Four more new Granges: Lake, No. 812, Luzerne county, Pennsylvania. Elk Creek, No. 506, Otsego county, New York. Pognonock, No. 53, Hartford county, Connecticut. East Blackstone, No. 137, Worcester county, Massachusetts.

Adams Grange, No. 929, Decatur county, Indiana, reorganized, and is now in tip-top working order. A number have joined who never joined before, and are manifesting a deep interest. One is a finely educated young man, who has long been a bitter opponent, but has seen the error of his way. (Grange papers did it.) This time we have come to stay.

Fulton Grange, No. 66, Pa., reports purchases during the past year to the amount of $7762.19, about $100 per member. If all Patrons in the State had done as well it would have amounted to about one and one-half millions of dollars.

The Patrons of the District Grange of Northern Virginia have started "The Patrons' Mutual Fire Insurance Co." Only the property of "Patrons in good standing" is insured. Loss of membership in a Grange loses membership in the insurance company.

Capital Grange, No. 113, Concord, N. H., had 18 members for the fourth degree on their anniversary night, Jan. 25th.

"To the field go forth, O reaper,
There you will find golden grain,
Ready, waiting for the sickle,
Ripened by the sun and rain.
Go, the harvest sun is glowing,
Let not seedtime be in vain,
Ever ready, O thou reaper,
Gather in the golden grain."

Grange Items.

We note in last week's *Patron* that owing to the exhibit of State products which W. M. Johnston made at the National Grange, he is besieged with letters of inquiry from various quarters about California, all which he answers to the best of his ability and leisure....That Sister Sarah A. Daniels, a faithful charter member of Montezuma Grange, passed from earthly life Jan. 21st....That the San Jose Grange at its last January meeting initiated two members in the third and fourth degrees.

A GRANGE ENTERPRISE.—We suppose that there can be no objection to alluding to the wise movement which resulted in the building of San Jose Horticultural hall, and the holding fairs therein, as a Grange enterprise. The effort was first put forth in the Grange and Horticultural Society as a joint effort, and nearly all those who are rendering such efficient service as directors this year are members of the Order. We allude to the matter with satisfaction, as a Grange undertaking and as an exponent of what can be done by Patrons in many places and in many ways, if they will unite forces and push ahead together.

ROBINSON M. JONES has been appointed by the President to be postmaster at Chico.

AGRICULTURAL NOTES.

CALIFORNIA.

El Dorado.

FOOTHILL FRUIT.—Grizzly Flat Cor. *Republican:* I have known the orchard of James T. Barney for 13 years, and cannot call to mind a failure of crops during that time. This orchard is in Range 14 east. Wm. Frey, at Mendon, about the middle of Range 13, in 1886 produced 45 tons of apples, which he is now hauling to Plymouth, Amador City, Ione and Galt, and selling at the rate of $1.50 per box, while fruit produced near those places is offered at 50 and 75 cents per box. Men owning large orchards in Sacramento county drive to our orchards in Mountain township, furnish boxes, pack the fruit, and pay us for it at the rate of $40 per ton. Whether the elevation of the soil makes the difference in the fruit, I do not know; if there is any difference in the productiveness of soil from west to east in this county, I fail to see it. Each belt, perhaps, of one or more miles may have its own specialty of production. We do not pretend that we grow oranges at Grizzly Flat; in fact, we have never tried.

Humboldt.

STOCK DOING WELL.—Correspondents of the Eureka *Standard*, the latter part of January, give good accounts of cattle on the ranges near China Flat and along the Lower Klamath.

Los Angeles.

MOIST LANDS PROSPERING.—Compton Cor. *Times:* Compton, Westminster and Artesia are the only self-supporting districts in Los Angeles county, and our surplus goes largely toward the support of the seat of the county. Our dry years are our best years; then our produce brings the highest prices; then our alfalfa hay sells best; there is a rush for our big pumpkins, and your worn-out horses are sent to our pastures green to rusticate and recuperate. We send you butter and cheese, and our steers make your best cuts of sirloin and porterhouse. The cars are crowded with our fat hogs, and to-day five large warehouses are filled with barley, and the farmers' cribs are filled with the golden corn and their pockets with golden coin. If you want a carload of potatoes send your order, and fresh-picked strawberries, too. We challenge the whole United States to beat us on deciduous fruits. I can show you oranges one mile west, and again the same distance south of Compton, sweeter and cleaner than you can produce in the vicinity of Los Angeles. On this same tract we have grapes of all kinds, equal to any in the county. The willow wood that you burn in the city nearly all comes from Compton, and soon will supply you with eucalyptus. Our young groves are growing splendidly. We do not depend upon sewage for irrigation for vegetables, but when we need water for that purpose or any other (and that is our beverage), we uncap our artesian wells, and lo, Moses' rock and rod is a crude invention beside us, while we have added all the modern improvements.

San Bernardino.

BARRING OUT BUGS.—Riverside *Press and Horticulturist*, Feb. 5: The carload of shrubbery sent to this city from Oakland was thoroughly inspected Monday by L. M. Holt and A. S. White, the legally appointed fruit-pest inspectors for this district, and two distinct kinds of scale were found on it. The stock was condemned and put in charge of Marshal Morse, fruit guardian, who has notified the owners that it must be removed from the city within 24 hours.

CONDITION OF THE ORANGE CROP.—Wednesday afternoon, accompanied by Mr. Skelley, we visited a number of orange orchards from W. P. Russell's down as far as Van Fleet's, and made a thorough inspection of them to ascertain the amount of fruit held by each, its condition and the amount of damage by frost. We not only found the orchards in excellent condition, carrying a full crop of very fine oranges, but the marks of the frost were almost imperceptible. As these orchards are scattered through a wide extent of territory, they are a fair test of the crops between the extreme points mentioned, both as to quantity and quality of fruit. There are some orchards in another portion of the city that have not escaped so thoroughly the late cold wave, but at the worst the percentage of loss will be very small, and the amount of good fruit shipped from Riverside this season will not, we think, be less than last year.

Santa Cruz.

EDITORS PRESS:—It commenced raining at 9 P. M., Thursday, and has rained constantly to this hour, 9 A. M. of Saturday. From yesterday at 9 A. M. to 7 o'clock this morning it rained 7½ inches. Thank God for the glorious rain! The San Lorenzo river has been up high, booming, all the time since 2 o'clock yesterday, and still it pours down.—I. W. PEERY, *Lorenzo, Santa Cruz Co.*

Solano.

RAIN AND FRUIT.—EDITORS PRESS: We got six inches of rain this last storm, making 12 inches to date this season; so the fruit crop is assured, as far as regards rain.—J. S. SHEARMAN, *Vacaville.*

Sonoma.

THE ITALIAN SWISS COLONY.—*Democrat*, Feb. 5: Olive roots which are estimated to make 4000 trees are imported from Italy and will be planted along the roadways and drives throughout their highly cultivated vineyard, also on each side of the railroad track that passes through the ranch, besides some 20 acres are being planted to olives. Two hundred orange trees will be put in the ground that surrounds the handsome residence of the manager, Mr. Mechi. Improvements are continually being made.

Tuolumne.

EDITORS PRESS:—The long-looked-for rains are upon us, and more overhead. Crops among the foothills did not suffer much from the drought, but a continuation of such dry, cold weather would have caused a partial, if not a total, failure. As it is, with spring showers after the present refreshing, a crop is insured beyond peradventure. Business, which had declined by reason of dry weather, is now springing into new life. Man feels encouraged when farmers are prosperous. Even San Francisco depends more upon farming than she is willing to allow. It is hoped that this rain is general, so that the great plains may receive a baptism. It takes a small fortune to seed most of the farms, and when a failure takes place, few are able to stand the strain. That is one reason why so many fine farms are burdened with mortgages. A failure means a second small fortune for a second seeding. All this is a heavy load to carry, which is apt sooner or later to break down the home altars. Wheat being the only industry of importance upon the large ranches, there is nothing to fall back upon; whereas, the foothills have a variety of means to make a living. It may be more humble, but nevertheless it is less liable to change and bankruptcy.—JOHN TAYLOR, *Chinese Camp, Feb. 6th.*

Ventura.

SIGNIFICANT SAMPLES.—*Free Press:* M. D. L. Todd raised a field of pumpkins that had to be loaded on sleds by the use of skids. The heaviest weighed 253 pounds. J. H. McCutcheon in gathering a crop of beets October 5th from seed sown in February, weighed one that kicked the beam at 81 pounds. We have had on exhibition at the *Free Press* office a dozen ears of corn, picked at random, that weighed nearly 24 pounds.

Yolo.

GEESE GOBBLING UP THE GRAIN.—*Record-Union*, Feb. 3: A farmer from Hungry Hollow states that that section is fairly overrun with wild geese. This invasion is doubtless due to the dry condition of the tules where they usually stay. It never happened before, save during the year 1871, which was very dry. What makes the grain an easy prey is the fact that, owing to the dry season, the land is plowed only to the depth of about six inches, and the geese have no difficulty in finding it. There is a large number of men busily at work with guns, etc., "herding" the geese from the grain-fields. The farmers gladly welcome all sportsmen.

NEVADA.

STOCK PROSPECTS.—Reno *Gazette*, Feb. 3: W. S. Bailey, the cattleman and rancher of Churchill, says business is looming up in good style around the sink of the Carson. The cattle and sheep are in excellent condition—as good as they are usually in early fall. As strong and hearty as stock now is, there can be scarcely any loss, no matter how severe the spring might be. Mr. Bailey thinks that there has not been a better outlook for stock for many years than there is at present.

New Subscription Terms.

Our recent new terms for inducing payment of subscriptions in advance are meeting with favor in all quarters. New subscribers are coming in and old patrons are again entering their names.

We are confident of greatly increasing our large list of subscribers within the next few months.

A few subscribers have complained of paying at the rate of $3.50 when fully one year in arrears. To induce all such to settle up, we will, *during the next 30 days*, give all such the privilege of paying all back dues at the rate of $3.25 per annum.

Jan. 22, 1887.

Vacaville Notes.

EDITORS PRESS:—After a long time, winter seems to have set in in earnest. It commenced raining here last Thursday night, and kept it up pretty steadily until Saturday afternoon. The hills are covered with snow, and the air is very cool for our boasted tropical climate. The weather has been pretty cold for some time past, though there has been very little ice or frost here this winter. Almond trees are in blossom, but the cold weather has kept the blossom buds back generally. There has been four and one-half inches of rain in Vacaville the last storm, and nearly six inches two miles west near the hills.

Pruning is getting pretty well along. This has been a fine season for pruning and burning brush. Grapevines are generally burned in the vineyard, though some haul them out with a sled or wagon. I think it would be a good thing for the vineyards if some one would invent a machine something like a feed-cutter, that the vines could be run through and cut up into small pieces. They would rot in a few years if covered up, and be good manure for the ground.

People are getting notions in regard to the use of manure different to what they had 20 years ago. I have seen farmers haul the manure from their barn and pile it in the road, rather than put it on their land. Several of our orchardists have been experimenting with super-phosphates on their ground. This manure is said to be composed of blood and bones dissolved in sulphuric acid. Formerly it was made by grinding the bones, but the particles of bone would lie in the ground for years before decomposing enough to benefit the trees or vines. F. Buck has used some of this manure, and says the effects are wonderful. He put some on a row of corn and that row grew 18 inches higher than the one adjoining it; and if it is put around a tree or vine its effects will very soon be seen. Mr. Buck seems to think that it is of more benefit in forming fruit than wood.

Joe Bassford says he put some on a number of sick grapevines last year, and the difference in the growth of those vines that were manured and those that were not could be seen from the hilltop half a mile away. He says that some old apricot trees on which he used the super-phosphates made a larger growth than for several years past. Mr. Bassford thinks young trees do not need it, but old trees or vines that are past their prime are greatly benefited by the use of super-posphates. About 1000 pounds to the acre are generally used, and it costs $30 per ton. Two and a half pounds to the vine is said to be as good as a large wheelbarrow load of stable manure. G.

Vacaville, Feb. 6, 1887.

A Fine Japanese Orange.

We have tested and are very favorably impressed with oranges brought us by H. E. Amoore, of the Japanese Tree Importing Co., whose office is at 120 Sutter street, in this city. The oranges, although more than a month from the trees, having been plucked rather green in Japan, were of very sweet and agreeable flavor. The orange is apparently of the Mandarin type, and the most desirable we have seen. It is named the "Oonshiu." The Japanese Agricultural Association of Tokio says in its sixth annual report:

The "Oonshiu" orange is of medium size, rather large, oblate; rind thin, smooth, deep orange color; pulp sweet, juicy, most delicious, containing hardly any seeds or seedless. It is mostly esteemed for its excellent qualities for table use, as well as for being seedless—the *best* variety of Japanese oranges.

This description seems to fit accurately the samples shown us. They were about two inches in diameter, and we are told they sometimes reach three inches. The skin separates easily and cleanly, and the fruit must become popular. The company has just made a large importation of trees, which have been examined by State Inspector Klee, and are favorably spoken of by him.

LEGISLATIVE BILLS.—We are indebted to Hon. George Steele, of San Luis Obispo, for a full file of bills now before the Senate, and to Hon. I. A. Wilcox, of Santa Clara, for a similar file of Assembly bills. If bound they would make a volume as thick as an unabridged dictionary, and yet the law-makers are supposed to digest all the propositions in them in 60 days. We thank our friends and sympathize with them at the same time.

THE Sour Orange Stock, imported from Florida by Twogood, Edwards & Cutter, of Riverside, has already won considerable notice and reputation in the State. W. R. Strong & Co., of Sacramento, have the sole agency for Central and Northern California, and are prepared to take orders for Navel, Tardiff, Pineapple and other choice varieties on this now celebrated stock.

JOHN ROCK'S NURSERIES.—Our readers can hardly overlook the announcement of John Rock's nurseries in our columns. Aside from the standard varieties of fruit, we know Mr. Rock has a collection of new varieties which are worth attention, and his stock of ornamentals, plants, shrubs and trees is vast and varied.

The Eggs that Never Hatch.

There's a young man on the corner,
Filled with life and strength and hope,
Looking far beyond the present,
With the whole world in his scope.
He is grasping at to-morrow,
That phantom none can catch;
To-day is lost. He's waiting
For the eggs that never hatch.

There's an old man over yonder,
With a worn and weary face,
With searching, anxious features,
And weak, uncertain pace.
He is living in the future,
With no desire to catch
The golden Now. He's waiting
For the eggs that never hatch.

There's a world of men and women,
With their life's work yet undone,
Who are sitting, standing, moving
Beneath the same great sun,
Ever eager for the future,
But not content to snatch
The Present. They are waiting
For the eggs that never hatch. —*J. M.*

The Senator's Daughter.

CHAPTER VI.

[Written for the RURAL PRESS by SARAH CAMPBELL SANFORD.]

The turn-out belonged to Mrs. Secretary Blank, and the note was an invitation from that lady to assist her in receiving New Year's calls at her elegant mansion. You see, with all her magnificence and style, she had a tender woman's nature, and her heart was touched with compassion for a motherless country girl; so she included me in her bevy of girls to make her reception gay and youthful. All girls enjoy beautiful dresses and handsome furniture.

Mrs. Blank sent her carriage, with obsequious servants, to conduct me to her house. She welcomed me very cordially, and introduced me to a group of young ladies in full dress. Mrs. Cecil had seen to it that I was up to the mark in that respect. A handsome black lace over a mauve silk, and mother's opals were worn.

There is no need to tell how the day was spent; the carriage-loads of gentlemen who tarried just long enough to say a few words and partake of the refreshments. I was made heart-sick and sore to see the girls proffer wine, and drink with the gentlemen. At first, every one was clear and level-headed; but later, many of them, scarcely more than boys, could hardly speak intelligibly. Oh! when will women renounce this awful sin of tempting young men to their ruin?

I managed to keep away from the refreshment table—I was such a stranger, it was quite natural that the other girls should perform that duty. I was quite unhappy, not knowing just what to do in the matter. I feared I would offend my hostess if I should say anything. Besides, of what use was it to speak to half-drunken men?

All at once I thought that father was making the same round. Would he yield? Was all my labor and anxiety to be thrown away, after all, because of the thoughtlessness of the ladies of fashion? Oh! what responsibility, what opportunities, we women have! And our lost opportunities! when we cease to see as in a glass darkly; when the white light of eternity reflects upon our past life; when we think of the deed left undone or the word left unsaid which would have cost us so little at the time, and see, perhaps, the soul of some fellow-being weighted with sin that our influence has been instrumental in producing—oh, what could be worse than such remorse? May the women of this land wake up to their responsibility in this matter, and discourage this social drinking.

I worked myself into quite a fever over these thoughts. But at a late hour father and Mr. Somerville were announced, and they came down the long drawing-room together with clear, smiling faces and no fumes of wine befogging their brains. I always had a foolish habit of crying when gladdest, and I felt the tears welling up as father greeted me. He saw it, and drew me into the conservatory, where I put my head on his shoulder and cried freely.

Father petted me, as he always does. At last he broke the silence by saying:

"This has been a hard day for both of us, dear; and but for this young Somerville, who has been with me all day, I don't know what would have happened. Next to God, thank *him*, Madge. Oh, it's hard, this custom! The temptation of the cloak-room, which is brought to bear upon me daily, is nothing to this."

"The cloak-room, father! What is that?"

"The room provided for our wraps at the Capitol is arranged with closets, which are kept stocked with wines, etc.; and I am sorry to say many of the members resort to it frequently. So far I have resisted that temptation; but the hardest trial has been to-day. But young Somerville has saved me. I could not have held out against all those ladies alone."

"Does the Government furnish this wine, father?"

"Oh, no; a wagon drives up, a basket of champagne is taken in and the bottles arranged on the shelves. No bills are brought, no questions asked."

"O papa, papa! let us go away from this dreadful place. We cannot live here long without becoming accustomed to these habits, and then we will not be shocked; and who knows what may happen? Think of it; the Government permitting her law-makers to be so tempted and overcome by this evil."

My tears all dried in my indignation. I felt as if there was strength in my woman's arm to chastise the whole nation.

Father laughed at my indignant spirit, and proposed to return to the others; he said he would take me home with him.

So, after a short time spent in the drawing-room, Mr. Somerville, father and I were driven home together. The young man spent the remainder of the evening with us. Of course our conversation turned to the evils of the custom of offering wine to guests, and we learned that, many years ago, Mr. Somerville's grandfather, convinced of the evil of the whisky-barrel, poured the contents of his on the ground, and became a total abstainer. He so reared his family that there has never been a drinker among his descendants.

How my blood tingled as I thought: "This man has never tasted strong drink." He had taken a university course and traveled over a considerable portion of the world, yet never drank a drop of ardent spirits! There was no smell of alcohol, no whiff of tobacco, no heavy perfume, about him. He was a clean, clear-brained, jolly fellow, full of wit and humor. How happy I was to count this man my friend!

The very next day Alvar came to us. How well he looked! I had never seen him so robust. He was as crazy as ever over his project, and cared a great deal more about the buildings of the fair city than the pleasant people he met. He went about measuring and calculating. He took a great fancy to Mr. Somerville, who seemed to know and understand his enthusiasm about buildings. They talked of Doric, Ionic, Corinthian, Gothic and even Etrurian architecture.

Etrurian? Mother's opals were set in Etrurian gold; but I scarcely know of the country itself.

Mr. Somerville often illustrated his conversation with some fable. When I inquired the difference between the Doric, Ionic and Corinthian architecture, they all being Grecian and all using columns, he explained that the difference lay in the proportion and embellishment.

The tradition is, that Dorus, a being of fabulous birth, king of Achaia and of all the Pelopennesus, built a temple to Juno in the ancient city of Argos. Its proportions were supposed to resemble the figure of a man. The Ionian colonists, in building a temple to Diana, the huntress, imparted to their temple the delicacy of a woman. The Ionic architecture is the style of the Acropolis at Athens. The Corinthian, which came after, embellished the Ionic with delicate carving, supposed to imitate the grace and beauty of a young girl.

I listened to their long talks and made up my mind that the calling Alvar had chosen was a high one, after all.

Mr. Somerville gave us beautiful descriptions of the French and German Gothic architecture. He seemed to be impressed with the cathedral of Cologne, which, he said, is very appropriately called the "St. Peter's of the North." He told us of St. Ursula—called also "The Church of the Eleven Thousand Virgins." It is the tomb of St. Ursula, and the walls of the church and treasury, or golden chamber, are covered with the bones of her unfortunate companions. The legend is that St. Ursula, the daughter of a British king, made a pilgrimage to Rome, accompanied by eleven thousand maidens. On their way back to their own country they were massacred at Cologne by the Huns. Of course he described the cathedral of Milan, which is considered the finest Gothic edifice in Italy. He could not speak enough in its praise. He said, in whatever else our imagination might exceed the reality, it could not come up to this wonderful work of art.

Then Alvar inquired about Genoa. He said a letter he had lately received from there spoke in high praise of the architecture of that city. He mentioned the palaces whose flat roofs are adorned with shrubs and such trees as the orange, lemon, pomegranate and oleander, 20 feet and more in hight, refreshed by fountains which play constantly during the heat of the summer. Mr. Somerville said that the gates of entrance to some of these palaces are 40 feet high.

I could scarcely wait for a lull in the conversation to inquire who had written to Alvar from Genoa; and after teasing long enough he informed me it was Jessie herself—Jessie, who had neglected me during the past few weeks! Alvar refused to show me her letter, and said:

"If Jessie thinks it worth while to write you concerning architecture, she would do so; but it is quite likely she will not, as you never cared for the art."

He added: "Jessie is the only girl I ever saw who can appreciate a building, anyhow."

I felt inclined to resent this treatment, but, upon reflection, remembered it was Jessie, and not I, who had sympathized with him in the beginning.

Father seemed quite satisfied as to the turn of Alvar's mind, and appeared willing to have him absorbed in measurements and drawings instead of law and oratory. He said: "In June we will go over and join the Stanhopes for a summer vacation." Then Mr. Somerville invited himself to accompany us as guide.

One day father said to Alvar and me that he thought the afternoon session would interest even Alvar, as Senator Vara had given indications that he would make a speech.

"He is a man of very few words, but when he does wake up, it means something. You should be interested in him, Alvar, as he is a strong advocate of moral reform. You and Madge had better put in an appearance to-day."

"How do you know he will speak to-day, father?" said I.

"Well, different men appear differently just before breaking out. This Mr. Vara usually sits quiet; but I noticed an uneasiness in his manner; he ran his fingers through his hair, and managed to give his usual faultless attire a rumpled appearance; and the word went around among the older members: 'Vara is preening for a speech.' And I am told it will be something worth hearing."

Mr. Somerville joined us soon after we took our seats in the gallery. I immediately made inquiries about the gentleman in question, and he pointed him out to us, and also gave us a little sketch of his life:

"The Hon. Mr. Vara represents the Granite State. He is of Scotch-Irish descent. His father died when he was but two years old, leaving him to the care of a noble mother, who imparted to him her high moral character. During his early years he endured many privations and hardships—working during the summer months and going to district school winters. When 19 years of age he entered an academy, where he alternately studied and taught for three years, and then entered college. But his health failed; so he was compelled to abandon his college course. He entered a law office, acquired his profession, and in due season was admitted to the bar. In a short time he was sent to the Legislature, and, after being returned to the lower house several times, represented his district in the State Senate. Then, after a few years of private life, he was chosen to the United States Senate, where he has proved himself a strong advocate for a just cause. I once met the gentleman in his own home in a pretty New England village. I found the family a most delightful one. Notwithstanding they write 'Hon.' before his name, everything was plain and unostentatious; and although he has been in Congress for some years, the family has never visited Washington. The wife, a thorough Latin and Greek scholar, prepares her children for college, and at the same time manages her household affairs, regardless of the glare and glitter of the capital."

"No wonder her husband stands above all trickery and chicanery. So many public men are drawn into it through the extravagance of their families," said I.

"Yes," answered Mr. Somerville. "This man has no expensive establishment to support here. His salary is sufficient for his own and the family's needs, and he can afford to espouse an unpopular cause and legislate for the future, as well as for the present."

Of course Alvar and I listened closely to the masterly address. The little sketch of his life, and his advanced principles on the great question which was of so much importance to us, endeared him to us before he opened his lips.

Mr. Somerville went home and dined with us. The eloquence of the speech had so stirred our blood, we could talk of nothing else. After dinner we gathered around the grate, the gentlemen still engaged upon the same subject; while I sat near father with my eyes fixed on the glowing coals. An open fire has a peculiar charm for me, and often, as I gaze into the ever-changing shapes, I think of the old fire-worshipers.

"For each ravine, each rocky spire—
Of that vast mountain stood on fire!"

I seem to understand their adoration of fire—the symbol of that great source of heat and light, the sun. An open fire is the finest piece of furniture a room can contain. I never lose an opportunity of indulging in one. To lie on the hearth-rug and watch the fantastic shapes the consuming coal assumes is ever a delight to me. I listened in a sort of a dreamy way, with most of my thoughts on the fire.

I had lost the drift of their conversation, but was recalled by Mr. Somerville saying:

"Your remarks remind me of a picture in the Luxembourg gallery at Paris, 'The Decadence of the Romans.' It represents an orgie in the court of a temple in Rome. Revelers occupy the center of the court. The faces, in which linger little trace of the old Roman fire, are brutalized by excesses of every kind. Their heads of disheveled hair are bound with coronals of leaves and they are drinking, from graceful antique goblets, the fiery fluid that is destroying them. On lofty pedestals around stand statues of the grand old Romans who, from the calmness and coldness of the marble, look a more severe rebuke than words could give upon the swarm of revelers below. On one pedestal, a boy, young and graceful, but with red and swollen eyes, sits listlessly. On another stands a youth, insane with drink, and proffering a dripping goblet to the mouth of the statue. In a corner, as if quitting the court, is a group of Romans with careworn brows and with hands lifted to their faces in melancholy meditation. In the foreground, painted with all the splendor of Venetian art, is a vase, around which is a festoon of brilliant flowers, with one end trailing on the floor. In the background, between the columns, smiles the blue sky of Italy, the only pure thing left.

"In this picture of decadent human nature," continued Mr. Somerville, "is found a moral that needs no explanation. Should European customs, and the vice of the great European capitale, continue to invade our society, the wealthy youth of America could furnish one part of the painting. For the other, our revolutionary ancestors, looking forth with dismay from the pages of our nation's history."

There was a soft pause, broken only by the soft crackle of the falling coals. Then Alvar quoted:

"This is the moral of all human tales,
'Tis but the same rehearsal of the past;
First freedom, and then glory; when that fails,
Wealth, vice, corruption, barbarism at last,
And history, with all its volumes past,
Hath but one page."

"Not so," said father, reaching out and taking my hand in his firm, warm grasp. "There is a factor entering into this problem that the ancients failed to recognize. Our American youth will be saved from that decadence by our daughters. The nineteenth century will prove to the world 'that our daughters may be as corner-stones, polished after the similitude of a palace.'"

And thus, dear reader, we will leave them. No story can be completed until the Angel of Death comes to finish it. Therefore my little tale must remain unfinished; for my characters are real folks, and we trust they will live many years to come.

FINIS.

Washing the Dishes.

She stood upon a shady porch
Before a milk-white table,
And o'er her head a rose-vine wreathed
The brown, old-fashioned gable.
A pretty cotton gown she wore,
With sleeves rolled up, displaying
Her lovely arms, and on the breeze
Her curls were lightly straying.
This side a cage of songbirds hung,
And that a globe of fishes,
And butterflies flew in and out,
And hovered lovingly about
The maid that washed the dishes.

At first she dreamed not I was near,
And never ceased her singing,
While through the shining bubbles fast
Her dainty mop went swinging.
But soon she spied me, and I heard
A little rill of laughter,
And straight my heart sprang to her side,
And I sprang quickly after,
And in a moment more I'd told
My love, my hopes, my wishes,
And marked her bright eyes brighter grow;
And then—work must be done, you know—
She washed, I wiped the dishes.

—*Margaret Eytinge in Harper's Bazar.*

Our Calendar.

EDITORS PRESS:—We were showing our family the nice calendar and time-tables in the RURAL for Jan. 8th, when one of them asked if we had any direction in our mind as regards the seasons. The various ideas of the different members were quite amusing, and I jotted them down for others to compare with their own notions. The one who first mentioned the subject said that the months always seemed to him to go around in an elliptical track, with January at the top and February at the left, and so on around; and the days of the week were in the same form, with Monday at the top, Tuesday at the right, and so on down to the bottom, where Saturday came in, and all the left side was Sunday. In counting, after each ten, the next number deflected to the right, so that in going from the left-hand lower corner up the paper, he would come out at the right-hand upper corner. Another said that December always seemed at the top of a circle and the months went around to the right; and that Monday was always the first day of the week, and the days went in a circle the same as the months. Another said that the years commenced with January and seemed to go on in a straight line—no coming back at all—and the week days the same, with Monday as the first day and Sunday a day apart from all the rest.

MRS. H.

"How much for two grains of sulphate of zinc?" queried the boy of the druggist.

"Twenty-five cents."

"But my father is a doctor."

"Oh! Well, I must make a hundred per cent profit on such things, any way. Give me two cents."

"PA," said little Johnny McSwilligan, "there's a piece in the paper about 'Parasites.' What are they?"

"Paris-ites, my boy, are people who live in Paris. I think you ought to know that, and you in the third reader."

IT IS not generally known, but a dog was sold in Atlanta two years ago for $10,000. This price, however, was not paid in cash—the dog was swapped for two $5000 cats.

YOUNG FOLKS' COLUMN.

Ruth's Valentine.

[Written for the RURAL PRESS by REIS SAMSON.]

The bell had just rung for recess. Lena Adams, the richest and prettiest girl in school, took her lunch basket and ran out of the room to the big willow tree by the stream, where she was soon joined by her four dearest friends. "I say, girls," commenced Lena, when they were all settled, and their lunch spread out on a mossy rock, "day after tomorrow 'll be Valentine's day."

"Isn't that jolly?" cried Edith Low, trying to divide three oranges into five equal parts; "I just love Valentine's day, I always get so many beautiful valentines. Twenty-seven last year, and I know who sent every one."

"I am sure of one from cousin Horace," said quiet Anna Woods, "but I don't know of any one else who will take the trouble to send me one."

"I do, though, Anna;" here Lena gave her friend a kiss.

"Are you going to send many of the girls valentines this year, Lena?" asked Daisy Hucknall.

"Yes, just as many as I can; see, papa gave me this to spend on valentines," replied Lena, taking a red silk purse from her pocket and displaying a five dollar gold piece.

It was an old custom in Miss Sherwood's school for the pupils on the 14th of February to send each other valentines, which were laid on Miss Sherwood's desk before school, and delivered by her after the lessons had been recited.

"They have some beauties down at Walker's for a dollar, all covered with Cupids and flowers. I am going to get one for Miss Sherwood," said Clara Newton.

"Have you heard about Grace Chisholm, girls?" asked Edith, helping herself to another sandwich. "She is going to send all her old valentines to the Fruit and Flower Mission for the poor children. I'd like to do something like that, wouldn't you? Oh, dear," she continued, "here comes that tiresome Frances Hale; I wonder what she wants."

"Well, Frances, what is it?" said Anna, as a plainly dressed girl drew near the group.

"I am sorry to disturb you, girls, but Miss Sherwood has sent me to tell you not to sit so near the brook, and to be careful not to leave orange peel around as you did yesterday, or she will be obliged to make you take your lunch in the playroom."

"Disagreeable old thing!" said Daisy, as Frances left them. "I don't believe Miss Sherwood sent that message at all, and I'm not going to stir."

"Do you know, girls, I really believe Frances has made a contract with Miss Sherwood to do all her mean errands," and Clara laughed as though she thought she had said something funny. "I have a splendid idea," she continued, as she nibbled a piece of cream pie; "suppose we send Frances a valentine. I don't believe she ever got one in her whole life. There's a splendid one at the store called 'Charity Girl,' with a long piece of poetry under it about getting everything for nothing. What do you say, girls?"

"Capital!" cried Edith; "we'll put it in a fancy box with lace paper around it, and she'll think she's going to get a lovely valentine. It will be a sort of April fool, too, won't it?"

"I don't see what right Miss Sherwood has, any way, to take a charity pupil in her school," said Lena, tossing back her chestnut curls, and smoothing the lace ruffles on her dainty apron. "She can't certainly expect us to associate with her. Let's all go down after school and choose the valentine, the very ugliest and most appropriate we can find."

"You ought to be ashamed of yourselves, girls," cried Anna Woods, her blue eyes flashing with indignation. "What has Frances Hale ever done to you? On the contrary, she has always been ready and willing to help you whenever she could."

"Harken all ye sinners, come one, come all, and hear the celebrated Saint Anna preach; pews free," exclaimed Daisy. At this speech all the girls commenced to laugh, and Daisy, finding her wit was so much appreciated, kept on: "There will be a sermon every afternoon at 12 o'clock M. ——"

"I won't stay another minute with such heartless, cruel girls," cried Anna, jumping up. "I hate you, every one, and will never go with any of you again as long as I live."

"O Anna! Anna, please come back," said Lena, running after her and putting her arms around her neck, dragging her back. "We were only in fun. I didn't know you liked Frances so much, or I wouldn't have said anything about her."

"It's not that I care one bit more for Frances than you do, Lena," said Anna, wiping her eyes and accepting the pickle Daisy was holding out as a peace offering; "but I feel sorry for her, and you would, too, if you only knew all that I do about her."

"Well, tell, do, like a dear old girl, and we'll promise not to say another word about her."

"All right," commenced Anna, unbraiding her long flaxen hair. "You see Mrs. Hale has been making some aprons for my sister Ethel; so yesterday, after school, mamma told me to go for them. I took Ethel and went to the little house where they live; and O girls! I never felt so sorry for any one in my life before. They've got the tiniest house you ever saw, only four rooms, with scarcely any furniture, but just as neat as a pin. Mrs. Hale told me the aprons would not be ready for half an hour, and asked me if I would like to go in the other room and stay with her daughter till they were finished. I said yes, because I didn't like to say no. Then she opened the door of the next room and called out: 'Ruthy dear, here is a little girl who will stay and talk with you for half an hour.' Imagine how astonished I was when I walked into the room to see a little girl just about my age lying in bed looking so pale and thin, with such big black eyes they frightened me. 'Why, Mrs. Hale,' I said, 'I didn't know you had two children.'"

"'Yes, dear,' she answered, 'Frances and Ruth; but Ruth is an invalid and never goes out. Now I will leave you two to make friends while I go and finish my sewing.'"

"I didn't know Frances had a sister, Anna," interrupted Clara.

"No, I don't think anybody did. You see, we don't go with Frances, so of course she never told us anything about Ruth. If you could only see her," Anna continued. "She has something the matter with her spine, and the doctor says she will never, never walk. I stayed with her almost two hours, and she told me all about Frances—how good and kind she was to her, giving up everything to get a few books to please her. She said Miss Sherwood had known her mother for years, and when they moved here she offered to take Frances in her school and educate her for a teacher. When the aprons were finished and I was going home, Ruth begged me to stay, as she was so lonesome, and then she said, so cheerfully, that as soon as her mother could save $20 she was going to buy her a Bath chair, and Frances would wheel her all over the village, into the green fields and dark woods, and leave her with her books by a little stream until she came home from school; and she continued, with tears in her eyes, 'I shall be so happy to go out in the green fields. I get tired of lying in bed all day.'"

"I wish we could do something for her," said Daisy, when Anna had finished.

"I'll send her the prettiest roses I can find in the garden and some hothouse grapes," cried Lena.

"O girls!" screamed Clara, clapping her hands, "I have another idea. You needn't look at me so reproachfully, Anna; it's not like the other one; it's good this time. Suppose, instead of buying valentines for one another, we take the money and give it to Frances as a valentine to get Ruth a chair."

"You darling Clara!" cried Anna; "that will be just lovely. I am sure I am willing for one. Come on; let's go and ask the rest of the girls."

"Very well," replied Clara, returning Anna's enthusiastic hug; then in a loud, shrill voice she called out: "Girls, girls, come here a minute; I want you."

At this summons some 15 bright, laughing girls made their appearance from everywhere, and the five friends communicated their plan about the chair.

"Well," said Laura Henry, "I have only 75 cents, but I'll give it with pleasure, because I always liked Frances Hale."

"Grandpa told me he would give me a trade dollar, to-night, for valentines, and I'll give it all toward the chair," said another.

"I have a dollar I'll give, too," called out some one else.

"So will I," "and I," echoed a dozen shrill voices.

Here the bell for class rang, and the girls were obliged to go in, arranging to meet at Anna Woods' house after school and bring their money.

The 14th of February dawned bright and clear. Miss Sherwood, as she took her place at her desk, was surprised to see only one package, instead of the usual large pile of envelopes. She said nothing, however, but called the class to order and heard the recitations as usual. At half-past 11 the pupils were told to put away their books, and Miss Sherwood, taking the package in her hands, said: "Young ladies, you know that it has always been customary in our school for the pupils on this day to exchange valentines; but as I see only one has been put on my desk, I suppose you must have a good reason for omitting this pretty custom. Frances Hale, as this box is addressed to you, you may come and get it."

As Frances heard her name called, she left her seat and walked to Miss Sherwood's desk. She felt it must be some joke the girls were playing on her, for she knew no one who would send her a valentine. She broke the cord nervously, opened the box, and took out a little note which she read, then exclaiming "O girls!" she burst into tears.

Miss Sherwood gave a stern glance at the pupils, who were all smiling, went over to Frances' desk and took the box from her. What was her surprise to find a handsome valentine and four crisp five-dollar bills pinned to a little note which read: "A valentine to Frances Hale, from her schoolmates, to buy a Bath chair for Ruth."

There were tears in Miss Sherwood's eyes as she returned to her place, and after a few minutes' silence she said: "Young ladies, I propose we take a half holiday and go into town to buy Ruth's chair."

Of course there were no dissenting voices, and after Frances had kissed them all around, they put on their hats and started for Mr. King's store, where the chair was to be bought. When kind Mr. King saw the flock of girls and heard about Ruth, he said: "Well, girls, I am going to give you the chair for $15; the other five you may give Ruth as my valentine."

They were such a merry group of girls as they left the store, wheeling the chair, for nothing would suit them but that they must take it to Ruth themselves and take her for her first ride. One of the girls had brought a blue fascinator, and Mrs. Adams had sent a nice warm shawl. When Ruth made her appearance, carried in Mrs. Hale's arms, looking so happy and excited, the girls crowded around her, each begging to be allowed to push her chair. They spent such a happy afternoon together by the side of the stream Ruth had longed to see! Before they separated at five o'clock, after seeing Ruth home, she kissed each one of them and made the prettiest little speech possible, in which she said this was the happiest day she had ever spent, and she would always love the 14th of February because it brought her such a beautiful valentine, their friendship, as well as her comfortable chair.

Alameda.

GOOD HEALTH.

Whooping Cough—What Is It?

Whooping cough is a highly contagious fever, affecting the entire system, but specially manifesting itself in an inflammation of the bronchial tubes and a spasmodic cough occurring in frequent paroxysms. The whoop is due to the rapid coughing. This renders it impossible to draw in the breath until the coughing ends, when the breath enters strongly through the glottis, still partially contracted by the spasm. It rarely ends in less than six weeks; generally its run is longer, sometimes many months. As a rule, the physician merely aims to palliate the symptoms, guard against complications and abridge somewhat the attack. Says Flint: "It must be admitted that there are no means by which the affection may be arrested."

A writer in the *Lancet* for March, 1886, thinks that the prevalent treatment has been directed too much to the symptoms, instead of to the cause. Hence the medicines prescribed have simply had an anti-spasmodic and sedative effect—relieving the cough, but not reaching the disease itself. During a severe epidemic of whooping cough, he noticed, on several occasions, a marked alleviation of the symptoms, and then at other times a marked aggravation. This led him to suspect some powerful atmospheric influence at work. On consulting his charts, he found that the former condition corresponded to a high percentage of ozone in the air, and the latter to a very low percentage. Ozone being a natural antiseptic (preventive of putrefaction), he at once commenced to treat his patients with antiseptic medicines, taken internally. The result was very favorable. The method was confirmed by further experience, proving satisfactory in almost every case.

THE GASTRONOMIC VALUE OF ODORS.—The magic and value of gastronomic odors lie in this, that they stimulate the flow of saliva and other alimentary juices, thus making sure that the food eaten will be thoroughly utilized in renovating the system. This stimulating effect of gastronomic odors also explains the French saying that the appetite comes while eating, as well as our habit of reserving sweetmeats, nuts, cheese, etc., for the end of a meal, when rich odors are needed to brace up the flagging appetite. So great and salubrious is the effect of gastronomic odors in stimulating all the glands and functions of the body, that a dinner of savory, fragrant courses may produce in the diner a feeling of warmth and exhilaration resembling the effects of wine, but with none of the depressing after-effects following excessive indulgence in that liquor. And thus it comes about that the epicure in search of "ignoble pleasure" finds it the source of health and of general contentment with the world.

CARBOLIC ACID IN INDIGESTION.—In a recent number of the *Practitioner and News*, a correspondent says: "I have just passed through a severe attack of indigestion accompanied by colic, pyrosis, food eructations, epigastric weight, uneasiness, etc. Alkalies, muriatic acid, pepsin and pancreatic extract failed to give relief. Seeing your note in the *American Practitioner*, on the use of carbolic acid in acid eructations, etc., I took, with almost instant relief, two or three drops of the acid as soon after food as regurgitation, distention or acidity occurred. One dose was usually sufficient. On two occasions only was a second dose required. This I took half an hour after the first. I dropped the acid on a bit of fresh bread and rolled the mass into a pill. Since my own case I have given it in a similar case, with like good result. Here I added a scruple of carbolic acid to one ounce of glycerine. Dose, a teaspoonful."

LADY DOCTORS IN THE FIFTEENTH CENTURY.—Dr. Horowitz, of Frankfort-on-the Main, has published a work entitled "Judische Aerzte in Frankfurt," in which the learned author mentions the interesting fact that as long as 450 years ago, Jewesses practiced medicine in that city; they especially devoted themselves to ophthalmia.

DOMESTIC ECONOMY.

CLEARING WASTE PIPES.—The annoyances and danger arising from the stoppages of waste pipes in country houses are many, and the question how to get rid of the accumulations in the pipes is, therefore, an important one. Digging up and cleaning out is a costly remedy, as is also that of the plumber's force-pump. When the pipe is entirely stopped, empty it down to the trap, as far as practicable, by wiping out with a cloth. Next fill the pipe with potash, crowding it with a stick. Then pour hot water upon it in a small stream, stopping as soon as the pipe appears to be filled. As the potash dissolves and disappears, add more water. At night a little heap of potash may be placed over the hole and water enough poured on so that a supply of strong lye will flow into the pipe during the night. If the pipe is partially obstructed, a lump of crude potash should be placed where water will drip slowly upon it and so reach the pipe. Pipes that have been stopped for months may be cleaned out by this method, though it sometimes calls for three or four pounds of potash. It is a good plan to use potash from time to time in order to dissolve greasy deposits as they form, and carry them forward to the cesspool or sewer. Potash is valuable for this purpose, because, in addition to its grease-solving powers, it is exceedingly destructive to all animal and most vegetable matter.

TO MAKE A MERINGUE.—Take the whites of as many eggs as you like; four will be enough to cover a large dish. Allow one-half tablespoonful of sugar (pulverized is best) to each egg (if you use much sugar the meringue will be less light); and after beating them stiff, add the sugar. Beat only just enough to mix it in. Spread the meringue over a pudding or whatever you like, and set on the top shelf of the oven, which should be very hot. Watch it closely, for it will brown in a moment, and if not removed at once will burn. It should be only a yellow brown, not a dark color. It is best served as soon as it is perfectly cold.

BOILED EGGS.—Have ready a kettle of boiling water. Wash and put each egg into the water with a tablespoon so as not to crack the shell. Be sure that the water more than covers the eggs and is not boiling too violently. Boil for 3 minutes, if you like them soft; 12, if hard. Another way of boiling eggs soft is to put them in an egg-dish or deep-covered bowl. Pour over them water which you are quite sure is boiling (not simply hot), to take the chill off. Drain off this, and cover a second time with boiling water. Cover tight; set on the breakfast table and leave in the water about 10 minutes.

TO MAKE CHOCOLATE.—A dainty way to make chocolate is to set an earthen pot in a kettle of boiling water; in this place a quart of milk and cream mixed. Stir into this when it is hot a paste made by mixing three heaping tablespoonfuls of grated chocolate with a little cold milk. Let this boil for two or three minutes, and serve very hot. If the chocolate is sweetened, it is better not to add sugar, but to let each one add it at the table if it is not sweet enough; but if the unsweetened chocolate is used, two dessertspoonfuls may be put in while it is cooking.

APPLE SAUCE.—Peel and core tart, juicy apples, and cut them into even slices. Stew with water enough to barely cover them, crushing them often with a wooden spoon. When half done, add sugar; then boil down to a smooth, pulpy mass. Serve with nutmeg grated over the top. Never throw away a spoonful of apple sauce. It can be used for custard, and an endless variety of things.

A JAPANESE DISH.—First cook to your taste some vegetable, such as cauliflower, mushrooms or even potatoes, and mix with it some scrambled eggs. Take a nice fresh fish, get the bones out and soak the flesh in salt and pepper for, say 15 minutes; then put the mixture of the eggs and vegetables inside of the fish and steam the whole thing; try it while warm with Worcestershire sauce.

BUTTERED PARSNIPS.—Wash and boil in cold salted water from three-quarters to an hour. Skin and cut into round, thick slices. Have ready in a saucepan a tablespoonful of butter and one teaspoonful of flour, previously rubbed together, and two tablespoonfuls of milk. When it boils up put in the parsnips and shake over the fire until smoking hot. Serve hot in a covered dish.

ORANGE-WATER ICE.—Add a tablespoonful of gelatine to one gill of cold water; let it stand 20 minutes and add half a pint of boiling water; stir until dissolved, and add four ounces of powdered sugar, the strained juice of six oranges, and cold water enough to make a full quart in all. Stir until the sugar is dissolved; pour into the freezing-can and freeze.

CREAM COOKIES.—One cupful of sour cream, one cupful of sugar, one teaspoonful of soda and one of cream tartar, with a teaspoonful of lemon juice, a very little grated nutmeg and two tablespoonfuls of caraway seed. Mix lightly and roll out as soft as possible, using just flour enough to keep them from sticking to the board.

The Week.

The storm which stole into the State by way of Cape Mendocino at the close of last week brought snow and rain over the upper half of the State, refreshing and cheering all industrialists, and kept its southward course, drenching the great valley and adjacent regions, passed the Mojave desert and Sierra Madre mountains and poured a generous flood upon the waiting counties of Southern California. It has been a grand storm, and though it has perhaps disappointed tourists, it has toned up the whole productive and commercial life of the State and caused the doubt and gloom of apprehension to give way to confidence in a year's productiveness and prosperity. The season's figures do not, it is true, reach very high marks in some localities, but such a rain coming thus late will, if reinforced by moderate later supplies, close connection with the surplus left from the generous rain of last year, and insure a fair production in most parts of the State. As we write on Wednesday the storm seems fairly over, though the weather is not settled and more water may fall. A few season's totals to date at the places named are as follows: St. Helena, Napa county, 11.51 inches; San Francisco, 12.26; Niles, Alameda county, 11.10; Pleasanton, 5.54; Livermore, 6.15; Tracy, San Joaquin county, 2.50; Lathrop, 3.09; Stockton, 3.73; Brighton, Sacramento county, 6.16; Sacramento, 6.30; Auburn, Placer county, 14.36. At Southern California points it is still raining on Wednesday, Los Angeles having received over two inches in 24 hours. The dispensation is generally welcome and inspiring.

The Legislature.

The junketing season is over, and our Solons at Sacramento seem to be hard at work for the dear people. The insurance bills seem at present to engage the undivided attention of the legislators and lobby. These measures provide that foreign companies, against which the Legislature can freely legislate, shall not enter into a compact to fix rates of insurance. It is claimed that this creates a monopoly of the business and increases rates. If the principle is a good one, why will it not also apply to the home companies? Just what will be the fate of the bills at the present writing is impossible to say, but there is a general impression that they will pass both houses. The opposition is strong, but the question is one that touches the pockets of many members. It is idle to argue with a Senator or Assemblyman with a policy in his pocket, showing that his premiums have taken a decided jump.

The University bill, creating a tax of one per cent for its permanent support, has passed both houses, and will go to the Governor for his signature. This measure will forever lift that institution out of the slough of partisan strife and caprice. The amendment to the Constitution, introduced into the Senate, repealing the section for the collection of poll and capitation tax, was lost, not securing a two-thirds vote. Thirty thousand dollars is collected annually on an average by the operation of this law. Brooks' Pilot bill hangs fire in the House. The debate yesterday showed a strong opposition to it. It was contended that it discriminated in favor of foreign ship-owners as against American tug-owners. However this may be, every farmer in the State is interested in the reduction of pilot fees, as the burden ultimately falls on the producer. It is claimed that the San Francisco Board of Trade and Chamber of Commerce in 1883 adopted resolutions indorsing a similar act. The pilots have mustered in full force, and it is said they have a sack. The whole of the afternoon yesterday was devoted to a debate on McGowan's Slander and Libel bill. The bill permits a newspaper, upon written notification, to retract the libelous publication, after which the damages shall be nominal only. This bill needs to be carefully watched. If it passes in its present shape, there is not a man, woman or child in the State whose reputation would be safe. A scavenger-hunting journal could smut the purest woman in the land and escape the consequences by an apology. Such a law will invoke the pistol as a means of redress.

State Superintendent of Public Instruction Hoitt has apportioned the State school money to various counties. San Francisco receives $435,584.52; Alameda, $118,934.76; Marin, $13,829.76; Los Angeles, $97,666.20; Santa Clara, $61,681.20; Fresno, $24,596.04; Colusa, $19,533.36.

The Senate Committee on Viticulture will hold a meeting on Thursday, February 10th, at 7:30 P. M., at which time the committee will consider legislation affecting the wine interest and particularly Assembly Bill 254.

The contest over the division of Colusa county waxeth hot. Tehama county people want the children taught the effect of alcoholic stimulants on the human system, in the schools. Their heads are level. It is generally believed that Vrooman's dynamite bill will readily pass both houses. It is also thought that Wright's irrigation bill will become a law. A Sunday law memorial from the people of Lake county has been presented to the House. It is as follows:

"We, the undersigned, legal voters of the State of California, believing that the best interests of the State, material and moral, will be promoted by a suspension of business and a rest from labor on one day in seven, would respectfully petition your honorable body to enact such law or laws as may be necessary to secure to the people of the State this important object."

The Interstate Commerce Bill.

This bill has become the law of the land. The Attorney-General found no constitutional objection to it and the President appended his signature. It is too early to judge of the value of this measure. It is experimental, and should it prove too stringent or too lax in certain clauses, time will suggest the remedy. That it is in response to a popular demand goes with the saying. That it settles the transportation problem, or the right of the Government to exercise legislative and visitorial control over corporate powers, will hardly admit of a doubt. It proves, too, that when the people are united and in earnest, the great monopolistic powers are putty in their hands. The doleful prophecies of a big smash in railway bonds and shares have not been realized. The bears ran into the cockpit of the New York Exchange and forced the quotations for a few hours, but failed to fan a flurry.

The selection of the commissioners is the next thing in order, and then this piece of legislative machinery will be ready for operation. The board is to be constituted of five commissioners, not more than three of whom shall be of the same political party. The term of office is fixed at six years, except the first appointments, which are for two, three, four, five and six years. The commissioners are to receive a salary of $7500 a year each, and maintain an office in Washington City, but it is made their duty to hold meetings in any part of the country where needed. The welfare of the country will largely depend on the men selected to energize this movement, and they should be men who have made railroad law and the transportation problem a careful study, and whose integrity is above suspicion. As they will naturally be selected from different parts of the country, the importance of the Pacific Coast having a representative can hardly be overlooked. Our myriad mines, mills, manufactories, immense grain fields and almost illimitable fruit and wine industry give this coast a paramount claim. We certainly ought to have the ablest and best man that can be found on the coast, and as the President has proved to be quite an expert in making appointments, we shall be surprised if he neglects us.

SPECIAL LEGISLATION.—Perhaps the best feature of the New Constitution is the clause forbidding special legislation. The political brokers and boodle men have ever been restive under this restriction, as it deprives them of a vast amount of rich pickings. There is now a proposition before the Legislature to amend the Constitution so as to restore this ancient privilege. San Francisco is rapidly coming to the front as one of the leading cities of the Union, and the State is thickly dotted with young cities, towns and villages, flush with growth and prosperity. In all matters of grade and streets, granting street railway franchises and hundreds of other ways, there is a fine chance to raid the public crib. A clause permitting special legislation would let in a deluge of jobs and thieving schemes. The birds of prey would roost again in the lobby. The measure will hardly pass, and if it does it will give the people great pleasure to snow it under too deep for resurrection.

SORGHUM SUGAR.—It is telegraphed that at a meeting of those in the sugar interest held in St. Louis this week, an address from Commissioner N. J. Colman was read, in which it was stated that the total production of cane-sugar in 1885-86 was 3,197,000 metric tons, and in 1886-87 was 2,368,000 metric tons. The production of sugar from sorghum cane in this country from Europe had only commenced, but had already reached an amount equal to our total production of all kinds of sugar. The commission considers that, upon the whole, although the expectations of a year ago have not been realized, the outlook is favorable for a large production of sugar from sorghum by the adoption of a new process of diffusion and saturation.

THE EXPERIMENT STATION BILL.—The Secretary of the State Horticultural Society has received a letter from Hon. J. McKenna, M. C., dated at Washington, Feb. 1st, in which he says: "I am in favor of the Hatch Experiment Station bill. Mr. Hatch will bring it up in the House immediately after the pleuro-pneumonia bill is disposed of." Mr. McKenna's statement, in connection with the letters from others, printed last week in the report of the Horticultural Society, show that the California delegation is right on this measure, and we trust it will be brought up before the confusion incident to the close of the session sets in.

A "Local Agency" Fraud Checked.

One of those sleek cheats who prowl about the country in fine raiment, to cajole credulous farmers into signing negotiable paper, has come to grief. The last name he traveled under was John C. Colter. He had been around in Solano, Yolo, Colusa, Sutter and Yuba counties, representing himself as agent for the "U. S. Horse Hay Elevator and Carrier Co.," whose office purported to be at 23 Stockton street, S. F.

His game was lately described by the Vallejo *Chronicle* as follows:

He goes to a farmer and attempts to make a sale of one of the machines. The farmer refuses to make the purchase, when the agent offers to give him one provided he would act as agent and allow the machines to be stored in his barn. The farmer agreeing to this proposition, the agent gets him to sign an order for the machines when they arrive. The unsuspecting farmer affixes his signature and the agent departs. In about 10 days afterward the farmer is again visited by two persons representing to be members of the same company. They inform the farmer that they have called upon him about the payment of the 10 carriers he ordered. The farmer indignantly denies that he gave any such order, when the agent takes out the agreement which the farmer previously signed and which turns out to be an order for the machines. The farmer is then informed that the machines have been shipped and are at the depot, and unless he pays for them they will resort to law. The farmer becoming frightened, is led to believe that he has got himself into serious trouble. The agent tells him that he is sorry for the state of affairs, but lays all the blame on the advance agent. He then offers to compromise the matter by allowing the machines to remain with the farmer for six months, and all unsold at that time to be returned at manufacturer's prices. As security he asks the farmer for his note of $500 and gets him to sign the following agreement:

WHEREAS, Said ——— ——— contracted and signed a printed order for ten Horse, Hay, Grain Elevators and Carriers at $50 each, and this day accepts the delivery at Suisun Station, Cal., according to order, and executes his note for $500 as payment in full for same, with understanding that this agreement is not made to appear as an offset in any way to the above-named note: The company now agrees, on condition of said ——— ——— making his best efforts to sell the machines and then fails so to do, to take them back at manufacturer's prices, or any part thereof remaining unsold at the time said note becomes due; said ——— ——— to give notice to the company one week before his note becomes due of how many machines he has and wishes to return to the company. It is understood this agreement becomes nullified if any way made known to any other person.

The farmer, believing that he is getting out of a scrape, signs the agreement and gives his promissory note for $500. The two representatives, after securing the note, depart, bidding the farmer many kind farewells.

They would then go to a bank, get the note discounted, and leave the neighborhood with their booty.

The workers of this scheme succeeded in fleecing a number of parties in the region above named; but "Colter" finally woke up the wrong passenger, was overtaken in Tehama, arrested, and brought back to Woodland, where Judge Ruggles held him to answer to two felonious charges, one of having obtained money under false pretenses, and the other of conspiring with "Jones" and "Pritchard" to defraud. Failing to furnish $2000 bail, he was remanded to jail to await examination on Wednesday of this week. Like the hydro-carbon sharpers, he is a slippery knave, and it may prove difficult to make any legal charge stick to him—a charge of buckshot is not legal—so it still behooves our rural friends to hold to the one invariable rule: *Never write your name on any piece of paper for a stranger.*

U. S. ENTOMOLOGY.—We had a call on Wednesday from Mr. Albert Koebele, assistant of the U. S. Bureau of Entomology, who has just completed his work on the cottony cushion scale in Los Angeles. He is now busily engaged in preparing his collections for shipment to Washington, and it is possible that some results of the investigation may be given in the report for 1886 which will be out this spring. Mr. Koebele tells us unofficially that he expects Prof. Riley, U. S. Entomologist, to visit California next March or April. This visit has been long anticipated by the California horticulturists, and Prof. Riley's coming will be hailed with pleasure.

The Port of San Francisco.

For years our farmers have complained of the excessive freight rates and charges they had to pay on a cargo of wheat or other agricultural product. They have blamed the cupidity of the ship-owners and charter parties for charging such extortionate rates. No doubt they are as selfish as the average run of humanity, and inclined to make all they can out of the business, but it may be that they have to bear a little more than their share of this contumely. In coming in or leaving this port they have to submit to pilotage and tonnage fees that are simply enormous, and the dockage and wharfage rates are well known to be excessive. Acting in sheer self-defense in order to recoup and make the voyage profitable, they charge all this loss on the freights, which ultimately falls on the consumer and producer. Hon. Frank McCoppin, in a paper read before the Joint Committee of the San Francisco Produce Exchange and Chamber of Commerce a few months ago, and incorporated in their report, said: "It seems to me that, considering the comparatively limited docking facilities on the water front, the amount collected is very large, and it is claimed by some that it is so large as to be hurtful to the city's interest. It would be bad policy to drive commerce from our door by over-burdensome charges upon shipping, and perhaps to have to say hereafter of those ships:

"These, far dispersed,
on timorous pinions fly
To sport and flutter in a
kinder sky."

This question is one that should engage the attention of the agricultural, viticultural, and wool-growing classes, as well as the merchants of San Francisco, for it is only by their united, earnest, and persistent effort that any change for the better can be effected. The control of the water front of San Francisco belongs to the State, and the tariff of dues or revenue exacted from vessels and the goods they carry is fixed by the Legislature. Here is where the remedy must be sought. There is no sense in finding fault with the Harbor Commissioners, for their duties are prescribed by statute. The money that is collected for dockage and wharfage rates and tolls on goods is expended in furnishing harbor facilities and paying the salaries of the commissioners and an army of employes.

One remedy that has been suggested for the relief of our commerce is to declare the port of San Francisco free, and raise the needed expenses in keeping the harbor in good repair from a general tax. But this policy would most likely be opposed by the electors of Los Angeles, Santa Barbara, San Diego, Humboldt, and possibly other localities. It is almost certain they would never consent to be taxed for this purpose. We assume that as long as the State administers this trust the present policy of raising revenue will continue. But may not something be done in the way of economy? Since the organization of the State Board of Harbor Commissioners April 24, 1863, the total gross receipts to May 1, 1886, have been $7,699,534, and of this vast sum only $1,193,345 has gone into permanent improvements, namely: the seawall embankment, and all the remainder, $6,506,189, or 85 per cent of the gross receipts, has gone into salaries, perishable structures, and the vast waste and leakage incidental to all our public institutions. That a large sum may be saved, and the burden upon our commerce correspondingly relieved from reductions in rates of pilotage and tonnage fees, is generally conceded. This matter is now before the respective committees of the House and Senate, and perhaps our law-makers may wake up to the importance of removing this and the aforesaid burdens from the industries of the State.

Marking Fowls.

A number of inventions have been brought forward and a number of home-made methods devised for marking fowls so that breeding or individuality could be kept on record, but the one shown on this page seems to be a very simple and available method. It was invented by W. H. Wigmore, of 107 South Eighth street, Philadelphia, and the implement shown in the engraving is so small that it can be carried in the vest pocket. Marking fowls is of course valuable to a breeder, as we have indicated; it is also useful in identifying stolen birds, etc. The plan is, as the engravings show, by puncturing the web of the foot, and the punctures may be so arranged as to indicate many things on the record.

The cuts show 15 figures, and these can be made into any number of different ways of marking, or one breed may be marked 15 times differently, as shown by the dots in the cut. This can be increased by marking the skin of the wing. It is a great advantage for young chicks. The eggs are marked from the different breeds, and, as soon as the chicks are hatched, they are marked with the marker, and

WIGMORE'S CHICKEN MARKER.

by so doing you can tell their age and every detail in regard to them. The cut shows full size of the punches. They are nickel-plated, and have steel cutter and spring. There are two sizes—one for chicks and one for fowls.

THE demand for tubing and piping for natural-gas purposes is so heavy that prices have been advanced.

County Boundaries.

The Committee on County and County Boundaries of the Assembly has decided to allow the people of the section proposed to be divided from Colusa county to vote on the question. This will probably result in a division of the county. Colusa county contains 2300 square miles and is larger than either the State of Delaware or Rhode Island. There is considerable rivalry existing between the town of Colusa and the Willows, in the northern part of the county, but should the citizens of the aforesaid section conclude to separate, it will doubtless be owing to the fact that their interests can be more conveniently and economically served thereby. The chief interest that gravitates around this local agitation, should it result in a division, is the probable effect it may have as a precedent. Other counties may catch the division fever. In point of size, California is the second State in the Union, containing 155,000 square miles, and yet has only 52 counties, while New York has 60, Ohio 88, Virginia 100, Kansas 104, Missouri 114 and Texas 179. Only those who have taken pains to study their geography are aware of the territorial extent of some of our counties. San Bernardino has an area almost equal to that of West Virginia. The following table may give our readers an idea of the extent of some of our larger counties:

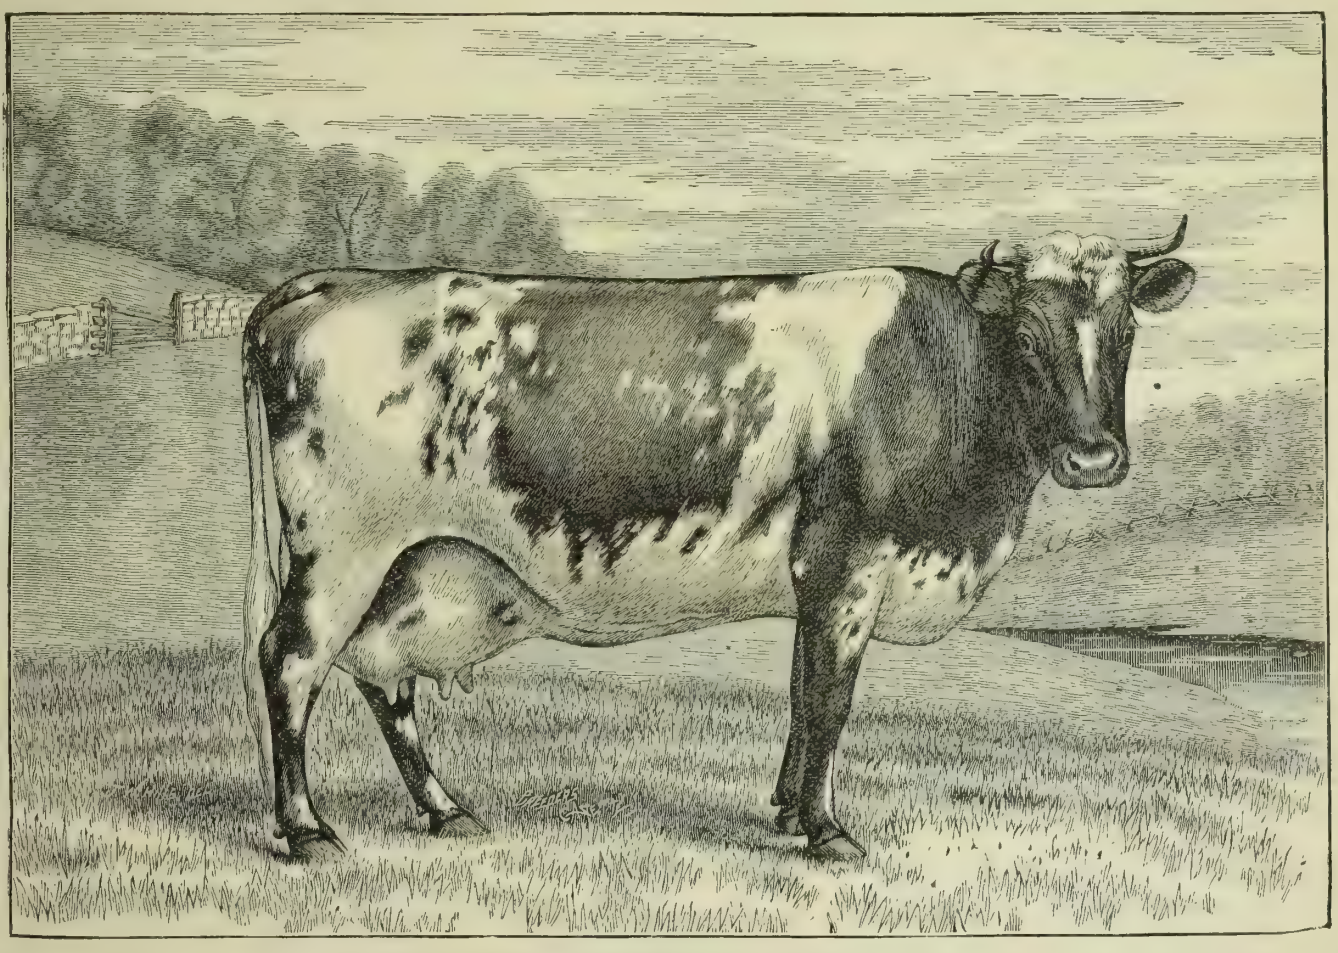
Counties.	Square Miles Land Surface.
Fresno	8,094
Humboldt	4,094
Inyo	10,156
Kern	8.100
Lassen	4,750
Los Angeles	4,812
Modoc	4,297
San Bernardino	21,172
San Diego	14,969
Siskiyou	6,078
Tulare	6,406

State.	Square Miles Land Surface.
Connecticut	4,845
Delaware	1,960
District of Columbia	60
Maryland	9,860
Massachusetts	8,040
New Hampshire	9,005
New Jersey	7,455
Rhode Island	1,085
Vermont	9,135

It is a little rough to compel a man to travel from 60 to 100 miles to put a deed on record or attend court as a juror or witness. This inconvenience may be patiently endured in a thinly settled county, but as the population becomes dense and business at the county seat increases, it would not be strange if the people became uneasy and demanded more compact county facilities.

INTENSE COLD NECESSARY FOR SOME FORMS OF VEGETABLE LIFE.—A marine alga of the Arctic regions grows at a temperature far below zero, and its spores disappear at a higher temperature. It thus appears that intense cold is necessary to the existence of some forms of vegetable life, together with extreme dryness, and this class of plants probably includes the cryptograms of red snow.

A Famous Ayrshire.



The Ayrshires are coming forward on the basis of accurate yield tests, which in the extent of its application at least is an American introduction to the science of dairying. We have given figures of long and short milking periods of various breeds, and this week we have an Ayrshire which has distinguished herself at the pail and scale. The cow is Alice Douglas, the property of Geo. A. Fletcher, of Milton, Mass. She was calved May 18, 1878. She was got by Edward Douglas, 1783, out of Stella Douglas 2d, 3848—a cow which gave 25½ quarts for many days, and for which her owner refused $500.

The cow is deep mahogany red, well marked with white, fine head and neck, forequarters light, body large, deep at flanks, wonderfully fine udder, carried well up, and reaching far forward; teats exceptionally good size and well placed; Flandrine escutcheon, skin fine, soft and elastic; her disposition is of the very best.

On March 11, 1886, Alice Douglas was milked dry at 9 P. M., and then milked at intervals of 8 hours for 7 days from that time, ending on March 18th, at 9 P. M., during which time she gave 393 pounds of milk. She was milked perfectly dry again at 5 P. M. on Tuesday, April 6th, and a test made from that time to 5 P. M. on Tuesday, April 13th, during which time she gave 407 lbs. 12 ozs. as follows: Wednesday, 64 lbs. 14 ozs.; Thursday, 54 lbs. 10 ozs.; Friday, 60 lbs.; Saturday, 60 lbs. 4 ozs.; Sunday, 57 lbs. 8 ozs.; Monday, 59 lbs.; Tuesday, 53 lbs. 8 ozs.

The cow stood in the barn with the rest of the herd, during the entire test, and had two feeds of rowen, one-half bushel of mangolds and one-half bushel of brewers' grains daily, besides the grain, which during the seven days she was fed as follows:

	Quarts.
Bran	44
Cornmeal	30
Ground oats	42
Oilmeal	6
Cotton seed	5
Total	124

THOROUGHBRED AYRSHIRE COW, ALICE DOUGLAS.

We have a letter from Mr. Fletcher giving another test of the cow as follows: One day, 62 lbs. 14 ozs.; 7 days, 407 lbs. 12 ozs.; 30 days, 1695 lbs.; 90 days, 4997 lbs.; 9 months and 20 days, 11,310 lbs. She has made in 7 days 10¾ lbs. of butter.

We have some good Ayrshires in this State, as our readers know who go to the fairs, but the breed has not the prominence it deserves, and we trust wider attention will be given to its claims.

TO CURE A HORSE OF KICKING.—The *Calistogian* gives this prescription its warmest indorsement: If you have a horse that is in the habit of kicking, put him in a narrow stall that has both sides thickly padded. Suspend a sack filled with hay or straw so that it will strike his heels, and let horse and sack fight it out. Be sure to have things arranged so that the horse cannot hurt himself. The sack will be victorious every time, and in the end the horse will absolutely refuse to kick the sack or anything else.

A PIONEER DAIRYMAN DEAD.—James Phœnix, a native of England, died January 21st at Santa Maria, aged 85. "Father" Phœnix brought his family to this State from Australia in '49, settled in Marin county, and started a dairy, which is claimed to have been the first in California. Butter was then $1.50 per pound. A dozen years later he moved to Santa Maria valley, where he pursued the same business throughout his life. He is eulogized in the *Times* as an amiable and practical Christian.

The General Principles of Farming.

Among the entertaining and practical addresses at the Contra Costa Fair last fall was one by Hon. Charles Wood, of Danville, on the general principles of farming. We take pleasure in giving it, almost entire, to a wider circle of thoughtful readers than it is likely to have reached through our excellent neighbor, the Martinez *Gazette*. Farmers who think, themselves, will be grateful for hints from one of their brotherhood who leads them to look for benefits where they may not before have thought of seeking and trying. After a few introductory remarks about fairs ancient and modern, Mr. Wood said:

The farmer of America, or rather of the United States, occupies a different position from that of the farmer of Europe, or of any other part of the world. In England he is generally a tenant paying rent upon entailed land, and his interest therein is simply what can be extracted from it, the thought of owning it never entering his mind. In France his ownership is so small, although preferable to the English system, that it is virtually but a garden, the census, a few years ago, showing 36,000,000 of acres divided into farms of not more than eight acres each. So in India, in the great valley of the Ganges, which to-day is the great bear—to use a term of the Stock Exchange—of the world's wheat market, the holdings of land to any one family do not exceed 10 acres, and these are allotted by government, the occupants barely gaining a subsistence as tenants, and not as owners.

Thus, the farmer of this country possesses advantages over those of any other in that he is generally the owner of the land he cultivates and is responsible to himself for his zeal and industry in its improvement. Thought and labor go hand in hand in its care and development. Now, ownership of anything, from some inherent quality in human nature, at least, carries with it a good deal of self-complacence and satisfaction, and there is perhaps no better source of genuine enjoyment and contentment. The man who is both the owner and cultivator of a farm has superior inducements for self-respect, self-culture and ambition to become educated in the best sense of the word. He has it in his power to become socially and intellectually, as under our free system of government he is politically and under the law, the peer of any person in the land, or in the world for that matter, and by our excellent common-school system, the means of education for his family accorded to the most affluent are brought almost to his very door.

Farms are out-of-door workshops and manufactories, assisted by the chemical and hidden-growth processes of nature in producing the great staples of life and the raw material which enters into the fabrics of nearly every industry, and farmers are capitalists, using the term in a broad sense, to the extent of their investments in land, implements, machinery and stock, the same as other manufacturers are. Farmers are employers rather than employes. They expect to make the most of their profit from the labor of others; hence, while in sympathy, perhaps, more than any other industry, in what is called the labor element, it is as material to their interest to obtain work done as cheaply, and with as much labor-saving device, as other manufacturers or producers. Nevertheless, a cheap and unsatisfactorily paid labor is not for the general benefit of a free nation where all have equal political and civil privileges, and, as good citizens, we should not advocate it. By superior knowledge of agriculture and by superior labor-saving implements and machinery, we must and can be beyond the hurtful competition of servile, cheap or unpaid labor of Europe, Asia or elsewhere.

The complaint of injustice practiced toward farmers in this country, as a class, has not always been based upon facts, and has frequently been more overdrawn than the facts would warrant. To the power and greed of capital has been attributed most of the evils and depressions under which we suffer, when, possibly, an honest investigation would show the evils to be magnified, and the cause of depression to rest elsewhere, sometimes even with ourselves. It is forgotten that farmers are all capitalists to the extent of their investments or productions, although combining these with their own labor, more or less. Take the cultivation of wheat, for instance: The land whereon it is grown is capital; the animals and their feed used for tillage are capital; the seed held over from the previous year is capital; the cost of labor bestowed on its culture is capital; the machinery and cost of running it is capital, and the labor of delivering it at the landings and depots is capital, and thus far the capital is in the hands of the farmer, though he may own but a moiety of it, and ought to receive fair returns for its use. The warehouses, the railroads and the vessels employed in its next step for concentration at the seaboard are capital, and their claim for proper remuneration must be recognized, and so on through every successive movement by land or sea, until the wheat reaches the mouth of the consumer, capital is used and those furnishing it are entitled to just compensation. Here, then, is the problem. Do farmers receive the average compensation for capital, labor and risk of loss of crops required in the production of wheat that others do in its subsequent movement? To that average compensation are the farmers entitled, and proper efforts to obtain it are legitimate, commendable, and, in fact, a duty. These observations apply with equal force to all the productions of the farmer, and it should be the aim of every one to find out if undue discrimination is practiced, and to remedy it if found to exist.

Our efforts may be only approximate in their results, because the inexorable law of supply and demand must be recognized in all transactions. If more wheat is raised than is needed for consumption within a reasonable period, as before another harvest, depression in price is the inevitable consequence; if less, increase in prices must ensue. If we seek a world's market in the great center of population, the available production of the world competing in that market is to be considered a factor. Should that production be in excess of the demand, the depreciation will fall mostly upon the farmer, for the reason the larger the crop to go forward, the greater the call for transportation for which owners can exact high rates of freights. But the endeavor should be made to get the world's market for our commodities, less reasonable carriage and cost of handling, and if to this end farmers ship wheat to Liverpool, wool to Boston, or fruit to Chicago or New York for their own account, rather than sell it at any intermediate point of transit, it is their undeniable right to do so, and no one should complain; and here it is that co-operation, if anywhere, should come in. Co-operation among farmers for the purpose of regulating prices in the world's great markets seems to be altogether impracticable, owing to the widespread area of production, taking in as it does the larger part of Europe, including Great Britain, part of Asia, Australia and much of America.

Overproduction in any of the industries is the cause, above all others combined, of depression in prices. Legislation may ameliorate or exaggerate, but does not often create them. The approximate ratio between production and consumption must be kept up, and to a certain extent is self-regulating. It should be one of our aims to so diversify our products that a failure in one or an excess in another would not be disastrous. The interests of city, town and county are identical and coextensive within certain limits. Each by fair exchange of its various productions ought to contribute to the general welfare of the whole.

Greater economy in productions in times of depressed prices rather than the production of the greatest possible quantity, must be the rule.

There is a growing opinion that wheat culture is, or is becoming, unprofitable, owing to lower prices as compared with the past. Perhaps this is true somewhat, but let us see if, while prices have decreased materially, the cost of production and subsequent handling has not been considerably lessened, although not in the same ratio.

The valuable tables of Mr. Montpellier, cashier of the Grangers' Bank, give the average price for wheat in 1874-5 at $1.62 per cental; in 1875 6 at $1.93½; average for two years, $1.77¾. By same tables the average price for sacks during the three months required by the farmer was at least 12½ cents each. Now take the average crop in this country to be 20 bushels or 1200 pounds per acre, the approximate cost per acre to time of sale, of the items showing greatest change, 10 years ago would be as follows:

Seed for one acre, 80 lbs, @ 1¼c	$1 40
Heading at least	1 75
Feed of horses and board of men	40
Thrashing, old system, nothing furnished but machinery and three men	2 00
Sacks 12½c each for 135 ctls	1 11
Storage $1.50 per ton, weighing when sold extra	90
Freight to S. F. from landings, $1.50 per ton	90
Commission on sales, 2½ per cent	53
Total per acre	$8 99
Approximate cost for 1886:	
Seed for one acre, 80 lbs @ $1.30	$1 04
Heading	1 25
Feed for horses and board of men	35
Thrashing, everything furnished by move	1 44
Sacks holding 135 lbs, 7c each	62
Storage per ton, including weighing, $1	60
Freight to Port Costa, not to exceed 50c per ton	30
Commission on sale, 25c per ton	15
Total per acre	$5 75

Difference in cost $3.24 per acre, fielding 1200 pounds, or 27 cents per cental, and in this estimate the cost of plowing, harrowing and hauling by the farmer to the landing or railroad is not included, which, if anything, is less now than formerly. So that if the productive capacity of the land has not been injured, there would at least be as much profit to raise wheat to-day at $1.50¾ per ctl. as in 1876 at $1.77¾, and if self-binders and combined harvesters come into general use the profit would be still the greater, and this comparison, perhaps, could be made in the other industries of the farm. Interest and taxes on a higher valuation of land are not taken into account, because the increase is offset by lower rates.

The general cost of living and supplying one's wants is much cheaper than 10 years ago, for the reason that everything that is required for consumption or use in life can be had at largely reduced prices.

Therefore there would seem to be no substantial reason why farmers should despond or complain of their lot as compared with humanity in general. Prices have probably touched bottom and are quite likely to react. Population and home markets are rapidly increasing, while the area suitable at least for wheat has about reached its limit, and it is extremely doubtful if the world, and certainly California, will ever see produced in any one season the equal of the wheat crop of 1880.

It is an astounding fact that although the population of the world is ever taxing its capacity to raise the staples that sustain life, it has never succeeded in laying up such a supply as would prevent it from starvation, if only a year's general failure of crops should occur.

One main question with us as farmers, and indeed as a community, for all are interested in it, is how farms can be managed so as not to impair their fertility, and, at the time, give happy homes and a fair return for capital invested and labor bestowed upon them. It is of the first importance that the land does not deteriorate in crop-growing capacity, for if $500 be made upon a field of wheat, and $500 lost in crop-producing qualities of the land, where is the gain? Old homes, barns and fences can be rebuilt, worn-out machinery and implements replaced with new and better, young stock raised to take the place of old and worn-out and aged farm animals; but when once the fertility, the cream of your fair acres, is gone, it can never practically be replaced. Hence bear in mind that too much care, labor and thought cannot be bestowed in keeping approximately the land in its pristine vigor of production. Mixed or diversified farming, as it is called, is the solution of the question, if there be any to it. Keep more live-stock and sell more on foot, in the fleece and from the dairy and poultry yard, and less in the wheat and barley sack.

Fellow-farmers, there are many other subjects it would be pleasant to consider with you to-day, but fearing to trespass upon your patience I shall take up but one more, and that is the keeping accounts and a record of the important transactions upon the farm. Accounts should not only be kept with persons but with things. The presumption should be that for every exchange of a commodity, no matter whether made with another person or into another commodity, an equivalent is received. Hence, for every debit on the ledger there should be a corresponding credit, and for every credit there should be a debit to some personal or impersonal account, and this is the essence of double-entry bookkeeping. If 10 tons of hay are fed to fattening cattle, the cattle account should be charged with its value, and hay account should be credited therewith. The first cost of your service, together with the pasture and grain to fatten them, should be charged to swine account, which in time should be credited with whatever hogs are used or sold, and so on through the various departments of the farm. From time to time comparative statements can be made so that we can know just what is being done. In this manner can one farm be managed intelligently, if not profitably, and perhaps, as the leaks and other sources of loss and avoidable expense become apparent, the profit and loss account may in time be made to exhibit the proper credit balance. Is it not a good plan to give the children, as they grow into manhood and womanhood, a chance to keep the books, thus being a means of education, making them more apt in figures, more systematic in methods, and at the same time giving them a correct knowledge of our financial affairs that is often withheld from them to their and our own detriment?

In conclusion, let us dignify and elevate our calling; let us assert equal rights and privileges without trampling upon those of co-ordinate industries; let us extend our knowledge of the business of the world that we may be benefited by it; let us educate ourselves and our children to better understand the problem of life and aid in its solution; let us encourage industry both mental and physical, putting thought with labor to produce the best results; let us beautify and adorn our homes that they may be more attractive to inmates and friends; let us do away with so much isolation—the bane of farm life—and cultivate more congeniality of feeling and sociability; let us assist each other in sickness and adversity. In a word, let us be better and consequently happier creatures.

Herefords Coming.

We have a letter from T. P. A. Williams, representing James Kay, Jr., of Hereford, England, that he will leave Columbia, Mo., about the middle of February with two carloads of thoroughbred imported and recorded Hereford bulls, cows and calves and heifers. There will be 14 yearling bulls, 3 two-year-olds, and the remainder of the lot cows and calves and heifers. He will rest the cattle for a few days at Winnemucca and also at Reno, Nevada, on arrival there. The cattle are out of the same shipment as the carload of bulls that Mr. Williams exhibited at the State Fair, Sacramento, and at the Stockton, San Jose and Reno fairs, and sold out. They will be offered for sale by private contract.

YANKEE SCHOOL-MA'AMS IN JAPAN.—Misses Mary and Isabella Prince, who formerly kept school in Maine, but have for some years been teaching in this city and at Eureka, have accepted an invitation from the Japanese Government to enter its employ as instructors. Miss Mary is to teach the Girls' Normal School at Tokio, and Miss Isabella will organize a national domestic school, to introduce American customs among the Japanese women.

A Kansan Captivated.

H. C. Whitley, a prominent citizen of Emporia, Kansas, who has just been visiting San Diego, writes home in measureless admiration: It is a task not easily performed to give an intelligent description of Southern California, for there is no means of comparison; its counterpart has not yet been discovered. The Almighty in His wisdom so disguised this land as to hide its many virtues from the view of man, otherwise the slope east of the Rocky Mountain Range might have yet remained a wilderness. It is easy to be seen, but California must be seen to be appreciated. It has no resemblance that I can discover in points of soil or climate to the Atlantic Slope. Here the air, as well as the ocean, is pacific. Here the elements are at peace. There are no winters except in name. It is summer all the year. Flowers and fruit have a vernal growth and perpetual bloom. Geraniums and tomato plants once started grow on, year after year, producing flowers and fruit until they stand like trees before you. Ten acres of land here, thoroughly cultivated, is believed to bring more profit than a 160-acre farm in ordinary cultivation in the Eastern States. Many crops are produced without water. In some localities irrigation is unnecessary to increase the growth of vegetation. After all that I have seen, it needs no further argument to satisfy me that whoever lives to see this coast 10 years hence will look upon a country 10 times more populous than it is at present. The country lying south of this city for about 15 miles, to the Mexican line, can be seen in its virginity, stretched out along and overlooking the bay. Improvements along this plateau have just commenced. In a few years it will be changed from a sunny desert to gardens of fruit and flowers. I visited a 10-acre fruit garden about six miles south of this city a few days ago, in company with Hon. Wm. Martingale and others. To say that it was grand and beautiful does not convey an idea of its appearance. No doubt the contrast, with its uncultivated surroundings, had much to do with the exhibition of its charms. A garden surrounded by an apparent desert shining forth like a diamond among cobblestones. The orange and lemon trees were only four years old, yet in full bearing, loaded to the very ground with bright golden and green fruit. The earth in the garden is kept moist by cultivation, and was even quite damp within an inch of the surface. This condition of the soil looked strange and unaccountable to me, but the fact was before me. Barley, grapes and many kinds of vegetables thrive and yield good crops without water. Potatoes once planted keep producing the year round, if care is taken to leave enough to seed the ground. People here look happy and appear to enjoy life. The climate is wonderfully exhilarating. Old men coming here from the East usually experience a change. They straighten themselves up and quicken their pace. Women who have passed the meridian renew their charms and go about wreathed in smiles, as they did in the heyday of youth. The children, partaking of the happiness of their parents, put on the appearance of fairies in solid form and help to keep the people young.

A Fortune for You.

All is new; capital not needed; you are started free. Both sexes; all ages. Wherever you live you should at once write to Hallett & Co., Portland, Maine; they will send you free, full information about work that you can do and live at home, earning thereby from $5 to $25 and upwards daily, from the first start. Some have made over $50 in a day. The best chance ever known by working people. Now is the time—delay not.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

Consumption Cured.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma, and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French, or English, with full directions for preparing and using. Sent by mail by addressing with samp, naming this paper, W. A. NOYES, 149 Powers' Block, Rochester, N. Y.

It Should Always be Borne in Mind

That time is the only really impartial test of genuine merit, and that according to the universal law of "the survival of the fittest," few sewing machines have withstood this test. Therefore, the only safe thing to do is to buy what time has proven to be the fittest"—the "DOMESTIC" SEWING MACHINE.

Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from $5000 to $500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. **

THE Sign of the Arkansaw Cough Syrup is looking you all square in the face.

Do you want a sure, safe and reliable Cough Syrup? Are you troubled with a Cough, Cold, Bronchitis or Lung Complaint? Do your Babies keep you awake all night with Hacking Coughs, Colds in the Head, etc. Do you want something reliable in the house to meet these emergencies? We answer to all: "Go to your Druggist and get a Bottle of the Arkansaw Cough Syrup, and be troubled no more." Price, 50 cents per Bottle!

For Sale by all Druggists.

Reasons why Sherwood's Steel Harness is the Best and should and will be Universally Used:

1.—It is a common sense Harness. 2.—It is made of material that will last a lifetime. 3.—In plowing, dragging, logging and scraping there are no whiffletrees. 4.—In all farm work you can change from plow to wagon quick. 5.—In plowing in the orchard, you can't bark fruit trees. 6.—In plowing and cultivating hops it has no equal. 7.—In plowing along the fences you can get two furrows closer. 8.—Horses cannot step over the traces, or calk themselves. 9.—A small boy will handle plow readily. 10.—There is no weight on plow beam. 11.—Team works one-third easier. 12.—There is no chafing, crowding or fretting of team. 13.—For man and team it has no equal. Do not hesitate, but order at once from your nearest agent. Address

General Agents for the Pacific Coast of NATIONAL ASSURANCE CO., of Ireland; ATLAS ASSURANCE CO., of London; BOYLSTON INSURANCE CO., of Boston, Mass.

FRESNO COUNTY.

BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, to 20 acres, being 2½ times the usual amount supplied for colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is $3.75 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without teams are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for $150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads. Nearly one-half already sold.

Price, $22 to $40 per acre, on very easy terms to actual settlers.

☞For further particulars call on or address

ISAAC GOLDTREE.....Vice-President
R. E. JACK.....Treasurer
C. H. PHILLIPS.....Secretary and Manager

The West Coast Land Company now offers for sale in subdivisions the
PASO ROBLES RANCH,
Of 20,400 acres, less 6000 acres sold to settlers in the past four months,
THE SANTA YSABEL RANCH, of 20,200 acres,
THE EUREKA RANCH, of 11,000 acres,

And 12,000 acres of the Huer-Huero Ranch all lying in a body, on the S. P. R. R., at its terminus in San Luis Obispo County. These are all agricultural and fruit lands, in quality equal to any in the State, with an average annual rainfall exceeding that of Santa Clara County, and require **NO IRRIGATION.** Templeton, the present terminus of the Railroad, less than three months old, has a population of 300, a newspaper equal to any in the State outside of San Francisco, *The Templeton Times;* the Templeton Institute, established, and Primary Department now open; the best hotel in the county and south of Salinas on the road, and lies central to these ranches and to **500 SQUARE MILES** of rich agricultural and fruit land—the most picturesque section of country on the Pacific Coast. Eight hundred acres have been subdivided into lots of from 5 to 12 acres each, adjoining the town and Templeton Institute, for the convenience of patrons of the school, and are offered at low prices and on same terms of ranch lots. The Ranch subdivisions are offered at an average price of $20 an acre. **Title, U. S. Patent. TERMS OF SALE.**—One-third cash; balance in 4 equal payments, at 2, 3, 4 and 5 years; interest 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of $25 will be required in all cases to cover expenses of sale.

C. H. PHILLIPS, Manager West Coast Land Co., San Luis Obispo, Cal.

A new Catalogue and Maps showing the location of these lands, the town of Templeton, the 800 acres in 5 to 12 acre lots, and all the ranch subdivisions, will be sent free on application. Take the 8:30 A. M. train, S. P. R. R., for Templeton, 220 miles; time, 9 hours; fare, $8, and apply at Company's office.

INSECTICIDES!
CODLIN MOTH WASH,
WHALE-OIL SOAP, Etc.

By the use of these Washes all insect life reached will be destroyed, and all trees washed will show a marked improvement in growth and general appearance. For sale by

ALLYNE & WHITE, 112-114 Front St., San Francisco.

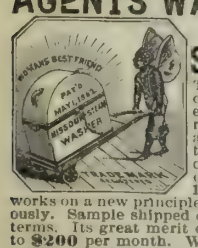
Farmers and others can make **$15 to $50 a day.** We can show purchasers where they can get plenty of work, as we are continually advised of parties wanting wells, and of sections where Well Drills are badly needed. Write for information with specifications and cost.

COULDS & AUSTIN,
167 & 169 Lake St., CHICAGO, ILL.



A Great Bargain!

A Remarkable Chance Offered.

124 acres of as good Fruit Land as there is in this State. About 40 acres improved and a good Orchard on it. Also two tracts of 160 and 166 acres each. Title guaranteed. Homestead and a pre-emption. The right to the two latter tracts will be relinquished. These pieces lie right in the mountains, and 200 acres can be cultivated when cleared up. There is plenty of good timber valuable for shakes, posts, or pickets; 1000 inches of the best water in the world for drinking and irrigating purposes; plenty of fish, deer, grouse, and bear. Also, 10 miles of the best mountain range for stock in the Northern part of the State. Twenty-five miles from the railroad and seven miles to the nearest village. A good price can always be obtained for produce; never less than 2 or 2½ cents per pound for potatoes. Water free on all the land.

Correspondence invited. Apply soon. Address, Ranch Owner, Box 2361, S. F.

AGENTS WANTED TO SELL THE MISSOURI STEAM WASHER

To men and women of good character, seeking profitable employment, exclusive territory will be given with agency. Teams can be used to advantage by agents in country districts. Riverside Citrus Fair.

At a meeting of fruit-growers and business men, held at the pavilion in Riverside on the 29th ult., it was decided to open their ninth annual citrus fair Feb. 22d. From the *Press and Horticulturist's* report we gather that the management of the fair was given into the charge of an executive committee consisting of A. S. White, J. G. North, C. W. Filkins, H. J. Rudisill, L. M. Holt, Orrin Backus, Geo. Crawford and G. W. Garcelon, under whom the finance, excursion and advertising committees were instructed to work.

It was voted without dissent to invite all orange-growing sections to show their fruit, and let the section that produced the finest fruit get away with the awards.

On account of insect pests, a resolution, offered by John G. North, was adopted, that fruit be admitted from all sections of the State subject to local inspection.

The gentlemen who have the matter in hand are experienced, earnest and apparently determined to make this year's display at Riverside the finest citrus fair ever held in California.

Premium List.

Class 1.—Best display of citrus fruits grown by one exhibitor in the State of California, $50; second best, $25; third best, $10.

Class 2.—Best display of budded oranges; size and general appearance to decide, $10; second best, $5.

Class 3.—Best display of seedling oranges; size and general appearance to decide, $10; second best, $5.

Class 4.—Best pyramid of budded oranges, not less than 100 specimens; general appearance of both fruit and pyramid to decide, $10; second best, $5.

Class 5.—Best pyramid of seedling oranges, not less than 100 specimens; general appearance of both fruit and pyramid to decide, $10; second best, $5; third best, $3.

Class 6.—Largest orange on exhibition, $5; second largest, $3; third largest, $2; largest and finest cluster of oranges, $5; second best, $3; third best, $2.

Class 7.—Entries under this class to be displayed on ordinary dinner plates. Best plate of Riverside Navel oranges, $3; second best, $2; best plate of Australian Navel oranges, $3; second best, $2; best plate of Malta Blood oranges, $3; second best, $2; best plate of Paper Rind St. Michael oranges, $3; second best, $2; best plate of Mediterranean Sweet oranges, $3; second best, $2; best plate of Mandarin oranges, $3; second best, $2.

Class 8.—Best pyramid of budded lemons, not less than 100 specimens; general appearance of both fruit and pyramid to decide, $10; second best, $5; third best, $3.

Class 9.—Best display of lemons, $10; second best, $5; third best, $3; best plate of Lisbon lemons, $3; second best, $2; best plate of Eureka lemons, $3; second best, $2.

Class 10.—Best display of limes, $3; second best, $2.

Class 11.—Best display of new varieties of oranges, $5; second best, $3; third best, $2.

Class 12.—Best box of fancy packed Muscat raisins, $10; second best, $5; third best, $3; best box London Layers Muscat raisins, $10; second best, $5; third best, $3; best box Sultana raisins, $3; second best, $2; best box Zante currants, $3; second best, $2; best box of figs, $3; second best, $2.

Class 13.—Best specimen of olive oil, $5; second best, $2; best specimen of pickled olives, $5; second best, $2; best specimen of pickled limes, $2; best specimen of pickled figs, $2.

Class 14.—Best specimen of French grapes, $3; second best, $2; best specimen of almonds, $2; second best $1; best specimen of English walnuts, $2; second best, $1.

Class 15.—Best display of winter apples, $3; second best, $2; best display of winter pears, $3; second best, $2.

Class 16.—Best display of fruit (in syrup) in glass, $3; second best, $2; best display of preserved fruit in glass, $3; second best, $2; best display of jellies in glass, $3; second best, $2; best specimen of orange jelly, $2; second best, $1; best specimen of orange marmalades, $2; second best, $1; best specimen of preserved citron, $3; second best, $2; best specimen of preserved lemon, $2; second best, $1.

Class 17.—Best exhibit of dried apricots, $2; second best, $1; best exhibit of dried peaches, $2; second best, $1; best exhibit of dried apples, $2; second best, $1; best exhibit of dried pears, $2; second best, $1; best exhibit of dried prunes, $2; second best, $1; best exhibit of crystallized fruit, $2; second best, $1.

Class 18.—Best display of flowers, $5; second best, $3.

Artistic Designs.—The following premiums are offered by the Riverside *Daily Press:* The most artistic design executed in fruit, by any fruit-grower or dealer, $25; second best, $20; third best, $15; fourth best, $10; fifth best, $5.

Cold Storage Co.'s Premiums.—The Chicago Cold Storage Company, having its works just erected in Riverside, offer to pay the following prices for premium fruit: First premium, Washington Navels, 5 boxes, per box, $6; second premium, Washington Navels, 5 boxes, per box, $5; first premium Mediterranean Sweets, 5 boxes, per box, $4; second premium, Mediterranean Sweets, 5 boxes, per box, $3; first premium St. Michaels, 5 boxes, per box, $4; first premium Seedling oranges, 5 boxes, per box, $4; first premium lemons, 5 boxes, per box, $3; second premium lemons, 5 boxes, per box, $2. These prices are to be paid for the premium fruit. A part of the whole of five boxes may be used on exhibition during the fair, in competition for premiums in any way the exhibitor may desire, but the fruit must be uniform in size, appearance and quality. After the fair this fruit must be placed in cold storage under the grower's name and brand, and the owner can see the fruit once a month to note its keeping qualities, and next summer the fruit will be shipped East and placed on the market in the original packages, and the report of sale will be published.

Rules Adopted for the Government of the Exhibition.

1. All fruits entered for premium must be grown by the exhibitor.

2. Each exhibit of citrus fruits must consist of at least six specimens.

3. All entries from Riverside must be in by Monday afternoon, the 21st, and from all other parts of the State by noon on Tuesday, the 22d.

4. All exhibits must remain until the close of the Exhibition, at which time premiums will be paid.

5. Parties residing in districts affected with Red or Cottony Cushion Scale are requested to be very careful in selecting specimens to be furnished for exhibition, as no fruit affected with those insects will be exhibited.

6. The awarding committee will be announced on the morning of the second day.

7. Entries must be made for each class in which the exhibitor wishes to compete, as one entry cannot be permitted to take two premiums. Exhibitors are particularly requested to state to the Entry Clerk under which class they wish different exhibits entered.

The Central California Citrus Fair.

EDITORS PRESS:—Despite the drenching rainstorm the Central California Citrus Fair opened auspiciously at 7 o'clock Monday evening. All available space has been filled. Many applications to exhibit other than citrus fruits were refused. Had all been granted, a hall twice the size would have been required.

Entering the hall, your correspondent was amazed at the grandeur of the display. The decorations, which were arranged by Mrs. D. C. Feeley, assisted by Mrs. T. O. Smith, Mrs. S. T. Ingalls, Mrs. Loomis, Mrs. Dr. A. J. Cory, Mrs. L. J. Watkins, Mrs. E. O. Smith, Mrs. S. A. Paddock, Mrs. Dr. J. K. Secord, Mrs. S. P. Sanders, and Mrs. M. G. Buzzo, are particularly striking. From every rafter and crossbeam hang artistic arrangements of palm leaves and bamboos, furnished by John Rock, the nurseryman. Mingled with these are holly branches and evergreens, contributed by D. C. Feeley, Mr. Fowler, Mr. Holland, H. G. Keesling and others. Long bands of evergreens regularly festooned beneath national flags, and shields bearing the word "Welcome," adorn the galleries their whole length. On each side of the hall a broad strip of evergreens, made into a fringe 15 inches wide, hangs in scallops from the beams above the galleries the whole length of the building. At the lowest point in every scallop is a bunch of hollyberries.

Long lines of tables loaded with the choicest oranges, lemons, limes, pomegranates, persimmons, nuts, vegetables, flowers and dried and canned fruits, give the hall a picturesque appearance. Above the stage at end of the hall, opposite the entrance, and crowning this glory of golden exhibits, are the words "Central California Citrus Fair," worked in California raw cotton on large card-board letters, by Mrs. S. P. Sanders.

Back of the stage is a dark screen, upon which is a spread-eagle made of a kind of yellowish-brown feather-grass, and bearing a bunch of calla lilies in its beak and a basket of oranges in its talons. Above the eagle is the word "Eureka," lettered in pampas-grass, while below is a model of a railway train. This work was executed by Mrs. S. P. Sanders, assisted by Mrs. D. Loomis, C. Feeley and others.

The first object to be seen on entering the hall is a banana growing in a box of earth. This comes from John Rock's nurseries. It stands 10 feet high, with a stalk 8 inches in diameter, and has leaves 6 feet long by 18 inches broad. The bunch of fruit, which is 18 inches long, is green, and the blossoms have not disappeared.

The Golden Stairs.

Dr. W. S. McMurtry, of Los Gatos, presents a unique design, the "Golden Stairs," in a flight of steps extending from the floor to the gallery and completely covered with oranges. The "Golden Gate" is represented by two large Chinese oranges, six inches in diameter. Over the upper end of the stairway hovers a dove made of acacia blossoms, while at the foot lie the golden slippers.

Orange Monument.

In the southeast corner of the building, near the stage, stands a monument constructed by Mr. and Mrs. T. O. Smith, G. W. Tarleton, Mrs. M. G. Buzzo and Mrs. Loomis. It consists of a framework entirely covered with branches having oranges upon them. This exhibit is made by Mr. Geo. E. Pinder, of Los Gatos. The monument is covered with 1902 oranges and surmounted by a Japanese dwarf orange tree bearing fruit. Near the monument is a pyramid of oranges entered by Mr. Pinder.

Tree Bearing Oranges.

Perhaps the most interesting object is the bearing orange tree in the center of the hall. This was brought from Mr. C. Yocco's grove, near Los Gatos. The tree is growing in a four-foot cubical box of earth, and is seven feet high, with a nine-foot spread of branches. The trunk is four or five inches in diameter, and forks a foot and a half above the ground. There are now 300 oranges upon it. It is a very beautiful and symmetrical specimen, and attracts much attention.

Fine Walnuts.

D. C. Vestal, of San Jose, exhibits a box of English walnuts. The tree that bore them was grown from a seedling scion, grafted upon an Eastern black walnut root. The seed was brought from Valparaiso, Chili, by the late Philip Biddle, and was planted by Mr. Vestal. One tree, which is now 29 years old, is two feet in diameter, with a 60-foot spread of limbs, and is 30 feet high. From three trees of this variety he sold this season $70 worth of nuts at 13 cents per pound, after retaining a barley sack full for family use. The nut is very heavy, looks like the Prœparturiens, has an exceedingly rich flavor, and a thin shell that can easily be crushed in the hand. These trees are regular and heavy bearers, never having been bitten by frost. No irrigation is required.

The soil of Mr. Vestal's place is a sandy loam in the artesian belt. He has two large artesian wells, one 464 feet, and the other 500 feet deep, with a constant flow of about 60 inches of water, which will rise some 15 feet above the surface of the ground. He makes a specialty of raising the Moorpark apricot, black Tartarian and black Bigarreau cherries, egg plums, and peaches.

Mr. Vestal also has on exhibition some cherry-wood from four-year-old trees of the black Bigarreau variety. These shoots are fruit-bearing wood taken from the top of the trees and are over nine feet long and two inches in diameter. The soil in which the trees grow is a loam extending to a depth of 22 feet to surface water, lying upon a bed of clay 70 feet thick. Under the clay the first artesian water is found.

The Evergreen Exhibit.

One of the finest collections to be seen in the hall is that from the vicinity of Evergreen. The long table is covered with dishes of fruit from this favored locality, while over the middle of the table is a rack loaded with clusters of oranges and lemons, from green to ripe, making a most charming scene.

Charles C. Smith has some very fine large oranges, of delicious flavor, neither too sweet nor too sour. The trees from which these were taken are five years old, and bore 100 oranges each. His lemons are among the largest on exhibition. The trees bore about 650 each. He claims that their flavor is superior to that of the imported.

D. B. Fuller's raisins are rich in sugar, and his seedless seedling oranges are unusually fine.

Gilbert Cain shows excellent lemons and limes.

A. J. Fowler exhibits some very large lemons and some sweet oranges.

Messrs. P. Prellier and Pludhome have a fine collection of almonds, English walnuts, oranges, green beans, quinces and olives.

F. H. Babb exhibits a collection of sweet oranges.

A table space of 15x3 feet is used by W. H. Brundage's collection brought from Dr. A. E. Mintie's ranch in the foothills east of Evergreen. There is a beautiful cluster of large oranges hanging from the rack above the table. There are on the table a good many large oranges of great beauty, including some large Chinese. There are also fine almonds, English walnuts and lemons. Some of the orange trees on Dr. Mintie's place are said to be 15 years old, being among the earliest set out in Santa Clara valley.

C. Yocco's Exhibit.

On C. Yocco's table the fruits have been artistically arranged by Mrs. A. P. Hill in squares, crescents, triangles and cornucopias. One square, made of olives, is edged with oranges and has at its center a four-pointed star composed of lemons. In the center of the lemon star is a circle filled with dried olives. Mr. Yocco's oranges are of a superior quality, and his lemons show all stages of growth from the green to the ripe fruit.

Floral Designs.

The designs of winter flowers form one of the leading features of the fair. Mrs. E. O. Smith enters a large variety tastefully arranged on the right of the stage in a rockery 10 feet long, 6 feet wide, and tapering to a hight of 7 feet. Grottoes, lakes and pools, with the water represented by glass, give the artistic display of flowers, reeds and ferns a most striking and natural appearance.

A cornucopia of oranges within a horseshoe of marguerites and ferns, by Mrs. A. P. Hill, is very attractive. A lyre made of laurestines, with alternate strings of red and of white immortelles, by Mrs. Dr. A. J. Cory, looks as if it might, in skillful hands, give out strains of music. Mrs. L. F. Paddock has entered a pyramid of fire and calla lilies, interspersed with laurestines. Mrs. O. F. Alley, of the Willows, has sent in a beautifully designed frigate, two feet long.

Stanislaus County.

George A. Goodell, of Knight's Ferry, makes an exhibit of a large quantity of very beautiful oranges, grown at an elevation of 450 feet above the level of the sea. Three of his trees are said to yield an average of 2600 oranges annually. He shows some dried figs, 75 drums of which were produced by one tree last season.

Large Yield of Oranges.

Isaiah Shaw, of Berryessa, exhibits the large yield of nine boxes of oranges from two trees, and one box of lemons. The oranges are arranged in pyramids with square and triangular bases. Upon his table are to be found some almonds of unusually large size and a bunch of scions loaded with almond blossoms. Mr. Shaw has brought a beautiful lemon tree, growing in a box filled with earth, and bearing a load of fruit.

Late Grapes.

J. W. Fuller, of Saratoga, has placed in the fair several bunches of Muscat grapes, which remind one of the last rose of summer. He has also a collection of beautiful oranges.

J. Cunningham, of Saratoga, shows a box of fine lemons, four boxes of excellent oranges, almonds, English walnuts, dried prunes, and Japanese persimmons. A strange freak is seen in what was in its incipiency three lemons, but which has grown into queer shapes. The largest part is a cylindrical lemon two inches long by three-fourths of an inch in diameter. The other two lemons attached to the longest parts have developed into pipe-stem growths three inches long and a quarter of an inch in diameter.

Design of Beets.

A humorous design of an Indian, four and a half feet in stature, made of six red beets, attracts considerable attention. This work of art bears no name, but is labeled as grown on Fourteenth street without irrigation. The head and face are quite natural. The nose is represented by an onion and eyes by onions cut across the layers. The beet taking the place of the body of the Indian is two feet long by eight inches in diameter. The arms, which are slightly akimbo, are almost perfectly represented by beets 18 inches long, while the thighs and calves are properly developed beets two feet long by four and one-half inches in diameter. Beet leaves represent the conventional costume of an Indian.

Several wags have tacked their cards upon his beetship with various inscriptions, one of which runs: "It takes six California dead *beets* to make a man."

Vegetables.

From A. E. Gish's place at Saratoga, comes a tomato-vine, with tomatoes grown in the open air, showing the absence of frost.

Some large red beets, two feet long by ten inches in diameter, were grown without irrigation, on the places of E. W. Harrison and Mrs. L. J. Watkins, of Fourteenth street, San Jose. M. D. French has placed on the same table some monstrous cabbages, 18 inches in diameter.

W. C. T. U.

On the west side of the hall, the ladies of the W. C. T. U., of Santa Clara Co., Mrs. A. M. Gates, president, have a booth. The department of county fairs is under the superintendency of Mrs. Emma McLellan. The booth, the object of whose maintenance is the distribution of temperance literature, is very tastefully ornamented with flowers, ferns, acacia blossoms, hollyberries, pampas-grass, and branches from pepper trees. The walls bear the pictures of famous temperance workers, and a silk banner, having the name of the organization.

Angora Goods.

Col. C. P. Bailey, the most extensive breeder of Angora goats in the United States, makes a fine display of his products, as well as a beautiful live goat, which is snow-white, with short legs and spiral horns. His fleece hangs in spiral ringlets, from 6 to 12 inches long. Clipping time comes once a year—in the spring—before the fleece loses its oil, which renders it soft, lustrous and heavy, sometimes weighing 4 to 10 pounds, and worth 40 to 60 cents per pound. Plushes, serges, dress goods, braids, poplins, shawls, rugs and yarns are made from the fleece, which, when mixed with wool, is used in manufacturing hosiery, velvets, cloakings and fringes. The pelts are wrought into carriage robes and rugs, and the lower grade of skins into glove leather.

Mr. Bailey owns 8000 Angora goats, distributed among Mariposa, Battle Mountain, Nev., and Soledad. He has sold during the past five years over $50,000 worth of goats to people starting in the business. He organized the Angora Robe and Glove Company in 1875, but bought out their interest last January, and is now the sole proprietor of the business.

The rugs on exhibition are beautiful, silk-like, fleeced skins, gorgeously dyed. The plush robes manufactured from goats' wool are almost indestructible. The buckskin, seal and Angora goat skin gloves, of which $100,000 worth were made the past year, are of superior quality.

Paintings.

At the left of the stage hang three fine oil paintings of watermelons, oranges and lemons, the work of Mrs. J. E. Brown. The melons look ripe and as cooling as on a hot day in summer. The oranges are as natural as those on Mr. Pinder's monument near them. On the right of the stage is a painting of an overturned basket of ripe peaches. An excellent painting of a bunch of Tokay grapes and another of a bouquet of roses plucked last January are strikingly natural.

Your correspondent proposes to make some further notices of exhibits in your next issue.

Captain David Powell, manager of the excursion from Los Angeles, arrived Friday, Feb. 4th, with a party of about 70. Another excursion, under the management of W. Putnam, left Los Angeles on Thursday, in time to arrive here before the close of the fair, which may be continued another week on account of the rainy weather.

H. M. HAMILTON.

San Jose, Feb. 8th.

DRAFT HORSES—WHAT CHICAGO HORSE DEALERS SAY.—The unanimous opinion of all the principal dealers of horses in Chicago, who handle some 10,000 horses annually, is that the grade Percherons are superior to all other draft breeds for city use; that they sell for higher prices than the English draft, Clydesdale, or any other draft horse, and they advise the farmers of the West to breed to Percheron stallions if they wish to raise the most desirable horses for the Chicago market.—*Chicago Tribune.* M. W. Dunham, of "Oaklawn Farm," Wayne, Illinois, has imported from France nearly 2500 Percheron horses, and now has on hand about 500 head, nearly all recorded with their pedigrees in full in the Percheron Stud Book of France. All careful purchasers demand certificates of such registration as the only reliable evidence of purity of blood, many horses of unknown blood being imported and sold as pure bred.

Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

POULTRY.

T. D. MORRIS, Sonoma, Cal. Extra fine Wyandotte Cockrels for sale cheap. Address, inclosing stamp.

J. N. LUND, Box 116, Oakland, Cal. Wyandottes, Langshans, L. Brahmas, P. Rocks, B. Leghorns, B. B. R. Game Bantams, T. Guineas, Hom'g Antwerp Pigeons.

WILLIAM NILES, Los Angeles, Cal. Thoroughbred Poland-China and Berkshire Pigs. Circulars free

HORSES AND CATTLE.

BEAUFORT.

NEW IMPORTATION

—OF—

NORMAN STALLIONS.

Theodore Skillman has just arrived from France with the choicest importation of Norman Stallions that has ever reached the Pacific Coast. Mr. Skillman has selected these horses from the best in France, with a view to the improvement of draft horses on this Coast. They are young and sure to suit the tastes of intending purchasers as regards color, etc., a number being coal-black. He has also on hand some Imported French Coach Stallions. These horses are now very popular in the East and have long been the favorite carriage horses of France. Their merits speak for themselves. Come and inspect this rare collection of horses and be convinced that they are the best ever seen on this Coast.

S. F. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Feb. 9, 1887.

Timely rainstorms in the valleys and deep fall of snow in the mountain ranges have dispelled all fears regarding crops, and created a more cheerful, hopeful feeling. Trading in all lines of produce the past week was light, owing to the heavy rainstorms, but values ruled higher in everything except cereals. European wheat cables the past week were fairly steady. Today's cable was as follows:

LONDON, Feb. 9.—Cargoes off coast, very little inquiry. Cargoes on passage and for shipment, steady. Mark Lane, quiet. Cal. wheat off coast, 36s 9d. Cal. wheat just shipped, 38s 3d. Cal. wheat nearly due, 36s 9d. Liverpool wheat, spot, rather more inquiry. Liverpool wheat, Cal. 7s 2½d to 7s 5½d. Weather in England, cold.

Foreign Review.

LONDON, Feb. 8.—The *Mark Lane Express*, in its weekly review of the British grain trade, says: The condition of the English wheat offered has shown no improvement, and as a result there have been slow sales and lower values, both in London and the provinces. The sales of English wheat during the week were 44,300 quarters, at 34s 3d, against 67,437 quarters at 20s 9d during the corresponding period last year. It is estimated that the deliveries of English wheat from the beginning of the cereal year, 1886-87, has been 18 per cent, and under those for the same period in 1885-86, country flour, 6d lower. Trade in foreign wheat is stagnant. The arrivals have been heavy and stocks are increasing at Liverpool, Bristol and London. Australian shipments are commencing, and the new crop of the Argentine Republic, Chili and India, will soon be on the way here; therefore, if peace is maintained there will be no change for higher values. Flour is dull at unchanged prices. Corn is unhardened, and prices have advanced 3d. Oats are firmer, and have recovered 4d. To-day English wheat was in bad condition and very difficult of sale. Corn was dull; oats were 3d dearer, and barley and peas were unchanged.

Crops at the East.

CHICAGO, Feb. 6.—In this week's issue of the *Farmers' Review* the following summary of crops will appear: The wheat fields of Ohio, Indiana, Illinois, Missouri and Kansas, at the close of last week, were generally bare of snow, while those of Michigan and Wisconsin were well protected. The amount of attendant injury resulting from the disappearance of the snow, thus far, has been light, though occasional reports of damage from freezing have already been made. The movement of corn is scarcely perceptible in Iowa, and is very slow in Minnesota, Missouri, Indiana and Ohio, owing to bad roads, though stocks are reported low in all the States named. The reports show also that there is a very slow shipping movement of potatoes in all the Western States, and light supplies are generally reported.

NEW YORK, Feb. 6.—In wheat, the aggregate business for the week has been extremely limited. Both shippers and millers are holding off. The continuance of the strike has been a great hindrance to business, and contradictory war news from day to day has added to the dullness, hesitation, and distrust. Spot closed ¼c lower for the week, and futures steady, with prices down ½@⅝c as follows: February, 92c; March, 92⅞c; April, 93⅞c; May, 95c; June, 95¾c; and July, 96½c.

Eastern Wool Markets.

BOSTON, Feb. 5.—There is no material change in the position of the wool market this week. A full average business, amounting to 3,238,100 lbs, has been accomplished. Holders are offering samples cautiously, and only on full limit of valuation. Advices from all points are encouraging. The firmness of the London auction sales has been sustained. All kinds of desirable domestic wools are meeting with a steady demand from the manufacturers. There is no special activity in any one kind. A remarkably steady market is found on every hand in comparison with the corresponding time last year. The prices then ruling were about on a level with present values, the difference being so slight as to be hardly noticeable, and is not at the outside more than 1c. There has been more demand for California wool, and in addition to the sales of Spring wool reported, there are quite large sales of Fall wool pending. A round lot of Spring wool has been sold, amounting to 27,000 lbs, at 27c, which is part of very choice Humboldt clip, and is an outside price. There is very little wool now on the market, it being held at 25c, and from that down. Other sales embraced 145,000 lbs Spring and 13,000 lbs Fall on private terms; 150,000 lbs of Oregon sold at 17@25c. The receipts of the week have been 7028 bales domestic and 2655 bales of foreign, against 3829 bales domestic and 3833 bales foreign for the corresponding week last year.

NEW YORK, Feb. 6.—The movement has been a moderate one all the week. Indirectly the strikes and war rumors have had some effect in limiting business. The situation otherwise remains steady on the better class of wools, and offers no cause for alarm. There is a pretty good supply of Territory wools on hand. Among sales were 12,000 pounds Spring California at 21½c; 15,000 pounds Valley Oregon at 26c, and 12,000 lbs Territory at 18½@23c. The Philadelphia market is moderately active, and manufacturers are operating with a fair degree of freedom for well-assured wants, and prices are well maintained. Among sales were 14,000 pounds Oregon fine at 29¾c; 10,000 pounds Territory fine at 25c; 10,000 pounds Territory fine and fine medium at 22c; 2000 pounds Territory black at 24c; 2000 pounds Territory black at 18c; and 5000 pounds California defective at 16½c. The Boston market is almost destitute of any leading and well-pronounced feature. Its tone is not so strong and healthy. Much of the wool is held above quotations. Among sales were 100,000 pounds California at 26@27¾c; 55,000 pounds East Oregon at 24@25c; and 40,000 pounds Territory at 20@26c. Imports of wools last year were 131,263,103 pounds, against 100,000,479 pounds in 1885, the value being $17,403,099 in 1886, and $12,219,251 in 1885. Exports were 10,219,985 last year, and 2,350,364 in 1885, the value being $1,165,285 in 1886, and $345,958 in 1885.

New York Hop Market.

NEW YORK, Feb. 6.—The market is firm for choice 1886 Pacifics, which are scarce and wanted. Ordinary grades of hops are plentiful and hard to sell, even at concessions; choice 1886 New York State, 25c; prime to choice 1885, 11@13c; Pacific Coast 1886, choice, 23@25c; fair to good do, 18@22c; good to prime do 1885, 8@10c.

Dried and Canned Fruit at the East.

CHICAGO, Feb. 6.—The dried fruit market is steady and firm. Country orders are moderate and there is in turn a fair demand for all descriptions from local jobbers. Apples are about the only description of which there are any offerings on the open market, and there are not many of these. Other kinds of fruit are centered entirely in second hands, and holders are firm. California varieties are in moderate demand, at the following prices, by the pound: Prunes, French, 8½@11½c; plums, pitted, 11@13c; peaches, halves, 12@14c; halves, pared, 20@25c; figs, 6@8c; nectarines, 9c; pears, 8@11½c; raisins, London layers, 20-lb boxes, per box, $1.45@1.50; loose Muscatel, per box, $1.30@1.35.

NEW YORK, Feb. 6.—In canned goods the demand from consumers is showing some improvement, and large operators are in the market. For tomatoes, there has been an active demand for next year's pack. It is reported that 55,000 cases have been contracted for at 92½c@$1. California canned fruits are firm, as the stock is not excessive. Peaches, $2.50@2.75; pears, $2.50@3.25; plums, $2.25@2.50; grapes, $2.25; apricots, $2.15.

Dried fruits—California loose raisins, $1.55@1.90; London layers, $1.70@2. The *Commercial Bulletin* says: California raisins, some inferior, are now coming forward to this market, but the most objectionable feature of the receipts is the fact that supplies in many instances are being consigned to parties in no way connected with the trade, and they, with a view of realizing upon their holdings, are pressing them upon the market. There has been renewed activity in Turkish prunes; sales are reported of 300 casks, ranging from 6@6¾c, which disposes entirely of every parcel of importance on spot in outside hands; French are in fair demand and firm at 8¼@8½c for 60's and 90's. Citron is in demand at 18½@19c. Currants are weak at 4¾c.

California Products in New York.

NEW YORK, Feb. 6.—California yellow mustard-seed, dull, quoted at 3¾@4½c. California honey is moving more freely. There is considerable stock here, but the more liberal distribution gives strength to the market. Amber, in lots, quoted at 4¾c, and white, 5c.

California Fruit in Chicago.

CHICAGO, Feb. 6.—There was a little more doing in oranges, owing to the weather having moderated, but there having been several days of dullness, holders are very willing to sell. Prices were easy, but not materially changed. California bright Riverside, $3@3.50; California Navel oranges, $5@6.

Local Markets.

BAGS—The market is claimed to be stronger for grain bags, owing to the rains having improved grain crops. As yet transactions are light. For Calcutta, May-June delivery, 5¾@6 cts is asked.

BARLEY—The market, under heavy rains and a bear raid, had a severe backset, but at the close today prices are higher, with an advancing tendency. On Call, to-day's sales were as follows:

Morning Session: Buyer season — 700 tons, $1.05½; 400, $1.05⅝; 1200, $1.05¾; 500, $1.05⅞; 1300, $1.06; 300, $1.06¼; 700, $1.06¾; 100, $1.06⅜; 300, $1.06½. Seller season —200 tons, $1.01¼; 100, $1.01½; 100, $1.01⅝ ₱ ctl. Afternoon Session: Buyer season—900 tons, $1.06¼; 100, $1.06⅜; 1600, $1.05½; 100, $1.06⅝; 600, $1.06¾; 1000, $1.06⅞; 200, $1.07. Seller season—100 tons, $1.01⅝ ₱ ctl.

BUTTER—Owing to lighter receipts and stocks well cleaned up, prices are higher, but it is claimed that receipts will soon be on an enlarged scale.

CHEESE—The market continues to hold to strong prices, under light stocks and a good demand, It is claimed that heavy receipts will soon set in.

EGGS—The market is a shade higher, and strong at the advance, owing to lighter supplies by reason of bad roads.

FLOUR—The market is steady at current quotations.

WHEAT—The market for sample parcels is very dull, but still holders are slow to make concessions. The supply in the State is light for this time of the year, with the bulk in the hands of strong parties. The market which weakened off closed stronger today. On Call, to-day's sales were as follows:

Morning Session: Buyer season—700 tons, $1.55⅞; 200, $1.55¾; 100, $1.55½; 200, $1.55⅜; 4000, $1.55¼; 100, $1.55⅛ ₱ ctl. Buyer 1887—200 tons, $1.59; 200, $1.59½ ₱ ctl. Afternoon Session: Buyer season—100 tons, $1.56; 200, $1.55⅞; 800, $1.55¾; 600, $1.57⅝; 500, $1.55½; 600, $1.55⅜; 900, $1.55¼; 700, $1.55⅛; 100, $1.55. Buyer 1887—300 tons, $1.60; 500, $1.59½; 100, $1.59⅛ ₱ ctl.

Market Information.

Cereals.

The Cincinnati *Price Current* furnishes the following calculation as to wheat consumed and exported in the past six months, probable exports prior to July 1, 1887, etc.:

	1886-87.	1885-86.
Total supply July 1.....	80,000,000	150,000,000
Unavailable.....	50,000,000	50,000,000
Available supply July 1....	30,000,000	100,000,000
Crop.....	457,000,000	357,000,000
Total available supply....	487,000,000	457,000,000
Exports 6 months to Jan. 1.	77,000,000	39,000,000
Consumption to Jan. 1....	141,000,000	138,000,000
Seed requirements, year...	53,000,000	53,000,000
Disposed of.....	271,000,000	230,000,000
Available supply Jan. 1....	216,000,000	227,000,000

It is added that the "domestic requirements for consumption for six months to July 1 next will be approximately 143,000,000 bushels, which will leave 73,000,000 bushels available for export, by reducing reserves to minimum point, or 30,000,000 bushels lower than on July 1 last, which would compare with the low point in 1882."

General rainstorms throughout the State, with a heavy snowfall in the mountain ranges, have dispelled, to a very great extent, the clouds of distrust regarding this year's crop. The croakers of two weeks ago have gone to the other extreme, and now unhesitatingly claim that the yield this year will be in excess of that of last year. While present crop prospects, for the land already seeded, are of the best, yet no one can foretell the future, for hot north winds that usually come in May or June may decimate many fields of grain, but still it is hardly likely that the hot winds will come in any force this year until the crops are well secured. This has been the experience of former seasons, when the rains held off late. Even if we escape the north winds, still the acreage seeded to wheat is below last year's, and in many sections it is now too late to seed to wheat. From present information, and allowing a fair percentage for damage to some grain fields later on, it is safe to say that our exportable surplus, from this year's crop, will be about 500,000 short tons, but then the carry-over from this season into the season of 1887–88 will probably be slightly more than was carried over from 1885–86 into 1886–87. Eastern advices are, taken as a whole, not so favorable regarding Western crops as were given out last year at this time, but then it is too early to form a correct idea as to the outturn, for the spring weather is the controlling influence. European advices are essentially unchanged; taken as a whole, they are fairly favorable for an average crop. Australian advices give a larger outturn than last year; in the Victoria colony the yield was 12,000,000 bushels, which gives an exportable surplus of about 130,000 to 150,000 tons, or about 60,000 tons in excess of the quantity exported the preceding haryest.

Trading, the past week, in the local wheat market was exceedingly light, owing to shippers holding off, and holders not disposed to make much concession in their asking prices until a better idea of the beneficial effects of the rainstorms are known. In futures on Call, transactions were large, with the bears hammering down prices each day, yet options have not been broken to as low figures as many were led to expect they would be, with a general rainstorm reported in the State.

The Messrs. C. A. King & Co., of Toledo, furnish the following figures of total reported European and American stocks of wheat in bushels:

	——000 omitted——			
Stocks, bushels.	Jan. 1, 1887.	Jan. 1, 1886.	Jan. 1, 1885.	Jan. 1, 1884.
Visible supply wheat.	62,700	58,400	47,996	35,507
Stocks California....	13,400	19,000	27,200	11,700
Stocks U. K.	15,800	25,600	16,900	29,900
Am't on pass. U. K.	16,500	14,000	16,400	16,700
Am't on pass. contin't	5,900	1,300	3,180	2,780
Totals, bushels...	114,300	118,300	111,676	96,587

Heavy rains, and buyers confining purchases to actual requirements, created a lower barley market for all grades up to Monday, when a steadier feeling set in at the decline. The heavy rains have caused a better inquiry to prevail for seed. The consumption of feed barley is reported to still be very large, while the demand for brewing is increasing, but only in, as yet, a small way. Advices from the agricultural districts report a less acreage seeded so far than for the like time in 1885-86, but it is claimed that plowing and seeding will be done in an extensive way this month. On Call, transactions in futures were on a very large scale, with heavy buyers taking all offered, at a decline of from 8 to 10 cts per cental on last week's prices.

Corn, like other cereals, has labored under the weather influence, which, with free receipts from the West, caused a dull and depressed market to obtain. Choice grades of corn continue scarce, but the demand is slow.

Oats continue to come to hand freely from the Western States, keeping our market down. The stock of choice is light, as is the supply, but the other grades are in heavy stock, and favor buyers.

Rye is in better supply, with the demand slow.

Buckwheat moves slowly.

Exports of flour from this port in January were 72,776 bbls., against 80,000 in January, 1886. For the first seven months of the crop year, the exports were 683,900 bbls. against 673,414 in same time last crop year. Reducing the flour to wheat we have total exports of wheat since July 1st of 11,397,000 ctls., valued at $15,725,000, against 7,084,000 ctls. at $10,095,000 in the same period last crop year.

Feedstuffs.

Under heavy rainstorms, the receipts of hay the past week were lighter, but as the demand was also light, no marked changes were noted. Buyers confine purchases to immediate wants, under the impression that prices will recede with clearer skies; but dealers say that the supply of the better grades to come forward is light, and consequently not much if any lower prices can be expected to obtain up to next harvest. The consumption is very heavy, owing to cold weather.

Ground feed is reported unchanged in prices, although a good demand is said to rule for this time of the year.

Fruits.

Under lighter receipts and a fair demand, oranges are in better feeling. Limes are stronger, while lemons are steadier. The consumption of oranges is reported to be fully up to last year.

Oregon continues to send us liberal supplies of apples, which move off freely at quotations.

Dried fruits have a strong tone, with the more choice packed fetching an advance on top quotations. The consumptive demand is fair, while the Eastern demand is reported to be good.

Raisins, unless well selected, packed and put up attractively, are hard to sell, except at concessions. It is claimed that in the Eastern markets, strong selling competition by commission merchants is against the market.

Live-Stock.

Timely rains have created a firmer tone in the live-stock market, with a strong probability that a higher range of values will soon follow. In beef cattle there is a falling off in the offerings, necessitating slaughterers to pay full up so as to have their wants met. Mutton sheep are also in lighter supply. Reports from the interior are to effect that the cold weather killed large numbers of lambs. Hogs have a still stronger tone. In milch cows a better inquiry is reported, but buyers are slow in naming higher prices. Horses, it is claimed, will soon be in better demand, particularly for railroad building.

The following are the wholesale rates of slaughterers to butchers:

BEEF—Extra, 7@7½c; first grade, grass fed, 6½@7c per lb.; second grade, 5½@6c; third grade, 5@—c.

MUTTON—Ewes, 5@—c; wethers, 5½@—c.

LAMB—Spring, 6@7c. Yearlings, —c.

VEAL—Large, 7@8c; small, 9⅛ to 10c.

PORK—Live hogs, 3¼ to 3¾c for heavy and medium; hard dressed, 5⅛ to 7c per lb; light, 3 to 3¾c; dressed, 5 to 6c; soft hogs, live, 2 to 2¾c. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Vegetables.

Under light receipts, the market is well cleaned up, and a good demand ruling, potatoes have advanced, with a strong market at the close.

New potatoes are coming in fairly well, but high prices restrict the demand.

Sweet potatoes are in light stock and strong.

A continued heavy shipping demand has advanced the price of cabbages to a still higher range. It now looks as if the top has not been reached. Cauliflowers are stronger, as are root vegetables.

Onions are doing better under moderate receipts and a fair demand. Choice, hard are scarce.

Green cucumbers are in the market. Green peas, string beans and tomatoes come in sparingly, and, consequently, command fancy prices.

Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1887.	1886.
On the way.....	205,710	142,264
In port, disengaged.....	93,850	102,142
In port, engaged.....	17,509	59,303
Totals.....	317,069	303,709

The above gives a carrying capacity as follows: 1887, 500,415 short tons; 1886, 484,760 short tons; increase over last year, 15,655.

In poultry, receipts are light, but the very low prices at which wild game is sold operates against higher prices.

Quails, geese, ducks, and hares are in oversupply and hard to sell. Several consignments had to be dumped.

Hops are more strongly held by holders, owing to improved advices from the East.

In wool there is nothing new to report here, but dealers claim that it is only a question of time when higher prices will prevail.

Honey appears to be stronger, but as yet no advance in prices has been noted.

Tallow is scarcer, but improved pasturage, it is claimed, will bring in more liberal supplies later on, owing to live-stock taking on more flesh.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

WEDNESDAY, Feb. 9, 1887.

List of U. S. Patents for Pacific Coast Inventors.

From the official report of U. S. Patents in DEWEY & Co.'s Patent Office Library, 252 Market St., S. F.

FOR WEEK ENDING FEBRUARY 1, 1887.

357,139.—CHEMIST'S BALANCE—Attwood & Taylor, Oakland, Cal.

356,977.—WATER-WHEEL BUCKET—L. Biggio, Sutter Creek, Cal.

356,983.—MUSIC LEAF-TURNER—P. L. Carden, Dixon, Cal.

357,063.—PENCIL—W. C. Carlton, Baker Co., Ogn.

357,117.—TIME INDICATOR—J. H. Culver, S. F.

356,824.—GRATE—De Guerre & De Lano, S. F.

356 829.—REEL-SUPPORTING ARM—J. B. Gemmill, Red Bluff, Cal.

356,941.—PHOTOGRAPHIC CAMERA—Oliver Hyde, Vallejo, Cal.

357,151.—HARROW—D. Lubin, Sacto.

357,152.—CLOD CRUSHER AND PULVERIZER—D. Lubin, Sacto.

356,948.—DUMB-WAITER STOPS—J. J. Mahoney, S. F.

356,960.—TROUSERS STRETCHER—C. E. Ray, S. F.

356,961.—BREECH-LOADING FIREARM—J. W. Redfeld, Glendale, Ogn.

356,855.—KITCHEN CABINET—B. C. Tabor, Salem, Ogn.

356,857.—WINDOW—Henry Tintrop, S. F.

NOTE.—Copies of U. S. and Foreign Patents furnished by DEWEY & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, $3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

THE Russian River Valley Immigration Association has been organized at Healdsburg, with the following officers: Pres., J. S. Young; Vice-Pres., J. D. Hassett; Sec., George Madeira; Cor. Sec., J. T. Coffman; Treas., E. H. Barnes.

Send for free circular describing most of these premiums, and any further information desired.

Books for the Household.

We desire to give our readers every advantage in obtaining useful books at the most favorable rates attainable. We offer below a number which we believe will be found acceptable to many readers of the RURAL, and the reduced prices at which we can furnish them to our cash-in-advance subscribers—POSTPAID—will place them within the reach of many.

WHAT EVERY ONE SHOULD KNOW.—A Cyclopedia of practical information. Gives full directions for making and doing over 5000 things necessary in business, the shop, the farm, the kitchen and the home. Recipes, prescriptions, trade secrets, law, art work, agriculture, etc. Compiled from the most reliable sources and alphabetically arranged by S. H. Burt. 510 pages, cloth. Postpaid 50 cents. Regular price, $1.

THE WAY TO DO MAGIC.—Illustrated. Plain directions to enable any one to become proficient in Jugglery and Legerdemain. 60 pages. Postpaid, 10 cents.

THE TAXIDERMIST'S MANUAL.—Illustrated. How to Collect, Prepare, Mount and Preserve all kinds of Beasts, Birds, Insects, etc. By Prof. Graham Allen. 64 pages. Postpaid, 10 cents.

KNITTING AND CROCHET.—A Guide to the Use of the Needle and the Hook. Edited by Mrs. Croly (Jenny June). 144 pages, 200 illustrations. Postpaid, 25 cents.

NEEDLE-WORK.—A Manual of Stitches and Studies in Embroidery and Drawn Work. Edited by Mrs. Croly (Jenny June). 126 pages, 200 illustrations. Postpaid, 25 cents.

LADIES' FANCY-WORK.—A Manual of Designs and Instructions in all kinds of Needle-Work, embracing Embroidery, Kensington, Lace-Work, Tatting, Net-Work, Wax Flowers, Painting on Silk, etc. Edited by Jenny June. 152 pages, 700 illustrations. 25 cents, postpaid.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it,* let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

TO THOSE WHO CONTEMPLATE TAKING UP THE BOOK BUSINESS, we wish to say that we are prepared to do better by them than any other house can afford. We carry the finest line of popular subscription books on this Coast, and by a system of training, can make a success of the most inexperienced. Book Agents, we ask you to look into this. Address for terms, books, and territory, BANCROFT & CO., 607 Market St., San Francisco.

Can consumption be cured? Yes. One man only, discovered the laws of gravitation. One man only, discovered the virtue of vaccination. And one man, after years of study and reflection, has discovered the cure for consumption. Dr. Pierce's "Golden Medical Discovery" IS ITS SPECIFIC. Send two letter stamps and get Dr. Pierce's pamphlet treatise on consumption. Address, World's Dispensary Medical Association, Buffalo, N. Y.

"Sweet Maud Muller."

Whittier's beautiful ballad contains a touching allusion to the many cares and sorrows which wear upon the "heart and brain" of a wife and mother. Thousands of weary, suffering women have found Dr. Pierce's "Favorite Prescription" a marvelous recuperator of wasted strength, and of sovereign efficacy in all those derangements and maladies peculiar to their sex, by reason of which the vitality is gradually sapped, and the cheek robbed prematurely of its bloom. Price reduced to one dollar. By druggists.

* * * * Young or middle-aged men, suffering from premature decline of power, however induced, speedily and radically cured. Illustrated book for 10 cents in stamps. World's Dispensary Medical Association, Buffalo, N. Y.

DAIRY MACHINERY.

Woolsey's Improved Steam Generator

Has all the requirements of a first-class Efficient and Economical Boiler.

Woolsey's Improved Steam Cheese Vat.

Constructed with a View to Equalizing the Temperature in every part thereof.

Received first premium at the State Fair in 1873, and in 1881. Its chief merit consists in being separate from the heater, thereby avoiding all artificial heat in the cheese-room.

This Generator and the Improved Steam Cheese Vat, which it is designed to operate, has **superseded all others** in the vicinity of Gilroy, and has received the highest praise from cheesemakers wherever it has been tried.

I CURE FITS!

When I say cure I do not mean merely to stop them for a time and then have them return again, I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my Infallible remedy. Give Express and Post Office. It costs you nothing for a trial, and I will cure you. Address Dr. H. G. ROOT, 183 Pearl St., New York.

Seeds, Plants, Etc.

BARREN HILL NURSERY

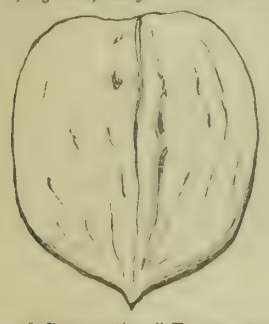
NEVADA CITY, CAL.

SPECIALTIES:

NUTS, PRUNES, AND GRAPES.

The Finest Collection of Nut-Bearing Trees to be found in the United States.

19 Varieties of Walnuts,



—INCLUDING—

CLUSTER WALNUT,

The newest, most prolific and valuable variety ever introduced into this country.

PRŒPARTURIENS,

Or Early-Bearing, or Fertile Walnut, introduced into California in 1871 by Felix Gillet. "Second Generation" Trees, grown from nuts borne on the ORIGINAL tree; 90% guaranteed to be "genuine Prœparturiens," or having retained the surprising characteristics of **precocity, fertility** and **hardiness** of the **original** Prœparturiens. "Third Generation" Trees, grown from nuts borne on **second generation** Prœparturiens, entirely California-grown; vigorous, hardy and fertile variety.

"Second Generation" Prœparturiens.

Serotina, Franquette, Mayette, Chaberte, Gant, Parisienne, Mesange Walnuts.

The leading varieties of Europe, highly recommended for beauty and quality of the nuts, fertility and hardiness of the kinds.

9 Varieties of French Chestnuts or Marrons (Propagated solely by grafting).

7 Varieties of Filberts.

4 Varieties of April Cherries, the earliest and most prolific in California.

207 Varieties of Grapes, including the very earliest Table varieties known, such as Blue Muscat, Ischia, Magdeleine, Malingre, Pearl of Anvers, Bulhery, Luglienda, Dupont, Gros Sapat, etc.

81 Varieties of English Gooseberries, all sizes, shapes and colors, and "true to name."

PRUNES! PRUNES!

LOT D'ENTE, OR "D'ENTE TRUE FROM THE ROOT."

We have ourselves given this name of "Lot D'Ente" to this type, so extensively propagated in the valley of the Lot (France). **True from the root** and not grafted, and which we have introduced into this country. This type of the D'Ente Prune is not at all propagated by grafting, which would do away with its chief qualities of being more vigorous, more **long-lived** than grafted trees, and a **gum-resistant** stock.

ST. CATHERINE, "True from the root."

This kind is altogether propagated **true from the root** in its home, valley of the Loire (France), and offers greater advantages than grafted trees, as being also more vigorous, more long-lived, and a **gum-resistant** stock.

APRICOTS — Boulbon, Esperen, Duclos, Mexico, the shipping varieties of the south of France.

Constantinople Quince—The largest, most precocious and prolific of all quinces.

Ever-bearing Black Mulberry of Spain—Medlar, Sorbus (all those kinds should have a place in all gardens).

Mulberry Trees for Silkworm Feeding. Silkworm Eggs. Sericulture Chart, 50 cts.

☞Send for General Catalogue and Supplement with Chapters on "Nut-bearing Trees" and "Prunes," illustrated with 20 walnut cuts, 5 prune cuts, and numerous other cuts representing Medlar, Sorbus, Black Mulberry, French Chestnuts, Filberts, etc.

FELIX GILLET,
Nevada City, Cal.

GRAPE SEED!

FINE, FRESH AND CLEAN.

I have for sale seed of **Vitas Californica,** proof against Phylloxera, which I will send at $1 per pound for 5 pounds or more, or $1.50 per pound for less than 5 pounds.

Vitas Californica Cuttings, $8 per 1000.

☞Freight to be paid by purchasers.

JOHN ROCK.
San Jose, California.

33d YEAR. STOCKTON NURSERY. 33d YEAR.

WHITE ADRIATIC,

SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Præparturiens, Macrocarpa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobolan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

TRY THE PERSIAN MULBERRY.

NO SCALE—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.
STOCKTON, CAL., October 27, 1886.

This is to certify that we the undersigned have this day thoroughly inspected the Stockton Nursery; that we found no Scale or indication of scale, and that to the best of our knowledge and belief the Stockton Nursery is free of this dreaded pest.

ARCTIC OIL WORKS,

Manufacturers of

INSECTICIDE!

FOR ERADICATING AND DESTROYING ALL PESTS THAT INFEST FRUIT TREES AND PLANTS, SUCH AS

SCALE BUG, HARVEST FLIES, TREE HOPPERS, PLANT LICE, Etc.

It has been fully tested by the Agricultural Department of the State University, and pronounced a success, the endorsement of which we append. It is put up in convenient forms for use both in liquid and paste state.

For Sale in Barrels and 2 and 5-pound Cans in paste form, and in Barrels and 5-gallon Cans in liquid form.

Copy of Letter Received from the University of California, College of Agriculture, Berkeley, dated December 4, 1886.

J. N. KNOWLES, Esq., Manager Arctic Oil Works, San Francisco—DEAR SIR: We have lately tested the Insecticide preparation of Whale-Oil Soap sent by you to us, and have found it to be very effectual against the Scale infesting Orange and Bay Trees here; also against the Thrips. From our previous experience with a similar composition, I think it will be found fully effectual against any small Insect Pests not specially protected like some of the armored Scales, and against which any Wash short of strong lye cannot be used. Respectfully,

E. W. HILGARD, Professor of State University.

OFFICE, 28 California St., San Francisco, Cal.

B. V. CUTTINGS.

Bordeaux Varieties.

I OFFER FOR SALE, AT $10 PER M., 200,000 CUTTINGS of the following renowned varieties, tule-packed, F. O. B. at depot: Cabernet Sauvignon, Cabernet-Franc, Merlot, Verdot, Malbec, Tinturier, Portal-Ploussard, Mondense, Petite Sirrah and Grosse Blue. Also from $2.50 to $5.00 per M. all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price. Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

21 LARGE GREENHOUSES
33d YEAR. 700 ACRES.

THE STORRS & HARRISON CO. PAINESVILLE, OHIO.

What Mr. Beyer says:

"Please accept my best thanks for the splendid seeds received from your firm. It would be a rather lengthy list if I should name all, but will say that amongst 38 first, and 3 second premiums awarded me at our fairs in Northern Indiana and Southern Michigan, 28 first premiums were for vegetables raised from your seeds. What firm can beat this?"

AUGUST BEYER, So. Bend, Ind.

Seed of this quality I am now ready to sell to every one who tills a farm or plants a garden, sending them FREE my Vegetable and Flower Seed Catalogue, for 1887. Old customers need not write for it. I catalogue this season the native wild potato. JAS. J. H. GREGORY, Seed Grower, Marblehead, Mass.

BURPEE'S FARM ANNUAL FOR 1887

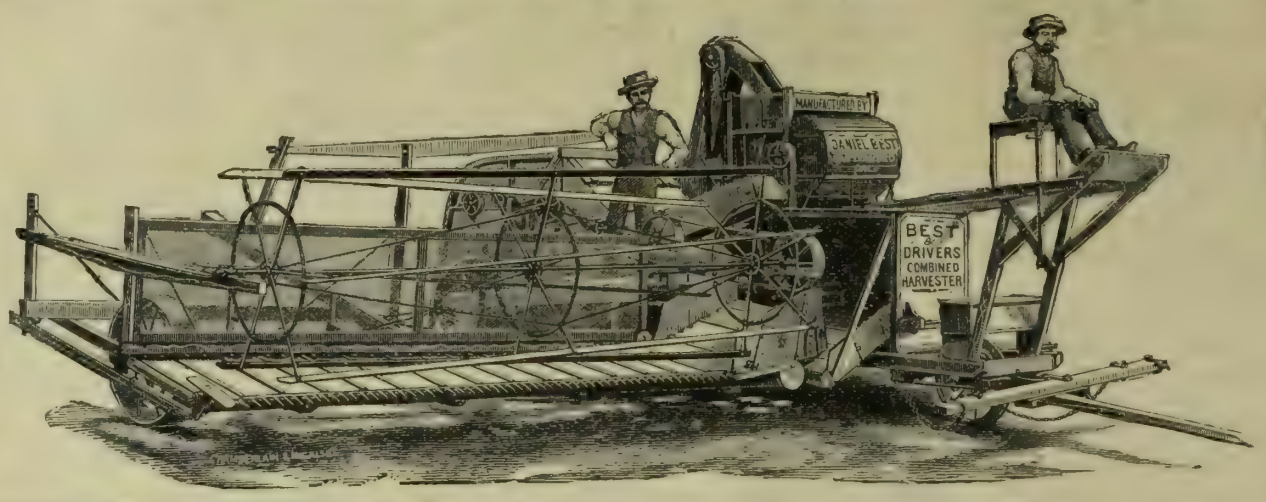
Will be sent FREE TO ALL who write for it. Send address on postal for the most complete CATALOGUE published, to

It is a Handsome Book of 128 pp., with hundreds of illustrations, 3 Colored Plates, and tells all about THE BEST GARDEN, FARM and FLOWER SEEDS, BULBS, PLANTS, Thoroughbred Stock and Fancy Poultry. It describes RARE NOVELTIES in Vegetables and Flowers of real value, which cannot be obtained elsewhere.

W. ATLEE BURPEE & CO., Philadelphia, Pa.

BEST & DRIVER'S IMPROVED COMBINED HARVESTER for 1887

Manufactured at the



DANIEL BEST AGRICULTURAL WORKS, San Leandro, Cal.

STANDARD SIZE

—IS—

14 Feet.

Will make any size that is ordered.

Belt

—AND—

Geared.

The BEST & DRIVER IMPROVED Combined Harvester, without doubt, will be the Leading Machine this season, is the verdict of all those who have inspected it.

IT HAS VALUABLE IMPROVEMENTS THAT ARE NOT FOUND IN ANY OTHER COMBINED HARVESTER MANUFACTURED. SPACE WILL NOT ALLOW US TO ENUMERATE HERE; AN INSPECTION OF THE MACHINE WILL CONVINCE YOU.

The Gearing is composed mostly of Spur Wheels, and so compactly arranged that should the frame of the machine weave because of the unevenness of the ground, there would be no danger of the gearing getting out of line, causing it to cut or bind in the boxes, which occurs with other Harvesters in which the gearing is more scattered.

We have succeeded in getting that combination of Lightness, Adaptability and Strength which is the result of thought and skill, taking from some parts and adding to others, making our Harvester from four to six horses lighter draft, and yet retaining as great strength as the heavest machine manufactured. The Header is very rigid and so balanced and hinged that it is no trouble to save down and tangled grain. A boy ten years of age can manage it.

I wish to call your attention particularly to the separating qualities of my Harvester. The agitators are so arranged that the grain is completely shaken from the straw, and my new AUTOMATIC GOVERNOR on the fan completely governs the blast on the shoe, so that at any speed which the machine travels, the blast will be the same. Making a saving of a great amount of grain that would otherwise be blown over the riddles; but, instead, will go into the sack, which in a season will more than pay the harvesting expenses, over and above any **Combined Harvester** that has not the **Automatic Governor.**

Each **Harvester** has one of my celebrated **Grain Cleaners** attached, which needs no recommendation from me, as the grain growers of California can testify as to its merits and superiority over other Cleaners on the Coast.

Every machine is thoroughly tested before it is allowed to leave the factory, so there will be no trouble or vexatious delays in the field. The Lumber is thoroughly kiln dried that we use in the construction of our Harvesters, so that they will not fall to pieces under a hot sun.

Please call at my Works, near the Depot, San Leandro, and examine our Harvester. I have sample machine belted and attached to the power of the factory, and will take pleasure in showing how it works, so that you can become familiar with the working of the machine before taking it into the field.

IMPROVED GRAIN CLEANERS, and MILLS.

I desire to call your attention to my latest Improved Cleaners that I make for any and all Combined Harvesters. The great success I have had with my Cleaners, made to run with Thrashing Machines, as well as the satisfaction given by my Fanning Mill and Warehouse Mill, induced me to design and build a Cleaner, especially for the Combined Harvesters. I make the following sizes, viz:

45-inch for 18-foot cut and over.
40-inch for 14 to 18-foot cut.

This Cleaner is the most successful Combined Harvester Cleaner ever offered to the public, and I can guarantee it to be the most perfect Cleaner now in use. I have made a great many valuable improvements that have never yet been introduced, the merits of which will be quickly understood and highly appreciated by those who have use for the Cleaner. It is made strong and durable, and of such size and capacity that it will easily handle and thoroughly clean the grain as fast as any Combined Harvester will thrash it, and it has proven to be the only Cleaner, mounted on Harvesters, that will thoroughly clean foul grain, and make it merchantable.

PACIFIC RURAL PRESS

TWENTY-FOUR PAGE EDITION.

Vol. XXXIII.—No. 8.] SAN FRANCISCO, SATURDAY, FEBRUARY 19, 1887. [$3 a Year, in Advance; Single Copies, 10 Cts.

Yerba Mansa.

We give on this page an engraving of a native plant which, no doubt, many of our readers have observed, as it is quite a conspicuous plant and sometimes occurs in considerable masses, especially in the Southern counties, although it is widely distributed over the State. It is found in moist places and is most abundant where there is a tinge of alkali in the soil. It is a plant of valuable medicinal properties, and, for the purpose of giving opportunity to test these, some of the plants were set in the medicinal division of the Garden of Economie Plants at Berkeley. The root stock of the Yerba Mansa was much employed by the Indians as a remedy for a number of bodily ailments, and was probably most useful in diarrhea because of its astringent properties due to the amount of tannin contained in it.

We reproduce this engraving of the Yerba Mansa from the report of Dr. Vasey, Government botanist, in the Department of Agriculture Report for 1885. The botanical name of the genus *Anemopsis* was given because of the resemblance of its head or cone of flowers, with its white involucre, to an anemone. The plant is an herbaceous perennial, and grows in California, Arizona and Northern Mexico. It belongs to the natural order *Piperaceæ*. It has a thickish, creeping root-stalk, which has a pungent, aromatic, and astringent taste. From this proceeds a number of oblong or elliptical leaves, from two to six inches long and half as wide, on stalks as long as the blade. These leaves are entire, obtuse or obtusish, with a thick midrib and a two-lobed or heart-shaped base. From the same point also proceed one, two or three flowering stalks, six to eight inches high, which are naked below, near the top producing a broadly ovate, clasping leaf, and one or two leaves like the radical ones, but smaller, terminating with a conical, compact flowering spike, one-half to one and one-half inches long. This flower spike has at its base an involucre of five or eight whitish, oblong leaves, which look like petals, and are about an inch long. The true flowers are on the conical receptacle above the involucre. They are very small and numerous, each with a small, whitish bract at its base. Each flower has six to eight stamens, and three or four spreading stigmas joined below in a many-seeded ovary.

YERBA MANSA—Anemopsis Californica.

Beginning Betimes.—The directors of the Agricultural Park Association at Santa Rosa are clearly in favor of taking time by the forelock. At their regular monthly meeting, February 5th, it was the unanimous sense of the board, says the *Democrat*, that immediate steps should be taken to arrange for a fair this year. To that end various committees were appointed, including a general Committee on Exhibits, for the purpose of bringing out a more complete representation of the products of Sonoma county than has ever been displayed.

War's Lessons.—Our well-known contributor, Edward Berwick, lately delivered a lecture upon "War's Lessons," at Y. M. C. A. hall, in this city, ex-Governor Perkins presiding. In behalf of peaceful settlements of international differences, Mr. Berwick urged that wars are, first, *not* of a divine origin; second, costly; third, unnecessary; fourth, ineffectual. We have on hand and hope soon to publish an extended report of his address.

Gen. Greely, Chief Signal Officer.—On the 15th the President sent to the Senate the nomination of Capt. Adolphus W. Greely, of the Fifth United States Cavalry, to be Chief Signal Officer, with the rank of Brigadier-General. The promotion is generally commended, and except those who are disappointed at not securing the honor, every one appears well pleased. The President says he appointed him on account of his knowledge of the service and peculiar fitness for the place.

By the Isthmian Route.—The Pacific Mail and the Panama R. R. Companies having settled their differences, it is announced that but two steamers a month will leave S. F. for the isthmus after March 1st. An immediate rise in rates is looked for.

Wheat Culture in India has grown to such large proportions and yielded such liberal profits that Indian farmers are now giving more attention to the purchase of farming implements and machinery, and a large demand is looked for. English manufacturers are advised to inform themselves from the reports made to the Government every year respecting the results of the trials of tools, machines and implements in the different provinces, and Americans should take the hint.

The Southern Pacific land office is experiencing an increased demand for good agricultural land in the southern part of the State, and the sales so far this season exceed those for the corresponding period of last year. The prices in the aggregate are low.

The Legislature.

Our law-makers this winter have displayed a marvelous *penchant* for traveling. The State has been so thoroughly inspected that some of the members ought to be able to write its geography, draft a topographical map, climate and other etcetera furnished gratis. So bent are they on sight-seeing that no less than five committees last week seized their grip-sacks and started out in the rain to envisage the public buildings at Berkeley, visit the militia in their armories at San Jose, Stockton and other places, hold their noses and run through Chinatown; and the Committee on Fish and Game having little to do and anxious to see something, thought it would look enterprising to go up the mountain and take a look at the sawdust in the Truckee river. There they were snowed in and had to telegraph for money, provisions, and leave of absence. The last heard of them they were reciting "The Beautiful Snow."

It is gratifying to learn that both the Senate and Assembly Committees on Irrigation have been busily at work this week. It is among the most important measures pending. Upon the ability of the farmers and vegetable growers to secure the use of water for their crops, the prosperity of the State largely depends. It is a big question to tackle, and whether the present Legislature can come any nearer solving it than their predecessors remains to be seen. Wright's bill, introduced in the Assembly, and Abbott's bill, introduced in the Senate, seem to be attractive, if there is no "joker" hidden in the scheme. These bills provide for the creation of irrigation districts wherever there are 50 freeholders having land to be benefited by such use of water, and a two-thirds vote of the said district can be obtained. Such districts shall be governed by a Board of Directors, having the power to purchase all the land and water needed by condemnation, and to see that the water is distributed in the ratio of the area which the land of each owner bears to the total acreage of the district. The bill introduced by Assemblyman Vincent, of Fresno, relates to the same matter and is substantially the same. Any honest effort to secure an equitable distribution of water should be encouraged, rather than no step be made in this direction.

We here give the readers of the Rural an approximate idea of what it costs to enjoy the luxury of a Legislature every two years. These items are taken from the General Appropriation bill:

For per diem and mileage of Senators	$21,000
For per diem and mileage of Assemblymen	41,500
For pay of officers and clerks of Senate	5,500
For pay of officers and clerks of Assembly	6,500
For contingent expenses of the Senate	20,000
For contingent expenses of the Assembly	30,000

With such figures presented, the question doubtless arises whether it would not be more beneficial to the State to appropriate that vast amount of money for some benevolent public institution than to have it squandered in junketing trips by a lot of unscrupulous politicians. It may be interesting to figure the cost of each bill, taking as a basis that in 44 days four bills have passed both houses at the expense above quoted.

Dividing Tulare.—The scheme to make a new county in the Mussel Slough region meets with strenuous opposition among the taxpayers of the Fresno and Tule River country.

THE VINEYARD.

Shall California Make Sophisticated Wines?

University Experiment Station Bulletin, No. 65.

The discussion concerning the definition of a pure wine, and of legislation relating thereto, appears to have reached a stage at which it is desirable to recall, to the minds of those concerned, the "bottom facts" of the case, which have been lost sight of in not a few of the arguments advanced in the premises. On the one hand, extreme purists have gone so far as to contend that even the blending of wines from different grapes constitutes a departure from strict rectitude; while on the other hand, we find gravely advanced, in public print as well as speech, and proposed to be enacted into a State law, a declaration that only poisons shall be excluded from the ingredients with which wines may be doctored for the public benefit. It has long puzzled philosophers and law-givers how a poison is to be defined. In the present case, the purest product possible contains as one of its essential ingredients a substance that is declared by a respectable portion of American opinion to be the very poison of poisons, which no one should touch, taste or handle. It is easy to foresee how adroit lawyers and easy-going "experts" would, under such a law, manipulate almost any but the most extreme cases, so as to produce a disagreement of juries.

It is a well-known characteristic of a primitive condition of human knowledge, that for any ill that befalls, a special medicine is sought. Among the greatest difficulties encountered by conscientious physicians is the persistent demand of patients for some tangible medicine, in cases when nothing but a change of hygienic conditions is needed, or can accomplish a cure. Similarly, in a primitive condition of the wine-making industry, the tendency is to rely on medicines to cure all faults found in the wine, instead of preventing the occurrence of such faults by the application of sound principles in its preparation.

California winemaking is just emerging from this primitive condition, in which wines were made from an indiscriminate mixture of Mission and other wine and table grapes, by the "go-as-you-please" process of fermentation, or by equally primitive methods derived from the producer's dim recollection of what he saw in Germany, France or Italy in his youthful days. The wines thus produced were to a large extent so thoroughly faulty, that the dealers who bought them took great risks in their preservation and transformation into anything corresponding to a commercially recognized grade. The materials for making proper blends were not obtainable, and the temptation to produce by artificial additions at least the semblance of the right thing was great, even when the knowledge of suitable methods of after-treatment existed. This, however, was by no means generally the case; winemaking and dealing was undertaken like any other business venture, without any special knowledge of the subject, because it was expected to pay, and with the sole idea of producing, as cheaply as possible, something that would sell as wine. The injury done to the reputation of California wines during this primitive period still weighs down the prices and the estimation of our best products, which are mostly hid away under foreign labels; outside of the State, it is still a mooted question whether we can produce anything in the shape of wine that will remain sound for some years, and that will not show the earmarks of its origin in some objectionable form. Worse than this, however, there remain among us, as remnants of the olden time, many of the bad practices both of producers and dealers. Even in this year of grace, the dealer is abroad who tries to persuade the producer that "wine is wine," no matter whether Mission or *Cabernet Sauvignon;* that all this talk about distinctions of kinds and qualities is made by unpractical men who only make trouble for the trade, and that 15 cents per gallon all around is about the right gauge.

It is quite time that these remnants of the good old style should be definitively consigned to the rubbish pile. Producers are fast awakening to the conviction that a definite plan must be pursued in the planting of vineyards, in order that they may themselves be enabled to proportion properly the blends desired in the market. They are also learning that winemaking is not altogether the simple and easy thing it was supposed to be, but requires skill, judgment, and close attention to details which, only a few years ago, were scouted as being beneath the notice of "practical" men. A large proportion of the best Old World varieties of wine grapes has been imported, and their local adaptations are fast being recognized and systematically studied with a view to the production of definite qualities conforming to the commercial demand of the world, *by the blending of suitable varieties.* A large number of producers who have created a direct market for their products, independently of wine-dealers, have successfully arranged their production so as to be independent of any medication whatsoever, and furnish wines conforming in every respect to the demands of legitimate commerce, as well as to the tastes of consumers. They furnish the living proof that "doctoring" is as unnecessary as it is objectionable from every point of view.

It is this most legitimate and desirable progress from crude mixing of miscellaneous ingredients into the semblance of wine, to the preparation and profitable marketing of an unimpeachable product, that is crossed and impeded by the manufacture of spurious wines and by the false pretense that the demands of the market require the sophistication of the product of the grape. If some wine-producers or dealers have failed to keep up with the progress of the times, and are thus not in a position to command the materials for proper blends from their ill-assorted vineyards, that is their misfortune or fault. It hardly justifies them in advocating the need and propriety of the use of cherry juice in making up deficiency of color; least of all does it justify their opposition to a legislative measure designed to enable the producers of pure wine (as defined in every dictionary and encyclopedia) to place a distinguishing mark upon the product of their skill or progressiveness.

Taking for granted that it is desirable to restrict as much as practicable the introduction into wines of any substance "not the product of the grape," a brief consideration of the ingredients of wine and must will show how far the need of any intervention of artificial additions can be maintained. If it can be shown that all desirable results can be compassed by the legitimate method of blending natural products, the wine-doctors' expedients should be repudiated as being needless as well as pernicious.

First, as to *water* (which after all is the most abundant ingredient of wine, since it constitutes from 81 to 92 per cent of dry wines), it must, of necessity, be used in the legitimate industry by which evaporated or "condensed" must is converted into wine by fermentation. Its use is also justifiable when by natural evaporation, in certain seasons, the grape juice contains too much sugar to allow of being fermented into dry wine, while light-bodied musts are not available for blending. The requirements of a sound fermentation limit its excessive use prior to that process; but the "stretching" of fermented wines, by its addition, is liable to gross abuse. When heavy red wines need dilution to conform to the requirements of the market, an abundance of light wines can be found for the purpose. Those of the Folle Blanche, Sultana, Burger and others are as neutral as could be desired, if suitable light red wines should not be available. There is no valid excuse for the use of water *after* fermentation.

Sugar is next in quantity to water. In the sunny climate of California, a serious deficiency of sugar is quite exceptional, provided the vineyard has been stocked with due regard to the local climate. A simple calculation shows that at the ruling prices and the average production of grapes per acre, the natural sugar of the grape is the cheapest available, since the best of commercial glucose introduces into the wine elements of instability, as well as other objectionable features impossible to overcome. Refined cane or beet sugar, when added to must prior to fermentation, is promptly converted into pure grape sugar and ferments out as such. Hence its use for the purpose of strengthening weak musts would seem to stand on the same basis as that of water for the opposite purpose; the sugar introduced becoming in every respect as identical with that of the grape, as the water. On the score of cost alone, however, it would in practice naturally be superseded by that of condensed must, so soon as this material shall be generally available.

As regards fortification with *alcohol* in the shape of "neutral spirit" instead of grape spirit, as advocated in the late district convention, it must be admitted that *really* "neutral" spirit would be objectionable mainly on grounds of true policy, in diminishing the market for our own brandy product. But most of the commercial article would infallibly make its presence felt in any delicate wine for years.

As regards *acid*, all "cream of tartar" is the product of the grape, and so is tartaric acid. There can be no intrinsic objection to the introduction of as much tartar as anybody may desire, into must or wine. Tartaric acid stands on a slightly different basis, as its presence, in place of its naturally occurring compound, renders the wine more liable to "turning" and other troubles. Those who attempt to use it on the large scale will also find that here, again, it is better to provide against any such expensive necessity by planting or purchasing a proper selection of acid grapes, by blending which with such troublesome varieties as Trousseau, Mission and others, a healthy fermentation can always be secured.

Glycerine and *carbonic gas* are natural products of wine fermentation. But no well-made wine requires the addition of glycerine, which serves mainly to hide avoidable faults. Carbonic gas is a legitimate ingredient of wine whenever wanted.

Color is probably the point which gives rise to more sophistication than any other; not only because the valley wines, which thus far have formed so large a proportion of the vintage, are generally deficient in color, but chiefly because in the "stretching" of wines, the color is that which suffers most obviously, and is most readily imitated by outside additions so as to satisfy the average consumer.

But since our vineyards have ascended from the valleys into the hill country, the supply of color proves to be as abundant in this State as anywhere in the world. In fact, it would be difficult to find a heavier showing of color per acre than that of the *Gros Verdot* at Cupertino, which, with a tint about three times as deep as that of the average Zinfandel wine, yielded at the rate of about 25 tons of grapes, or say 3500 gallons of wine per acre, competing in cheapness with "cherry juice." The Grosseblaue, the Bouschets and others are similarly available for the more common wines, while for those of high degree we have the Cabernets, Beclan, Tannat, etc.

In regard to *tannin*, it was at one time thought that California wines were likely to be deficient, and this remains true of most of the valley wines; but the products of the hill vineyards leave little excuse for the use of tannin from outside sources. Both sides of the Santa Clara valley, as well as the hills of Napa and Sonoma, and even portions of the San Joaquin valley, have furnished wines of extraordinary tannin contents. There will be little difficulty in securing, hereafter, a sufficiency of blending wines for bringing clarets up to the Bordeaux standard in this respect.

Commercial (oak) tannin is not, chemically, or hygienically, the same as wine tannin; and its use should, as a rule, be restricted to the *fining* process. This process, as now largely practiced, is responsible for a great deal of the fault found elsewhere with California wines. Our winemakers have not mastered the fact that fining is the last process in the finishing of wine; that it is in every instance an evil with respect to the delicacy and zest of the product, and should be practiced as sparingly as possible; and that a very large proportion of well-made, sound wines never need fining at all, if subjected to appropriate after-treatment, notably to frequent racking and aeration. It is here, especially, that hygienic treatment, instead of medication, needs to be generally adopted.

Finally, when wines are not entirely sound—and with the methods of fermentation now in vogue this is a very prevalent condition—the remedy to be applied should not lie in the use of antiseptics, sulphuring, salicylic or boracic acids and the like, but in the simple and rational heating process devised by Pasteur, and named for him. The "*Pasteurizer*" should be an indispensable appliance in every wine-house; and its use, if properly understood and practiced, will at once do away with nine-tenths of all doctoring for unsoundness. The universal adoption of this simple and inexpensive expedient will save all losses now sustained in the shipment of our young wines, and will soon do away with the reproach that "California wines will not keep."

If in the face of all these facts and legitimate substitutes for medication, there are those who desire to adhere to the old doctoring system, it is at least the right of those who do without them and furnish the consumers the pure product of the grape, to have a legalized mode of expressing the fact on the packages.

E. W. HILGARD.

Berkeley, February 11, 1887.

Distilling Slops for Vine Dressing.

We clip the following interesting information in regard to an economical use of distilling slops from the St. Helena *Times:*—We witnessed the other day at a prominent distillery near this town the utilization of distillery slops, namely, the process of extracting the argols contained therein, from which cream of tartar is manufactured. So far, we understand, this valuable refuse of the distillery has been allowed to find its way through the gutter to the creek, not even has it been used as a fertilizer, notwithstanding the fact that it contains the sum and substance found in the vine and its fruit.

The proprietor, who is bound to find out whether or not it will pay to utilize distillery slops as stated, now makes a trial to that end, keeping a strict account of all labor spent until the argols are all ready for the market. It requires no investment of capital, inasmuch as all tanks and other utensils used are always on hand at a distillery or cellar.

The process of crystallization is as follows: The liquid in question, which constitutes the residue of the wine sediment or piquet after all spirits have been extracted, is led, hot, into low tanks in which a number of grain sacks, cut in two lengthwise, are vertically placed, fastened above to a rope or a rod to keep them in that position. During cooling of the liquid the process of crystallization goes on, the argols forming themselves and accumulate on the sacks placed there for the purpose.

Another way, in place of sacks, to facilitate crystallization, is to use brush, which is put in the tank in bundles. When the process is over the crystals are freed therefrom by shaking, while the sacks have to be scraped and washed in water. The brush is used to advantage because the more surface is obtained on which the crystals settle—it also saves labor. The liquid now remaining is a good fertilizer. We were convinced of the fact when the proprietor showed us a tract of land in his vineyard where these slops had been applied, there was a rich vegetation, while not far from there, where it had not been applied, no vegetation to speak of had shown itself.

THE San Francisco & North Pacific Railroad Company have just completed a new bridge across the Russian river at Healdsburg to replace the old wooden Howe truss-bridge which did duty there for a long time. The new bridge is a Pratt combination, with two spans of 198 feet each, and is built on concrete piers. Its strength was tested the other day by running three of the heaviest locomotives of the company across it.

THE DAIRY.

The Movement Against the Oleo Law.

Col. R. M. Littler, secretary of the National Butter, Cheese and Egg Association, and a vigorous fighter of bogus dairy products, sends us the following:

Your special attention is invited, and your prompt co-operation asked, to sound the alarm and act against the concerted movement which is being made by the manufacturers of "oleomargarine," butterine and other imitations and counterfeits of butter, to undo what has been done by national and State legislation. They are desperate and they are (and they can afford to) prepared to spend a half million or a million of dollars, if necessary, to accomplish their purpose. The fact that May 1, 1887, is the date when licenses for manufacturers, wholesalers and retailers, must be renewed, prompts the enemy to earnest and boldest action, as they do not want to be compelled to again put up the money for retailers, many of whom are smart enough to understand that they can get that. The bogus butter men are even approaching the creamery men, asking their help upon the plea that they will get a better price for their best creamery, if they have butterine-makers for customers, etc. We do not believe intelligent, fair-minded creamery men can be hoodwinked by such argument; they certainly understand that their interests are with the hundreds of thousands of farmers, their patrons who furnish the milk and cream to them, and not to the 28 or 30 wealthy manufacturers of bogus butter who wish to work off on the unsuspecting consumer compounds composed mostly of tallow, lard, cotton-seed oil, chemicals, salt and water and 10 or 20 per cent of genuine butter, to give some character to their counterfeit, at butter prices, entirely regardless of the injury they are perpetrating upon the health and future physical condition of the consumers of their bogus product.

The oleo gang have been flooding the land with petitions in blank (for signatures of any persons). They propose to make a charge on Congress soon. On Sunday last, see date of their circular (a correct copy here given), they continued their conspiracy against the people.

[COPY OF CIRCULAR.]

OFFICE OF GARDEN CITY DAIRY CO.,
19 & 21 Wabash Ave.
Oleomargarine Factory No. 1,
First District of Illinois,
Cor Seventeenth & Grove Sts.
CHICAGO, Jan. 30, 1887.

DEAR SIR: You will have noticed in the daily papers that a bill has been introduced into the United States Senate to reduce the license tax for dealers in butterine and oleomargarine.

If you wish this license tax for merchants and dealers reduced or abolished, please write a personal letter immediately to your U. S. Senator and another letter to your Representative at Washington, D. C., and ask these gentlemen to vote for the above bill. Don't fail to write these letters quickly. If you delay it will be too late. . Your Senator and your Representative at Washington will vote to reduce your license tax if you will write to him and ask him to do so. Respectfully,

GARDEN CITY DAIRY CO.

Since the National law was enacted, there has been a much better market for farm and dairy butter; creamery has not advanced to 40 to 60 cents, as the butterine men said it would if there was a law against oleo. If it had advanced, these same counterfeiters would have a great argument why their kind of butter making should be permitted without legal regulations.

The present condition of the butter market is easily accounted for, simply because "the supply is greater than the demand." Under the teachings of improved methods by dairy conventions and the agricultural press the yield of butter per 100 pounds of milk is four to four and one-half pounds; formerly it was but three to three and one-half pounds. In my own State, Iowa (where I have lived 30 years), the make of butter for the past three months has been at least one-half more than for the same months the previous year; other dairy States show the same result. We also know that the exports of butter have decreased. See the figures (official): Packages American butter imported at Liverpool, three months ending Jan. 1, 1884, 128,172 packages; 1885, 115,819; 1886, 57,640; 1887, 35,348. The cheese trade has also suffered. Read these figures: For three months ending Jan. 1, 1884, 516,601 boxes; 1885, 520,433; 1886, 379,624; 1887, 348,892.

FRIENDS: The protection of agriculture and the dairy interests against the assaults of these enemies is of vital importance to the people of the United States. Every merchant, tradesman, mechanic and professional is interested, for when agriculture is impoverished and languishes, disaster and ruin must follow. Your duty is to work. Write to your State legislators and to your Representatives and Senators at Washington; let them hear from you and from your neighbor, and at once. Remember, the oleo men hope to have the license to sell their product repealed and want it done by this Congress, or by May 1, 1887. Do not leave all the protesting and work against this proposed outrage to others; you act now. Believing that you will, we thank you.

FELLOW-CITIZENS: The question is, Shall these score or two of unscrupulous manufacturers of bogus products be permitted to strike down the farmers and dairymen and divide all the resources thereof, or shall the profits of the farm.

be distributed by the farmers among the people? Remember the agricultural interests of the country pay 74 per cent of the taxes.

A Holstein Record.

B. B. Lord & Son, of the well-known Sinclairville Stock Farm, Sinclairville, N. Y., send us the recently completed year's milk test of the cow Glenburine, as follows:

Glenburine (506 N. H. H. B.), 8788 H. H. B., was imported by us Oct. 15, '84, with a Holland milk record of 82½ lbs. in a single day. She was sired by Dist. Bull Jacob, whose dam has a milk record of 86½ lbs. per day, and 19½ lbs. of butter in seven days. Her dam Trijntje has a milk record of 91½ lbs. per day, and a butter record of 20 lbs. in seven days. On the morning of Nov. 10, '85, Glenburine dropped the beautiful bull calf Duke of Hallowell, 1443 H. F. H. B., by Sir Archibald, 3045 H. H. B., whose dam, Kroonije, has a milk record of 96½ lbs. per day, and a butter record of 18 lbs. 12 ozs. in seven days.

On same day, Nov. 10, '85, Glenburine commenced her milk record, and in 10 consecutive months gave 20,138½ lbs., an average of 66 21 7-38 lbs. per day; highest day's yield, 89 lbs., given Jan. 14, '86. For seven consecutive days, commencing Jan. 8th, she gave 606 lbs., an average of 86-66 lbs. per day. For 30 consecutive days, commencing Jan. 2, '86, she gave 2466 lbs., an average of 82 1-5 lbs. per day. She also made 21 lbs. of unsalted butter in seven days in January.

The following is a monthly statement of her record for 10 months from Nov. 10, '85, to Sept. 9, '86:

Nov. 10th to Dec. 9th, inclusive,		1727½
Dec. 10th to Jan. 9th,	"	2357½
Jan. 10th to Feb. 9th,	"	2405
Feb. 10th to March 9th,	"	2060½
March 10th to April 9th,	"	1945½
April 10th to May 9th,	"	1837
May 10th to June 9th,	"	2000½
June 10th to July 9th,	"	2112½
July 10th to Aug. 9th,	"	1940
Aug. 10th to Sept. 9th,	"	1752½
Total		20,138½

This record is the more remarkable when we take into consideration the fact that Glenburine has bred regularly, and is to calve again in early spring.

Messrs. Lord & Son occupy a high position in Holstein-Friesian circles. They now have a herd of upward of 100 animals, old and young. They have made shipments to this coast, and the junior member of the firm made us a visit something over a year ago. We would like to see more of their stock out here.

A VALUBLE SUBSTITUTE FOR BUTTER CLOTH.—Mr. Jas. I. Taylor, of the old-established firm of S. P. Taylor & Co., has shown us a most valuable invention in the shape of a perfectly waterproof transparent paper. As he terms it, it is the most wonderful production of the age. The paper itself is perfectly white, and possesses all the qualifications of parchment, only stronger, and free from odor or chemical taint. By dipping in water it becomes soft and pliable, and is better adapted to wrapping butter than cloth, and only one-fourth the cost. For papers having an intrinsic value it has no equal, as after being written on, it can be submerged in any liquor, and retain all of its originality. For writing purposes it is perfect, possessing a beautiful, clear, uniform surface. For covering jars, pickle bottles and vessels containing liquids, fruits, or anything affected by coming in contact with the air, it has no equal, and has been fully tested in this respect. Its many uses are too numerous to mention, but Mr. Taylor informs us he will gladly furnish samples on application.—*Marin Journal.*

THE STABLE.

Fatal Horse Disease.

EDITORS PRESS:—Your card of inquiry (regarding horses) of February 3d was not received until yesterday. Many thanks for your kind words of sympathy. The article you quote from the Vallejo *Chronicle* is not altogether correct. I will therefore give you a short account of the manner in which they seem to be handled. I have never seen anything like it, and cannot find anybody who can account for it. Last winter, upon taking up my horses preparatory to commencing plowing, I discovered that they all seemed to have something of a cold, and upon working them a short time they seemed to choke up and became very short of breath. We were obliged to take them out and hire teams to do our plowing. We could not seem to do anything to relieve them; they acted very much like a person with the asthma. After suffering some time, they commenced to drop dead, one after another, until we have lost 10 already. Only those horses that were running out were attacked, while those that we had up in the barn were not at all affected, and have not taken it from the others; it does not, therefore, seem to be contagious. Some of our neighbors have also lost horses. I had a veterinary surgeon open two of them, and found them all right, except the lungs and the pipes leading thereto, as well as the whole throat, were very much inflamed, yet not enough so in his judgment to cause death. Some of them would seem to have a hemorrhage of the lungs just previous to dropping, others did not; they seemed to die before falling, as they did not struggle after being down. It seemed to attack young and old alike. Some of them were old and not very valuable, pecuniarily, but were doing the work, so it will require quite an outlay to replace them, while others were young and valuable. I lost three fine Norman colts, from one to five years old, two Admiral colts, five years old, just broken, and some others. They are a heavy loss to me.

Perhaps some of your correspondents may be able to tell what was the trouble, but I am inclined to think it is entirely a new complaint, as I could find no one, either here or in San Francisco, who could tell me what to do for them. JOHN F. DEMING.

Glen Cove Rancho, Vallejo.

[Mr. Deming's loss was noticed in our Agricultural Notes February 5th. We would like to hear from readers who can throw light on the matter.—EDS. PRESS.]

FRUIT MARKETING.

The Fruit Union.

The meeting of the directors of the Fruit Union was held in Sacramento, Feb. 3d, but nothing was done except hold a general conference about future action. A meeting will be held in this city, March 10th, at which arrangements for the coming season's work will be made.

President Hatch has issued the following letter to the stockholders of the organization:

Members of the California Fruit Union: At our second annual meeting, held Jan. 19, 1887, at Irving hall, in this city, changes were made in our by-laws (as you will notice by referring to the inclosed copy) which will allow non-producers who are engaged in buying and shipping to become members of our organization.

This was done with the end in view of preventing such competitive action as we experienced during the past season; a competition which caused poor prices alike to all who had fruit to sell in Eastern markets.

It is to be hoped that the action thus taken will encourage all to see in the California Fruit Union a protection to all fruit interests, especially in the matter of finding markets for our surplus fruits, of which the present season promises an abundance of superior quality. We trust that it is now evident to all, that with a large crop *without* concert of action, very low prices will prevail both at home and in the East. You are asked to stand by the Union and assist to bring about the much-desired result.

The trustees entertain the opinion that to bring about the best results the Eastern markets must be thoroughly and systematically worked up and many new outlets developed.

To do this we must select from our best material our general manager, and early in the season send him East to thoroughly canvass the markets. To do this requires some outlay. Now, we have started this Union for a certain purpose. We promised each other certain things. One of those promises was that we would pay, when called upon, in installments, the amounts we had severally subscribed. Some have done so; many have not. Our books show that we now have due nearly $4000. We therefore make this urgent appeal that you will promptly send to the secretary the amount which you still owe the organization. Three calls of 25 per cent each have been made. How many have you paid? Do not compel the few to bear all the expenses while you receive the benefits. We hope that all will see the justice of our demand, and that no subscriber to our stock will need any further invitation to fulfill his promise, and thereby prevent the necessity of proceeding to collect by law.

Feeling as we do that the fact that there was a California Fruit Union was of benefit to all producers (whether members or not), equal to many times the amount of any one's subscription by enhancing the values of their productions in our home markets beyond their greatest expectations, therefore we would consider it the privilege and duty of each and every one to sustain and encourage it, and that they should bring in with them their friends to assist in making it all that we desire it to be.

Nearly all who stood in the front of the battle shipping their fruit and often losing money on their shipments that fair prices might be maintained at home, have paid all calls promptly. It is now for those who form the larger part of the delinquents, those who received the most benefits without sacrificing any of their fruit, to show that they will not be behind, but have simply been waiting as a reserve guard.

Trusting that all will feel that this is a work in which every fruit-grower is personally interested and will unite in a pull, a long pull, and a pull all together, with the firm determination that the Union must and shall be preserved and made so powerful, as we can easily do, that no competition can separate it, I am very respectfully yours,

A. T. HATCH, Pres. Cal. Fruit Union.

Special Fruit Trains.

The C. S. R. R. has issued a circular conveying the following information of interest to fruit-growers:

Until otherwise advised, special fruit trains will leave Los Angeles for Eastern points, via the California Southern, Atlantic & Pacific, and Atchison, Topeka & Santa Fe railroads, on Wednesdays and Saturdays, at 8:30 P. M. sharp. The distance by the above lines being the shortest, the C. S. road is enabled to make the schedule time for these special fruit trains to the Missouri river a trifle over four days, thus enabling consignees at the river to receive their fruit, if necessary, before daylight on Monday and Thursday mornings.

A man will accompany each train as far east as the Missouri river, to attend to the proper ventilation of the cars, subject to the approval of the conductor.

THE STOCK YARD.

Nevada Measures Against Cattle Diseases.

In accordance with the wishes of the stockmen, Mr. Thoma, on the 1st inst., introduced the following bill in the Senate of the Nevada Legislature:

SECTION 1. It shall be unlawful to drive any horse infected with glanders or pinkeye; any sheep affected with scab or footrot; any neat cattle infected with Spanish or Texas or splenic fever, or with pleuro-pneumonia; any hog infected with cholera or trichinæ, or any of said animals that are infected with or that have been exposed to any of the above diseases whatever, along any highway or traveled road in this State.

SEC. 2. The owner of any animal or animals so infected or diseased, as mentioned in Section 1 of this Act, or that has been exposed to any contagious disease, and the person or persons in charge thereof, shall keep such animal or animals safely inclosed or securely herded upon lands owned or held in actual possession by them under the laws of this State by the owner or person in charge of such animal or animals.

SEC. 3. Every person who may violate either of the preceding sections of this Act shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished therefor by a fine of not less than $30 nor exceeding $500, or by imprisonment in the county jail for a term not exceeding six months, or by both such fine and imprisonment, in the discretion of the court; and the owner or owners of any animal or animals injured or damaged by any act or omission in violation of the provisions of this Act, shall be entitled to recover treble the amount of damages sustained from the owner or owners of the diseased live-stock from which the contagion came.

Congress Memorialized.

The following memorial and joint resolution was introduced in the Senate of the Nevada Legislature by Senator Pierce, on the 1st inst.:

WHEREAS, Large sums of money are now and constantly being invested in the raising of cattle and other live-stock in the State of Nevada; and

Whereas, The remoteness of her people from market makes them peculiarly sensitive to disadvantages arising from any prejudice or fear of disease in range-cattle; therefore, be it

Resolved, That our Senators and Representatives in Congress are hereby requested to use every energy and honorable means in their power to secure the passage through Congress of House of Representatives Bill No. 10,359, the same being an Act entitled "A bill to extirpate contagious pleuro-pneumonia, foot and mouth disease, and rinderpest among cattle, and to facilitate the exportation of cattle, and the products of live-stock, and for other purposes," which was introduced by Mr. Carey, Dec. 20, 1886.

Resolved, That the Governor is hereby requested to forward, immediately, copies of these resolutions to our respective Representatives in each House of Congress.

A BIG CATTLE COMPANY.—Articles of incorporation of the California and Sonora Cattle Company, with a cash capital of $1,000,000, have been filed with the County Clerk of San Bernardino county. The incorporators are Richard Gird, George C. Perkins, W. T. Garrett, H. L. Drew, M. O'Gorman and W. K. Gird.

POULTRY YARD.

Poultry Notes.

EDITORS PRESS:—As I take quite an interest in reading the poultry "notes" in your paper, I will also write what little I know about raising and caring for poultry.

I think we have as nice clean, healthy fowls as any I have seen in California. We have about 66 hens and 4 roosters and about 50 young chickens (Plymouth Rock crossed with Brown Leghorn and Dark Brahma).

We feed them bran and shorts mixed—one-third shorts and two-thirds bran, and twice or three times a week put in a tablespoonful of cayenne pepper, in about three gallons of feed. We also keep plenty of powdered oyster shells and lime in their yard, and while feeding $1 worth of feed we get about $3.50 worth of eggs at the present price—20 cents.

Of course every one knows that poultry and poultry-houses must be kept clean. Our hen-house is cleaned once a week and lime sprinkled on the ground under their roosts. We have the roosts whitewashed—also the inside of the building.

In their drinking vessels we put small pieces of copperas, not bluestone: about a tablespoonful to six quarts of water. The copperas prevents cholera.

As a result of our care we get from 20 to 25 eggs a day, and have all winter, while our neighbors have had to buy eggs to use.

I think that the cross between Plymouth Rock and Brown Leghorn makes good healthy chickens and good layers; also good size for the table.

Hen-houses should be made warm for winter and cool and airy for summer.

I find that some think copperas and bluestone are the same, but if they will consult the dictionary they will find that copperas is sulphate of iron, or "green vitriol," while bluestone is blue vitriol, or sulphate of copper, and is poisonous. MRS. J. R. SPRINGER.

Woodland.

QUERIES AND REPLIES.

Cost of Morning-Glory Remedies.

EDITORS PRESS:—I have read the article on morning-glory from Mr. J. R. Springer—Woodland—in your paper of the 5th inst., in which he says: "They piled straw and coarse stable manure upon it, about five feet deep, and just before a rain they set it on fire. Immediately afterward they repeated the operation."

I find that the matter of economy has much to do with my agricultural operations, and I proceeded to make some figures upon the above proposition as follows: An acre of land contains 43,560 square feet; now I estimate that a good four-horse load of straw and coarse stable manure would not be far from 20 feet long, 5 feet high, and 5 feet wide, or a superficial measurement of 100 square feet, 5 feet in depth. This would make 435 wagon-loads per acre, for the first application, and the second application being the same quantity, the total would be 870 four-horse wagon loads of straw and manure per acre.

The value of this manure for fertilizing purposes, together with the cost of gathering, hauling and distributing it over the land, and the great danger of fire to fences and other property in burning up such a vast quantity of material, should not be estimated, I think, at less than $1 per wagon-load, at which the total cost of exterminating one acre of morning-glory would be $870, which is much more than the value of land in this section would justify.

I have also figured on the salt cure that was presented in the same edition of your paper by "Observer, Alameda Co.," who says: "First put on some straw and burn it off (if in the fall); apply the salt two inches deep, before the rains set in, so it will have a chance to melt. The summer after, look carefully in and around the salted place for any straggling plants, and if any are found salt them, and so on till all trace of the weed has disappeared. In about three years (if no more plants can be found), the patch can receive a heavy coat of manure and will soon be as good as the rest of the field. I have tried it on a number of patches (aggregating about four acres), and have succeeded in totally destroying the weed."

"Observer" does not give the quantity of straw used nor the quantity of manure, or its quality. He says a heavy coat of manure, which I will take to be three inches in depth, and well rotted. This would give 85 cords, of 128 cubic feet each, which, at $2 per cord, would be $170 per acre for manure.

One application of burnt straw, as computed in the Springer plan (of 435 wagon-loads at $1 each), brings the cost of straw and manure per acre to $505. Now, two inches of salt in the first application, and estimating one inch more for the whole three years of salting, or three inches in depth, we have 10,890 cubic feet per acre; and presuming that "Observer" used Alameda coarse-ground salt, which weighs 64 pounds per cubic foot, we have a result of 696,960 pounds of salt, or 348 tons per acre. This salt will cost, laid down to the average farmer, including cartage and distribution over his land, about $7 per ton, or at the rate of $2436 per acre. Now add the cost of straw and manure—$505—and we have the sum of $2941; to which should be added the loss of the use of the land for three years, which would bring up the cost of "Observer's" process of killing morning-glory to, say, $3000 per acre.

This may do in Alameda, where land is valuable, but not in San Mateo. Whether land that had been salted to the extent of three inches would ever be of any value afterward, I will leave others to settle.—R. G. SNEATH, *Jersey Farm, San Bruno.*

Feeding Beets.

EDITORS PRESS:—A neighbor has just lost a valuable cow by being choked on a piece of beet. I asked if the beets were cut up before feeding, and was told that they were; and this was what caused the trouble. Judgment should be used in these matters. Such substances as apples, potatoes and turnips, being small, round and smooth, should be cut into halves before feeding to a cow. But beets should never be cut at all when fed to any animal; a cow, horse or sheep can slice off a beet to perfection, taking at a bite just as much or little as they want. I used to cut them up for my cows, but I learned a better way. Feed them whole and there can be no danger.—W. C. DAMON, *Napa.*

A Double Blackberry Bloom.

EDITORS PRESS:—The double calla having proved a failure as a curiosity, I have another flower—a native California production—to offer in its place. While tramping in the hills last summer, I discovered a double-flowering wild blackberry, the flowers an inch or more in diameter and beautifully *variegated* with pink. A number of bushes had variegated flowers, but only one had the double ones. The flower is a very beautiful one, and if it would improve as much under cultivation as some other plants have done, it would be a very valuable addition to the floral kingdom.—W. S. HUNT, *Salinas.*

Cleaning Native Walnuts.

EDITORS PRESS:—To clean California walnuts, keep them in a damp state until the outside bark is well rotted; then put them in a barrel with water and stir with a square stick; this will not injure the nut if well dried after.—SUBSCRIBER, *Stockton.*

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Making the Grange Meetings Inviting.

Much has been said about making the meetings of the Grange social and pleasant occasions—that the Grange-room should be made as cheerful and inviting as the place will admit, adorned with pictures and bouquets of flowers, enlivened with music and song, and every brother and sister come in the most amiable mood possible, and enter with the whole heart into the spirit of the occasion. Charming as all this may be, it is only a means to an end, making fragrant the path to higher aims and duties. Every organization is crystallized around a central idea that is its life and soul, and to cherish and develop that idea is its special mission. The basic principle of the Order of Patrons of Husbandry is co-operation in all that concerns the moral, material, and social welfare of the tillers of the soil. But it is obvious that in order to work harmoniously and effectively the member should have an intelligent comprehension of every question upon which he may be called to vote or express an opinion. The Grange should then be a school of useful knowledge, educating all its members to a true knowledge of their position as a part of a great working whole, and so far as it fails in this the vitality of the Order flags and dies. The Hon. Wm. Saunders in a recent address before the Virginia State Grange said:

Men and women who are earnest in their undertakings will not long be satisfied by merely enjoying a pleasant time at Grange meetings; they crave for more substantial mental food, something that will promote their intelligence and increase their knowledge and information. And the most obvious method of securing these advantages is by the introduction and mutual discussion of topics in which they are specially interested, and surely there cannot be a wider range for such topics than those relating to practical agriculture. These subjects are so numerous and varied in their characters that any attempt to enumerate them would necessarily be imperfect. I will, however, mention a few, such as the history and literature of agriculture, botany, entomology, physics, chemistry, mechanics, geology, hydraulics, architecture, etc., so far as they relate to Husbandry.

Then there are many studies that come under the head of general agriculture, such as the mechanical and chemical preparation of soils; the physiology of plant life, how plants feed and what they feed upon, the specific relations that exist between plants and the soils in which they are growing, and the natural laws governing plant production.

It is quite likely that the Order has been derelict in regard to a number of questions that were supposed to have a political bias — all such as have been classed under the head of political economy, taxation, tariff, banking, currency, transportation and trading, and especially all legislation that concerns the industrial classes. In the late proceedings of the National Grange we find the following advice to the subordinate Granges:

When time will permit, the study of political economy could be taken up with great profit to all. It would bring forward for investigation many grave questions which are now pressing for solution—questions that are full of danger, and demand immediate consideration, for such indeed is that of the unsettled relations between labor and capital.

The young of both sexes should be familiar with the principles which underlie our fabric of government, should be conversant with the Constitution of their own State, as well as that of the General Government.

Mr. Saunders very truly said that "nothing will sooner destroy a Grange than for the members to meet, open in due form, and sit languidly looking at each other, until, from mere inanition, the Grange is closed. When this is often repeated, or becomes habitual, members soon lose their interest in the meetings and cease to attend them."

It is the special duty of the Lecturer to keep up the intellectual features of the Order by preparing lectures, essays, and articles for reading that are curt and piquant, or topics for discussion that are timely and interesting. To this end the Lecturer should possess good general information, fair literary ability, an observing and suggestive mind. But unfortunately many Lecturers fall short in these endowments, and others, that might do well, seem not to realize the importance of their duties, and consequently many meetings are held and nothing of interest is brought before the Grange.

Then most of the members may help to make the conversations and discussions of the Grange instructive and entertaining by choice selections, essays, report of readings and experiments, telling a good story or reciting a stirring poem. Every one has some gifts that may be made useful, but those who are most fertile in thought and pleasant in address should have it as a special burden to never let the interest of a meeting flag and become weary.

TEMESCAL GRANGE will confer the first and second degrees upon candidates at 2 o'clock this Saturday afternoon, as announced last week, and hopes to welcome Bro. and Sister Field, of Maine, with other visiting Patrons.

DANVILLE GRANGE is to have a dramatic and musical entertainment and social dance in their hall on Friday evening of this week, and invites all Patrons to come and enjoy with them.

Bro. Cressey on the Wing.

The following pleasant letter, which has lately come to hand, tells its own story:

ON BOARD STEAMER CITY OF MOSCOW,
From Boston to Savannah,
Off Cape Hatteras, Jan. 31, 1887.

BROTHER D.: It is blowing a gale, with the sea running mountain high. This is the fourth day I have spent in my state-room. The sea-sickness is the worst you ever saw, and I have been wondering if Jonah was as sea-sick as I am, when he took that ride in the whale's "stomach." If he was, he was well punished for his wickedness; and if the whale suffered as much, in throwing him up, as I have since leaving Boston harbor, that whale should have been put on the retired list the balance of his days. There is one thing to comfort me—I shall have a good appetite for the old plantation cornbread and bacon that awaits me in the sunny South, the home of my early manhood.

Ten days ago I was in Providence, New Brunswick, where the mercury was 43° below zero, and there was four feet of snow; seven days ago, in Nashua, N. H., mercury 34° below zero; six days ago, Portland, Maine, 23° below zero. When we left Boston, it was snowing and the thermometer was 10° below zero. It is 70° above to-day. So you see I have been subjected to the coldest weather and the deepest snow that New England has had for years, and very sudden changes, and still I live. Tomorrow I expect to be in Savannah, and go from there to the orange groves of Florida. Thence to Brunswick, Georgia; then to visit Burke and Screven counties, to see my old friends and relatives whom I last met 37 years ago, and there note the changes that our cruel war wrought in the South. Then return to New England, to rejoin my children and return to God's country of continuous summer and continuous prosperity, even California, my adopted State, where I am willing to live and die. I find in order to fully appreciate our State, it is necessary to travel in other climes.

I am writing this flat on my back in my berth, too sick to get up, and my only companion now is the RURAL PRESS of January 15th, that my daughter forwarded from Brownfield; and sick as I have been, have read and reread its chatty contents. It seems like some old friend in a strange land. It contains so much of vital interest to me—the favorable report of my beloved institution, the Grangers' Bank—may it ever be, as it has been, the farmers' friend. Also, it is grand to see that the Lick Observatory is to be the astronomical department of our University of California. Also so much Grange news, in all which I take a great interest, and hope to make my travels this winter of some interest to my Grange Brothers in California.

If you can find anything in this letter for your paper, you are welcome to use it. Please send me a copy of it to Sardis, Burke Co., Ga. I shall be lost without it. Truly, your friend,

C. J. CRESSEY.

Insurance Legislation.

Clunie's Anti-Compact bill was voted down in the Senate yesterday by a vote of 21 to 14. This result we little suspected. Clunie made a valiant fight, but the vigilance and power of the insurance companies were too much for him. This is a case of $400,000,000 of capital on one hand and the people on the other. The bill did not make war upon corporations, but upon combinations to keep up rates. That the rates have been advanced under this autocratical combination, every one knows who has had anything to do with insurance. The 104 insurance corporations should go into the market and do business as other forms of business are conducted. As Senator Rose said, "Combination kills competition." This gentleman had the courage of his convictions. He voted for the bill, though the Board of Trade of Los Angeles had telegraphed him to vote against it. The vote on the motion to strike out the enacting clause resulted as follows:

Ayes—Bowers, Briceland, Byrnes, Conklin, Crimmins, Dray, Goucher, Hall, Lenahan, McCarthy, McDonald, Meaney, Murphy, Patterson, Pinder, Spellacy, Steele, Sullivan, Vrooman and Wilson—21.

Noes—Abbott, Boggs, Chandler, Clunie, Crandall, Dixon, Gesford, Haynes, Hinshaw, Langford, McCudden, Moffitt, Rose, Roth and White—14.

Absent—Caminetti, Jones, Sargent, Walrath and Yell.

King Caucus.

EDITORS PRESS:—We wish to give utterance to a loud amen to your editorial "King Caucus" in the PRESS of January 22d. Truly he is a "cus," so full of *cussedness* that every right-minded citizen, who loves his country and desires to see it justly governed, should do all that in him lies to put down this lurking devil, whose cloven foot obtrudes its uncanny sulphurous presence everywhere, from precinct to legislative halls, State and national.

Blocksburg, Humboldt Co. CITIZEN.

Grange Invitations.

EDITORS PRESS:—Stockton Grange holds a literary entertainment next Saturday, February 19th. Would like to see visitors in the afternoon. Such improving exercises are to be held every three months.

Pomona Grange, No. 3, meets here February 24th, at 10 o'clock, to install officers and enjoy a feast with members of other Pomona Granges and fourth degree members. The installation will be open to all visitors at Good Templar hall. MRS. W. D. A.

Grange Work and Progress.

[Prepared Weekly by M. WHITEHEAD, National Lecturer.]

Now that the Interstate Commerce bill has become a law and a National Commission is to be appointed to assist in carrying out its requirements, have not farmers, especially farmers who are *Patrons*, some "claims" upon the important positions now soon to be filled? No one can deny that the farmers in the Grange *first* made a determined stand against the encroachments of railroad corporations in their abuse of the charters granted them by the people. Year after year our National and State Granges maintained the position and insisted that regulation by Congress *must* come, and come it has. For six years a practical farmer, a citizen of broad views, a careful thinker, never sensational, but cool, seldom lacking in judgment, and *always honest*, presided at the head of this great farmers' organization with its million or more members. No abler presentation of the transportation question has ever been made than in his annual message to the National Grange. No one in all the land understands the question better; no one would better or more justly serve people and railroads alike on the Commission than J. J. Woodman, of Paw Paw, Van Buren county, Michigan, Past Master of the National Grange. Let the farmers and Patrons unite in respectfully asking this recognition of the work farmers have accomplished, in bringing about this much-needed reform. The law requires that the members of the Commission shall be from both political parties. As a true man of the people, *an honest man* from the *other* party, let us unite on ex-Governor Pattison, of Pennsylvania. All the thousands of Patrons who heard his noble words at the last session of the National Grange, cannot but feel that in him the people of the whole country would have a true and fearless friend. Let us talk this up at once in our Granges, bring it before Farmers' Clubs, Boards of Agriculture and other organizations. Write President Cleveland; send him memorials; write also to *your* Congressmen and U. S. Senators. Remember, "acting together" is one of our avowed principles. ACT NOW.

While we recognize the privileges and importance of all others, and concede to them every claim of right and justice, we simply ask that the importance of agriculture be also properly recognized, and equal justice be guaranteed to us. Agriculture holds a close relationship with every other interest, and all are dependent upon it for support, and it should be protected in its legitimate rights, and those engaged in it be permitted to enjoy a share of its profits.

Lord Bacon said: "We are engaged in the heroic work of making a nation." What a mission has the Grange in this direction! Patrons and patriots "working together for the good of our Order, *our country* and mankind."

The session of the Illinois State Grange at Bloomington, a few days since, was good; well attended, progress *sure*. A debt of $1300 was paid by individual and subordinate Grange contributions. Time of meeting changed to second Tuesday in December, and in State House, Springfield. One new Grange organized, several reorganized. Patrons' Aid Society, "a gratifying success," more than doubled its membership during the year. "Prospects for Grange work brighter in Illinois than for several years past."

It would be natural to suppose that the railroad corporations would have learned, by their experience in the Granger movement in Wisconsin and other States, the value of at least an appearance of fairness in dealing with those who complain of wrongs at their hands. The lesson appears to have been wasted in Nebraska, where last week a resolution was passed by the Legislature for a special committee on investigation. On this committee the Speaker, Mr. Humphrey, apparently a confirmed partisan of the railways, not only refused to place the mover of the resolution, but named all the members from among those who voted against it. It is precisely such high-handed, unnecessary and inexcusable proceedings as these that make the opposition to the railways so bitter and often so unreasonable. The railway managers find it difficult to learn the value of decent behavior even in a good cause, and certainly theirs is not so good that they can afford to wholly dispense with it.—*N. Y. Times.*

"The prejudice which has existed in the past against the organization by those engaged in other occupations is fast melting away, if not already gone. The Grange is recognized as a power for good in the State and Nation.

"Prominent men of high character and respectability, leading newspapers and journals, take every opportunity to express their high appreciation of the aims and objects of the Order, and of the good work we have undertaken and are pushing forward to success.

"We have, therefore, no room for discouragement, and must push the organization of Subordinate Granges to the end; that more of our farmers and their families may be benefited by the benign influence emanating from the Grange, and stimulated to become better men and women, consequently better and more enlightened citizens."—*Henry Thompson, Past Master Delaware State Grange.*

The Executive Committee of the National Grange have lately completed an important work assigned them, in the preparation of a list of books specially adapted to Grange libraries and farmers' homes. Much time and care was given to this work, and it will be appreciated. Patrons desiring the list, with special prices, should address, over Grange seal, Messrs. Porter & Coates, Ninth and Chestnut streets, Philadelphia, Pa., the "official" Grange Book House.

The Secretary of the National Grange has received a number of replies from U. S. Senators and Congressmen, acknowledging the receipt of copies of the resolution adopted at the twentieth session of the National Grange, and assuring him that they will have careful attention.

Bro. J. H. Brigham, Master of the Ohio State Grange, has been elected President of the State Board of Agriculture.

Bro. D. H. Thing has completed his series of "official" lectures in Vermont, and good results are already reported. At his very first meeting, where he was assisted by State Master Messer, a new Grange was cut out, and 27 men and women came forward and enrolled their names.

The Pomona Grange of Aroostook county, Me., has more than 600 members.

And still they come. Two more new Granges in Connecticut organized last week by State Master J. H. Hale; one at Plainville, the other at West Hartford.

"Another heart is in the work,
Another willing hand
Will lend its aid to clear the field
And beautify the land."

The Plague of the Microscope.

It is an old story how a European, possessed of a powerful microscope, approached a Brahman priest and requested him to inspect some delicious fruit he was about to eat. In the eye of the Brahman all life is sacred, a part of the deity, and he would suffer the most painful tortures rather than kill the most loathsome parasite. Having acceded to the request, he begged the European to present him the microscope. As it was an instrument of considerable value, the petition was denied, but by persistent persuasion he finally succeeded in becoming its owner, when he instantly shattered it into a thousand atoms, exclaiming, "You have destroyed the happiness of my life."

The microscope shows us that infusorial germs are everywhere; in the water we drink, the air we breathe, and the food we eat; that flesh, fish, fowl or fruit swarm with these hideous germs, and we must absorb them whether we like it or not. No strainer, no filter, can save us from their presence. In every particle of dust borne upon the breeze and settling over our furniture, carpets, pictures or clothes, come millions of these foul entities ready to penetrate our nostrils at the least disturbance. Even the common housefly, always a nasty plague, becomes still more so when we learn that it carries microbes as the bees carry pollen.

And now to add to our catalogue of woes and horrors, the medical journals assert that even milk, the almost universal hygienic pabulum, may be the means of transmitting infectious and epidemic diseases. That since 1870, when attention was first directed to the matter, it has been ascertained that at least 100 forms of disease have been traced to milk that has in some way become contaminated with disease-breeding germs. They assert that scarlet and typhoid fevers and diphtheria have certainly been disseminated in this way. That the properties of milk readily absorb such soluble particles in the air, and the way it is usually handled before it reaches the consumer makes it a special channel for transmitting the germs of disease. And now comes along the San Francisco Microscopic Society and partially sustains the statement of the medical journals. It seems that these enthusiastic explorers of the realm of the infinitely minute and infinitesimal have had a committee investigating whether the presence of bacilli tuberculosi may be found in cow's milk. At the recent meeting of this society, the members of this committee made an informal report, the substance of which was that milk from cows with tubercled mammæ and lungs was often undoubtedly tainted with bacilli; that rabbits and guinea-pigs, which had been fed on such milk, had died of tuberculosis — all were agreed that this form of tainted milk existed to some extent in this State. It was the general opinion that some of these microscopical pests might be expelled by centrifugal action, but the only sure way to kill them was the exposure of the milk to a temperature of 72 to 75° centigrade, and they were satisfied that the question was serious enough, now that the city was greatly alarmed at the spread of diphtheria, to warrant the authorities in subjecting the dairies that supply this city to a strict inspection. The committee will continue its investigations in this direction, and a more full and formal report of this mysterious cause of disease may be expected at no distant day. However this may be, the opinions of these microscopists, predicated upon rare and exceptional cases, should not be allowed to become a scapegoat to bear away the sins of our foul sewers, damp and decayed houses, and the need of a general rigid cleansing and purification of all parts of the city.

Stockton Notes.

EDITORS PRESS:—And still the showers come gently down, and still the hearts of the whole people rejoice! Even the benumbed tramp, carrying his all in his pack, is glad; for, through the haze of his lost manhood, he sees plenty in the giver's hand and big wages through the harvest. Even now, over a large part of the State, a fair harvest of grain is assured.

It is said that five inches of rain, ordinarily distributed—that is, with spring showers—insures a crop in this fine grain valley at least. It is a pity that some delayed plowing for rain, now that the spring promises to be wet. The ground works well, and teams are going. Some were sowing on windy Friday, just a week from the advent of the joyful rain—a bigger boom than all the other blatant booms combined. Grain that was thought killed is coming up, but the rain is too late to make much of a hay crop. Pastures are greening up to good nipping.

The Northern Citrus Fair stimulated orange planting here, and not a few are trying again in sheltered spots. They grow well in Stockton, and many are bearing large fruit. Olive trees also do remarkably well.

Feb. 13, 1887. MRS. W. D. A.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

AFTER THE STORM.—Haywards *Journal*, Feb. 12: Some of the San Lorenzo farmers had sown their grain just before the late rain, and are unable to harrow it in. Those who have their crops in now would rather they were out, as the prospects for a good crop of weeds are favorable. About Mt. Eden the storm started all the grain on the adobe not up, and when the weather clears chevalier planting will be general. The acreage planted will be the largest known for years.

ARTESIAN WATER.—Haywards *Journal:* Mr. H. Neilsen, at his place in San Lorenzo, has about as fine a supply of water as is to be found anywhere, which he uses extensively for irrigating small fruits, raspberries, blackberries, etc. He has bored two wells, one now down a distance of 550 feet, and the other, just six feet distant, 255 feet. The water comes to within six feet of the surface, and the pipe of the deepest one connects with a large cistern, thus giving him three pipes to use in irrigating. The water is lifted out of the wells by a San Jose galvanized straight-lift pump. It is astonishing to witness the volume that pours from the three pipes when in operation, and during these eight years the flow has not diminished a particle. Strange as it may seem, in sinking the last well the soil was entirely different from the first one. When down 200 feet Mr. Neilsen expected to find the same stratum of gravel, but he had to go 12 feet deeper before tapping it. He also has in the same building a large tank holding some 15,000 gallons that supplies the house, and another tank and windmill near the barn. He does not disturb himself about the weather, but if it fails to rain starts his engine and soon has a steady stream spreading throughout his favorite fruits. He also uses the engine for grinding feed, and it has cost him fully $3000 for what he has expended in this business, but it is money well invested. The man who bored his wells stated that the artesian belt extends from here along the bay to Alameda, and across the bay to Mission creek in S. F. He has bored wells for the oystermen in the bay beyond Alameda to secure a supply of fresh water, and was not long in securing an unlimited amount, that has not as yet showed any slacking up.

Amador.

PLENTY OF WATER.—Ione, Feb. 13: The rain continues, and has given us five inches for the storm and 10 for the season. The earth is now well saturated and the streams are beginning to rise. There are no more fears of a drouth, and crop prospects were never better.

Colusa.

TOO MUCH FOR BRIDGE AND LEVEE.—Colusa, Feb. 14: The iron bridge, recently constructed at Butte City across the Sacramento river at a cost of $26,000, and accepted by the supervisors about one week ago, was yesterday washed away.

GRIMES' LANDING, Feb. 14.—A break in the levee occurred this morning, about two miles below this place on the Colusa county side. The opening has widened to about 100 feet and the banks are caving in incessantly. The water is spreading over a vast expanse of young grain, which will be an entire loss, and will, if not soon shut off, inundate the Poundstone ranch of 5000 acres of the finest grain in the county. A break nearly opposite, in Sutter county, has widened to over 300 feet, but will not drown out over 100 acres of grain, for the water goes directly toward the tule, about a mile distant.

Fresno.

EDITORS PRESS:—Fresno county is just now experiencing what it has long sought for. About two weeks ago a few of our energetic business men called a meeting to devise some means of leading into Fresno part of the immigration that is pouring into the Southern country. They established an agency at Los Angeles, with an exhibit of the numerous products of this county, conducted by the Hon. Firman Church, from which we are reaping due reward. Our county is not known to Eastern people; it has never been advertised as others have. The people who have come in here have been induced by their friends. About six months ago Cory, Braly & Harvey published a pamphlet, describing part of Fresno county, of which the real estate firm of Woodward's Exchange sent 1000 into two counties in Illinois, and the result has been that a number of families have located here and many others will soon follow. A great many Eastern people have obtained the impression that the land in California is so high that there is no chance for a man with limited capital. While that objection may apply to some parts of the State, this county has opportunities that are not found elsewhere. Good land, susceptible of irrigation, can be had at from $15 to $40 per acre, and on very easy terms. Fresno county can boast of her water supply, as the whole country is threaded with numerous streams. Plains that a few years ago were nothing but a barren desert are to-day covered with great vineyards and orchards. The town of Fresno has a population of 5000 and is fast improving. Old residences are making way for business blocks which are being built up along the principal streets. The Masonic Temple is one of the largest structures, of imposing appearance, three stories in hight, and finished in luxurious style. Residences, exquisite in design, have sprung up in great numbers. The prosperity of the county is due to the colony system adopted here, there being many small holdings of from 20 to 40 acres. The people are mostly Eastern settlers, a prosperous and educated class. I would say to those who want cheap land, come to Fresno county.—A. H., *Fresno.*

Kern.

ARBORICULTURE. — Bakersfield *Californian*, Feb. 5: Dr. Fergusson has growing upon his premises specimens of the following trees: Camphor, magnolia, pawlonia, Constantinople acacia, Himalaya cedar, Lawson cypress, strawberry guava, Japan privet, Texas umbrella, umbrella acacia, Italian chestnut, Italian persimmon, and camellia japonica. Before the planting season is over we hope to see others emulate him with interesting and handsome selections, until visitors can see here every useful and beautiful semi-tropical tree known.

A NOBLE WELL.—A correspondent of the *Bulletin* says that a remarkable artesian well has been bored recently on the land of Mrs. A. S. Moore, in Kern county, a few miles south of Kern lake. The pipe has a diameter of eight inches and the water spouts up 19 inches above its top. It is estimated that the flow is more than 2,500,000 gallons in a day. A number of people from the surrounding country have gone to see the well. It was bored to reclaim what was a true desert—a dry, alkaline soil, which will be converted into a garden of artesian wells.

Lake.

ENERGETIC HORTICULTOR.—Lakeport *Democrat*, Feb. 11: George Thorington has added over 400 pear trees to his orchard this season. He has also added largely to his vineyard, and now is going to set out a few olive trees as an experiment. Mr. Thorington has probably the best selected and best-cared-for orchard and vineyard in this section.

COYOTES have made sheep-raising in Gravelly valley a very uncertain business. Mendocino county offers a bounty of $15 for their scalps; hence they are hunted so persistently over there that large numbers have crossed the line into Lake, where their scalps are in less danger. The sheep men alone cannot cope with them, and want the Board of Supervisors to lend a hand.

Los Angeles.

THE BLESSED RAIN.—Santa Ana *Standard*, Feb. 12: It fell so gently that nearly all soaked into the ground. It insures a grand crop of grain, hay and fruit, and an abundance of pasturage, which was growing alarmingly scarce. The mountains east and northeast of town are covered with snow, which will afford plenty of water for irrigation during the dry season.

Pomona *Progress*, Feb. 10: The winter-sown wheat has plenty of moisture, and there will be a big crop of hay and grain. The orange trees needed water and Nature does the winter irrigating this time. Ceres and Pomona are both satisfied.

Anaheim *Gazette*, Feb. 12: The sheep and cattle men also are all in their glory over the rain, and the starving cattle, together with the sheep and lambs, will regain their lost vigor.

Mendocino.

A FRIGHTFUL FELINE.—Santa Rosa *Democrat*, Feb. 5: A mountain lion or panther is creating considerable havoc in the northwestern part of Mendocino. Several sheep and lambs have fallen victims to the animal's rapacity, and many parties have seen him. One young man vows it is as large as a cow, and emits sparks from its eyes like the electric light. Another hunter has a strange story to tell of the death of his favorite dog at the hands of the awful monster. A party of young men started out to hunt the beast last Saturday, but returned badly frightened. They saw the object of their search, but failed to kill it, and, after several shots, one and all took to their heels.

Merced.

GREAT WATER ENTERPRISE.—Merced *Star:* After four years of labor and expense, the Huffman-Crocker canal is almost ready to place both land and water on the market. At a cost of over $1,000,000 a canal of an average width of 50 feet on the bottom, and calculated to carry a stream of water six feet in depth (or even eight feet if necessary), has been constructed through a hilly country a distance of 21 miles to a point five and a half miles east of Merced, where is located a large reservoir of an average depth of 30 feet and covering an area of 800 acres. This is intended to provide a permanent water supply for Merced and vicinity.

THE RAIN.—Merced, Feb. 14: Rain has been falling steadily all day and no signs are visible of an abatement. Enough has fallen to place the county in good condition. Work on the canal and all outdoor labor has been suspended.

Napa.

POULTRY PROFITABLE.—*Calistogian:* In the fall of 1885, Mrs. Wm. Ebeling, who resides near Calistoga, owned nine mixed-brown Leghorns, which commenced laying about November 1st, and continued till the following March, just 500 eggs having been gathered. Five hens were then set, and 61 chicks were sold at not less than 50 cents each; the eggs were also sold at going prices, both together affording a fine profit for the year; and the original stock (nine hens) is still on hand. Mrs. Ebeling says: "I feed chicks middlings in the morning, and if cool, I make the food hot; give them cayenne pepper once a week and sulphur once a month; in the evening, feed them wheat. My chicks are never sick and are the healthiest I have ever seen." Her method of feeding the fowls accounts in a great measure for her success.

San Benito.

OLIVES.—*Free Lance*, Feb. 11: Mr. Robinson, who purchased a large tract of land in the Gabilan mountains, planted out several hundred olive trees last week. Mr. Palmtag has also set out a large number of olive cuttings this season.

THE RAIN.—In the valley the ground has been moistened to a depth of from six inches to one foot, and a slight addition to the rainfall will wet it down to the moist earth. In Hollister the rainfall for the season up to date (10th) is 3.24 inches. The major part of the grain is sown, and is beginning to sprout. But little of it has rotted. Those who have not sown have plowed their land, and are putting in their grain as fast as possible. Unless the spring rains utterly fail, the prospect for a good crop in San Benito county is large.

San Bernardino.

A GOOD SOAKING.—San Bernardino, Feb. 13: It commenced raining at 8 o'clock last night, and there has been a continuous storm since. The country is now thoroughly soaked, good crops are assured and the farmers are jubilant.

THE UPPER VALLEY.—Riverside *Echo*, Feb. 10: A gentleman from Lugonia says: "There has been considerable rain at our place the last two or three days, and everything is looking fine. The thermometer has got as low as 29 degrees on two occasions within the last three weeks, but oranges and lemons don't show any effect of frost, and even the young, tender lime shoots are not nipped. Calla lilies are blooming in the back yard. Some of the peach and apricot trees have put forth their blossoms and I noticed yesterday that apple and pear trees are commencing to show their young leaves. Peas are in blossom, onions and lettuce vigorously shoving ahead, asparagus ready to cut, ripe tomatoes yet on the uninjured vines, and strawberries almost ripe enough to eat."

San Luis Obispo.

THE WELCOME WETTING.—Cambria Cor. *Tribune:* Feed was getting scarce and cattle thin, and stock-owners were looking ahead and around planning anxiously for the future. But their anxieties are now over. We have had a good rain and it is still coming, and prospects are splendid now for fine crops and a successful year.

Estrella telegram, 9th: We have had all the rain we need at present for crops and plowing. There has been a large amount of wheat and barley sown, and most of it was up before the last rain, and the farmers are going to put in the most grain this year that was ever sown in this country, and there will be a large amount of trees and vines planted.

San Mateo.

FLAX PLANTING.—*Times and Gazette*, Feb. 12: W. M. Hatfield's flax project is not to lapse. Although only a small portion of the promised acreage near Menlo will be put in, P. J. Maloney's 25 acres being the only field now sure of planting, Wm. Stanton will put in 8 acres about 5 miles west of town; Hugh Kelly, of Searsville, 15 acres; Mr. Hatfield himself about 30 acres, and the two Kiefer Bros., of La Honda, some 65 acres. Mr. Hatfield has already ordered his machinery from Canada, and the works will be located either here or in Redwood City. Fine flax has been grown near Mayfield, and there seems no reason why good flax should not be grown here, to the profit of all concerned.

Santa Barbara.

THE RAIN.—Santa Maria *Times*, Feb. 12: Over three inches was precipitated upon the fields of newly-sown grain, and the confidence that a good season is at hand is confirmed. It came in the nick of time, as the vast area sown to cereals was beginning to show the effects of the drouth.

Shasta.

STOCK SUFFERING.—*Courier*, 12th: The heavy fall of snow has been severe on unsheltered stock of all kinds. We hear of considerable loss, and many more animals will succumb on account of weakness and lack of feed. The time has passed in this county when live-stock can be wintered on the deficient and eaten-out ranges. Animals must be sheltered and fed.

Solano.

EDITORS PRESS:—The weather is still threatening; 10¼ inches of rain fell during the last storm. Snow fell last night on the hills west of Vacaville, though not so low down as before. A few peach blossoms are showing. It is rather curious, but some of the latest peaches bloom before the early ones. Not much can be done now, but as soon as the ground settles, it will be a good time for those who have grubs, small trees, or grapevines, to take up. A gentleman here who had quite a number of vines to take up, fixed a cart out of the hind part of a wagon, and by passing over the axle-tree and fastening it to the vine, a good team can pull them up faster than six men can dig them. I send you a few blossoms of a seedling peach that does not ripen until August.—G., *Vacaville, Feb. 14th.* [Blossoms received. Thanks.—EDS. PRESS.]

THE HATCH ORCHARD.—Dixon *Tribune*, Jan. 15: Last Monday we had the pleasure of a brief visit to the largest orchard in California. It is the property of A. T. Hatch, of Suisun valley, and is a model of neatness and thrift. In 1876 Mr. Hatch owned a farm of 120 acres near Rockville, which he planted to trees. This was the beginning of his horticultural operations. In 1882 he added the Ellsworth farm of 217 acres, which is now wholly devoted to fruit trees. In 1885 he absorbed the Turner farm of 237 acres, of which 230 acres are now in trees. In the same year he purchased the Sweitser tract of 80 acres, which is now under preparation for planting, the trees being already on the ground. In 1886 he made the additional purchase of the Peabody farm of 127 acres, all of which is in trees, or will be by the close of January. These tracts are all contiguous, forming one of the finest bodies of land in the State; and the orchard, as well as being the largest in the State, is probably the best kept and in the highest state of cultivation. The trees range from one to five years of age. Last year about two-thirds were in bearing, but as it was the first year for many of them, the yield was not large. The gross receipts amounted to about $50,000. This amount will be largely increased from year to year, until all the young trees come into bearing. Mr. Hatch has something like 80,000 trees, which preponderate in the following named order: Pears, almonds, peaches, apricots, plums and prunes, cherries and nectarines. To take care of this immense orchard the labor of 60 men is required during the winter, and 200 men are employed during the picking season. Mr. Hatch is an enthusiast in horticultural matters, and his enterprise is never misdirected.

Sonoma.

PHENOMENAL FUNGI. — *Index-Tribune:* A curious vegetable production was brought to this office last Wednesday by Dr. Lawrence. It is a large mushroom, measuring 14 inches in circumference. On the top or crown of this is another mushroom, measuring six inches around. The stem of the latter is directly in the center of the larger, where it has taken root and grown, as though imbedded in rich soil. It was found on Terrace hill, the doctor's residence grounds, which produced the mushroom mentioned last winter, measuring 31½ inches in circumference, and weighing 1¼ pounds.

A CHEERFUL OUTLOOK.—Santa Rosa, Feb. 12: The rainfall for this storm is 7.77 inches, making a total for the season of 13.58. The grass is good and everything growing finely. A full crop of grain is in, and the fruit and grain prospects are good.

Stanislaus.

THE WELCOME SHOWERS.—*News*, Feb. 11: All the rain that has so far fallen has done the greatest amount of good possible, which is truly encouraging. As we write, the rain is still falling lightly, every drop entering the soil.

PORK AND MUTTON MOVING.—Modesto *Herald:* During the last week of January, Mr. M. B. Kittrelle shipped from Modesto to S. F. 700 head of hogs, aggregating in weight over 200,000 pounds. Mr. Kittrelle also ships a great many sheep to S. F., but says he can do better by driving them to Lathrop or Stockton and shipping them from either of those points. How is that?

Tulare.

OLIVE TREE FRUITING.—Wiley Watson presented the Visalia *Times*, last week, with several sprigs, all bearing fruit, cut from an olive tree grown in his yard in the southwestern portion of town. Mr. Watson is uncertain when the tree was planted, but knows it has been reset twice, has received no care, and yet has grown and thrived. The tree has borne for a number of years, and he believes that the olive will fruit here at the age of six years, and do well. The trunk of this tree, near the ground, is about one foot in diameter, and it is about 20 feet high.

Ventura.

GLAD OF IT.—*Free Press*, Feb. 11: The ground is becoming thoroughly soaked. So far the rain has fallen gently, giving the earth a chance to absorb it as it falls. Every one is jubilant.

NEVADA.

FROM THE RANGES.—Carlin Cor. *Stockman*, Feb. 7: During the last two weeks most of the stockmen in this vicinity have been gathering poor cattle, and although they have found many thin ones, they tell me that they found but few dead animals. As a general thing, the poor cattle are found on the bottoms. Those in the hills are still in good condition. Grayson & Hinckley, at Beowawe, are feeding about 1500 head, near Battle Mountain—about 1000 on hay brought from California; the Hunter Brothers, at Elko, about 1000 head; Lissak Brothers, near Carlin, 150 head; Palmer, Griffin, Carlyle and Milsap, about 100 head each, with sufficient to carry them through.

ARIZONA.

HORTICUTURAL SOCIETY ORGANIZED.—EDITORS PRESS:—We have organized a Horticultural Society, chosen officers and are at work. Our Territorial Fair or Industrial Exposition has been captured by horse-jockeys and gamblers so completely that agriculturalists and horticulturalists have withdrawn and perfected the new society, of which I will shortly send you some items for publication.—G. W. L., *Phœnix, Arizona.* [We see by the *Herald* that it was resolved to call the society the Maricopa County Horticultural Society, and that its meetings be on the first and third Wednesday of each month.—EDS. PRESS.]

Washington's Birthday.

Send a thund'rous sound, O cannon! from your throat and iron lips,
To the life that led chained Freedom from the shadow of eclipse.

Mock with brazen-throated laughter, on this glorious natal morn,
Sounds of woe and battle-travail, 'midst which Freedom's state was born!

Bloom with red and white, O banners! on the cold and wintry air;
Shine, O stars, in fields of azure! on the deeds which placed thee there.

Bask, O freeman! full enfranchised, in the light of Freedom's sun;
Thank again the god of battles for the gift of Washington.

Shout aloud till they can hear ye—cowering 'neath a despot's rod—
That through him whose birth ye honor ye are men before your God.

Ah! thou Father of our Country, not dost thou our homage need—
We who reap the glorious harvest from thy sowing of the seed.

For thy fame shall grow in luster as is added age to age,
Through the splendor of the scutcheon, which thou left as heritage.

Never hand of thine hadst carved thee out a path to fame more clear,
Hadst thou grasped again the sword hilt cast away by Belvidere.

For for Freedom thou unsheathed it, and its strokes more potent were
Than that miracle of splendor, Arthur's brand, Excalibur.

When thy patriot hand withdrew it from the hiding scabbard's shade,
Shone the gliat of Freedom's sunburst on the glory of its blade.

Never sought thou blood of fellow, that Ambition's ghouls might gorge;
Not the sword of Freedom tempered was for this at Valley Forge.

Bright it flashed at storied Trenton, smoke-eclipsed at Brandywine,
Gleaming with a fiery splendor Yorktown saw its meteor shine.

Not till Phrygian-capped was Freedom's brows with olive crowns unwreathed,
Was the blade drawn for thy fellows back returned unto its sheath.

Never thou braved wintry waters for the honors thou mightst don,
As the mighty Roman Cæsar passed of old the Rubicon.

We shall see the breath of cannon, when from out grim mouths 'tis rolled,
To thy whitened locks transmuted, which thy forehead aureoled.

And when on the nation's birthday, it the flag thou gav'st enshrouds,
We shall see thy face of grandeur looking down from out its clouds.

Thou wert grander than the Roman when he thrice refused a crown,
Where by banks of singing Severn there thou laidst thine honors down.

Lapse with requiems, O Potomac! on Mount Vernon's storied shore,
Where are urned his sacred ashes, Freedom's Mecca evermore.

Though through camp the fields of heaven may by others still be won,
He amidst all constellations still shall shine as central sun.

He whom Freedom named as Father still is Father of the State,
Though the Nation claims of heroes now a great triumvirate.

Never shall his name rank lower on Fame's mighty muster rolls,
Who so goes to claim Valhalla's apotheosis of souls.

—*Ben D. House.*

Mount Vernon.

A Sketch for Washington's Birthday.

[Written for the RURAL PRESS by ANNA PLATT.]

Accotink, Fairfax county, Va., is our summer retreat from Washington City. It is not so remote as it sounds, for the Indian name is given to a little settlement 18 miles from the metropolis, four miles back from the Potomac river and Mount Vernon. Our host is a New Hampshire man who settled here 35 years ago, so he cannot be called a "carpet-bagger." His fruit farm of 140 acres yields strawberries and peaches, the berries requiring a hundred pickers a day to supply the market demand.

We are on a high ridge of ground 400 feet above the Potomac, which, with the opposite Maryland shore, is visible in the distance; while the malaria that glides unseen never reaches these airy hights. The points of interest seen from our piazza are Mount Vernon, Woodlawn and Pohick church.

The home of Washington, so well known here, may be a "terra incognita" to some of your readers on the Pacific Coast. The four-mile ride over hill and valley was a rough one, as all Virginia roads are; for the oldest State in the Union seems quite destitute of all improvements that civilization usually brings.

The grounds of Mount Vernon are entered by a gate a quarter of a mile from the house, and the winding road through the park leads us to the back garden gate and through the avenue bordered by box plants a century old. We emerge into a grove of grand old trees that seem like sentinels to guard the hallowed ground. Our first view was of the back of the house, which presents an unusually attractive appearance. The long, low, wide building is connected by a gallery or arcade of seven arches on each side to the buildings or offices in the rear. First is the old kitchen with brick floor and the great open fireplace, and iron crane that swung there a century ago. The laundry and butler's pantry adjoining, on the opposite side, are Washington's office and the gardener's house, all forming a perfect semi-circle; and through the arches of the arcade we see the blue waters of the Potomac. We walk through the broad hall in the center of the house to the portico in front, paved with stone tiles, the roof supported by lofty pillars of brick, covered with stucco.

The visitor is here taken by surprise, for the view is enchanting. From the commanding hight he looks down to the broad Potomac, over a green carpet of turf, whose every curve is a line of beauty, instead of the dead monotony that characterizes the banks of most Southern rivers.

This picturesque spot was selected by Lawrence Washington in 1727, and named in honor of Admiral Vernon, of the British Navy, on whose ship he was midshipman. His brother George purchased the place after his marriage to the widow Custis, and we seem to read the record of their happy home life in the beautiful old mansion, preserved in all its antique simplicity and elegance, by the Mount Vernon Association.

The superintendent, Col. Holingsworth, who for 15 years has been its guardian and genial host, has resigned his office, much to the regret and loss of visitors. The courtesy and chivalric hospitality of olden time seem to have vanished with them. For the frugal lunch of bread and milk, tea, coffee and fruit, dispensed in the old kitchen, and under the arches of the arcade, has been banished in the new regime, and there is an empty void that sight-seeing does not fill.

The state dining-room was built as an addition to the house, with lofty ceiling and a mantelpiece of carved Carrara marble sent as a present to Washington from Italy. The ship bearing the treasure was taken by pirates, but the mantelpiece was sent to Mount Vernon, for even these robbers of the sea venerated George Washington. Each room in the house has a quaint beauty and grace of its own, from the cozy breakfast-room and Nelly Custis' music-room with the old harpsichord to Lafayette's bedroom and the bright airy chamber where the Father of his Country died; and a pathetic interest attaches itself to Martha Washington's room in the attic, where, from the gable window, she could see her husband's tomb. The rag carpet is replaced by a Persian fabric that resembles the original. The slender-legged table and quaint mirror are her own, and there is a hole in the door for the entrance of a favorite cat.

As the steamboat passed the mansion the bell tolled as usual, and about 75 or 100 passengers came up the winding walk from the wharf, all stopping at Washington's tomb—a vault with an iron gate, where the marble sarcophagus of George Washington guards his sacred ashes. About 30 of the Washington family are buried in the vault beyond this one, and, when filled, the key of the iron door was thrown into the Potomac.

The crowd of passengers from the boat stood with uncovered heads while the guide gave these details. There is no gloom, but a calm repose rests upon the grave of George and Martha Washington, as the sunshine and shadows of drooping trees rest upon the marble sarcophagus.

"This surely is hallowed ground," as Jacob said when angels ascended and descended the ladder; and if departed spirits do visit this earth, surely the home of Washington is not deserted, even when the daily crowd of pilgrims have departed.

Our drive home in the afternoon was varied by a call at Woodlawn, two miles from Mount Vernon. It was the home of Elenor Custis Lewis, the stepdaughter of Washington, who married Major Lewis, the son of Betty Washington and a nephew of Gen. Washington. The mansion was built in 1803, of brick, with many gables and a stone portico with lofty columns. It is on a grand scale, with broad hall and lofty ceilings, and carved marble mantelpieces—a present from Washington.

The estate, with 500 acres, is now owned by Mr. John Mason, formerly of New Hampshire. The lawn, with the grand old trees, is a fitting setting for the baronial mansion, but all has gone to decay. The steps seem crumbling, the pillars are broken and paint has scaled from the walls. An ancient piano in the parlor reminded us of "the harp that once through Tara's halls, its soul of music shed." But now its halls are deserted and glory departed. This is historic ground.

On Sunday we attended the Pohick church, 3 miles from Mount Vernon and the same distance from us. It is built of stone and is about 150 years old, has survived the Revolutionary war, the war of 1812, and the war of the Rebellion. It passed unscathed through the two first, but the iconoclasts of the Union army left nothing but the walls and two rows of empty windows. The cornice of the ceiling also remains. All else, the pulpit and chancel, the ten commandments and Washington's pew, with high, square sides, all are gone, carried off as relics by vandals of the 19th century.

THE HOME OF WASHINGTON.

The church has been restored and the pulpit placed on one side where Washington's pew once stood. We listened to the same prayers and the litany that he responded to, and we believed in the "Communion of Saints" which unites us here on earth with those who have gone before.

We copied the following inscription from one of the gravestones near the church:

To the memory of Mrs. Susanna Mills, wife of Mr. John Mills, merchant, who departed this life June 12, 1774. Aged 39 years.

"Whate'er she was, forbear to say,
'Twill best be known on that great day
When you, and all, and every one,
Must give account for what they've done.
To say no more, she lived approved,
And died lamented and beloved."

Advice to Parents.

[Written for the RURAL PRESS by MRS. J. HILTON.]

That is good advice that "Elsie Ange" gives the girls in last week's RURAL, and I want to give mothers some of the same kind of advice. Don't, for mercy sake, allow a daughter to treat you as Ida Mathews is said to have treated her mother. If she does so far forget herself, give her fully to understand in private that you will not allow it, and then if she does it again, order her out of the room, no matter who is present.

Have you no pride for self, nor desire for your daughter's good? People who see such things allowed in a girl feel pity and contempt for the mother, and they cannot have true friendship or love for the daughter. You may say, "My girl has got so large I am ashamed to make any fuss." You ought to be ashamed to allow her to disgrace herself, for it is a disgrace when a child does not honor a parent; and sometimes, when no word is spoken, a child gets into wrong ways through sheer lack of thought, especially if of a naturally overbearing disposition.

I have a word also for fathers. Don't you know that you can make those children treat their mother rightly by saying to them very plainly, when she is trying to make them mind, "Children, mind your mother," and not laugh or look sneeringly on and say to the mother before the children, "I should think you would make them mind." Help her to make them mind her, and she will have more love for you and so will the children have more love and honor for the parents who help one another to guide them in right paths.

Los Alamos.

The Mother of Washington.

The Woman Who Gave a Great Son to the World.

Mary Washington lived in an age when the mothers of great men and women were not such objects of interest to the world as they are now. But little was thought in the then new country of the mother's share in producing and developing an immortal figure.

Enough is known to support the supposition that from her he inherited his strongest mental qualities and splendid physique. After he became the military hero of his country everything pertaining to his paternal ancestry was gathered and treasured with zealous care, but no one thought of the maternal genealogy.

Mary Ball was the daughter of a well-to-do Virginia planter. She was born in 1706, was carefully brought up and religiously trained. On March 6, 1730, at the age of 24, she became the second wife of Augustine Washington, a friend and neighbor of her father. The wedding was celebrated with the old-time generous hospitality of Virginia.

The Washingtons were planters of considerable means in Westmoreland county. Mary Washington found herself the step-mother of several children and the mistress of one of the most comfortable homes that section of the country afforded. It was a one-storied frame house with a steep roof, four large rooms, and an entrance hall of old-fashioned width. At each end of the house on the outside was an enormous chimney. It was situated on an eminence about half a mile from the Potomac river, commanding a view of the Maryland shore for miles.

Here, on Feb. 22, 1732, George, the first child of Mary and Augustine Washington, was born. Six children were eventually born to them. They were named, respectively, George, Betty (afterward Mrs. Lewis), Samuel, John Augustine, Charles and Mildred. The last-named died in infancy. The three sons inherited separate plantations in Virginia from their father, and there lived and died.

When George was six years old the Washingtons removed to a large plantation or farm on the Rappahannock river, opposite Fredericksburg.

The Washingtons owned many slaves, and the spinning-wheel and loom and sewing-room required constant care from Mrs. Washington. It was a religious household. Both Mr. and Mrs. Washington were members of the Episcopal church, and family prayers, at which all the servants were present, were the rule of the house.

The mother was a serious, earnest person, whose reproofs to her children were often made in scriptural language. "Honor thy father and mother," was a command so thoroughly instilled into their young minds that they were as obedient and reverent in their later as in their earlier years. Mrs. Washington was left a widow when George was but 11 years old. She was the guardian of her step-children as well as her own, intrusted with the revenues of their property until they severally came of age, a trust she conscientiously fulfilled.

She ruled kindly but firmly, exacting deference as well as obedience, and this, it is said, her children willingly paid to the day of her death. She was dignified to the point of being severely stately. From her, doubtless, Gen. Washington inherited the awe-inspiring manner he was said to possess. There is an old story describing the discomfiture of a man, an official of high standing, too, who once familiarly put his hand on Washington's shoulder. He said he wouldn't do it again to save his own life.

That mother and son were much alike in character, appearance and conduct, there can be no doubt. Both were lacking in humor and imagination; both were silent, reserved, self-contained and serious.

George frequently spent his holidays at Mount Vernon with his brother Lawrence, who was largely responsible for putting him in the way of a military career, and who bequeathed to him Mount Vernon. When he was but 14 years old a midshipman's position on a British man-of-war could have been secured for him, but his mother refused her consent. This little incident doubtless saved him from obscurity. Later she cheerfully assented to his departure to the French and Indian war, and from that time on he only saw her on occasional visits.

Before starting north to assume command, Washington visited his mother, and during his absence wrote her repeatedly. When she heard him extravagantly praised she answered that Providence ordered all things, or said simply that he had been a good son and she believed he had done his duty as a man should. She did not see him for six years. After the surrender of Cornwallis at Yorktown, Washington visited her, attended by his staff. The people of Fredericksburg gave a ball in his honor, which was attended by the most distinguished officers and citizens. That was the only occasion when Mrs.

Washington appeared in public with her son. She was then over 70, and received more courtly attention than any other figure present, her illustrious son not excepted. She is described as "the picture of beautiful simplicity moving among the dazzling throng dressed in the appropriate costume of a Virginia matron of the olden time."

The Marquis de Lafayette visited Fredericksburg especially to bid Mrs. Washington goodby. He found her in a homespun dress and sunbonnet, working in her garden.

"Ah, Marquis," she said, "you see an old woman; but come, I can make you welcome to my poor dwelling without the parade of changing my dress."

When Washington was elected President he paid her a farewell visit. This was the year of her death. Both felt that the parting was the last in this world. She was then fast journeying to the life beyond, having for years been afflicted by a cancer, keeping her ailment a secret as long as it was possible to do so. She died on Aug. 25, 1789, in her 83d year. Her grave was unmarked, even by a headstone, till the year 1833, when President Jackson laid the corner-stone of a monument to her memory. A colossal bust of Washington was to adorn the shaft, and that surmounted by the American eagle sustaining a civic crown above the hero's head. This was to be its inscription: "Mary, the mother of Washington." But, alas, the pedestal is moss-covered and unfinished, and the marble from which the shaft was to have been made lies beside it crumbling to decay.

Recently the citizens of Fredericksburg have petitioned Mr. Croxton, their representative in Congress, to endeavor to secure an appropriation to finish this monument. It is scarcely possible that Congress will turn a deaf ear to this appeal.

West Side Notes.

[Written for the RURAL PRESS by MRS. J. M. K.]

It has been a beautiful winter, considering climatic comfort only—very little cold weather until lately, and almost unlimited sunshine. Still the midwinter scene in Napa county, with all its glory of birds and bees and blooming flowers, described by a correspondent in a late RURAL, seems almost as strange to us, dwelling in this dry region, as it would to Eastern readers. I should hesitate amid such loveliness to suspect any California picture of being overdrawn.

What a wonderful State we live in, and how difficult to convey correct impressions abroad, as not only each locality differs from each other, but varies with the seasons. Here in San Joaquin we often have green fields and bright flowers at this date. We often remark that fortunes could be made on the West Side if we only could correctly know the nature of the coming season. But the Signal Service does not give long enough time to benefit us wheat farmers. Now let them stand aside with their little 36-hour predictions; here comes Prof. Blake, of Richland, Kansas, able to calculate by astronomical mathematics the weather changes a whole year ahead.

In the December number of his paper, *The Future*, he says: "We do not make any hypothetical predictions. We squarely stake our reputation every time, as fearlessly as an astronomer, in making the prediction of an eclipse, and we never fail in giving the general changes of the weather."

Mr. Blake, however, very generously does not propose to monopolize the benefits of his wonderful discoveries. In the issue of September, 1886, he writes: "In this issue we publish the result of our calculations for the next seven months, and therefore think the signal officers and other prophets will be able to make pretty correct predictions for the coming winter, and thus be relieved of the charge of being a fraud."

As I have only been reading *The Future* a few months, I cannot deny or verify the statement that the calculations for the Pacific Coast proved to be almost exactly correct. That your readers may judge for themselves, I give here the predictions spoken of above, for seven months from October, 1886, to April, 1887:

In Northern California, toward the last of October and by the end of the month, the rains will extend nearly to the south end of the State; but they will not be heavy till November, when heavy rains will extend over parts of the State in streaks. Probably a heavy streak of rain will pass near Sacramento during November, with still heavier rains on the northwest coast of the State and thence north to the British line. In December the rains will not be very heavy except in the North Pacific Coast region; but in January and February heavy rains will extend further south, reaching the southern line of California. In March, 1887, the rains will be much heavier than usual all along the coast. Take the whole season together, and it will be a splendid one for the Pacific Coast. The amount of rainfall during the entire season will be considerably in excess of the average. This will insure a good crop again next year.

In the February number, just come to hand, the statement is made that during the months of February, March and April there will be nine inches of rainfall in the Sacramento valley. This prediction is based upon calculations of rainfall extending back to 1849.

The brief extracts I have given convey but a faint idea of the scientific claims of *The Future* with its lengthy articles on cosmogony, earthquakes, volcanoes, etc. As Prof. Blake is very ready to teach the principles of his science, suppose a bright young man be sent from each locality to study it. We want to know exactly where the streaks will come. We were left out this time. Who got the streaks? And who will tell us how much of all this is mere conjecture to extort money from the credulous; or has Prof. Blake really his hand upon the long hidden secrets of nature?

I heard of something new in the way of agents the other day—a gentleman who could not hear, but could talk, the other party being obliged to write his part of the dialogue. At first thought it seemed an improvement, but a moment's reflection convinced me the case should be reversed. Yes, the agent (especially sewing machine agents) should be dumb and deaf, and one is tempted to covet a temporary deafness for himself.

Tracy, Feb. 7.

YOUNG FOLKS' COLUMN.

Her New Home.

DEAR EDITORS OF THE PRESS:—We have lately moved from Woodland to the Cholame hills in San Luis Obispo county. Our house is on a hill which overlooks the valley for miles, and gives us a beautiful view of the Coast Range. There are a number of little cabins springing up in the canyons. The trees grow more abundantly in the canyons than on the hills, and quails seek their hiding-places there. The bunch grass grows to the hight of four or five feet, and the cattle feed upon it all the year around. There is a kind of grass growing here which is called water or honey grass, and the old settlers say that wherever this is found there is water near the surface.

I will relate an adventure that happened to my aunt and myself. One bright December afternoon we started out for a walk. It was a beautiful sunny day and all the world looked magnificent, and the meadow larks were singing gayly. Prince, the dog, ran playfully up and down the hills beside us. He is about four months old; he is part greyhound and part bloodhound. His ears lap forward and he moves them back and forth as if they were two little banners, and he is the cutest little dog that ever breathed. There are large bands of cattle roaming about the hills, and one has to be very careful, because they come so unexpectedly upon a person. We started out to find a spring; it was in a deep gulch near an oak which was draped beautifully with mistletoe and Spanish moss. It was in one of the canyons. As we were wandering down the gulch we saw a small stream of water, and aunt said, "Why, there is the spring." As we were going up the hill it was so steep that Prince lost his foothold and rolled over and over down into the gulch.

When we arrived upon the brow of the hill we stopped to rest and admire the scenery around us. Auntie plucked some delicate yellow flowers to press and send East. As I turned to look behind us I saw a band of cattle running toward us, and I said: "Auntie, auntie! the cattle are coming. What shall I do—shall I set the dog on them?" And she answered, "No, we must run," and then we rushed down the hill, and when we reached the gulch aunt was so tired that she sank down upon the ground, and she said to me, "Jump across the gulch." I answered, "We can't; it will cave in," and she said "You must," in a firm voice. She afterward said that it took a good deal of exertion to speak in such a determined voice, and that she did not know but that my life depended upon it. And I thought that when she spoke that way I could, and I made a great effort and sprang over. We soon got in among the trees and out of sight of the cattle, and when we were safe we congratulated each other upon our escape.

My papa takes your paper and I am always interested in the children's column.

Cholame Hills. LILLIAN HOLLY.

From Lake County.

DEAR EDITOR:—I again write a few lines to your columns to tell your readers of my dear father's death; he died about three months ago. You can imagine how sad I am.

There is a great deal of sickness around here. Christmas was very dull.

There is some talk of there being a postoffice near by.

Our spring term of school will begin the first of March. There will be about 20 scholars. Mrs. Sherwood will teach. I think she is a good teacher and the best they could get.

Lake Co. MINNIE FERGUSON.

[Our young friend has our most sincere sympathy in her affliction.—EDS. PRESS.]

Don't Find Fault.

[Written for the RURAL PRESS by MRS. J. HILTON.]

DEAR YOUNG FOLKS:—I want to caution you about being intimate with any one who makes you feel a distrust of others. Unfortunately, there are people so constituted that they rarely see anything good in any one; and when they speak of others, they either say bad things of them, or else sneer or laugh at what they do. Of course, while they are talking to you they will speak as though *you* were not of that kind; but you may be assured that they will speak in the same way of you to others as they speak of others to you. There seems to be a fascination about such people which is hard to overcome after we once allow ourselves to get to listening to them—the same sort of fascination that is shown by those who always turn to the murder and horrible columns of the low papers that pander to such tastes. Nine out of ten of the people who are always finding fault with what others do, are utterly incapable of doing the very things which they are so ready to say have been done so poorly. If you allow yourself to become familiar with such people you will unconsciously get into the same way of thinking, and fault-finding is death to true happiness. Cultivate charity toward every one, and instead of finding fault, take hold and try to do it yourself and see how well you will succeed.

Los Alamos, Cal.

A PLUCKY GIRL.—One Sunday morning, this winter, Mrs. Charles Krumlin, of Lobetus, San Mateo county, opened a door leading into the yard and saw a large, hungry-looking coyote gazing longingly at her. It took the lady about 'steen seconds to shut the door and not much longer to tell her daughter, Miss Lizzie. The young lady, only just in her teens, grasped the situation and stole quietly into the yard. The coyote was still hungrily regarding the door. Miss Lizzie grasped a big hoe in her little hands and "went for that heathen" coyote. At the first blow the varmint keeled over, howling awfully, but it took about a dozen more blows to end its earthly career. The friend who wrote to the *Times and Gazette* about her exploit adds: "We, of Lobetus, are proud of Miss Lizzie, and trust she may grow up to become a school-teacher and be able to subdue the 'young idea' as effectively, if not so severely, as she did that coyote."

GOOD HEALTH.

Healthful Breathing.

Tight lacing and lazy ways of breathing, says Helen C. Swazy, in *St. Nicholas*, prevent the lungs of the adult woman from getting enough exercise for their own good.

It is well to establish the habit of deep breathing, but, in addition to this, the reserve air which is left in the lungs after an ordinary expiration should be expelled, and the lungs thoroughly ventilated at least twice every day. First, then, see to it that the air in the room is as pure and fresh as out-of-door air can make it. Then, with all tight and superfluous clothing removed, lie flat on the back, and, with the mouth firmly closed, take a full deep breath. Hold it 8 or 10 seconds, and then let it out. Take another, and yet another breath, in the same way.

After that, take a breath into the lungs as slowly as possible, beginning to fill them up at the lowest extremities, and inhaling gradually until they are filled to their full capacity, when the air should be exhaled in the same slow and steady manner in which it was taken in.

When you have taken this movement again, to make sure that the shoulders are in good position, throw your arms vertically over your head and take another quick, full inspiration, swinging the arms rapidly to the sides close to the body and back again over the head. Swing the arms up and down four times on the same breath, and repeat the exercise three or four times.

After this it is a good plan to stand erect, with the arms horizontal at the sides, and vigorously clasp the hands from that position over the head a few times. When taking such movements in an erect position, always keep the chin two or three inches back of the vertical.

A few such exercises as these, for 5 or 10 minutes at night and morning, will promote refreshing sleep and give increased vitality.

CURE FOR DIPHTHERIA.—Dr. A. Brondel writes, in the *Bulletin General de Therapeutique* of Nov. 15, 1886, concerning the treatment of diphtheria by benzoate of sodium, and asserts that of 200 consecutive cases he has not lost a single one. He admits the possibility of a mistaken diagnosis in some instances, but, even excluding 50 per cent on this account, he still has 100 cases without a death. His method is as follows: Every hour the patient takes a tablespoonful of a solution of benzoate of sodium, 15 grains to the ounce, and at the same time one-sixth of a grain of sulphide of calcium in syrup or granule. In addition to this the throat is thoroughly sprayed every half hour with a ten per cent solution of benzoate of sodium. This is done religiously at the regular intervals, day and night, but no other local treatment is employed. No attempt is made to dislodge the false membrane, and no penciling nor painting of the fauces is resorted to. Tonics are given and antipyretics are used when occasion calls for them. The nourishment consists of beef juice, tender rare meat, milk, etc.; but bread and all other articles which may cause irritation of the throat are forbidden. The sickroom is kept filled with steam from a vessel containing carbolic acid, turpentine, and oil of eucalyptus in water.

The employment of benzoate of sodium is not a new method in the treatment of diphtheria, for it has been tried and is recommended highly by Letzerich, Kien, Ferreol, and others. But this, of course, speaks so much the more strongly in favor of the remedy; and as Dr. Brondel's results were better than those obtained by others using the same drug, it is to be presumed that his method of employing it is the best.—*Medical Record.*

DOMESTIC ECONOMY.

Tested Recipes.

[Written for the RURAL PRESS by ADA E. TAYLOR.]

Ham for Breakfast.—Fried ham is particularly nice when the slices are cut the night before and are allowed to soak all night in a cup of water, in which a tablespoonful of sugar has been added. This softens the meat and takes out the salt taste.

Chocolate Cake.—One cup sugar, one heaping tablespoonful butter, two cups flour, one cup milk, three teaspoonfuls yeast-powder; cream, butter and sugar, beat the yolks of four eggs with milk, mix all together, add flour with yeast-powder sifted well through it. Bake in a large tin, so as the cake will be about an inch in thickness when done.

Lemonade Syrup.—With one pound of lump sugar rasp the yellow rind off six lemons. Moisten the sugar with as much water as it will absorb, and boil it to a clear syrup. Add the juice of 12 lemons, stirring it well in beside the fire, but do not let it boil any more. Bottle the syrup at once, and cork it when cool. Mix a little of this with cold water when lemonade is wanted.

Frosting.—One-half cup cream, two cups sugar, set on stove and stir till it boils, then let it boil for five minutes without stirring, remove from the stove to a cool place and stir till it begins to thicken, then add one cup of grated chocolate, and one tablespoonful of vanilla, spread over the cake, about half an inch thick. The same frosting is also very nice between layer cake.

Orange Float.—Take one quart of water, the juice and pulp of two lemons, one coffee-cup sugar. When boiling hot, add four tablespoonfuls of cornstarch dissolved in a little cold water. Let it boil five or ten minutes, stirring all the time. When cold, pour it over four or five oranges that have been sliced into a glass dish, and over the top spread the beaten whites of three eggs, sweetened and flavored with vanilla.

Sunset Pudding.—Dissolve four tablespoonfuls of cornstarch in a little cold water; pour boiling water over this, stirring constantly, until it thickens; add one cup sugar and a little vanilla, mix well; have ready the whites of four eggs beaten stiff, stir them quickly into the hot cornstarch, cover tightly, and set in a kettle of boiling water. Let it cook for 20 minutes. For the sauce, put two pints of milk in a tin and set in boiling water. When hot, add one-half cup sugar, beat the yolks of four eggs and one teaspoonful of cornstarch in a little milk; pour gently into the hot milk, stirring constantly. Let cook 10 or 15 minutes, then flavor with vanilla. It makes a very beautiful as well as a delicious dessert for dinner. Can be eaten either hot or cold.

German Dumplings.—Mix a half pint of lukewarm milk or cream with a small cup of fresh yeast; add two ounces of sugar, two well-beaten eggs, six ounces of partly melted butter, and two pounds of sifted flour. Beat the whole thoroughly until light and spongy; cover with a cloth and let raise with a gentle warmth. Turn out the dough on a well-floured board; cut off egg-sized pieces, and lightly roll them into round balls or ovals. Leave these on the board to raise again. Put two ounces of butter in a broad, flat stew-pan, with a dessertspoonful of sugar, and milk half an inch deep. Let this boil; take up the cakes gently and lay them close together in the boiling milk. Cover with a lid and put them in the oven till the milk is nearly dried away, and the dumplings have a yellow crust. Take them carefully apart, sift sugar over, and serve with any sweet sauce or fruit. Nice with beaten cream, sugar and lemon.

Hints.

A little borax put in the water in which scarlet napkins and red-bordered towels are to be washed will prevent them from fading.

In icing cakes, dip your knife frequently into cold water.

Mush to fry will brown better if the meal is mixed with milk, and then poured into boiling water.

Tuolumne Co., Cal.

Preserving Eggs.

EDITORS PRESS:—I see through columns of the RURAL some valuable recipes. I send you one for preserving eggs, as they do it in Germany. It is said they will keep a year as good as fresh eggs.

Take a keg (be sure and have it water-tight) pack it full of eggs; then take unslacked lime, slake it by pouring water on in a tub or barrel and let it settle; then pour the lime water over the eggs and they will keep good.

Will some of the readers of the RURAL be kind enough to tell how to burn a charcoal pit? It will be very valuable to a poor man.

Our Subscription Rates.

OUR SUBSCRIPTION RATES ARE THREE DOLLARS a year, in advance. While this notice appears, all subscribers paying $3 in advance will receive 13½ months' (one year and six weeks) credit. For $1.50 in advance, six months and three weeks. All agents and clerks are required to adhere to these terms. No new names entered on the list without payment in advance. Our premium offerings are subject to these terms.

Advertising Rates.

TABLE OF CONTENTS.

EDITORIALS.—Yerba Mansa; The Legislature, 141 The Week; Engineering Irrigation Debris; Southern California Notes, 148. Fresno; Irrigation and Alkali, 149.
ILLUSTRATIONS.—Yerba Mansa—Anemopsis Californica, 141. The Home of Washington, 146. In the Barton Vineyard, Fresno, 149.
THE VINEYARD.—Shall California Make Sophisticated Wines; Distilling Slops for Vine Dressing, 142.
THE DAIRY.—The Movement Against the Oleo Law, 142. A Holstein Record; A Valuable Substitute for Butter Cloth, 148.
THE STABLE.—Fatal Horse Disease, 148.
FRUIT MARKETING.—The Fruit Union; Special Fruit Trees, 148.
THE STOCK YARD.—Nevada Measures Against Cattle Diseases; A Big Cattle Company, 148.
POULTRY YARD.—Poultry Notes, 148.
QUERIES AND REPLIES.—Cost of Morning Glory Remedies, 148.
PATRONS OF HUSBANDRY.—Making the Grange Meetings Inviting; Bro. Cressey on the Wing; Insurance Legislation; King Caucus; Grange Invitations; Grange Work and Progress, 144.
AGRICULTURAL NOTES—From the various counties of California, 144-45.
THE HOME CIRCLE.—Washington's Birthday; Mount Vernon; Advice to Parents; The Mother of Washington, 146. West Side Notes, 147.
THE YOUNG FOLKS' COLUMN.—Her New Home; From Lake County; Don't Find Fault; A Plucky Girl, 147.
GOOD HEALTH.—Healthful Breathing; Cure for Diphtheria, 147.
DOMESTIC ECONOMY.—Tested Recipes; Preserving Eggs, 147.
THE LUMBERMAN.—The Great Demand for Lumber; An Immense Order for Railroad Ties; A Big Lumber Yard; Government Timber Planting, 152.
PUBLIC AFFAIRS.—Lottery Robbery and Jobbery, 156.
MISCELLANEOUS.—Central California Citrus Fair, 150. In Los Angeles and San Bernardino; The Stockton Pavilion, 154.

Business Announcements.

Agricultural Implements—Baker & Hamilton.

The Week.

One storm has trodden upon the heels of another so closely that we have practically had two full weeks of rain. Each new storm seems to drop its burden more easily, and the downfall which began with snow and bluster has continued with gentle rain and higher temperature, except in the mountains, where unwonted snowstorms have raged and have blocked trains on the upper overland route. The rapid rise of the valley streams has swept away bridges and broken levees in some places, and thus has wrought injury to lands and brought new burdens upon the county treasuries; but these losses are outbalanced many times by the outlook for harvest plenty which will banish thought of winter hardships. Since our last issue the rains have continued at the south as well as at the north, and the snowcapped Southern mountains will have constant contributions for the irrigation ditches of the lower country. The whole outlook has become delightful to contemplate. Our Agricultural Notes this week contain many indications of the satisfaction which is now swelling the producer's heart and promises ere long to result in the same enlargement in his pocket-book.

Engineering, Irrigation, Debris.

The present century will be noted in the annals of engineering. The world over, there seems to be a craze for cutting isthmuses, boring tunnels, springing gigantic bridges and other kindred projects. The Alps have been pierced by tunnels under the St. Gothard, the Simplon, Mont Blanc and other places, and what is called the Channel tunnel between England and France, has been pronounced feasible. The restless genius that planned and executed the brilliant success of the Suez Canal, is now engaged in the mighty scheme of spading out another canal across the Isthmus of Panama. In our own land we have our hands full of marvels accomplished or in embryo. New York and Brooklyn have been united in wedlock by a suspension bridge, at a cost of $13,000,000, and the energetic people of Chicago are contemplating the construction of an artificial harbor at an expenditure of $12,000,000. Captain Eads, not satisfied with the glory of chaining Illinois and Missouri together at St. Louis, and scouring out a channel at the mouth of the Mississippi by means of jetties deep enough to float the largest ships, is now trying to induce Congress to help him build a ship-railway across the Isthmus of Tehuantepec. Many of the greatest engineers in the world have pronounced the scheme practicable, and after long, patient and persistent effort, Congress now seems inclined to grant the necessary aid.

In the light of these and many other mighty enterprises that might be enumerated, why should any one doubt the possibility of solving the irrigation and debris problems in this State in a way that may preserve all personal equities and advance the public welfare? Take the irrigation problem. The desirability of a comprehensive system for the distribution of the waters of the State for this purpose is now too generally recognized to admit of debate. It would be foolish to look with distrust upon such a scheme, in the face of such vast areas of land, as in Egypt, Italy, Spain, France and India, which have been reclaimed and enriched, where otherwise barrenness and desolation would reign. The topography of some of these countries made the construction of canals and the storage of water very difficult, laborious and expensive. In planning the topography of California, nature seems to have had an eye to business. From the mountain ranges along the entire eastern boundary of the State to the Pacific ocean on the west, the surface slope is so gradual that the waters of the rivers which traverse this territory can be carried in canals over the greater part of this fertile region. The supply is abundant, and if distributed under a just and liberal riparian system would insure crops on millions of acres where crops are now uncertain or impossible. The Tuolumne, Calaveras, Stanislaus, Mokelumne, Merced, Fresno, San Joaquin, King's, Kaweah and Kern rivers embrace a territory as large as the States of Connecticut, Rhode Island, Vermont and New Hampshire. This cannot be done under the existing riparian law, to wit, that one owning land upon a stream has a right to its uninterrupted and undiminished flow over or past his land. The mere repeal of Section 1422 of the Civil Code, where our Supreme Court thinks this principle of the old common law is entrenched, would not cure matters. The rights of the present riparian proprietors have become vested; and then, to throw open the waters to the seizure of the first comers would be only jumping out of the pan into the fire. It would inflict an unseemly scramble among speculators. What is needed is a comprehensive scheme of irrigation for the State, armed with the power of eminent domain, and yet so carefully guarded that every proprietor shall receive a just compensation for his loss of control over the water, and the method of distribution be protected from extortionate rates and improper discrimination. The bill introduced by Mr. Brierly, providing for the appointment of a commission to obtain the necessary data, seems a step in the right direction. The State Engineering Department has already accomplished much, and the general maps of the State and special maps and profiles that have been constructed showing minutely the gradients of large scopes of country, and the geographical, topographical, and hydrographical data accumulated, will be found of inestimable value. The conviction is wide-spread and increasing that the time has come to make the initiative movement. Whether our present Legislature is competent to handle the question remains to be seen; the indications, certainly, are not very assuring.

Then there is the debris problem. That a large and fertile region covered with gardens, orchards, vineyards and grain fields, towns and cities, has been greatly damaged or imperiled; that the navigation of the Sacramento has been seriously obstructed, and the harbor of San Francisco menaced by shoaling, from the inflow of debris, will hardly be denied. The natural action of the water would in time, aided by jetties, levees and the like, scour out the channel, but not so long as the detrital matter continues to pour in. It is obvious that something more comprehensive and vigorous should be done than has yet been attempted. The hostility existing between the miners and farmers is unpropitious for any broad and amicable adjustment of this question. The temper of the present Legislature indicates that nothing satisfactory to either side will be done. We should not overlook the fact that this problem is partly a national one, as the security of navigable waters is involved. That Congress can solve this problem, hardly admits of a doubt. Greater engineering schemes have been accomplished.

These two questions, irrigation and the prevention of injuries by mining debris, are now the most important in our public affairs, and to them the Legislature should have first directed its attention and applied its best energies. It is evident to any one who has watched the course of legislation that they have either not been properly appreciated or have been intentionally avoided. If a different course had been taken, if we could clearly see that these questions were solved or advanced in any appreciable degree toward settlement, it would not seriously matter if nothing else had been undertaken. These issues are pressing for solution; the growth of vast areas of the State depends upon their prompt and fair adjustment. Several Legislatures have approached the subjects, and popular discussion has shed much light upon them. The time was ripe for action, but the opportunity has been thrown away by this Legislature, and its inefficiency in this regard will not be forgotten.

It does not seem likely that a legislative body with a majority fit to grasp such problems can be secured until men are chosen more for their practical understanding of the important issues involved than for their party services or loyalty, nor does it appear that legislators will take proper action until they are actuated more by devotion to the true industrial growth and prosperity of the country, than by fealty to political leaders. It rests with the people to correct existing evils, and the remedy lies in manly, conscientious, independent action in nomination and election of representatives. It is evident that public services are now measured by far too low a standard, and that rewards for public service are found in the smiles of the bosses instead of in the consciousness of well-doing in the interest of the State.

AUSTRALIAN RABBITS COMING.—It is said that a ship from Melbourne, bound for this port, has on board 20 Australian rabbits, which it is proposed to turn loose in the Sacramento valley. As this is the prolific animal that has proved so destructive a nuisance in Victoria and South Australia, the above report has aroused no little alarm and indignation. There is no statute to forbid the landing of such immigrants, but if they get ashore and are set at liberty the farmers will doubtless take prompt and vigorous measures to annihilate them.

DYNAMITE.—As we write on Wednesday, it is announced that the police have captured men with dynamite bombs in their pockets, to be used for blowing up street cars. The new anti-dynamiters' law is progressing favorably at Sacramento. The present condition of affairs needs vigorous repression measures, and it will be well to enact them before an indignant populace takes the matter in its own hands. This dynamite abomination must be stopped—legally, if possible—but it must be stopped forthwith.

Southern California Notes.

The wonderful and very gratifying activity and development in Southern California gives the writer on California progress a very delightful and yet at the same time a very difficult theme. We can well remember when the enterprises in that part of the State were so few that they could be compassed in a paragraph without much wearing of the pencil-point, but now the marks of advancement are so many and so diverse and so well distributed over a vast territory, that even a meager account of them would require a volume instead of a paragraph. One can, however, get an idea of the activity in a region when the real estate sales in its chief city, Los Angeles, have been running along at a million dollars a week; when the finest resort hotels in the country are filled as soon as built; when the railways are racing with each other from place to place, as they are now from Los Angeles to San Diego, vying with each other to see whose engine will first shriek beside that beautiful southern harbor; when electric railways are projected for six miles in different directions, as they are now being discussed at Riverside and elsewhere; when land sales in towns like Anaheim bring in train loads of people, who buy all the lots offered at growing prices; when, in fact, every exchange which comes from the district is filled with notes of the enterprising things being done by individuals or by companies, all tending toward the same end, to wit: the development of the grand natural resources of the country.

We are glad, too, to see that with increasing wealth and grandeur the old principles, upon which many of the settlements were made, are being steadily maintained, and that the multitudes who are coming in are of the kind to aid the pioneers in this work. For example, Pasadena, starting out with the idea of curbing the vices of men, as far as practicable, has grown to be a pretty city, with fine streets and buildings, and all the graces of the municipal condition decide that they shall not be marred by too prevalent municipal evils. Last week the City Council, in answer to a petition signed by over 500 citizens, decided not to grant any license for the sale of liquors in Pasadena. This will have the effect to abolish the only saloon in the city and make Pasadena the banner prohibition city in the State. Over $6000 has been raised by private subscription to prosecute any liquor cases that may come up in the future. This is an example that other towns may follow if they have the prevailing sentiment to enforce it, because the lawyers employed by the Pasadena citizens to look into the legal aspects of their action reported, after a careful examination of the new Constitution, and after quoting a vast number of authorities bearing on the case, as follows:

> We are therefore of the opinion that an ordinance declaring it unlawful for any person to carry on any saloon, bar or other place where intoxicating liquors are sold within the limits of your city, would be constitutional and valid.

As stated last week, the citrus fair at Riverside will open on Washington's birthday, Feb. 22. We learn from the *Press* that preparations are progressing favorably, and the indications are that it will be the finest ever held in Riverside, and that means in California. The decorations will be in skillful hands and will be elaborate, while the fruit promised is as fine as any ever exhibited in a citrus fair.

MORE OF THE DOUBLE CALLAS.—A gentleman of this city, just back from a visit at Bodega bay, brought us in two more double callas, which grew on Mr. E. H. Cheney's place there. One of them had a second spadix, also attached to the base of the inner spathe; but "some of the children" had got hold of the flower and broke this off, so that only the place of attachment was visible when the blossom reached us. Our informant says the two spadices were nearly equal, and of the usual hight and appearance. The inner spathe was partially divided down one side, as if disposed to triplication. A number of other double blossoms were opening at Mr. Cheney's.

Fresno.

Between the tawny covers of the February *Overland* are a goodly number of pages devoted to Fresno county—its natural features, history and business enterprises. Some extracts from this interesting article, together with a view in the Barton vineyard, appear below. The selections could more easily have been lengthened; and we shall not wonder if the samples given induce readers to seek the whole:

The great commonwealth of California, extending over ten degrees of latitude, and embracing within its imperial sweep every variety of soil and climate, contains, as its most distinctive geographical feature, two mountain-girded valley plains, one sloping south, the other sloping north, and forming in union the magnificent inland basin of the San Joaquin-Sacramento.

The county of Fresno is located in the San Joaquin basin, about midway between the Tehachapi mountains, which bound the valley to the south, and the region about Lodi to the north, where the plains of the San Joaquin merge into those of the Sacramento. Easterly and westerly—its line of greatest length—the county stretches across the broad valley from the Sierras to the Coast Range.

With an area of 9000 square miles, it ranks third among the counties of California, exceeding in extent any of the following States: Rhode Island, Delaware, Connecticut, Massachusetts, New Jersey.

Fremont, in 1844, camped among the willows and sycamores of Fresno. "Wild horses were raising clouds of dust on the prairie;", columns of smoke, Indian signals of danger, were rising from the tules, bands of elk and antelope were browsing in the oak openings along the foothills, and the pristine wildness of the scene was unbroken. Wild oats grew saddle high, extending for miles on miles; blossoms shone by the acre and league; it was a land lying waste, unfenced, and wonderfully attractive to the pioneers, who slowly made their homes on the Fresno plains. When Grizzly Bear Adams drove his old camp-wagon to Lake Tulare and shot elk and bear along the San Joaquin, there was hardly a house within sight of his line of travel.

But a few years since the vast treeless plains of Fresno and other San Joaquin counties were considered by most Californians a barren desert—in dry years worthless, and, at most, of temporary value only, when a winter season of heavy rains had clothed them with a transient verdure of the native grasses, alfileria and other varieties, forming, during the spring months which followed, brief pasturage to the vast flocks of sheep and herds of cattle that roamed at will over this unsettled region; till, with the coming of summer and the withering and drying away of the herbage, they were compelled to seek the mountain pastures of the Sierras. The country, with the exception of three or four scattered settlements, was uninhabited, save by a few wandering "sheep-herders" and vaqueros.

The growth of the county was slow until the coming of the railroad, when people began to flock thither, settling on sections of land near the railroad and beginning to make agricultural experiments in a small way. The results more than repaid expectations, for the soil, even without irrigation, is rich and retentive of moisture, varying in character from the celebrated red land, so valuable for vineyard purposes, to white ash and sandy loam, of great thickness and inexhaustible fertility.

With settlement came the question of irrigation, by which the resources of Fresno might be doubled, trebled, almost infinitely increased. Irrigation speedily became something more than a problem in Fresno. Recognizing the necessity of artificially watering the lands, various irrigating plans more or less extensive and independent of each other were undertaken and speedily pushed to completion, * * until, as a result of the business sagacity and enterprise of the projectors, there are to-day in the Upper San Joaquin basin, which includes beside Fresno the counties of Tulare and Kern, no less than 1100 miles of irrigating ditches, those located in Fresno alone being capable of watering 600,000 acres of land. Of these canals, the largest is the '76, not long since completed, which has the enormous capacity of 1300 cubic feet per second, and capable of irrigating on a gigantic scale. * *

The settlements for the most part have been made in groups, thus leaving vast tracts of territory yet untouched by the plow, and capable of the widest range of products, from wheat and other grains of the temperate zone to the vine and the nectarine and the citrus fruits of the subtropics.

Ten years ago Fresno county, except the foothills, was one vast unpeopled plain, and only six years have passed since the irrigation ditches began to spread over the valley; but in 1885 over 46,000,000 pounds of freight was shipped from the single station of Fresno city. The assessment roll of the county doubled between 1882 and 1886. The 20,000 people of Fresno in 1886 produced and sold over $5,000,000 worth of marketable products—wines, fruit, raisins, wheat, corn, alfalfa, cattle, etc. Small farms and horticulture have made the town of Fresno the most prosperous place in California. Twenty acres can be bought for $800, and a cabin can be built for $250. The man who can do this, and have $500 more to start with, can get his land into profitable condition and be happy and independent. Men have taken hold without a dollar, bought land on credit, worked for their neighbors, met their payments, and established themselves. There is not a teacher or clerk in the cities of California who could not struggle into the possession of a few acres of San Joaquin valley land. "What will it be worth?" men ask. Wait until the lessons of wisdom that the splendid southern counties of California have taught their slower northern sisters have been fully taken to heart. Wait until a "regular Los Angeles boom" strikes into the heart of the San Joaquin. Wait until the great tide flows at once westward down the Sierra slope, northward over the Tehachapi passes, eastward through the Carquinez portals. Wait until there are more brains to plan, more hands to do. Then—nor will it be long to wait—these lands will hardly have a ratable value, for they will be worth too much to sell. Only crime or misfortune will ever bring an improved homestead of the future San Joaquin into the market.

The Paige Vineyard.

The section of land known as the Paige tract, lying about three miles southeast from Fresno, toward the Malaga Colony, is now being laid out and planted with the best varieties of raisin grapes. Two hundred acres are now in vines, and the whole 640 acres will be planted by next March. Forty men and 35 horses are now at work there plowing the land, moist from the great ditches, the main canal of the Fresno Company flowing along the east line of the tract. The vineyard is laid out in checks 216 feet square, with roads between. Each check will contain 703 vines, and there will be 484 checks in the tract, aggregating 340,252 vines. There will be no trees, ornamental or shade, to draw moisture or shade the vines. It is intended to build the packing-house on the line of the railroad, with side-track for convenience in shipping. The packing-house will be three stories high. The first floor will be partly underground for the sweat-room or equalizer; the second floor will be the packing-room, and the third floor will be used as a box factory.

The Paige tract is owned by Mr. Timothy Paige, the well-known S. F. capitalist, and Mr. T. C. White, whose raisins, grown upon his famous "Raisina Vineyard," have a reputation in the world's markets.

The Barton Estate.

Three miles east of the growing town of Fresno is the famous Barton vineyard, covering a square mile of land. To be more accurate, 540 acres are in vines, 20 acres in orchard, 60 acres in hay and grain, and perhaps 20 acres in buildings, roads, and irrigation ditches. * * The view from the roof of the elegant residence of the estate is extremely beautiful; the whole expanse of the superb Fresno plain, dotted with young vineyards and miles upon miles of new settlement, is spread before the vision. This, with the high, snow-clad Sierras within close distance, completes a picture never to be forgotten. It is a kingly domain, and the great vineyard, surrounded by stately rows of eucalypti and poplars, rises magnificently from the midst of fields of grain and ever-fruitful pastures.

We give this sketch of Fresno's progress only as a foretaste of fuller discussions which we hope will follow. The district has been transformed within a few years from almost nothing into a wealth of production, and yet its career is but opening. Our readers in the region owe it to themselves and to the general progress of the State to tell us more of their excellent accomplishments, and our columns are always open to such recitation.

IN THE BARTON VINEYARD, FRESNO.

PERSONAL.—We had a call the other day from Prof. C. H. Dwinelle, who recently returned to California from his year and a half abroad. He has suffered severely, as was stated in the RURAL some time ago, from a brutal assault made upon him by a sleeping-car porter on the New York Central, while on his way East, in July, 1885. The blow still affects his eye, and unfortunately, as is said by competent physicians, will be lasting in its influence upon his sight and comfort. It is a serious matter for a man doing such important work as Professor Dwinelle, to be disabled in such a manner, and it is all the more outrageous to have a New York judge attempt, by a quibble, to free the railroad from the responsibility of such treatment of passengers. Professor Dwinelle proposes to carry the matter to the court of last resort in the interest of public safety, and to force the company to pay him damages sufficient to enable him to continue his work with the help of an amanuensis. If the New York Central cares for its reputation in this State, it should do something to assure people that it has some regard for the safety of its patrons.

Irrigation and Alkali.

The occurrence of alkali in our farming lands is a matter of the greatest importance, and especially so since the extension of irrigation has made alkali a greater factor than heretofore in California agriculture. The investigation of alkali and the prescription of remedies for its reduction was one of the earliest undertakings of Prof. Hilgard and one in which he has rendered the State signal service. We have given from time to time, during the last ten years, outlines of this work, and we are not surprised to see that Prof. Hilgard continues to train his forces against the old enemy in all the new forms which it assumes. There has just been issued from the College of Agriculture a special report of 45 pages, dealing directly with "Alkali Lands, Irrigation and Drainage in their Mutual Relations." A copy can be obtained free by addressing Prof. Hilgard, at Berkeley, and it should be in the hands of every farmer upon whose lands traces of alkali appear. In his introductory note, the writer says:

At first only a few individuals, directly affected by the occurrence of alkali at inconvenient points in their cultivated land, took much interest in the question; but as the San Joaquin valley came forward as a region of profuse fertility and promise, the fact that some of its otherwise most eligible portions are marred by the alkali tracts interspersed with the best lands, attracted more attention, and the question of their possible reclamation for culture was mooted. Yet for some years this question remained more a matter of curiosity than of serious concern. It was not until it began to be noted that in the irrigated districts of the Kern and Tulare valleys the alkali was continually extending its area, and seriously damaging the wheat crop where before there had been no sign of it, that public interest was aroused; but even then the fear of injuring the sale of lands situated in the regions concerned, caused many to avoid and frown down mention or discussion, precisely as has been done in the case of the phylloxera. But the specter would not be laid by the hushing-up policy in either case; complaints of the same tenor came up from one irrigation district after another; until now, when the necessity for the establishment of some definite system of irrigation has become too obvious to be longer put aside, the discussion of irrigation and drainage in their bearings upon the alkali question, in the light of past experience, not only in California, but in other irrigation countries, cannot and should not be postponed, since to do so can but result in an unnecessary repetition of the same costly experience.

For this reason Prof. Hilgard has collected into a single publication the various investigations which he has made on alkali, and outlined the course which must be taken to guard against the evil which the increase of these pernicious salts threaten to our irrigated lands. Coupled with these original investigations and supporting them, is an outline of the efforts against alkali made in the irrigated districts of East India, where the problems are seen to be the counterpart of those which face Californians, and which must be attacked and solved if our State is to be fully developed.

The report will be found to have a deep interest to all who desire to be informed upon the peculiar phases of California agriculture, and to those whose lands are in alkali districts its importance can hardly be overestimated. Fortunately there is a remedy for the evil even in its broadest extension, but in such a case, of course, the remedy must be as broad as the disease. Our friends in the San Joaquin valley, who are laboring earnestly for a drainage system to complement their work for irrigation, will find in Prof. Hilgard's report data which will

lead them to redouble their efforts and give them new force in commanding the interest of the careless and thoughtless. We have often appealed for drainage as an essential, both in individual forms and in districts where the water level is rising too high, and the striking statements given in Prof. Hilgard's report will incite all to insist that immediate attention be given to the needs of the State in this regard. We do not attempt to outline the contents of the report, because all who have any interest in it, or desire to know about it, can have the full report for the asking.

Central California Citrus Fair.

[Written for the Rural Press by H. M. H.]

A literary and musical entertainment has been given nightly, beginning the second evening of the fair, when the opening exercises took place. An overture by the Fifth Infantry band of 18 pieces, L. Chaffers conductor, was first on the program. The same performers discoursed excellent music every evening during the first week, to the satisfaction of the visitors and managers.

On Tuesday evening, Feb. 8th, a large number of people being in attendance, notwithstanding the generous downpour, President Cyrus Jones introduced Rev. Dr. C. C. Stratton, president of the University of the Pacific, who delivered an able and appropriate address, of which the following is a brief synopsis:

Dr. Stratton's Address.

Ladies and Gentlemen: When the invitation to deliver the opening address was extended to me, I asked myself what qualifications for the purpose I possessed. I remembered that when a boy I followed the plow, swung the cradle and bound the sheaves; but the semi-tropical scene before me to-night convinces me that my experience as an Eastern granger 30 or 40 years ago avails me little on this occasion.

I visited some friends last summer in Los Angeles, and while there saw many things of interest. What a man of ordinary intelligence and observation cannot learn there in a week regarding natural scenery and other attractive features, is not worth knowing. I saw many fine displays of citrus fruit, but none that compares with the one before me.

The people of Los Angeles have unbounded confidence in the resources of their country, in whose praise they were prolific. This is commendable. To them, things the most commonplace assume a poetic grandeur. "See," said one, pointing to a reservoir filled with water of inky blackness, "see the beautiful amber color of the water." At the mention of the word amber, I thought of the magnificent gems that deck the crowns of kings and adorn the necks of queens; of the poetry suggested by the word, and of its application to the repulsive-looking water. This remark taught me to adopt a more poetic style of nomenclature. For instance, if looking upon our own western mountains, when obscured by clouds or smoke, I must, instead of using prosaic language, describe them as robed in violet hue, made so by the delicate softness of our atmosphere.

My friend, who was endeavoring to awaken enthusiastic responses from me, was amazed at my indifference, and, surmising the reason, asked me how Santa Clara valley compared with Los Angeles.

I told him that I had not witnessed anywhere so entrancing a scene as the view of our own valley from the Alum rock road, whence we may see the beautiful city of San Jose, surrounded by golden fields of grain, extensive vineyards, numberless orchards and forests of ornamental trees, with the Bay of San Francisco stretching away to the northward.

I would not live in a country that can afford but one kind of product. Beginning at San Jose as the lowest point and gradually rising on all but the bay side through the valley, and the mountains to the summit, we find such varieties of soil and climate as are adapted to the production of cereals, flowers and fruits, including nearly all the semi-tropical.

The student of political economy, in search of a good location for a home, must certainly choose the Santa Clara valley, with its numberless products, over Colusa with its single production of wheat, or Los Angeles with its oranges.

The cultivation of a variety of fruits will have a tendency to break up large land-holdings, inasmuch as it is impossible to build up many homes on a large estate. Let us suppose that the large ranches in this valley were subdivided into farms of from 10 to 20 acres, supporting happy homes and their attendant school-houses and churches. There would not then be a more desirable country this side of the Better Land.

I cannot conceive of an interest more intimately connected with the advance of intelligence than the one that calls us together to-night. Compare the fruit industry with the wheat interest. The wheat-raiser produces grain on a large scale, calling in the assistance of tramps and idlers from the towns. The harvest ended, the employer has no further care for the welfare of the laborer, who returns to his life of idleness and dissipation. Such employment is pernicious to industry and promotes the tramp nuisance. Farming on a small scale, and raising a variety of fruits, gives continuous employment to the laborer, who is made one of the household and treated like a human being. One member of the community cannot flourish and the other decline, and at the same time the highest welfare of the citizen obtain.

I have been studying the industries of Southern Europe, which our valley is about to rival. Comparing the mean temperature of Rome and of Sacramento, we find that the two cities have about the same climate. Sacramento could undoubtedly compete with Italy in the production of fruit. If this is true of Sacramento, how much more is it true of Santa Clara valley!

The magnificent display before us is proof that we can produce the orange, the lime and the lemon as favorably as in France, Italy and Greece.

Scientific observation teaches us that the orange tree can withstand a temperature of 12° and the lemon tree of 6° below the freezing point. Since in our valley the cold has never been known to be so severe, the fears of the most timid in regard to growing citrus fruits are removed.

These trees are the most beautiful as well as the most profitable grown. They tell me that every orange tree in Los Angeles county has sold a thousand acres of land. There is something attractive in the contrast between the green leaf and the golden fruit. Let us, then, cultivate semi-tropical fruits, but not to the exclusion of the apricot and the plum. In this course will lie our greatest prosperity and wealth.

Wednesday Evening.

The following poem, written especially for the occasion by Mrs. E. O. Smith, was read in fine style by Miss Benfey:

Cradled, soft grassy hills between,
Clothed in her robes of varied green,
Lay a beautiful maiden, asleep. No tongue,
Though inspired by the muses, has spoken or sung
Of such marvelous beauty and wealth of charms
As lay slumbering beneath her folded arms.
A form in which all graces seemed to lurk,
A crowning of Nature's handiwork;
In the beautiful tints on her face that shone,
The rose and the lily had rivals grown.
In her heart lay buried such treasures as those
Which earth on her favored children bestows.
Tall trees, with lichen and moss overgrown,
Above her head had a canopy thrown.
Long trailing vines, decked with wild flowers rare,
Twined themselves into wreaths for her shining hair;
While the hills sent down their waters sweet
To ripple and dance at her pretty feet.
Many a painter, with talents rare,
Stooping to gaze on her lying there,
Had exclaimed, "Ah, none but a hand divine
Could portray on canvas such charms as thine."
Now, this beautiful maiden had many a swain
Who had journeyed from far in hopes to gain
A place in her heart. They had brought their store
Of treasure rich, in her lap to pour;
They tasted her sweetness, her ringlets caressed,
And gathered the roses that lay on her breast.
But no harder part has lover e'er played
Than wooing the heart of a sleeping maid;
So they wearied at last of pressing their suit
To eyes that were closed and lips that were mute,
And lured by the dazzle of womanly art
That so often beguileth the human heart,
They stole from her lifeless presence, away
To sport with maidens more wakeful and gay.
But the beautiful sleeper awoke at last,
And beholding the throng as it hurried past,
She exclaimed, "Ah, me! Too long have I slept,
And no watchful eye has its vigil kept.
Behold those who homage should pay to me,
To others, less charming, are bending the knee.
O that one should allow, o'er their senses to creep,
The bewildering charm of the goddess of sleep.
I'll arouse me, and reach out a welcoming hand
To other proud suitors throughout the land;
I will open my heart for the jewels there,
To bedeck my robes and adorn my hair;
Will herald my virtues till, hearing my voice,
The proudest of courtiers shall make me his choice.
Shall call me his glory, his joy and his pride,
The fairest of daughters, his beautiful bride;
And shall dwell in my sunlit halls with me.
Not too late have my eyes been opened to see
That a maid, howe'er fair, who a bridegroom would take,
Must be on the alert—must be up and awake."

ENVOY.

The beautiful maiden, so marvelously fair,
Is our own lovely valley, the vale of St. Clare;
Her suitors are those who would bring of their spoil
To invest in her treasures of climate and soil;
Her sleep is that spell which has hung like a pall
O'er her slumbering bosom, and held in its thrall
The fairest child of that glorious State,
Whose entrance way is the Golden Gate.
Not too late has her hour of awakening come—
Already she catches a distant hum;
'Tis the heralds, announcing her coming groom
And his courtly train; 'tis the Princely Boom.

Miss Benfey, being encored, rendered Will Carleton's "Schoolmaster's Guests" with excellent mimicry.

Miss Cora Finch, of whose musical talent San Joseans are justly proud, was listened to with marked attention while she sang inimitably "The Last Rose of Summer," and as an encore "Polly, the Cows are in the Corn."

Messrs. Moody, Hervey, Boulware and Harrell sang "Huntsman Song," and on being recalled a "Serenade."

Floral Award.

All the ladies who entered floral designs, in competition for the premium offered by the Horticultural Hall Association, met in the hall after the flowers had been placed on exhibition, and balloted for a Committee on Award. Mrs. D. C. Feeley, Mrs. D. C. Vestal and Mrs. M. G. Buzzo were elected. Mrs. E. O. Smith, not wishing to compete with ladies whom she had induced to enter flowers, very generously withdrew from the contest her own exhibit, which was superbly disposed in a rockery of caverns, lakes and rills.

The premium given is a very fine oil painting of safrano roses, by Mrs. J. E. Brown, from a bouquet plucked last January. The picture, which the association had purchased for $20, was awarded to Mrs. Dr. A. J. Cory, of San Jose, for the largest variety and most artistic arrangement by an amateur of natural flowers grown out of doors. Her design consisted of a lyre of laurestinus, with a disposition of immortelles into strings alternately red and white.

The following ladies received honorable mention: Mrs. H. S. Foote, Miss Mattie Ross and Mrs. S. T. Ingalls.

Mrs. Foote's design was constructed upon a wire frame having the outlines of a triangular pyramid, trimmed with smilax. At the apex, and at the three angles of the base, were exquisite bouquets of safranos, pinks, Japanese chrysanthemums, azaleas, fuchsias, and other choice flowers. This piece looked like an escape from Fairy Land.

A striking display made by Miss Ross consisted of a large variety of pansies arranged in the form of a butterfly, with wings measuring two feet from tip to tip.

Other Floral Exhibits.

Mrs. N. S. McClay's horseshoe, made of calla lilies, laurestinus, hollyberries, and other winter growths, appeared to good advantage.

A very unique and attractive design is shown by Miss Adda C. Munn, who resides on the Berryessa road, about two miles from San Jose. It consists of a horseshoe of violets and smilax, interwoven with maiden-hair ferns. The arch is lined with flowering quince, and the top surmounted with red and variegated pinks. The back is of white gillyflower and laurestinus, and the whole rests upon a stand entwined with smilax, the base being formed of marigolds.

Mrs. T. O. Smith shows a basket of marguerites.

T. Conant, of Santa Clara, has a design of a horseshoe, above which is a five-pointed star, both made of everlastings.

Miss B. Spangenberg a collection of choice flowers, grown in the open air at Cupertino.

E. Bourguignon.

A florist of San Jose, makes an exceedingly fine display. His palms of the Latinus Senfortia Elegant and Dracenus varieties are very beautiful. He has a Marechal Neil rose in bloom; a rare lily, the Crinum Asiatica, an uncommon evergreen tree known as the araucaria, a native of Australia; several kinds of the croton; an Australian tree fern; some pretty pinks, begonias, azaleas; a stephanotis, which bears a white flower like wax; a camphor tree; a Fresia, which grows from a bulbous root; an ivy geranium with variegated leaves; and a Eufortia which has a red flower and a stem covered with large briars. Mr. Bourguignon's floral monument, which stands over five feet high, is a thing of beauty, and it is a pity it cannot be a joy forever. The front of the cubical base is studded with the choicest of flowers, and is intended as an emblem of Central California. The other three sides, trimmed with common flowers and acoleus leaves, and presenting a less attractive appearance, represent the other portions of the State. Above the base is a globe completely environed with rare gems of the floral kingdom, typifying Santa Clara county. At the top of the monument, spreading at an angle of 75 degrees, a fan, arrayed in the most exquisite specimens from the hot-house, symbolizes the city of San Jose. Upon each division of the monument the initials of the part of the State represented are deftly wrought in flowers.

Santa Cruz Flowers.

When one who has heard of the fame of Santa Cruz county as a region free from frost, sees the luxuriant display of winter flowers grown in the open air, he must exclaim, with the Queen of Sheba, that the half had not been told him. Long tables, extending from the middle to the end of the hall on the west side, are laden with a profusion of flowers culled from their dooryards by the ladies of Santa Cruz. Surely Santa Cruz county is a veritable land of flowers in eternal bloom!

Upon one of the tables the name, "Santa Cruz," is worked in the flowers of the pyrus Japonica (flowering quince), entwined with acacia blossoms. Around the name is a border of marigolds and narcissus. Against the wall stands a ladder with the words "Santa" and "Cruz," lettered in double geraniums upon the rounds. A large variety of wild ferns from the mountains adorn the wall. A very beautiful domestic fern five feet long, with 25 branches 15 inches long, extending from the main stem, attracts general admiration.

On a table 30 feet in length are to be found the following kinds, kept fresh in moistened moss: Carnation pink, a large variety of geraniums, heliotrope, veronica, cestrum, chrysanthemums (15 varieties), violets, mignonette, stocks, wallflower, myrtle, marguerites, pyrus Japonica, laurestinus, belladonna, ageratum, smilax, narcissus, calla lilies, jonquils, spiræa (three varieties), heath, a variety of ferns, marigolds, double hollyhock, abutilon, habrothamnus, fuchsias (30 varieties), sweet peas, centaurea, three varieties of acacia, begonias, primrose, valerian, cactus, pelargonium, orchid, mezerium, gloxinea, larkspur, hyacinth, daffodil, vinca, laburnum, Japan globeflower, polyanthus, green rose, amaryllis, agapanthus, iris, coxcomb, mahonia, penstemon, bachelor's button, ampelopsis, hydrangia and gladiolus.

The flowers sent from Santa Cruz are in charge of Mrs. A Pope, assisted by Mr. A. Loomis, of Wrights.

Stanislaus County.

In the exhibit made by Mr. Geo. A. Goodell, of Knight's Ferry, there are 1000 oranges of six varieties, viz.: Washington Navel, Rose Navel, Mediterranean Sweet, Malta Blood, Seedling, and Mammoth. They are exceptionally fine, both in color and quality.

Mr. Goodell informs us that the country around Knight's Ferry is well adapted to the growth of oranges. There is scarcely a door-yard that has not one or more of the trees. A neighbor of his, Mr. Collins, took a load of ripe oranges to market on the 1st of last December. One of Mr. Goodell's trees bore 2000 oranges this season. He and his neighbors have made a great success with the lemon, the trees this season being loaded. He has some dried figs of the Mission variety, and Mr. J. H. Prowse, of the same place, has recently set out an orchard of 10 acres of figs.

Unfermented Wine.

W. W. Waterman, of Highland, Santa Cruz county, has on exhibition some grape juice three years old and not fermented nor boiled. It is as refreshing as the grape. The recipe is a secret. This juice has been exposed to heat and the atmosphere for a week without fermenting.

Santa Cruz County.

Mrs. F. J. McCann, of the city of Santa Cruz, shows some branches bearing Cuthbert raspberries; M. W. Wittle exhibits lemons and the melon pear, which looks somewhat like a banana.

To prove that there is very little frost in Santa Cruz county, it may be stated that there are exhibited thrifty, tender green tobacco plants, standing about three feet high. These came from the place of Mr. Gaffney, in Pajaro valley, near Watsonville.

The same gentleman shows some fine Chili peppers growing in a box of earth, and a lime tree in blossom.

Mrs. James King exhibits two plates of lemons; J. A. Logan, one plate of lemons; F. A. Hihn, two plates of oranges.

Mrs. C. H. Allen exhibits a table-top made of redwood burl, which has been given a superior finish. It compares favorably with the finest Suisun marble in appearance.

Prof. C. H. Allen, principal of the State Normal School, brings from his home at Skyland a plate of sound Newtown pippins, grown at an elevation of 2000 feet.

Wright Bros. show some fine oranges, grown 1500 feet above sea level; W. H. Aiken very good oranges.

Miss Maggie Tennant exhibits sound apples that shine as if varnished, and some very large pears, which were grown by Mr. Edward Berwick, of Carmel valley, Monterey county.

John Tennant, of Edenvale, Santa Clara county, has some pomegranates, and Miss Maggie Tennant, of the same place, some olives on branches.

Vegetables.

F. M. Tenny, of San Jose, makes a fine show of vegetables, there being eight varieties of squash, two of pumpkin, one of carrot and one of citron. A white Belgian carrot weighs over 20 pounds. His pineapple squash is both a summer and a winter squash. One carrot of peculiar growth consists of six fingers 15 inches long and two inches in diameter.

Kellogg & Morse, seed-growers, of Santa Clara, show some globe onions four inches in diameter.

A. E. Woodsum, of San Jose, exhibits a box of Eastern black walnuts.

E. W. Harrison, of San Jose, displays to advantage a box of English walnuts, some dried prunes, and several monstrous beets, grown without irrigation.

Wm. Pascoe, of Stockton avenue, near San Jose, shows English walnuts.

Judge A. L. Rodes, who resides on the Alameda, exhibits ripe and dried olives, hard-shell and soft-shell almonds, and California and Eastern black walnuts.

Nathan Hall, of Cupertino, shows raisins, oranges and almonds.

L. C. Casey, San Jose, has a fine exhibit of oranges, some of which are in clusters, some large Japanese persimmons and walnuts.

Dr. W. F. Gunckel, of Cupertino, sends fine tomatoes and Languedoc almonds.

M. M. & J. J. Shaner, of Los Gatos, have one of the finest collections in the fair; shaddocks, five inches in diameter; Italian chestnuts, some of them in the bur, an interesting sight; also Languedoc almonds and English walnuts.

Pecan Nuts.

Though a good many pecan trees have been planted in this county, there are few old enough to bear. However, Mr. V. C. Mason, of San Jose, furnishes a plate of these nuts. Mr. W. V. Gaffey, whose place is located at an elevation of 500 feet above the sea level, in Pajaro valley, Santa Cruz county, exhibits some almonds.

Mandarin Oranges.

From the farm of Capt. Jas. Aram, San Jose, come Mandarin oranges three-fourths of an inch in diameter, a section of bark from the cork oak, a box and a plate of oranges, and a plate of green limes.

Dried Fruit.

Mr. A. C. Penniman shows some beautiful specimens of dried fruits, neatly boxed. His evaporated prunes will go from 40 to 50 to the pound. From 100 pounds of green fruit he gets

(*Continued on page 157.*)

For Coast Defense.

The text of the bills making appropriations for ordnance and sea coast defenses, as passed by the Senate, is as follows:

SECTION 1. That the Secretary of War be and is authorized to make contracts with responsible steel manufacturers, after suitable advertisements, to continue not less than 30 days in the newspapers most likely to reach the manufacturers addressed, for a supply of rough-bored, rough-turned and tempered steel, in forms suitable for heavy ordnance adapted to modern warfare, and steel finished for armor and other army purposes, in quantity not to exceed 10-000 gross tons, in quality and dimensions conforming to the specifications, subject to inspection and tests at each stage of manufacture, and including all parts of each caliber specified; provided that no money shall be expended except for steel accepted and delivered; that each shall contract to erect in the United States a suitable plant, including the best modern appliances capable of making all the steel required, and of finishing it in accordance with the contract and agreement in the ordnance contract; to deliver yearly a specified quantity of each caliber, the time of delivery of the small caliber to commence at the expiration of not more than 18 months, and that of the largest caliber at the expiration of not more than three years from the date of acceptance of contract, and that all forgings shall be manufactured in the United States.

SEC. 2. That the Secretary of War be and is hereby authorized to erect at Watervliet arsenal, West Troy, N. Y., an army gun factory, in accordance with the report of the Gun Foundry Board of December 20, 1884, and for finishing and assembling guns adapted to modern warfare to the approved sizes, and for the manufacture of gun-carriage and ordnance equipment for the army at a cost not to exceed $1,000,000.

SEC. 3. That for the purposes of the foregoing sections the sum of $8,000,000 is hereby appropriated, out of any money in the treasury, not otherwise appropriated, to be available during the six years from January, 1887.

SEC. 4. That for the purpose of the construction of fortifications and other work, as coast defense, such as masonry and earthwork foundations for turrets, casemates and magazines, submarine mines and galleries, exclusive of armor, in accordance with the recommendations of the Board of Fortifications or other defenses, as appointed by the President of the United States, under the provision of the Act of Congress approved March 3, 1885, $5,000,000 to be expended, per direction of the Secretary of War, is hereby appropriated.

The Senate has passed the bill to encourage the manufacture of steel for modern naval ordnance, armor, shafting and other naval purposes, and to provide heavy ordnance adapted to modern naval warfare. This bill is like the other in important particulars, except that the gun factory is to be at the Washington Navy Yard, and that the fourth section of the other is omitted.

Johnny's Composition on Medicine.

"There is two kinds of medicine besides the kind you Rub On and the first kind is the Soft Kind which you take with a spoon while A man holds your Head and you kick and Riggle some because it Tastes so and the other kind is the Hard kind which is called Pills and it is the Hardest of the whole because it is so Hard to go Down but it does not make any Difference which kind you Take when you get it Took you wish you Had not for it makes quite a Row in your Stomach and Riots Around."

Evidently Johnny's experience in medicine does not include Dr. Pierce's "Pleasant Purgative Pellets," which are easy to take and do their work quietly and calmly. Neither does it include in the way of "Soft Medicine" Dr. Pierce's "Golden Medical Discovery," which though powerful to cure all chronic derangements of the liver and blood, is pleasant to the taste and agreeable in its effects. Unequaled as a remedy for all scrofulous diseases, pimples, blotches, erruptions, ulcers, swelled glands, goitre or thick neck, fever-sores and hip-joint disease.

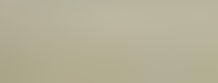
"Golden Medical Discovery" will not cure a person whose lungs are almost wasted, but it is an unfailing remedy for consumption if taken in time. All druggists.

Don't hawk, hawk, and blow, blow, disgusting everybody, but use Dr. Sage's Catarrh Remedy.

It Should Always be Borne in Mind

That time is the only really impartial test of genuine merit, and that according to the universal law of "the survival of the fittest," few sewing machines have withstood this test. Therefore, the only safe thing to do is to buy what time has proven to be the fittest"—the "DOMESTIC" SEWING MACHINE.

Cheap Money for Farmers.



Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from $5000 to $500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. **

BEST TREE WASH.

"Greenbank" 98 degrees **POWDERED CAUSTIC SODA** (tests 99 3-10 per cent) recommended by the highest authorities in the State. Also Common Caustic Soda and Potash, etc., for sale by

IMPORTERS, MANUFACTURERS, AND DEALERS IN

HARDWARE AND AGRICULTURAL IMPLEMENTS.

THE FAVORITE!

AWARDED THE FIRST PREMIUM at the State Fairs of 1877, 1878, 1879, 1880, 1881, 1882, 1883, and numerous County Fairs.

The Leading Gang Plows of the United States.

They are made to adapt themselves to various kinds of soil, and are supplied with different patterns of Plow Bottoms.

These implements have received more State and County Fair Premiums, have been successful in more plowing contests, and have met with a more extensive sale, than any Gang Plow ever invented.

EUREKA GANG PLOW, No. 7c.

They have been the Plows against which all dealers and manufacturers interested in the sale of other Gangs have waged the fiercest war, and the ones by which inventors have measured their efforts, well knowing that if they could make a more satisfactory implement than the Eureka, they could justly claim to have the best.

The efforts in this direction, both by Eastern and California inventors, have been strenuous and unremitting, and possibly might have been crowned with success but for certain stumbling-blocks in the shape of broad patents, covering all essential points, whose validity they have compelled us to establish in the Courts.

Weight, with Steel Bottoms, 638 lbs.

No. 7c Eureka Gang Plow, with 5-16 Iron Center Steel Moldboards, chemically hardened, Cast Cast-steel Shares, with or without Land Gauge, Beams 3½x1⅛, with 2 extra Shares, 10 or 12-inch Cut	$95 00
No. 7c Eureka Gang Plow, with Star Moline Bottoms, with or without Land Gauge, Beams 3½x1⅛, with 2 extra Shares, 10 or 12-inch Cut	95 00
No. 7c Eureka Gang Plow, with Chilled Iron Bottoms, with or without Land Gauge, Beams 3½x1⅛, with 2 extra Shares, 10 or 12-inch Cut, Chilled Shares	85 00

Weight, with Chilled Iron Bottoms, 688 lbs.

No. 7c Eureka Gang Plow, with Chilled Iron Bottoms, with or without Land Gauge, Beams 3½x1⅛, with 2 extra Shares, 10 or 12-inch Cut, with Cast Cast-Steel Shares	$95 00
Extra, for Beams 3½x1¼	Per Gang. 3 00
" " " 5x1¼	" . 10 00

" " " with Fin Cutters	" . 3 00
" " one Detachable Beam	" . 5 00

THE LUMBERMAN.

The Great Demand for Lumber.

In the present extensive and constantly growing demand for timber and lumber, only the roughest approximate estimate can be made of the magnitude of its use. Leaving entirely out of calculation the more visible demand for ordinary building purposes, and its multifarious uses in the various industries which occupy the numerous and extensive wood-working shops of the country, we give a few items of other demands for lumber. The cost of replacing decayed ties by the railways of the United States for 1885 exceeded $30,000,000; repairs of station buildings and road crossings, $19,500,000; repairs of wooden and wood parts of bridges, $6,250,000 (estimated); repairs of freight cars, $22,500,000 (estimated); repairs of passenger cars, $7,500,000 (estimated). The renewal of telegraph poles and fixtures on 160,000 miles of line constitutes a large item. The loss to the agricultural interest is much greater. The tenth census reports the cost of fencing in 1879 at $77,763,473, the most of which was for repairs.

Damage Caused by Destructive Fungi.

One of the largest sources of destruction to lumber is that caused by fungi. The loss caused by fungi on the 9,000,000 dwellings, with their accompanying buildings, and the $406,520,055 worth of agricultural implements which appear in the census reports, and that on the 6,654,997 tons of marine, and on wharves above water, form other large items. The lumber interest is also a great loser through the quantities of timber that are destroyed in store. The destruction and decay of lumber in railroad ties, bridges, etc., is largely due to the destructive presence of fungi. The mere mention of these facts will give some idea of the immense loss from this single source.

The Tree-Killer.

In this connection the following paragraph from a South American journal will be interesting as well as instructive: One of the curiosities of the forests on the Isthmus of Darien and in a part of Central America is a plant called the tree-killer (matapalo). It starts as a climber upon the trunk of large forest trees, and owing to its marvelously rapid growth, soon reaches the lower branches. Then it begins to throw out numerous shoots, which entwine themselves all around the trunk and branches, and also aerial tendrils, which, as soon as they reach the ground, become rooted in the soil. In the course of a few years this gigantic parasite will completely envelop the trunk of the tree which has upheld it, and eventually kill it. The whole dead tree rots away, leaving the hollow matapalo, which continues to flourish standing alone.

An Immense Order for Railroad Ties.

It is said that the Southern Pacific Co. is letting contracts for 300,000 ties at Truckee, which will require the cutting of 10,000,000 feet of timber. We must have railroads and they must be largely multiplied both in number and extent, and until some better and cheaper material than wood can be made available for railroad ties, such roads must continue their heavy drafts upon our forests. The annual demand for lumber is largely in advance of the annual maturity of trees suitable for lumber purposes. Our State Board of Forestry, in its last and most elaborate report, shows quite conclusively that this state of affairs exists in California to-day. The time is coming when earnest measures will have to be taken as a matter of necessity and self-preservation, so to speak, and the longer it is deferred the harder the problem to be solved will become.

So far as railroad ties are concerned, it would well repay the road companies or indeed any private person or association to raise ties for this special purpose. This is already being done in Kansas by the railroad companies themselves. It is said that similar ones are being established in other States. Why not in California? Experiments have been made with both glass and iron; but thus far, for various reasons, they have not proven satisfactory—one important reason is said to be their excessive rigidity.

It is shown in the report of the Board of Forestry that in various places the timber line of the State has receded over 15 miles since the American occupation. This recession still continues and nothing is being done toward providing for forest reproduction or protection, because we have no laws covering the case. The board has drafted several measures for consideration by the Legislature. It is a subject of great importance and one affecting the best interests of the State, and it is to be hoped that before the close of the session the question will have received due attention and the neces sary legislation been enacted.

Examples are cited in the report which demonstrate the importance of this matter. It is shown that in one place, the Santa Clara river valley in the southern portion of the State, the timber and brush have been so thoroughly removed along that river and its tributaries that within the last four or five years the waters run much more violently and destructively than ever before, and that estimates from individuals on different locations on the river show that (as a consequence) between 1000 and 5000 acres of good land have been cut away by changes in the channel of the streams or covered with debris, so as to be worthless.

It appears to be the general sentiment that if the peculiar climate of this State, upon which more than anything else, save, perhaps, water, its future prosperity depends, is to be preserved, there will have to be an end to the indiscriminate cutting of timber and the clearing away of the undergrowth in forest regions by means of fire.

A Big Lumber Yard.

The latest acquisition to the Contra Costa shore is the vast lumber yards of the Port Costa Lumber Co. This is not a conjectural scheme, but an actual reality, and its importance to this county may be judged from the fact that the yards are to be the chief distributing point for the entire coast, even San Francisco being secondary.

The Port Costa Lumber Co. is located at Valona. It has acquired three franchises, being the old Moore & Smith franchise, one purchased from Dr. Strentzler and one from Prof. John Muir. These include the entire water front from Starr's mills, at Crockett, to Vallejo Junction. The president of the company is Mr. John A. Hooper, of San Francisco, and the gentlemen composing it were induced to locate here through the instrumentality of Mr. A. D. Starr, of Starr's mills—a gentleman who is fully acquainted with the value of our water front for business purposes, and who is only too willing to impart his information to others, with a view of building up our county and adding to our material resources.

The company has let a contract for the building of 1500 feet in width. This will include all of the Strentzel franchise and 200 feet in length each of the Muir and Moore & Smith franchises. The wharf will be constructed on a new plan, with a view of lessening time and expense in unloading ships. As built, their vessels can discharge at the same time, and a further extension of the wharf will accommodate others. It is definitely decided to begin the work of construction within a week or 10 days.

This company is a union of all the Oregon pine lumber interests of the coast. This class of umber will be a specialty. The yards at Valona will be the distributing point for all points on the coast. Lumber will be brought by ship direct to the Valona yards and unloaded there. All other yards, including those in San Francisco, will be secondary, and will be supplied from Valona by rail and water. The old Puget Sound Lumber Company's yard at South Vallejo will be closed, but the Pope & Talbot yards there will be continued as subyards. The yards at Valona will give constant employment to 150 men.—*Martinez Gazette.*

GOVERNMENT TREE PLANTING.—Norman J. Colman, the U. S. Commissioner of Agriculture, in his second annual report to the President, in speaking of forestry says: There is practically no reproduction attempted or forest planting done worth mentioning, in comparison with the enormous annual consumption. "As the first step of reform," he says, "undoubtedly the land policy of the United States, in timbered regions, requires a change according to the conditions of those localities. Beside the good example which the Government may set in taking better care of its own timber lands, it might appropriately extend its operations by planting on a large scale in bodies of several contiguous sections in the treeless States and Territories of the West. The military reservations in these States, owned by the General Government, would form the most desirable field of operation. Only by such extensive tree planting can a desirable modification of the extremes of climate on the Western plains be expected."

WINTER MELONS AND SUNFLOWERS.—Ransom Greene, of Alma, Santa Clara county, brings us a Cassaba melon, which demonstrates the value of the species as a winter fruit. Mr. Greene finds that with him the melon ripens continuously from November to January, thus giving a long market season. Mr. Greene advertises in this issue seed of the famous sunflowers which were shown at the last Mechanics' Fair, and where the heads, 16 and 17 inches in diameter, attracted much attention. Mr. Greene finds these sunflower seeds very valuable as poultry food, feeding them with other food, as they are too rich alone. We are promised an article on sunflowers for poultry, which will no doubt be interesting.

FRUIT CANNERY AT SANTA ROSA.—The committee lately appointed by the Fruit and Grape-Growers' Association of Sonoma County to solicit aid for re-establishing the Black fruit cannery at Santa Rosa, held a meeting in that city Feb. 4th. The *Democrat* reports that they resolved unanimously "that a fruit cannery is a vital necessity in Santa Rosa, the great center of fruit-growing, and that we will immediately proceed to take subscriptions for and to organize a stock company with a capital of $50,000—500 shares at $10 each." The following named of the committee signed for $1000 worth of stock each: J. H. Glenn, E. A. Rogers, Capt. Grosse and B. M. Spencer. Before the meeting adjourned E. W. Davis subscribed for 100 shares of stock ($1000).

Grading Prunes by Machinery.

John Rock, the well-known fruit-grower and nurseryman, of San Jose, writes to James Loney, of Pomona, as follows:

Dear Sir: Your favor of the 6th at hand and contents noted. You have, undoubtedly, the most prolific prune orchard in California, and your prunes were the sweetest I ever tasted.

The grading of prunes is done here usually before they are dried, as they come from the tree; they are then round and roll over the riddles with ease; after they are dried and rough it takes more work to roll them over the riddles and stick fast.

The riddles or machines in use are of various make, and are a new institution, as they have been only in use last and this year, and none are perfect yet, although some claim patents on their machines and do not want anybody to see them. Most of them work on the principle of a fanning mill; three to four riddles placed above one another, each with a slight incline, and a spout on the side where each grade drops in a box. Some have a long riddle, say 12 feet long, with three different sizes of wire screen. This riddle is hung up on four ropes with an incline; the prunes are thrown in the higher end and by shaking it they roll down and fall through the holes and in boxes underneath. This machine will do to grade your dried prunes. The first piece of screen should be small, to let only stems and dirt through, and no prunes.

A good many ways of packing have been done here to come near the French way. The custom of dipping in syrup has been condemned; and only hot water or steam is used before packing.

There are no machines made for sale; they are all home-made.

ANOTHER HILLTOP HOTEL.—The magnificent Raymond, at Pasadena, appears likely to have a rival—at the safe distance of 50 miles—for it has been announced in the *Semi-Tropic* that a company has been formed, with a capital stock of $100,000, to erect one of the finest hotels in the State on the top of Slover mountain, about one and a half miles from Colton. Surveys have been made and the ground laid off. On the top of Slover mountain is one of the most beautiful plateaus, 20 acres in extent, that lies in California. The view is grand, and takes in the surrounding country for a distance of over 60 miles in nearly every direction. The air is pure, and the altitude just right for health. An electric car line is being surveyed to reach the spot, and pure mountain water will be piped to large reservoirs at the base of the mountain and thence forced to the plateau and carried to all parts of the hotel and grounds. No more beautiful nor healthier spot on God's green earth could have been selected for a hotel site, and the enterprising gentlemen who have the project in hand well know the importance of the location. The hotel will be within a few minutes' walk of the California Southern and Southern Pacific railroad depots.

Castor Beans.

EDITORS PRESS:—I would be pleased if you would call upon some of your subscribers who are able to give it, for information on the cultivation of the castor bean. What are the conditions of soil, climate, etc., most favorable, and what the average yield, price, and where the market?—EDMUND WRIGHT, *Red Bluff.*

[We would like to have information from readers who have had experience with this crop. We know that many have been disappointed with it and that the production has never advanced as was expected, but we are not fully informed as to reasons. Readers are also inquiring as to methods and machinery for making the oil. Doubtless some can give us interesting letters on these points.—EDS. PRESS.]

"NO NORTH, NO SOUTH."—The L. A. *Times* of the 26th ult. avers positively that Ralph Rogers, one of the most energetic and successful real estate men of Los Angeles, with other capitalists, including men in the North and East, have bonded about 50,000 acres of land in Butte county and are going to lay out a big town 12 miles from the main line of the C. P., whose magnates have promised them a branch road. The tract runs down to the main line. Water is abundant, and will be piped all over the land, which will be sold, with water, at $60 to $100 an acre. The *Times* adds: "It is well known that the best oranges the N. C. B. can produce are grown in the vicinity of Oroville, Butte county, and Mr. Rogers brought down some attractive samples of Oroville's citrus abilities. He goes up again next week to have the tract mapped off and laid out."

JAMES HUTCHISON.—Our columns again contain the advertisement of James Hutchison, the veteran nurseryman and florist of Oakland, who has seen the city grow up around his establishment, and has returned the favor by his own efforts to build up the city. Mr. Hutchison's floral and seed depot, opposite the City Hall in Oakland, is centrally located, and it is reported that he proposes to build a new block upon his site there. As a member of the California Nursery Co., he has taken part in building up our greatest establishment of its kind. Though Mr. Hutchison's long service would entitle him to a rest, he goes right forward with all his old-time vigor.

JAPANESE PLANTS.—A. Chabot, of Oakland, has in his gardens bearing Mandarin orange trees imported from Japan. He has also successfully raised tea plants, and says that tea plants can be profitably cultivated in this State. He has grown from seed 1,000,000 camphor trees, which grow to perfection in some parts of California.

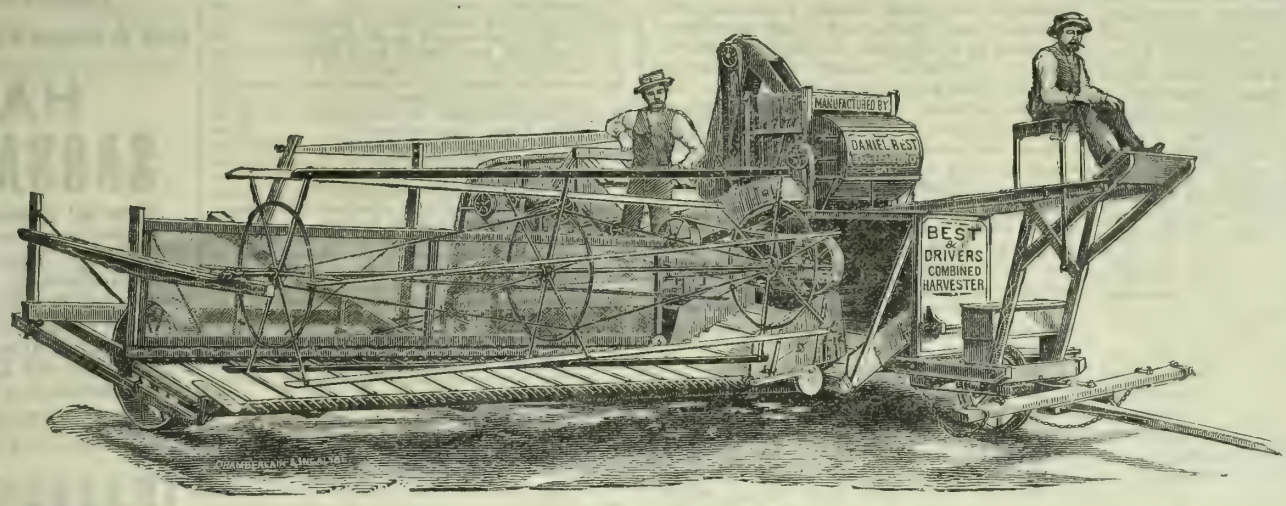
BEST & DRIVER'S IMPROVED COMBINED HARVESTER for 1887

Manufactured at the



DANIEL BEST AGRICULTURAL WORKS, San Leandro, Cal.

STANDARD SIZE

—IS—

14 Feet.

Will make any size that is ordered.

Belt

—AND—

Geared.

The BEST & DRIVER IMPROVED Combined Harvester, without doubt, will be the Leading Machine this season, is the verdict of all those who have inspected it.

IT HAS VALUABLE IMPROVEMENTS THAT ARE NOT FOUND IN ANY OTHER COMBINED HARVESTER MANUFACTURED. SPACE WILL NOT ALLOW US TO ENUMERATE HERE; AN INSPECTION OF THE MACHINE WILL CONVINCE YOU.

The Gearing is composed mostly of Spur Wheels, and so compactly arranged that should the frame of the machine weave because of the unevenness of the ground, there would be no danger of the gearing getting out of line, causing it to cut or bind in the boxes, which occurs with other Harvesters in which the gearing is more scattered.

We have succeeded in getting that combination of Lightness, Adaptability and Strength which is the result of thought and skill, taking from some parts and adding to others, making our Harvester from four to six horses lighter draft, and yet retaining as great strength as the heavest machine manufactured. The Header is very rigid and so balanced and hinged that it is no trouble to save down and tangled grain. A boy ten years of age can manage it.

I wish to call your attention particularly to the separating qualities of my Harvester. The agitators are so arranged that the grain is completely shaken from the straw, and my new AUTOMATIC GOVERNOR on the fan completely governs the blast on the shoe, so that at any speed which the machine travels, the blast will be the same. Making a saving of a great amount of grain that would otherwise be blown over the riddles; but, instead, will go into the sack, which in a season will more than pay the harvesting expenses, over and above any **Combined Harvester** that has not the **Automatic Governor.**

Each **Harvester** has one of my celebrated **Grain Cleaners** attached, which needs no recommendation from me, as the grain growers of California can testify as to its merits and superiority over other Cleaners on the Coast.

Every machine is thoroughly tested before it is allowed to leave the factory, so there will be no trouble or vexatious delays in the field. The Lumber is thoroughly kiln dried that we use in the construction of our Harvesters, so that they will not fall to pieces under a hot sun.

Please call at my Works, near the Depot, San Leandro, and examine our Harvester. I have sample machine belted and attached to the power of the factory, and will take pleasure in showing how it works, so that you can become familiar with the working of the machine before taking it into the field.

IMPROVED GRAIN CLEANERS, and MILLS.

I desire to call your attention to my latest Improved Cleaners that I make for any and all Combined Harvesters. The great success I have had with my Cleaners, made to run with Thrashing Machines, as well as the satisfaction given by my Fanning Mill and Warehouse Mill, induced me to design and build a Cleaner, especially for the Combined Harvesters. I make the following sizes, viz:

45-inch for 18-foot cut and over.
40-inch for 14 to 18-foot cut.

This Cleaner is the most successful Combined Harvester Cleaner ever offered to the public, and I can guarantee it to be the most perfect Cleaner now in use. I have made a great many valuable improvements that have never yet been introduced, the merits of which will be quickly understood and highly appreciated by those who have use for the Cleaner. It is made strong and durable, and of such size and capacity that it will easily handle and thoroughly clean the grain as fast as any Combined Harvester will thrash it, and it has proven to be the only Cleaner mounted on Harvesters, that will thoroughly clean foul grain, and make it merchantable.

A Treatise on the Horse and his Diseases

By B. J. KENDALL, M. D.

35 Fine Engravings showing the positions and actions of sick horses Gives the cause, symptoms and best treatment of diseases. Has a table giving the doses, effects and antidotes of all the principal medicines used for the horse, and a few pages on the action and uses of medicines. Rules for telling the age of a horse, with a fine engraving showing the appearance of the teeth at each year. It is printed on fine paper and has nearly 100 pages, 7½x5 inches. Price, only 25 cents, or five for $1, on receipt of which we will send by mail to any address. **DEWEY & CO.,**

252 Market St., S. F.

LIGHTNING WELL SINKING MACHINERY. Our Artesian Well Encyclopedia contains near 700, engravings, illustrating and describing all the practical tools and appliances used in the art of well sinking; diamond prospecting machinery, windmills, artesian engines, pumps, etc. Edited by the "American Well Works," the largest manufacturers in the world of this class of machinery. We will send this book to any party on receipt of 25 cents for mailing. Expert well drillers and agents wanted. Address, **The American Well Works, Aurora, Ills., U. S. A.**

In Los Angeles and San Bernardino.

A Missouri gentleman, writing home from Pomona on New Year's day, gives a charming bird's-eye view of the south country and its thriving. He says:

The climate here now is similar to that of a dry June in Missouri. We have all the new vegetables. Flowers are in full bloom, and fruits of rare kinds are abundant everywhere. So you may infer that this is the Promised Land.

The country is full of visitors seeking health and pleasure, and nearly all the invalids claim to be benefited, more or less. Some are entirely cured. I think the climate is especially adapted to relieve from lung troubles.

I have never seen such a boom as there is in Southern California. The hotels and private houses are full everywhere, and many are going from place to place looking for lodging room, and still they come. We have information that the largest excursion yet is on the way. When we came out there were three trains of 600 persons that belonged to one excursion, and many have come on different roads since, until it looks like there is no room for more.

We arrived in Los Angeles two weeks ago, spent several days there and at Pasadena, and then came to this place. Have just returned from a big carriage drive around the valley, of 85 miles, taking in the towns of Riverside, Colton, San Bernardino, Cucamonga and Ontario, which embraces the large orange belt of Southern California. There is a seven-mile double drive at Riverside, with evergreens, rare plants and flowers on either side and in the middle, and orange groves and fine residences all the way. Another at Ontario is seven miles long, built in the same way and just as pretty, but not so old.

Lands are very high here; unimproved orange land, with water privileges, sells at from $100 to $200 per acre, and improved land from $200 to $1000 an acre. This appears high at a glance, but when we know that the oranges on some of these orchards will bring $400 to $500 per acre, it does not seem so much out of the way.

The Stockton Pavilion.

From the action of the Stockton City Council last Monday night, it seems probable that the petitions in favor of giving the Agricultural Association the use of Washington square for a pavilion site will be granted.

James H. Budd made a plea in behalf of the petitioners, stating that, as a lawyer, he had no doubt of the Council's power to lease the square for a term of years for the public uses mentioned, and presented written opinions of Judge Terry, P. W. Bennett, Judge Booker and others to the same effect.

City Attorney Smith differed with Mr. Budd on some points, but not in the conclusion reached. He believed that if the Council granted the use of the square for 15 or 20 years for a public purpose, it would not be an abandonment and the property would not revert to the Weber heirs.

After further discussion, the motions carried at a previous meeting, refusing to lease Washington square and offering Independence square, were reconsidered, and the subject was referred to a committee of five, consisting of Councilmen Doyle, Henderson and White, the Mayor and the City Attorney, who are to confer with the committee of the association and report at the next meeting of the Council.

CHICAGO AS A GRAIN MART.—The fact that receipts of wheat at Chicago this season have declined, and that what it has lost in this direction has been gained largely by Minneapolis and Duluth, has stirred up newspapers as well as members of the grain trade in the Northwest. It is noted, too, that the chief grain inspectors at Chicago and a committee of the Chicago Board of Trade have been examining the methods of handling grain at the Northwestern cities named, presumably with the intention of improving their own when they get home again. It is alleged that Chicago has thus far graded wheat which was not quite clean, quite low, against the merits of the grain, and that from this practice the opportunity to buy good wheat cheap and clean it (say at Milwaukee, after paying extra carriage) has given rise to a regular business in that line at the cost of consignors. Meanwhile the practice is working its own cure, and Chicago is surprised to realize that Minneapolis, St. Paul and Duluth grade wheat subject to cleaning, that the elevators are all fitted with cleaning apparatus, and that a State weighing law, are among a few reasons why Chicago's long supremacy as a grain market has begun to show signs of a decline.—*Bradstreets.*

SONOMA COUNTY CITRUS FAIR.—Messrs. Adams, Davis, Grosse, Roberts and Rogers, to whom was referred the matter of holding a citrus fair at Santa Rosa, having satisfied themselves that the citrus productions of the county are in their best condition for display about the 10th of January, and that it is now too late for such display for the season of 1887, recently

Resolved, That all persons in Sonoma county who grow any citrus products be, and they are hereby, requested to prepare the same for the "Santa Rosa Citrus Fair of 1888;"

Voted thanks to all who have aided and encouraged their efforts, and adjourned *sine die*.

WHEAT CULTURE IN ENGLAND.—The acreage devoted to wheat-growing in England and Wales decreased more than seven per cent last year, and the total yield was diminished by 2,173,451 bushels. Within the past 15 years the wheat acreage of Great Britain has been reduced from 4,000,000 to less than 2,500,000 acres, and the prospect is that the diminution will continue. The enormous increase of production in the United States, Australia, India and other countries has so lowered the price of the cereal as to deprive the English agriculturist of the profit he formerly enjoyed, and has compelled him to devote the land to other uses than the cultivation of wheat. In the opinion of Prof. Thorold Rodgers, "It is idle to anticipate any notable rise in this article. The wheat growing area of British India is reported to be nearly 28,000,000 of acres, and this area is likely to increase. That of Australia is capable of almost indefinite extension. Now, according to American returns, the United States area in 1884 was 39,500,000 acres. It is almost superfluous to state that in countries subject to periodical droughts, wheat is the safest crop on which the cultivator can depend, and is certainly the most merchantable."

THE GRAPE GROWERS' CONVENTION.—Preparations for the grape-growers' convention in this city, on March 7th and succeeding days, are progressing. As Mr. Thorne has offered the use of Music hall, Grand hotel, it is probable that the convention will be held there. It has been decided to use the mornings and part of the afternoon in tasting wines, and the remainder of the afternoon, with the whole of the evening, to literary exercises, the reading of papers and the discussion of their contents.

CITRUS SHOW IN OAKLAND.—The Oakland *Times* has recently had a little local citrus fair at its business office. The fruits on exhibition, gathered mostly from the foothills back of the city, included oranges and lemons from Mission San Jose, Warm Springs, Temescal and Alameda, Japanese persimmons, and olives. The lemons were spoken of as particularly fine; and the seedling oranges, from 15-year-old trees at L. Stone's place near San Leandro, were large, sweet, and of high market value.

GOOD WORDS FROM AFAR.—The *Religious Telescope*, of Dayton, Ohio—a paper which has been established over half a century—made this friendly and appreciative mention: The PACIFIC RURAL PRESS, published at San Francisco, Cal., is a valuable agricultural paper, devoted to the interests of the golden coast. Persons desiring reliable information in reference to the soil, products, etc., of the Pacific Coast could hardly do better than subscribe for the RURAL PRESS.

SCRIBNER'S MAGAZINE.—It is pleasant to see the name Scribner again attached to a first-class magazine, and the reading of the first two numbers of their new periodical assures us of its excellence. They have also made a departure in fixing the price at $3 per year, instead of $4, as held by the old standards. Single copies are sent for 25 cents, and all literature lovers should see it. Charles Scribner's Sons, New York city, is the address.

IN THE U. S. Senate on the 11th inst. Senator Stanford presented petitions from the S. F. Chamber of Commerce, asking for a branch hydrographic office in this city, urging Congress to provide for harbor defenses, and protesting against the reduction of the duty on raisins.

Books for the Household.

We desire to give our readers every advantage in obtaining useful books at the most favorable rates attainable. We offer below a number which we believe will be found acceptable to many readers of the RURAL, and the reduced prices at which we can furnish them to our cash-in-advance subscribers—POSTPAID—will place them within the reach of many.

WHAT EVERY ONE SHOULD KNOW.—A Cyclopedia of practical information. Gives full directions for making and doing over 5000 things necessary in business, the shop, the farm, the kitchen and the home. Recipes, prescriptions, trade secrets, law, art work, agriculture, etc. Compiled from the most reliable sources and alphabetically arranged by S. H. Burt. 510 pages, cloth. Postpaid 50 cents. Regular price, $1.

THE WAY TO DO MAGIC.—Illustrated. Plain directions to enable any one to become proficient in Jugglery and Legerdemain. 60 pages. Postpaid, 10 cents.

THE TAXIDERMIST'S MANUAL.—Illustrated. How to Collect, Prepare, Mount and Preserve all kinds of Beasts, Birds, Insects, etc. By Prof. Graham Allen. 64 pages. Postpaid, 10 cents.

Send for free circular describing most of these premiums, and any further information desired.

A Fine Piano for Senator Mahone.

[*From the Baltimore American.*]

A number of prominent musical people of this city gathered in the warerooms of Messrs. William Knabe & Co. yesterday morning to examine a piano made by the firm for Senator "Billy" Mahone, of Virginia, for his Washington residence. The instrument was specially designed and built to that gentleman, and is truly a magnificent specimen of the highest musical, as well as decorative, art. It is a full Concert Grand, the same in size and general outline as the famous Grand Messrs. Knabe & Co. furnished for the White House. The case is of rich and beautifully figured rosewood, decorated with inlaid work in white holly of unique and intricate design, carved out in the most artistic manner. Each panel has a group of different musical instruments, the whole surrounded by borders of fine marquetry work in leaves and flowers, etc. The legs and lyre are richly carved and decorated to match the body of the case, the whole producing a striking and at the same time most refined, esthetic effect. The tone is superb, striking the listener by its wonderful volume, depth and richness, combining with greatest power a most refined and mellow character and charming singing quality, the action and touch perfectly delightful to the performer by its ease and responsiveness. It is, indeed, a most wonderful instrument in every respect, and the Senator is to be congratulated on its possession.

Newspaper Agents Wanted.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference.

DEWEY & Co., Publishers,
No. 252 Market St., S. F.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.
G. W. INGALLS—Arizona.
E. L. RICHARDS—San Diego Co.
R. G. HUSTON—Montana.

HENDERSON'S PATENT TRUSS.
Comfortable and Reliable.

This simple truss can be worn without inconvenience, and gives all the comfort to the wearer that can be obtained from a perfect-fitting, pliable apparatus. The pad is soft and yielding, and on account of its peculiar construction and the connections of its securing bands, cannot get out of place. It will remain in place no matter what position the wearer may assume. The engraving shows the construction of the appliance. It is simplicity itself, and is comfortable and reliable. Address,

JESSE G. HENDERSON,
Grizzly Flat, El Dorado Co., Cal.

AGENTS WANTED TO SELL —THE— MISSOURI STEAM WASHER

To men and women of good character, seeking profitable employment, exclusive territory will be given with agency. Teams can be used to advantage by agents in country districts. The Washer is made of metal, size 13x22 inches at base, and works on a new principle, which saves labor marvelously. Sample shipped on a week's trial on liberal terms. Its great merit enables agents to earn $50 to $200 per month. Write for illustrated circular and terms of agency. J. WORTH, Sole Mfr.

GRAND AUCTION SALE!

WEST COAST LAND CO.,
San Luis Obispo, Cal.

Incorporated March 27, 1886. **CAPITAL, $500,000.**

DIRECTORS.		OFFICERS.	
GEO. C. PERKINS	San Francisco.	JOHN L. HOWARD	President.
JNO. L. HOWARD	San Francisco.	ISAAC GOLDTREE	Vice-President.
ISAAC GOLDTREE	San Luis Obispo.	R. E. JACK	Treasurer.
R. E. JACK	San Luis Obispo.	C. H. PHILLIPS, Secretary and Manager.	
C. H. PHILLIPS	San Luis Obispo.		

The WEST COAST LAND COMPANY now offering in subdivisions the

PASO ROBLES RANCH,

Of 20,400 acres, less 6000 acres sold to settlers in the past four months;

THE SANTA YSABEL RANCH,

Of 20,200 acres;

THE EUREKA RANCH,

Of 11,000 acres, and 12,000 acres of the

HUER HUERO RANCH,

All lying in a body, on the S. P. R. R., at its terminus in SAN LUIS OBISPO COUNTY.

Will sell

AT PUBLIC AUCTION

About March 22d (for date see later advertisement) **the balance of the Paso Robles Ranch,** consisting of town lots in Templeton, 800 acres in 5 to 12-acre lots adjoining Templeton, and 14,000 acres in ranch subdivisions;

ALSO,

2100 acres of the **Huer Huero Ranch** in 20 subdivisions.

These are all agricultural and fruit lands, in quality equal to any in the State, with an average annual rainfall exceeding that of Santa Clara county, and require

NO IRRIGATION.

Title, U. S. Patent and to be free and clear of all incumbrances.

TERMS OF SALE.

Lots in Templeton, cash, U. S. Gold Coin. All other tracts one-third cash; balance in 4 equal payments, at 2, 3, 4 and 5 years; interest 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser.
An additional charge will be made of $5, for deed in sale of town lots, and $25 in other cases for expenses of sale, including making and recording all papers.
Schedule price of ranch subdivisions average $20 an acre; of 5 to 12-acre lots, $50 an acre.

SALE WITHOUT RESERVE,

Providing that no bid will be entertained at less than 60 per cent of schedule prices.
Ten per cent of cash payment (but in no case less than $100) required at fall of hammer; 30 days to complete sale. Parties failing for 30 days, forfeit sum paid.
Parties going from Los Angeles take P. C. S. S. Co.'s Steamers from San Pedro to San Luis Obispo. From San Francisco, take 8:30 A. M. daily train, S. P. R. R., to Templeton.

Parties wishing to inspect said lands with a view to purchasing at the Auction, or any of the Company's Land at private sale, will be shown the property free of charge by applying at the Company's office in Templeton.

Maps of all the ranch subdivisions, of Templeton, of the 5 to 12-acre suburban lots, and a general map showing the location of the Company's lands with a new descriptive catalogue are in press and will be sent free on application after the 25th inst. (February, 1887.)

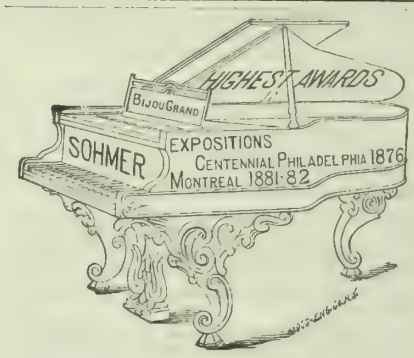
Lands For Sale and To Let.



A Great Bargain!
A Remarkable Chance Offered.

124 acres of as good Fruit Land as there is in this State. About 40 acres improved and a good Orchard on it. Also two tracts of 160 and 166 acres each. Title guaranteed. Homestead and a pre-emption. The right to the two latter tracts will be relinquished. These pieces lie right in the mountains, and 200 acres can be cultivated when cleared up. There is plenty of good timber valuable for shakes, posts, or pickets; 1000 inches of the best water in the world for drinking and irrigating purposes; plenty of fish, deer, grouse, and bear. Also, 10 miles of the best mountain range for stock in the Northern part of the State. Twenty-five miles from the railroad and seven miles to the nearest village. A good price can always be obtained for produce; never less than 2 or 2½ cents per pound for potatoes. Water free on all the land.
Correspondence invited. Apply soon. Address, Ranch Owner, Box 2361, S. F.

FOR SALE.

2240 Acres of land in Shasta Valley, Siskiyou county, Cal. Six miles from Montague. It is well watered with living springs, is fenced, has a house, barn and granary upon it. Two-thirds are suitable for cultivation and all is good grazing land. Price $25,000.
Also, 3240 Acres adjoining the TOWNSITE OF MONTAGUE. For further particulars, call, from 10 A. M. to 2 P. M., at room 2, 116 California Street, San Francisco, Cal., C. C. WEBB.

A NEW COLONY
On the new extension of Southern Pacific Railroads, on the lands belonging to R. T. BUELL, Esq., near Los Alamos, Santa Barbara county, Cal. PUBLIC AFFAIRS.

Lottery Robbery and Jobbery.

The RURAL PRESS has again and again pronounced its verdict on the swindling thieves who run lotteries and other gambling traps, and has given its opinion of the journalistic bunko-steerers who are their bribed abettors. But so long as these infamous practices are kept up and tolerated in the community, so long it is the duty of the faithful journalist to keep speaking. We rejoice, therefore, in the following vigorous leader from the *Record-Union* of Jan. 24th, whose editors and publishers show "the courage of their convictions":

There is no more vicious gambling than that of the lottery, and none that is more deceptive and demoralizing than the much-advertised Louisiana. Yet, we find this week California journals, for coin, defying the law and devoting two and three columns to elaborate descriptions of the "drawings" of this method of fleecing the people, and of accounts of the results of the drawings. These descriptions, which are nothing more nor less than advertising tricks, and therefore plainly in violation of the laws of the State, labor in detail to prove that the "drawings" are "honestly" conducted, as if that in any respect lessens their viciousness. The truth is, however, that the lottery cannot be "honestly" drawn, so long as the lottery concern has not received from every quarter full returns of all tickets sold. Yet it is a fact that the drawings take place irrespective of these returns, thus assuming that all the tickets are sold, or else the concern running the lottery is more than foolish in publishing its lists before the tickets are turned in, for all unsold tickets it would, of course, draw in its own behalf. But the dupes of this lowest form of gaming continue to be gulled, and do not pause to reflect upon the fact that there must be a marvelously heavy percentage against them to justify the extraordinary outlay made in advertising the scheme so widely and in such various ways.

There ought to be action at this session of the Legislature in the direction contemplated by the Constitution and the present law, to choke off the methods of advertising the lottery managers now adopt to evade the statute. For instance, Section 322 of the Penal Code reads: "Every person who aids or assists, either by *printing, writing, advertising, publishing or otherwise* in setting up, managing or drawing any lottery, or in selling or disposing of any ticket, chance or share therein, is guilty of a misdemeanor."

Now, since the newspapers which advertise the lottery referred to claim that publishing an advertisement or "a reading account" of the "result" of a drawing is not "advertising" the lottery or aiding in the sale of tickets, let some legislator who has not the fear of the lottery ring before his eyes propose an amendment to include any form of publication of the results, manner or methods, figures, numbers or devices of drawings, of any form or recital of the methods of drawings, or any accounts alleged to be narratives of the "luck" of ticket-holders, etc. Those who advertise the schemes, no matter how they "whip the devil around the stump," violate the law as it is; but remove utterly every shadow of excuse, let the law be amended to cover it, as suggested, and then let it be seen whether prosecuting officials have the hardihood to refuse to enforce the law, and the Legislature the courage to compel them to pursue the offenders.

The Constitution, Article IV, Section 26, declares that "the Legislature shall pass laws to prohibit the sale in this State of lottery or gift enterprise tickets, or tickets in any scheme in the nature of a lottery." It is, therefore, the sworn duty of the legislators to see that the spirit of the Constitution is given full effect in the law, and to that end they should pass laws to prohibit, under severer penalties than now attach, any manner of advertising aid given to the sale of lottery tickets.

There is not one of the San Francisco journals reaping such large rewards from lottery advertising, that has the courage to defend the practice, or that will advise the people to throw their money into the maw of the lottery monster. There is not among them all a single journal that will editorially indorse the lottery, or countenance their employes in investing in it, or that has the hardihood to oppose such amendment to the law as to remove any possible doubt as to what constitutes "lottery advertising." Some hundreds of thousands of dollars annually are "raked in" in this State by lottery swindles, and thousands of poor dupes rob their families of the necessities and comforts of life, in order to indulge the fatal appetite for this form of gambling. The commonest considerations of humanity demand that, so far as it is possible for the law to do it, the means of gratifying this appetite be removed, and one of the first steps in this direction is to prohibit any and every form of advertising the "schemes," and to make the inhibition so explicit that not even the San Francisco press will be able to evade the law, nor the prosecuting attorneys of the State put in peril their offices, by neglecting to bring to punishment every offender.

We call the attention of the legislative Committees on Public Morals to the need for clearer laws upon this subject, and to such mandatory orders from the statute-book as will secure their enforcement.

WINDMILL

Is the cheapest ever offered to the trade, and as efficient and durable as the most elaborate self-regulators. It is intended to run constantly, and turns on the stand facing the wind, from whatever direction.

The wearing parts are few and cheaply replaced. Requires little or no attention. Will raise 25 per cent. more water than any "self-regulator" of same diameter of wheel. Any one can put it up.

Bordeaux Varieties.

I OFFER FOR SALE, AT $10 PER M., 200,000 CUTTINGS of the following renowned varieties, tule-packed, F. O. B. at depot: Cabernet Sauvignon, Cabernet-Franc, Meriot, Verdot, Malbec, Tinturier, Portal-Ploussard, Mondense, Petite Sirrah and Grosse Blue. Also from $2.50 to $5.00 per M. all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price. Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

Seeds, Etc., Continued on Page 162.

Central California Citrus Fair.

(*Continued from Page 150.*)

28 pounds of pitted silver prunes, dried. Of his Muir peaches, unpeeled, five pounds of green make one of dried fruit. Of his Bilyeus peaches, peeled, five pounds of green will make one pound of dried. He shows some excellent dried apricots and cherries also. His place is located in the Willows district.

Mr. A. N. Van Fleet, of Saratoga, presents a variety of fruits. From the Fair View Farm evaporating establishment he brings several cases of French and silver prunes. His oranges are Mediterranean Sweets and seedlings. His Sicily lemons are of large size and excellent flavor. He does not irrigate his orchard. His English walnuts are from trees that began to bear at the age of seven years.

T. C. Walter Evaporator.

Messrs. Van Fleet and Alex. Hildebrand manufacture the T. C. Walter evaporator, and are the proprietors for Santa Clara county. The advantages claimed for this drier, of which they have a model at the fair, are economy of labor and fuel, capacity of production and absorption, and condensation of moisture within itself. The fruit is placed in a revolving wheel, which is turned as occasion requires, carrying the fruit into the hot atmosphere which converts the saccharine matter into a jelly. Mr. Van Fleet says that it saves from 10 to 15 per cent of weight over any other process. The capacity is from 2½ to 10 tons per day. The cost is from $400 to $2000. During last season Mr. Van Fleet prepared over 200 tons of dried fruit, consisting of apricots, peaches and French and silver prunes, which brought from 10 to 30 cents per pound in the San Francisco market, one firm taking seven carloads.

Capt. W. Warren, of Saratoga, shows some French prunes ranging from 35 to 40, and from 45 to 50 to the pound. His silver prunes have the appearance of being crystallized. His dried peaches are of good quality. His fruits are put up in neat boxes containing 10, 25 and 50 pounds. His prunes appear to be the largest in the fair. He has 50 acres in prunes, 40 acres in vines and 30 acres in hay. He disposes of his fruit yearly, to advantage, in San Francisco. Capt. Warren is treasurer of the Los Gatos and Saratoga Wine and Fruit Company, which made 85,000 gallons of wine last year.

Noteworthy Exhibits.

W. H. Brundage, beside the fruits mentioned in your last issue, shows citrons 18 inches long by nine inches in diameter. The very large oranges which your correspondent referred to as Chinese, are not Chinese at all, but an ordinary variety. The longer his lemons stay on the tree, the thinner the skin becomes.

From one tree on Dr. Mintie's place, of which Mr. Brundage has charge, he shows lemons of all sizes, from the smallest green ones to the ripe fruit. During the present storm, supports were needed to keep the tree from breaking down. The number now on it is estimated at 1200, and as many ripe lemons have been plucked from it in a single year.

Cuthbert raspberries, raised in the open air at Los Gatos, are shown by M. S. Boudich.

Well-cured raisins are brought from C. F. Holcomb's vineyard near Evergreen.

J. P. Bubb, from three miles north of Saratoga, shows two boxes of oranges and a basket of tomatoes from green to ripe.

Mrs. H. H. Headen, of Santa Clara, contributes fine-looking English walnuts and sound Muscat grapes.

Mrs. P. G. Keith, of Campbell's station, displays olives, ripe persimmons, papershell and Languedoc almonds, English walnuts and oranges.

James McWilliams, of Saratoga, exhibits two pyramids of oranges, some big lemons, and large English walnuts.

Dr. Geo. W. Handy brings, from his "Glen Una Ranch," several boxes of oranges and of lemons.

N. E. Beckwith, of Los Gatos, furnishes Washington Navel orange trees, brakes seven feet high, and a growing Solanum Melongena, bearing its fruit commonly called the melon pear.

A handsome showing of oranges grown on trees taken from the nursery and set out a year ago last May, is made by J. J. Groom, of Los Gatos.

D. D. Holland, of Los Gatos, has oranges arranged in the form of a five-pointed star, in the center of which is a lemon four by two and one-half inches.

Mrs. E. L. Watson, of Lincoln district, shows a cluster of 15 oranges.

The Catholic Fathers have a beautiful exhibit oranges and lemons from their grove at Los Gatos.

C. Yocco, of Los Gatos, shows fine oranges, lemons and limes, a curious model of an Indian canoe, hewn out of wood, being loaded with these fruits.

Mrs. S. T. Ingalls, of the Willows, makes a fine show of fruit canned by herself. Her peaches are late clings; her apricots, Moorparks; her cherries, Napoleon, Bigarreau and Black Tartarian. The Bartlett pears are luscious. The late Crawfords, which are very large, came from a tree that produced $14 worth the past season. Her English walnut trees bear abundantly and the nuts are sweet. The jellies—strawberry, raspberry, currant and rhubarb—are beautifully clear and inviting to the taste. Her large dried prunes come from trees 11 years old, the orchard being one of the largest old orchards in the county. Its prune crop the past season amounted to 70 tons. The water for irrigating it is raised from wells by a steam engine.

A glass case of bird eggs has been placed in the fair by Master George Ingalls, age 10 years. Most of the eggs came from the Willows, but a few were obtained from the sea coast and from the East.

Paintings.

A. P. Hill, whose work is becoming famous, exhibits an oil painting of a bouquet of lilacs standing in a glass pitcher, through which the stems and water show very prettily. The lilacs are delicately drawn with all their lights and shades. Growing around the stand which supports the pitcher, is a leafy snowball bush, admirably delineated.

Mrs. J. E. Brown's picture of many-hued peonies transports the beholder, in imagination, to a real flower garden.

Alameda County.

Juan Gallegos, of Mission San Jose, has a charming exhibit. His olive oil is as clear as water. His pickled olives have a look superior to the imported. His oranges are handsome, and his lemons uncommonly large.

H. Curtner, of Warm Springs, makes a large display of Sicily Seedling and Dresser Seedling lemons and Mediterranean Sweet oranges.

The Pneumatic Evaporator Co., of Alameda, exhibits a working model of a novel invention for curing fruits, adaptable in cost and capacity to every class of orchard, small or large, and for factories of any magnitude.

The furnace consists of a chamber some 40 feet in length by 4½ feet wide, inclosed by brick walls. In each end of this is a fire-box. From each fire-box three seven-inch pipes pass the entire length of the chamber and return, discharging the products of combustion into transverse drums, connected with smokestack; thus facilitating a uniform distribution of heat throughout the chamber. By the use of dampers and ventilators, the air currents which are admitted through apertures at the base of the brick walls are easily kept at any desired temperature.

The evaporator is simply another story, resting on top of the furnace walls. This is divided into compartments 3x4½ feet. In each compartment is a fruit-tray elevator, carrying 16 fruit-trays. These elevators are a novel, durable and ingenious device, which can be operated by a child. The trays are not lifted or handled after being filled with fruit, but rest upon a carriage, from which a slight pressure with the hand moves them into their respective compartments, through feed-doors; after which they are moved upward in their order by the elevators, at regular intervals, being removed further from the radiating pipes, as the loss of moisture renders the fruit more susceptible of damage by heat; and reaching the top when the fruit is dry and ready for removal through discharge-doors. It is claimed that the escape of moisture from the fresh fruit below prevents the formation of a dry crust on the partially dry fruit above, by which the escape of its interior moisture would be impeded.

Paul O. Burns Wine Co.

The first attraction at the right of the entrance is the exhibit of the Paul O. Burns Wine Co., occupying a floor space 32x24 feet, at each corner of which is a puncheon set on end, supporting a cone of bottles. The space is inclosed by lines of 5 and 10-gallon casks, lying upon their sides. In the center is a 600-gallon cask, upheld by a framework entirely hidden by bottles. The following information regarding the company has been furnished us:

The officers are Adolph Pfister, Pres.; Jacob Rich, V. Pres.; S. W. Boring, Sec'y; P. O. Burns, Manager. The capital stock is soon to be raised from $150,000 to $500,000. The vineyard, known as the Yerba Buena Vineyard, is beautifully located in the foothills, eight miles east of San Jose, at an elevation of 1000 feet above the valley.

The following varieties are on exhibition:

Red Wines—St. Inez, Burgundy, Zinfandel, Ordinary Claret.

White Wines—Gutedel, Chasselas, Riesling, Hock, Sauternes.

Sweet Wines—Sweet Port, Dry Port, Angelica, Yerba Buena, Madeira, Malaga, Mountain Wine, Muscatel, Sweet Sherry, Dry Sherry, Tokay.

Brandies—Grape, Cognac, vintage of '82 to '83, '80 to '81, and '78 to '79; pure Blackberry.

The St. Inez wine, the name of which was not borrowed from another wine to give it a reputation, but called after Mr. Burns' daughter, is a blend of three different clarets; one to give tannin, or color; another to give body; and the third to give character, or bouquet. This wine is gaining a wide reputation.

Wm. Hudson, the famous London wine expert, having examined Burgundy claret, pronounced it far superior to Australian and French wines which he was testing at the same time. He stated that he could dispose of this wine in large quantities, and overtures to place the company's wines on the London wholesale market have been received from three English firms, but declined for the reason that they all find ready market in the United States.

Santa Clara county wines generally are said to be growing in favor on account of their delicate flavor and superior tannin, or color, qualities which render them a valuable blend for the products of less fortunate sections. This superiority is partly due to the fact that a sufficiency and not an overplus of moisture falls in this county, and that the temperature not being excessive, the wine does not part with its saccharine properties, as in hotter countries.

The company's brandies are all made from wine produced from the grape, and not from the pomace, which gives it a rank taste. Pure brandy only, or cognac, as the French call it, is made by this company.

The proprietor of the Occidental hotel in S. F. has placed their Burgundy on his wine-list at the low price of 25 cents per pint, for the purpose of convincing European and Eastern guests of the superiority and purity of California wines.

Orders are received from families in the Eastern States to send large quantities of wines direct from the vineyard, some having been deceived in the East by unscrupulous persons who have sold vile French decoctions for pure California grape wine.

This company made 17,000 or 18,000 gallons the past year. The storage capacity will be increased to 1,000,000 gallons within six months.

The cork, which bears their stamp, being covered with a capsule having the firm's name in raised letters and secured by a wire netting covering the bottle and fastened at the bottom with a stamped lead seal, the genuineness of the bottling is guaranteed.

The labels, designed at great expense, were adopted as a protection against fraud, and represent California scenery as follows: San Francisco and S. F. Bay; bird's-eye view of Santa Clara and Santa Cruz counties, with a section of the Pacific ocean; Yosemite Falls; Mount Hamilton and Lick Observatory, with part of Big Trees; view of Yerba Buena vineyard at a distance; interior view of the company's main cellar, showing casks; the Geysers. On the corner of every label is a design of the Yerba Buena vineyard.

With one exception, everything connected with this company's products is Californian, even to the packing material, which is the tule, the well-known flag that grows along our rivers.

The cooperage is all made at the winery or at the vineyard from oak imported principally from Michigan in carload lots. From four to six coopers are employed in making casks and puncheons for shipment East and to South America, where the company has an extensive trade through the house of the John S. Cutting Co., of S. F.

The object of the Paul O. Burns Co. in doing their own cooperage is to secure well-seasoned oak, as new, sappy wood would affect the wine more or less. Being under their own supervision, the casks are thoroughly cleaned with hot water, to remove any impurities or bad odor that might affect their contents. In the cellar on Seventh St., San Jose, there are 20 casks that hold 2300 gallons and 10 that hold 3400 gallons.

The company employs one agent to solicit patronage on the Pacific Coast, and six to travel in the East. There is a large trade with Illinois, Wisconsin, Pennsylvania, New York, Louisiana, Texas, Minnesota, Dakota, Nebraska and Colorado, as well as on this coast.

Mr. G. W. Sill, of Pajaro valley, makes a beautiful display of White Winter Pearmains and Newtown pippins. M. Pace shows a plate of Swaar and Oregon Red-Streak apples. L. Martinelli, excellent Red Winter Pearmains, remarkably well-kept Bellflowers and Newtown pippins. G. L. Kellogg shows large and fine Smith's Cider apples. Thomas Leland, good smooth Winesaps and plates of Nonsuch and Leland's Favorite.

James Waters shows fine Beurre Hardy pears. James Rogers, the Vicar of Winkfield, four inches in diameter.

Combined Harvesters.

The abundant rains and the surety of crops over nearly the whole wheat area of the State, will make the subject of cheap harvesting of much interest. Since margins have become so narrow in wheat because of sharp competition between supply regions, the reduction of cost of production has become the key to success, and fortunately California, by the aid of her patient and skillful inventors, has possessed herself of harvesting machinery than which the world cannot show better. The combined harvesters came just in time to help California out of a very close corner in the wheat competition. This year there will probably be many more of these machines put in the field. We are often asked about these machines, and reply that we have good reports of several of them and are unable, from practical knowledge, to recommend either one as the very best. It is probably a safe proposition to say that the Houser machine, made by the Stockton Combined Harvester and Agricultural Works, is an old standby and has fully demonstrated its worth. It speaks well for a machine when it gets the good opinion of such a man as Isaac Ripperdan, of Modesto, and he says that his Houser machine after running five years before went through the season of 1886 with an expenditure of only $20 for repairs.

The Frost Bell.

EDITORS PRESS:—Can you tell me, through your valuable paper, where I can procure a "Frost Bell"? Have seen a notice of it in the PRESS, but no information as to where they can be procured. If you can give me the information you will oblige an old subscriber.—W. G. YOUNG, *Kelseyville.*

The frost bell is said to be an English invention introduced by J. H. Drummond, of Glen Ellen, Sonoma county, who can perhaps give information about them. They should be advertised in the RURAL.—EDS. PRESS.

ROSA BONHEUR, MUSTANGS, AND PERCHERONS.—The *Herald's* cable tells of M. W. Dunham lately presenting Rosa Bonheur with three wild American mustangs, which she has turned loose on her cattle farm near Fontainebleau. They are in fine condition, kicking and plunging about in high spirits, and the dispatch adds that she is perfectly delighted with them, and intends using them as models. In return she presented Mr. Dunham with three portraits of splendid Percheron stallions, selected by herself from a number which he had purchased. The Percheron horses this year are said to be numerous, and in quality as fine, if not finer, than hitherto.

Rural Seed Offering—1886.

Great Inducements for New Subscriptions.

To encourage gardening and further extend the circulation of the PACIFIC RURAL PRESS, we will offer, while this notice remains in our columns, to furnish to all old or new subscribers the following seeds on the favorable terms named below:

VEGETABLE SEEDS.
83 Varieties.

In Papers, postpaid.	Cts
BEET.	
1 Early Blood Turnip	10
2 Early Extra Bassano	10

☞ *Refer to Nos. in latest issue when ordering.*

For $1.00 we will furnish new subscribers the PACIFIC RURAL PRESS for three months, and $1.00 worth of the above seeds. For $1.75 the RURAL six months and $1.00 worth of seeds. For $3.25 the RURAL 13½ months, and $1 worth of seeds. For $4.50 the RURAL for 19 months and $1 in seeds. The seeds will be carefully forwarded, post paid, from some one or more of our leading and reliable seedsmen, whose name will accompany the package. In ordering, write on a separate sheet the *number only* of each article wanted as numbered, together with your address.

Old subscribers can advance payment so that their subscriptions will be paid the same length of time in advance and receive the same terms as above. Those who have remitted since this offer was made can send the additional amount which would have entitled them to a premium, and receive the same by stating which numbers they prefer.

For other kinds of seeds, or for seeds in larger packages, patrons are referred to reliable seedsmen advertising in this paper. We wish to aid in increasing the planting and cultivation of gardens.

We are not going to embark in the regular seed business, and have not time to investigate or answer many questions of private interest only, nor respond to orders received without remittances.

Subscribers will please notify neighbors who do not take this paper of this offer, and the merits of the RURAL.

In writing correspondence, items of information, or on other business, please use a separate sheet.

You Can't Read This

Without wishing to investigate, if you are wise. Send your address to Hallett & Co., Portland, Maine, and you will receive, free, full information about work that you can do, and live at home, wherever you are located, at which you can earn from $5 to $25 and upwards daily. Some have earned over $50 in a day. Capital not required; you are started free. All is new. Both sexes; all ages. Snug little fortunes await all workers.

Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

POULTRY.

NEW IMPORTATION

—OF—

NORMAN STALLIONS.

Theodore Skillman has just arrived from France with the choicest importation of Norman Stallions that has ever reached the Pacific Coast. Mr. Skillman has selected these horses from the best in France, with a view to the improvement of draft horses on this Coast. They are young and sure to suit the tastes of intending purchasers as regards color, etc., a number being coal-black. He has also on hand some Imported French Coach Stallions. These horses are now very popular in the East and have long been the favorite carriage horses of France. Their merits speak for themselves. Come and inspect this rare collection of horses and be convinced that they are the best ever seen on this Coast.

☞Catalogue for 1887 sent free on application.

S. F. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Feb. 16, 1887.

The past week was a repetition of the preceding week, although at the close, more trading with an advancing tendency is reported in all lines except spring vegetables. The English wheat market has ruled steady. The following is to-day's cable:

LONDON, February 16.—WHEAT—Quiet but steady. California spot lots, 7s 3d @ 7s 6d; off coast, 36s 3d; just shipped, 37s 9d; nearly due, 36s 3d; cargoes off coast, steady; on passage, firm; Mark Lane Wheat, firm; French country market is firm. Weather in England, frosty.

Foreign Review.

LONDON, Feb. 14.—The *Mark Lane Express* says: Native wheat is improved in its condition and is slightly firmer. The sales of English wheat during the past week were 35,032 quarters at 33s 6d, against 69,722 quarters at 29s 6d for the corresponding week of last year. The official returns of the wheat crop of the United Kingdom for 1886 show an estimated yield of 7,918,418 quarters, against 9,954,471 quarters for 1885. About four-sevenths of the crop remains in the hands of the growers. Foreign wheat is weaker. Flour is irregular and tends downward. At to-day's market, wheat was slow. Sound English sold freely at unchanged prices. Foreign was a shade lower. American flour was irregular and cheaper. Corn was 3d lower. Barley was dull. Oats 3d lower. Peas 6d cheaper. Beans and linseed steady.

New York Wheat Market.

NEW YORK, Feb. 13.—Wheat, the past week, has been weak and irregular, influenced by the break in prices at Chicago in the early part of the week, and unfavorable foreign markets, which have ruled dull, with a downward tendency. Spot closed 1½@3c lower and options heavy, with declines of ¼ to ½c; February, 89½c; March, 90c; April, 91c; May, 92c; June, 92¼c; July, 93½c; August, 94½c; September, 95c.

Crops at the East.

CHICAGO, Feb. 13.—The following summary will be printed in this week's issue of the *Farmers' Review:* Reports as to the condition of winter wheat continue to be generally of a favorable character, with the exception of those from Kansas, where, in the majority of counties, the outlook is regarded as poor. The latest reports were all made prior to the cold wave of Friday night, and the resulting damage to exposed fields, if any, has not yet been fully disclosed. The reports from Illinois, Indiana, and Ohio state that the plant is looking green and tender, but that broad acres are entirely exposed, indicating that the crop would be subjected to a certain amount of peril in the event of freezing weather.

Eastern Wool Markets.

NEW YORK, Feb. 12.—The market has been comparatively dull for all kinds of wool, the sales footing up only 1,997,000 pounds. There has been no material change in prices, but the tone of the market is not quite as strong as formerly, and buyers are getting the advantage. The unfavorable position of woolen goods is the most pronounced element of weakness in the situation. Spring California is in small stock and sales are moderate. The sales of the week included 10,000 pounds of spring California at 21½c; 12,000 Territory at 18½@23c; 6000 scoured Oregon at 58c; 3000 scoured Colorado at 49c.

Another dispatch says California wool finds slow sale and is offered at low prices. The transactions include 25,000 pounds at 15 and 17c. Oregon sales for the week were 130,000 pounds at 17 to 24c.

The Philadelphia market is very quiet. Among the sales were 6000 pounds California fall at 18c; 20,000 New Mexico, part improved, 19c; 20,000 Territory improved at 22½@23c; 2500 Territory fine at 22c; 18,000 Montana medium at 26c. The Boston market is also very quiet.

London Wool Sales.

LONDON, Feb. 14.—At the wool sales the attendance was better. The bidding was maintained and prices are firm. The competition was mostly in Cape of Good Hope and Natal. Thirty-four thousand bales remain unsold.

California Fruit in Chicago.

CHICAGO, Feb. 12.—Really fine, bright shipping oranges are steady, but there are a good many ordinary to fair, and these are easy. Fair California bright Riverside, $2.25@2.75; California Navel oranges, $5.50@5.50 per box. In the dried fruit market, prices rule firm all around. There is a fair demand for all lines, and former prices are obtainable. The arrivals continue small. Apples are the only description of which any consignments are noticed on sale, and there are now many of these. The stocks of other descriptions are centered in "second hands" entirely. Owing to light receipts, the market is necessarily quiet. California varieties steady, and selling moderately at the following prices per pound: Prunes, French, 8½@11½c; plums, pitted, 11@13c; peaches, halves, 12@14c; peaches, halves, pared, 20@21c; figs, 6@8c; nectarines, 9c; pears, 8@12c; raisins, per 20-pound boxes, London layers, $1.45@1.50; loose Muscatels, $1.30@1.35.

New York Hop Market.

NEW YORK, Feb. 13.—Hops are nominally unchanged. Choice stock has a fair demand at steady prices, while inferior grades have no demand. Coast crop of 1886, prime to choice, 22@25c; same, fair to good, 18@21c; 1885, good to prime, 8@10c.

Dried and Canned Fruit at the East.

NEW YORK, Feb. 13.—Raisins—Weak and lower. Two-crown loose Muscatel, $1.30; do California, $1.30; London layers, $1.65@1.70; do California, $1.70. At the auction yesterday low prices were realized for all descriptions of foreign and Pacific dried fruits, the California raisins offered bringing $1.05@1.20 for loose Muscatel, $1.15@1.45 for London, and 85c to $1.05 for seedless.

Prunes—There has been less demand for Turkish, to which fact the liberal offerings of Bohemian are attributed. French, quiet and steady at 8⅜@8½c. Turkish are offered at 6½@6⅝c.

Citron—Firm at 18½c.

Currants—Lower, quoted at 4½@4⅝c.

The canned goods trade presents a moderate appearance of activity, the demand from small buyers improving, and large buyers are in the market in quest of tomatoes, corn and other staples. Prices continue strong throughout. California canned pears, $2.75@3.25; peaches, $2.75@3.25; apricots, $2.50@3.15; Lima beans, $1.50.

California Products in New York.

NEW YORK, Feb. 13.—Seeds—Business is generally fair, but transactions are unimportant. California yellow mustard, 3¾@4½c.

Local Markets.

BARLEY—The market continued to sink up to Monday, when a steadier feeling set in with an advance established. The closing for sample parcels was stronger. On Call the lowest sales were reached on Saturday; since then the tendency has been upward. The following are to-day's sales:

Morning Session: Buyer season—800 tons, $1.02; 100, $1.02½; 900, $1.02¼; 1400, $1.02⅜; 400, $1.02½. Buyer 1887—100 tons, $1.04⅞ ₩ ctl. Afternoon Session: Buyer season — 200 tons, $1.02¾; 1800, $1.02½; 500, $1.02⅝ ₩ ctl.

BUTTER—The strong tone reported last week is continued this, with in some instances an advance established. The stocks in hand are lighter, yet the selling pressure is still strong.

CHEESE—The market is strong, with a weak tone, owing to expected supplies coming forward more freely.

EGGS—The market is barely steady, owing to liberal supplies. All received are of good quality.

WHEAT—Buyers are paying from 2½ to 3¾ cents per cental more in the interior than here. The latest sale is $1.46¼@1.47½ for good to choice, Port Costa delivery, although more was paid in the country. On Call, transactions have been free. To day's sales were as follows:

Morning Session: Buyer season — 100 tons, $1.51⅜; 600, $1.51½; 1200, $1.51⅝; 700, $1.51¾; 1800, $1.51⅞. Buyer 1887—100 tons, $1.56⅜; 400, $1.56⅞ ₩ ctl. Afternoon Session: Buyer season—600 tons, $1.52; 300, $1.51⅞; 100, $1.52⅛; 200, $1.52¼; 100, $1.52⅜; 500, $1.52½; 2400, $1.52⅝. Buyer 1887—100 tons, $1.56⅜; 300, $1.57½; 500, $1.57½. Seller 1887—200 tons, $1.42½ ₩ ctl.

[COMMUNICATED.]

Market Information.

Cereals.

Advices from the agricultural districts are of the same character reported last week. From letters received, there can be no doubt but the acreage seeded to wheat is not over 65 per cent of the number seeded up to the like date last year, and, owing to the advanced season, it is not at all unlikely that the total acreage will be much in excess of 2,400,000 acres against 3,400,000 acres last year. Present advices regarding the crop outlook, together with the general character of the weather that usually obtains from now on when the rains come late, justify the belief that the yield to the acre this year will be considerably in excess of last year. It is feared that if warm rains come soon the heavy deposits of snow in the mountain ranges may be carried off quite rapidly and flood the lowlands bordering the large rivers, by which the plant on many thousand acres of land will be destroyed. In Oregon and Washington Territory, crop advices continue to be of an encouraging character. Eastern advices, regarding crop prospects, are without essential change. The local wheat market has ruled dull and heavy throughout the week, with only one large export buyer in the market, and he kept bids down on all parcels offered for sale. Stormy weather has much to do with the market, for ships cannot load in a heavy rain, and, as a consequence, export buyers do not make purchases in stormy weather, unless at concessions. With clearer skies and more settled weather, more buying is expected. Offerings on the market have been more liberal the past week, but sellers are slow in letting go at the lower quotations. The market declined from Wednesday last up to Monday of this week over 5 cts per cental, since when it has advanced. There are still many holders of large parcels of wheat who will not sell yet, fearing that crop prospects may turn for the worse before June next. On Call, there have been free dealings in options, at prices showing moderate declines from last week's quotations, but on Tuesday the market began to recover. It is now claimed that the market is being manipulated for another bull movement.

The barley market continued to ease off, up to Monday, under freer selling combined with a strong bear movement on Call, but on Tuesday higher prices prevailed. Among the best informed there is a prevailing opinion that many who were long on Call options have been sold out, and consequently large operators are about ready for another bull movement. Crop advices continue favorable. It is generally conceded that the harvest will be later by at least two weeks than it was last year, and as the consumption is much larger than last year, the stock in the State will be reduced to low proportions before new is on the market.

The oat market is steady at the lower prices. It is claimed that the new overland tariff that will go into effect next month will stop the importation of Western oats. Oregon and Washington Territory advices report a light supply for the season.

Corn is reported to be without any material change. Western continues to be offered both on spot and to arrive in excess of the market requirements, which keeps values down and in buyers' favor.

In rye and buckwheat, dealers do not report any change since our last issue.

Live-Stock.

In both beef cattle and mutton sheep, there is nothing new to report. Calves, lambs and hogs are stiff. The supply of hogs is below the consumptive demand. In horses the market is without change.

The following are the wholesale rates of slaughterers to butchers:

BEEF—Extra, 7@7½c; first grade, grass fed, 6½@7c per lb.; second grade, 5½@6c; third grade, 5@—c.

MUTTON—Ewes, 5@—c; wethers, 5½@—c.

LAMB—Spring, 6@7c. Yearlings, —c.

VEAL—Large, 7@8c; small, 9½ to 10c.

PORK—Live hogs, 3¼ to 3¾c for heavy and medium; hard dressed, 5½ to 7c per lb; light, 3 to 3¼c; dressed, 5 to 6c; soft hogs, live, 2 to 2¾c. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Millstuffs.

The demand is of an offish character for ground feed, owing to improved pasturage, but owing to light stocks the market holds to strong prices

Hay is in light stock, but owing to the heavy rains, dealers only buy for immediate wants, fearing that heavy supplies may come forward. Choice grades continue scarce and in good request. The consumption so far this winter has been largely in excess of last winter.

Fruits.

Oranges are in free supply, but dealers refuse to make concessions on best consignments, but on common some shading is reported. The demand is slow, as peddlers are unable to operate. From up north the call is light.

Limes are a shade easier under a better supply. The demand is light. Lemons are reported to be unchanged.

Oregon continues to send us liberal supplies, for the season, of apples, which fetch good prices.

Dried fruits continue to rule strong at full figures, particularly the more choice packed.

Raisins are slow, with only the more choice, packed in attractive boxes, fetching full figures.

Vegetables.

Rainy weather up to Monday, with bad roads reported, have been against receipts. The light receipts created a strong, high market for the better grades. Fears are expressed of floods on the rivers, which, if realized, will do much damage to the crop. New potatoes are coming in quite freely, but as yet prices are well maintained.

Onions continue to rule strong at full figures, owing to moderate supplies and a good demand.

Cabbages are in good demand at full figures, chiefly to fill shipping orders. Sound hard cabbages are taken at a slight advance on top quotations.

Garden truck continues to come in sparingly from the southern counties, and sell at fancy prices. Cold weather retards their growth in the bay counties.

Root vegetables are without change.

Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1887.	1886.
On the way	196,853	141,003
In port, disengaged	112,961	69,163
In port, engaged	15,756	66,544
Totals	324,570	276,710

The above gives a carrying capacity as follows: 1887, 520,312 short tons; 1886, 442,736 short tons; increase over last year, 77,572.

Two vessels were taken yesterday for wheat loading, with negotiations pending for others. They have short lay days so as to get the wheat off before March 1st to save taxes.

Poultry is stronger and higher under light receipts and a good demand.

Game is higher under lighter supplies, and the market well cleaned up.

Hops are very strongly held, but buyers demand concessions on asking prices.

In wool there is nothing new to report. The inquiry is light, owing to small stocks to select from.

Honey is in sellers' favor, although buyers talk of a larger crop, owing to the rains improving the flowers on which bees feed.

Fruits and Vegetables.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations. WEDNESDAY, Feb. 16, 1887

EXPLANATION.—Cl. for clear; Cy., cloudy; Fr., fair; Fy., foggy; — indicates too small to measure. Temperature Wind and weather at 12:00 M. (Pacific Standard time), with amount of rainfall in the preceding 24 hours.

A PENDULUM CHURN.—The latest novelty in churns is one which works on the principle of the pendulum. The churn is hung up and by devices of counterbalance weights and springs is moved back and forth like the weight on a clock pendulum, by the exercise of a very little force. The construction is very simple; there is no iron or metal of any kind to be brought into contact with the cream, thereby avoiding any collection of corrosive matter; it can be readily taken apart for cleansing and cannot get out of repair. The evenness with which it brings the butter gives, it is claimed, a larger percentage from the same amount of cream than other churns. A small as well as a large amount can be churned and the churn is made of different sizes.

Dry Rot in Timber.

In a recent number of a German technical paper, Herr Gottgetrue treats of the question of dry rot by the light of a summary of known facts illustrative of the subject. He is of opinion that the problem is still to be solved; and, in view of the occurrence of dry rot under some very peculiar conditions, suggests that the germs of the disease may exist in the living tree. In no other way can he explain the decay of wood from this cause when it was apparently dry and sound and properly used. In Russia there are entire forests from which no timber is now taken, experience having shown that it has always been attacked by dry rot. Sometimes a strong solution of common salt, applied while hot, has been found an efficient preservative of timber. The necessity of airing timber in its built-in position is, of course, universally recognized. Professor Farsky, of Tarbor, Bohemia, has found that salicylic acid is a preventive and cure for dry rot. At first the acid was used in a dry form, but latterly great success has been achieved with a solution of 5·28 ounce of salicylic acid in 0 22 gallon of alcohol, and afterward diluted. This solution has efficiently protected a floor 800 square feet in area from the spread of dry rot, and has removed it from the spots where it seemed to have established itself. The crude acid may be used for this purpose, and its action as an antiseptic is hightened by the admixture of a little carbolic acid. Professor Poleck finds that wood cut in winter and not soaked in water is very susceptible to dry rot, which does not appear when the timber is kept perfectly dry or thoroughly wet. A somewhat high temperature and dampness are almost, though not entirely, essential to the propagation of the dry-rot mycele. It is in contemplation to determine by experiment whether timber cut in summer cannot be rendered safe against dry rot by the removal of the bark, protracted drying, and prolonged steeping in water.

Complimentary Samples.

Personsreceiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, $3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

BULL & GRANT FARM IMPLEMENT CO.—Readers will notice this firm name attached to an attractive advertisement in this week's RURAL. The firm is an incorporation which succeeds to the business in agricultural implements, formerly conducted by Arthur Bull. The incorporation has a capital stock of $50,000, $30,000 of which has already been subscribed and paid in. The directors are Arthur Bull, Chas. Montgomery, E. Glencross Grant, Franklin P. Bull and John Gould. We wish the new concern all success.

HOW THIRSTY PLANTS GET WATER.—In the arid regions of Egypt a French botanist, M. Volkens, has found roots 20 times as long as the part of the plant above the surface. On some of these desert plants the same observer has noticed a very curious moisture-absorbing contrivance. Glandular hairs put forth by the leaves yield a bitter crystalline liquid which spreads out at night and collects the dew.

Easy Binder.

Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, best and cheapest of all economical and practical file binders. Newspapers are quickly placed in it and held neatly, as in a cloth-bound book. It is durable and so simple a child can use it. Price, size of Mining and Scientific Press, Rural Press, Watchman, Fraternal Record, Masonic Record, Harper's Weekly, and Scientific American, 75 cents; postage, 10 cents. Postpaid to subscribers of this paper, 50 cents. Send for illustrated circular. Agents wanted.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

THE PACIFIC RURAL PRESS.

THE LEADING AGRICULTURAL AND HOME NEWSPAPER.

[*A Standard Authority on all the Branches of California Agriculture.*]

To Advertisers.

The PACIFIC RURAL PRESS has a greater circulation and influence, *in the Pacific States and Territories*, than all the other agricultural weeklies of the United States combined. Advertisers can reach nearly all the leading reading farmers through its columns. Established 1870. Circulation, choice and extensive. Rates of advertising comparatively very low. Subscription, $3 a year, in advance. Send for samples.

About Obtaining Patents.

Patents are Virtually Contracts.

The Patent Law provides that in case a patent, which is the evidence of the cont act, is not executed in compliance with the requirements of the law, it may be annulled and rendered void Hence, it is of the greatest importance to every inventor that his patent or contract be skillfully and accurately drafted, in order that it may afford him complete protection for his invention during the life of his patent.

Secure a Good Patent.

An inventor should first ascertain whether or not his improvement has been patented to another. This requires an exhaustive search among all the patents in the class to which the invention relates. If, by this "preliminary examination," the improvement is found to have been previously invented, our client will receive, for the small sum of $5 for the examination, a verbal or written report showing definitely wherein his invention has been anticipated, thereby saving him further expense and perhaps much time, anxiety, etc.

To avoid all needless delay, however, and secure patents at the earliest moment practicable, inventors will do well to forward a mod l, drawing or sketch, with a plain, full and comprehensive description of their invention (stating distinctly what the particular points of improvement are), with $15 as a first installment of fees. If the improvement appears to us to be novel and patentable, the necessary papers for an application for a patent will be prepared immediately and forwarded to the inventor for his signature. When he receives the application and finds it duly prepared, he will carefully sign and return the same plainly addressed to us, with postal money order or express receipt for our own fee. The case will then be promptly filed by us in the Patent Office, and vigorously prosecuted to secure the best patent possible. [This course is the most expeditious and satisfactory, as no time is lost in transmitting correspondence relative to the preliminary steps.] When the patent is allowed the inventor will be duly notified, and on sending the final Government fee of $20 to us, we will order the issue of the patent, and forward the same as soon as it is secured from the Patent Office.

The payments are thus divided and made easy. We make no pretense of doing cheap work, in order to entice custom, nor do we afterward make additional charges to bring the bill up to a fair compensation. We do our work honestly and thoroughly, and we never give up a case so long as there is a chance of obtaining a patent. The Agency charge, including drawings, rarely exceeds $40, and for this we do all we can without appealing the case.

Models and Drawings.

Models are now seldom required by the Commissioner of Patents, and generally only in intricate cases. Perfect drawings of practical working machines are more satisfactory to the Patent Office than the old cumbersome system of storing up an immense bulk of countless models.

Drawings or sketches, sufficient to illustrate the invention clearly, with a description that will enable us to make a full set of perfect drawings for the Patent Office, is all that we require. A model will answer our purpose as well, however, in cases where the inventor can more easily furnish it.

The value and even the validity of a patent often depends on the character, clearness and sufficiency of its drawings. There are thousands of existing patents in which the improvements are but partially or poorly illustrated in the drawings When an attempt is made to dispose of such patents, the vagueness and defects of the drawings oft n prejudice capitalists and manufacturers against the invention, while in reality it may be of great value, and would meet with ready sale had it been skillfully, completely and artistically portrayed. In all cases prepared by us, the drawings are made under our personal supervision, by skilled draftsmen in our constant employ, and every precaution is taken to have the invention fully and clearly shown by different views, so that the improvement will be readily understood by the Examiners in the Patent Office, and comprehended by the public when the patent is granted.

Advantages to Inventors on the Pacific Coast.

The firm of DEWEY & CO. has edited and published the MINING AND SCIENTIFIC PRESS continuously since 1860, a period of 26 years. Few agents, who are still engaged in the business, have had so long-extended practice in patent soliciting. The members of the firm give personal attention to the applications intrusted to their care; and their familiarity with inventions and with local affairs in the Pacific States and Territories, enables them to understand the wants of inventors on this coast more readily and thoroughly, as we believe, than any other agents in America. Thus there is saved a great deal of the time which ordinarily —when distant agents are employed—is wasted in preliminary writing back and forth.

This happy-combination of long business experience together, and wide connections, has placed our firm in a position unquestionably most fortunate for affording inventors prompt and reliable advice, and the best facilities for securing their full patent rights with safety and dispatch at uniformly reasonable rates.

Every patentee of a worthy invention is guaranteed the gratuitous publication of a clearly-stated and co rect description of his invention, in one or more of our influential and reliable newspapers, affording just the circulation best calculated to widely inform the class of readers especially interested in the subject of his invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, which is adjudged to be novel and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee is $10 additional.

To enable us to prepare caveat papers, we require only a sketch and description of the invention.

Rejected Applications.

Inventors who have rejected cases (prepared either by themselves or for them by other agents) and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unrivaled facilities for securing favorable results. We have been successful in securing Letters Patent in many previously abandoned cases. Our terms are always reasonable.

Inventors doing business with us will be notified of the state of their application in the Patent Office whenever it is possible for us to furnish such information.

INSECTICIDE!

FOR ERADICATING AND DESTROYING ALL PESTS THAT INFEST FRUIT TREES AND PLANTS, SUCH AS

SCALE BUG, HARVEST FLIES, TREE HOPPERS, PLANT LICE, Etc.

It has been fully tested by the Agricultural Department of the State University, and pronounced a success, the endorsement of which we append. It is put up in convenient forms for use both in liquid and paste state.

For Sale in Barrels and 2 and 5-pound Cans in paste form, and in Barrels and 5-gallon Cans in liquid form.

Copy of Letter Received from the University of California, College of Agriculture, Berkeley, dated December 4, 1886.

J. N. KNOWLES, Esq., Manager Arctic Oil Works, San Francisco—DEAR SIR: We have lately tested the Insecticide preparation of Whale-Oil Soap sent by you to us, and have found it to be very effectual against the Scale infesting Orange and Bay Trees here; also against the Thrips. From our previous experience with a similar composition, I think it will be found fully effectual against any small Insect Pests not specially protected like some of the armored Scales, and against which any Wash short of strong lye cannot be used. Respectfully,

E. W. HILGARD, Professor of State University.

OFFICE, 28 California St., San Francisco, Cal.

ORANGE TREES.

We are the sole agents (in Northern California) of Messrs. Brief descriptions of our Latest Improved Tools for the Orchard and Vineyard:

THE

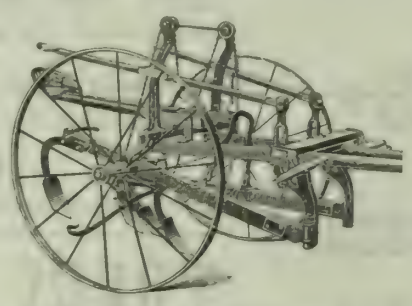
Racine Chilled Iron Plow

Is warranted to scour in the most difficult soils; runs light and is durable. Made in all sizes. They are furnished with a device for shifting beam to right or left, adapting them for work among trees and vines.

The ACME has double rows of Cast-Steel Coulter Teeth, which cut over the entire surface of the ground. It is the only Pulverizer having a CLOD-CRUSHER AND LEVELER. Being made of wrought-iron and steel, it is practically indestructible. It will keep the soil in better condition, and with less expense, than any other tool.

THE

"FARMERS' FRIEND"



Two or Three-Plow Gang is the most economical Plow invented for orchard or vineyard work. Saves the labor of two men, and is as easily handled among trees and vines as single Plows.

THE J. I. CASE RIDING CULTIVATOR,

For Deep Tillage or Corn Cultivation.

Is built entirely of Steel, making it the Lightest and, at the same time, the Strongest Cultivator in the market. Made with 4, 5, or 6 Shovels.

Also in Stock all sizes of the

J. I. Case Steel Walking Plows

Adapted Especially for Orchard and Vineyard Work.

THE "JAY EYE SEE" STEEL SULKYS & GANGS.

AJAX HORSE HOE CULTIVATORS.

319 and 321 MARKET STREET, SAN FRANCISCO.

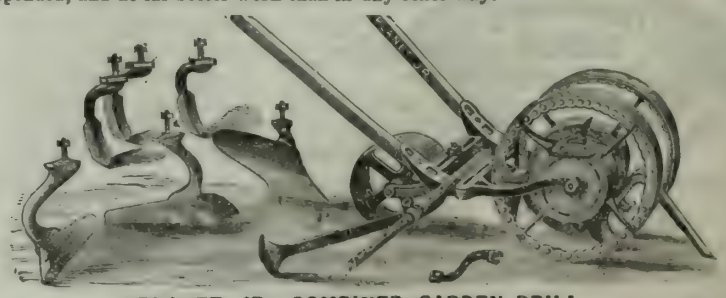
DEALERS IN

AGRICULTURAL IMPLEMENTS, BUGGIES, PHAETONS, BUCKBOARDS, HARNESS, Etc.

Our large stock of Vehicles, composed of the most popular styles, and made by leading manufacturers, in each grade of work, enables us to offer intending purchasers unusual facilities.

☞ We would call particular attention to our line of Spindle Wagons, or Buckboards, which are everywhere taking the lead as the most desirable in the market.



PLANET, JR., HORSE HOE WITH OR WITHOUT WHEEL.

PLANET, JR., GARDEN TOOLS.

Nothing has yet been invented that can equal the PLANET, JR., IMPLEMENTS for Gardening; either where the work is done with the aid of a horse or by hand, or both. Simple, light, very strong, and fitted with a number of attachments, which give them a wide range of usefulness, the owner of one of these tools can accomplish more for the amount of time and labor expended, and do far better work than in any other way.

PLANET, JR., COMBINED GARDEN DRILL.

Send for Illustrated Catalogue of the PLANET, JR., GARDEN TOOLS, of value to every Gardener.

ALSO A FULL LINE OF

PLOWS, RIDING CULTIVATORS, WALTER A. WOOD MOWERS, SULKY HAY RAKES, WAGONS, Etc.

Address: **319 and 321 Market St., San Francisco.**

Outdoor Recreations.

Now that eastern telegrams are so freighted with accounts of the toboggan craze, a mention of California outdoor, winter recreations may not be amiss. So far as we can learn from descriptions, the tobogganing which is now popular at the East is a sort of a glorified "coasting," or "sliding-down-hill," which we remember as one of our boyhood's indulgencies. To be popular, however, it seems necessary to find a place where there is no natural hill and make one out of timber. This of course costs money and gives the chance for getting up stock companies to build a slide, and then only the elect can ride down it, which liberates one from contact with the "pungs" of the unwashed and gives the whole business a sort of social standing, as it were. The sidewalk or roadway coasting of our boyhood was a very democratic affair, and any one, whether he had a cast-iron "swan's neck" or made his sled of two staves of a whisky barrel, could take part therein. Tobogganing seems to be different in this respect, but it is apparently quite as dangerous as the old-fashioned sport, for the artificial hills have a way of shivering their timbers and impaling one on the splinters, which is shocking to read of.

But we do not care to enlarge on snow or ice sports of any kind. We have had all we ever care to have of them. We wouldn't care if we had to live a hundred years in California and never see a snow-flake. For we have outdoor recreations in what is called winter here, which cheer but do not refrigerate, and which fill the frame with life and the heart with joy without shortening in one's ears or decimating one's toes and fingers. Our engraving on this page gives but a single glimpse at California's winter recreations—that of the roadway. There is no State in the Union where the saddle is so freely and satisfactorily used by both sexes as in California. Nor is the wheeled vehicle, whether it be the road-cart, the buggy, or the many forms of two-seated outfits, less in requisition or in joy. The scene which our artist takes from the grounds of the Hotel del Monte, in Monterey, is like many which can be seen this month in all parts of the State except in the snow regions of the mountain-tops. The crowds in the open air, the beautiful vegetation, the general tenor of the engraving, is characteristically Californian.

MARCH SCENE AT THE DEL MONTE CLUB HOUSE, MONTEREY, CAL.

Sugar.—Those interested in the latest improvements in sugar-making should write to Col. Colman, Commissioner of Agriculture, Washington, D. C., for a copy of Bulletin 14, in which Prof. Wiley gives a record of experiments at Fort Scott, Kansas, in the manufacture of sugar from sorghum and sugarcanes in 1886. These experiments give the latest results with the new diffusion and carbonatation process and descriptions of the apparatus used for sugar-making on this system. The competition between sugars derived from different sources is now very sharp and prices are low. If sugar can be profitably made in this country it must be by the very best and most economical processes, and the Government is doing well in investigating the matter thoroughly.

Flowers and Perfumery.—It is stated that E. J. Baldwin and others are preparing to start a 60-acre flower farm on the Santa Anita ranch. Suitable buildings and distilling apparatus are to be erected for the manufacture of perfumes from roses and other flowers.

Riverside Citrus Fair.

The abundant rains which have blessed the Southern counties, as well as the rest of the State, have been so copious in the southern citrus region that it has been found advisable to postpone the Riverside Citrus Fair, which was announced for this week, till March 8th. We gave in our issue of February 12th the full list of premiums offered and the regulations for entry, etc. We urge all, now that more time is given for collecting and preparing displays, to get together their best fruit and fruit products and send them down for display at the Riverside pavilion. This excellent building has inclosed some very fine displays in former years, and considering the wonderful progress the South has made since the last fair, there should be a magnificent exposition of the products of the leading industries of the region. March is usually a splendid month for a southern trip—a hint for our northern readers.

The winter has been very severe on the great plains, and immense numbers of cattle have been lost by the ranchmen of Montana, Colorado, Nebraska and Dakota. Nevada cattlemen are reported to have suffered very little.

The Railroad Commission recommends that the S. P. Co. establish a first-class freight station at Watsonville, as desired by the fruit shippers.

The Redwood Park.

Referring to the proposed purchase by the State of 20,000 acres of the redwood tract lying back of Pescadero and its conversion into a public park, the Santa Cruz *Sentinel* says it is understood that the land can be had for $15 an acre, and that several persons stand ready to contribute toward the funds requisite for the purchase. Unless some steps are taken to preserve them, the grand old redwoods must soon fall a prey to the insatiate ax of the lumberman. Nothing could be more delightful to the admirer of picturesque nature than such a park. It would be one of the most attractive spots on this continent. Towering redwoods, interspersed with open glades, shady dells and sunny slopes, present a lovely appearance, even in a state of nature. A region of that character, molded by the hand of art, would make one of the most exquisite retreats that the imagination can depict. The park would cover an area six miles long by five miles wide. Such a space would afford ample scope for the production of the finest landscape effects. The tract commands grand views of land and ocean, and embraces the finest varieties of scenery known to the redwood regions. In its broader aspects and without any thought of pecuniary gain, the project is well worthy of California.

Washington's Birthday was observed with honor in many Californian towns. At San Diego and Santa Barbara many shrubs and trees were planted. We gladly note these tokens of patriotic sentiment, and feel that they augur well for the maintenance of our free institutions, despite the trials, from within and without, to which they are subjected. We like, too, the growing disposition to engraft the observation of Arbor Day upon that of the natal anniversary of the *Pater Patriæ*, and hope the practice will prevail more and more, as the years roll round, and ere long become universal.

Apples are worth more than oranges in San Bernardino, selling for eight cents a pound.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

A Word For Southern Humboldt.

EDITORS PRESS:—We have been a subscriber for your valuable paper for five years, and have derived much pleasure and information from its pages. We have learned much of almost every portion of the State, the progress and development of which has been a source of pride and pleasure. But if we knew nothing of Humboldt county except what we have read in the city papers in all these five years, we must confess that our stock of information would be very small.

An occasional reference to the redwood forests and a vague item about stock and grass copied from the *Standard* (usually), about sums up what is said of this great county—one of the largest in the State. We have no right to complain of this seeming neglect, for it is our own fault. Even our county papers cannot give much information about local conditions, resources, possibilities, etc., unless we of the soil contribute to their columns. The truth is, Humboldt is but little known, much less boomed as many of our sister counties are.

To speak of Humboldt to a San Franciscan is to name a "far country"—Alaska or Farther India, for instance. One of the reasons for this is our somewhat limited means of communication with the outside world, though we have four shipping places, Humboldt bay, Eel river, Trinidad and Shelter Cove, also the overland stage road from Eureka to Cloverdale. The principal reason we are not better known is the lack of interest on the part of our citizens in describing the vast interests of our county. If we are not enough interested ourselves to try and attract the attention of others to us, how can we expect any adequate recognition?

It is not the purpose of this article to go much into details as to our soil, water, climate, products, attractions to "home-seekers," etc., leaving that to future efforts to elaborate. A few words, however, may not be amiss outlining briefly what our large area is good for. In the past and largely at present, the redwood timber has taken first place, and it is an item of great importance. But the principal area of the county consists of agricultural lands, which, after all, are of far more importance. For long years after the redwood timber has been stripped from our borders, the products of our soil will feed the hungry and clothe the naked. The timber will decrease, but the products from our broad acres will increase. It is not so much our bottom lands (among the richest in the world), but the thousands of acres of hill lands which are now used in the most primitive manner for stock—cattle and sheep roaming over them almost at will—that will in the near future swell our products and furnish homes for hundreds of families where now the isolated rancher is "monarch of all he surveys." These predictions are strengthened just now by the railroad talk, and would be speedily consummated by a railway connecting us with any of the great lines of the State.

Right here let us hint at the productiveness of the hills of Southern Humboldt. The writer has for several years farmed from 20 to 40 acres of his sheep ranch and obtained from 30 to 50 bushels of wheat per acre—not on rich patches, but an average of a ranch of over 3000 acres. Oats, barley, rye, corn, potatoes and vegetables all do equally well. And I venture the assertion that no finer fruit is produced on the Pacific Coast. I had Bartlett pears, season of 1886, 12 by 14½ inches in circumference; Crawford peaches 12 inches; strawberries 5½ inches; apples of highest flavor, plums, prunes, apricots, nectarines, figs and walnuts. Our grapes compare with any we have sampled in the State. I could show French prunes last season, from trees 5 to 7 years old, bearing from 600 to 800 pounds of finest quality of fruit.

We have an average rainfall of 35 to 50 inches, hence no drouths. The lowest temperature recorded during the last five years was 21°, and that only twice. The lowest so far this winter is 26°. The highest in summer 102°, and that not more than two or three times in a season. With all this, we have an abundance of wood for fuel and timber for building and fencing. The best of water, pure and soft, and so abundant that every quarter section has a living spring or little rill fed by living springs. For home-seekers where can a more inviting country be found? These large ranches could be bought and segregated for $10 to $15 per acre.

This land is all ready for the plow—no expense for clearing from brush, trees and rocks; no water ditches for expensive irrigation. We are justly proud of our schools, few, if any, counties in the State having a higher standard. The Eureka Academy and Commercial School offers an excellent opportunity to young men and women for practical training. It also embraces a Normal course, fitting teachers for good and efficient work.

I will close this article with an appeal to your readers in this county to join with me in an effort to make our noble county better known through the valuable columns of the PRESS. RANCHER.

Blocksburg, Humboldt Co.

[We welcome the effort.—EDS. PRESS.]

The Truth About California.

EDITORS PRESS:—The RURAL PRESS of the 29th ult. contained an editorial on the crop prospects in California, from which I clip the following:

Some of our readers are strongly protesting against the dispatches which are sent from their sections to the daily papers, representing fine prospects, etc. One writer denounces such reports as "lying telegrams," and says the outlook was never worse. We have always labored against the policy of exaggeration and misrepresentation, and are sure that such untruth does no real good to man or the State.

I wish that more people would "protest" against these "lying telegrams," and I think that editors of leading newspapers should exercise more discretion than they do in printing telegrams relating to crops from irresponsible and ignorant correspondents. Sometimes the local editors are to blame for erroneous and misleading reports. About the middle of last December we had a rainfall of about one-eighth of an inch, and a local paper had a paragraph, stating that the "farmers were jubilant" over the rainfall.

I have several times this winter noticed telegrams from different localities in the leading dailies to the effect that the farmers were rejoicing over the little showers that occasionally fell. Now, the fact is, as you know, that instead of farmers being "jubilant" over a slight fall of rain when the ground is dry, they always dread it. Farmers like to see a heavy rain fall early in the season, as these light showers are apt to sprout the grain already sown, and unless more rain follows them, the grain so sprouted dies for want of moisture. This has been the case to a certain extent in California this season. The rain that fell in November sprouted all grain then in the ground. In some localities there has not been enough rain to keep it alive, and the crop is lost. Since your issue of the 29th ult. we have had a glorious rain; and, although it came too late to give us our usual heavy crops, we still hope that more and late rains will give us plenty of hay and perhaps half a crop of wheat and barley. Nearly all the farmers in the southern and central parts of the State had suspended operations for some weeks prior to our last rain, which was, in fact, the only general rain of the season. Now every exertion will be made to improve the short remainder of the season; and what bade fair to be the "dryest season" for many years may yet give us half a crop.

Overestimates

It is a fact that farmers pay but little attention to the estimates and reports of crops made by boards of trade and produce exchanges. Nearly every man who is called upon for figures to help in such estimates, and all members of grain exchanges, are interested in the market as "bulls" or "bears," and each one tries to make the figures support his view of the market. Take for instance the estimate of the wheat and barley crop for 1886, made by the San Francisco Board of Trade and the Produce Exchanges. It was so grossly inaccurate that there was not an intelligent farmer in the State but knew that it was exaggerated. The "knowing ones" of the Exchange laughed at the estimate made by the RURAL PRESS, compiled from knowledge obtained from the simple farmers. Yet had they taken that estimate as correct, which it was, some of them who formed part of a certain "bag syndicate" would be several thousand dollars better off to-day. All sorts of exaggerated reports were industrially circulated among the farmers to induce them to buy bags at a high price; but the farmer had heard the cry of "wolf" before, and knowing just how many bags were needed, and just how many bags were in the State, he quietly but effectively bided his time. The days of "bag rings" are played out. Nearly all our large farmers import their own bags; that is, several of them club together and give an order to some respectable broker. If they don't want the bags when they arrive, they can afford to hold them for another season or sell them at a profit to a "bag syndicate," as some shrewd farmers did last year.

Foolish Rivalry.

I think that many of the mis-statements and exaggerated estimates of crops arise from the foolish rivalry that has lately sprung up between different sections of the State. One man sees a report that crops are good in a locality from which he has just returned, and where he knows that the crops are very poor. The prospects in his own locality may be no better, but he knows that they are just as good, and so he "goes one better" and reports "crop prospects good." Now, a word as to this unseemly, injudicious and injurious rivalry. It has so lately sprung up, that a little effort would kill it at once and forever. California is so large a State that the inhabitants of the counties of Siskiyou and Shasta may sometimes forget that the denizens of San Diego county, over 800 miles away, are also Californians and brothers. But neither should forget that if either a Shasta county or a San Diego county could be transplanted, with its climate, soil, and beautiful scenery, into Pennsylvania or New York, it would become the paradise and the Mecca of the Union. The State of California, as a whole, is without a rival under the broad canopy of heaven. In climate, fertility of soil, resources and beautiful scenery, it stands alone among the nations. It is no figure of speech to say that the hope of millions of people in other States of the Union and in foreign countries is to see California before they die. The jaded merchant, the tired farmer, and the sickly student of the East long to see the rich mines of gold and silver, the immense wheat fields, and the lovely orange groves and vineyards of this golden State. Immigrants from all other parts of the world are flocking to our shores in such numbers that, unless California was the largest State in the Union, there would soon be room for no more. To them it is a proud boast to be a Californian—to us it should be the same. Abusing one part of the State and crying up another will do us no good. In the end the immigrant sees and judges for himself. We all belong to one State. Let us be brothers in unity. Knowing as we do that no words of tongue or pen can do justice to our soil, our climate and our resources, let us look upon him who vilifies and cries down any part of our State as an enemy to us all. Truth will prevail. A FARMER.

Los Angeles, Cal.

Smother out the Morning-Glory.

EDITORS PRESS:—In 1874, while living at Marysville, Yuba county, I had in my potato patch about one-fourth of an acre of morning-glory, which I tried for two or three seasons to subdue, by hoeing it down as fast as it made its appearance, but it gained upon me all the time. I then, after taking off the potatoes the last of June, had manure from the slaughter-house hauled and spread all over the piece, from four to eight inches deep, and let it remain till the following March, when I had the manure removed and spread over one and one-fourth acres. I raised a fine crop of potatoes and effectually killed the morning-glory.

S. BLODGETT.

Ben Lomond, Santa Cruz Co.

HORTICULTURE.

Sickly Fruit Trees.

EDITORS PRESS:—While engaged in pruning fruit trees for some time past, I have noticed the sickly, feeble, unthrifty appearance which most of them present, indicating plainly that they are in a decline, and need prompt and vigorous treatment. The trunks of the trees present a rough, scaly appearance; no roots are seen near the surface of the ground, a condition essential to the healthy growth of any tree, and the tops present a mass of stunted, crooked, dead, gnarly, knotty, broken limbs, devoid of leaf buds, but overloaded with fruit buds. This condition of fruit trees may not be common in other counties of the State, but in all the orchards which I have examined in Monterey county this is the rule, while a clean, healthy, vigorous fruit tree is the exception. It is very rare to see a fresh growth of healthy wood in the tops of any fruit trees which have been long in bearing, showing plainly that there is a lack of humus or plant food in the soil. In short, it is evident that trees are starving for want of food, and especially for want of potash.

While pruning a small orchard in Salinas City a few days since, I noticed one large, fine-looking, thrifty tree, which stood near a pile of manure which had been thrown from the stable, while not 60 feet distant stood other trees of the same variety, having a stunted, sickly aspect.

In another instance that came under my observation, ashes had been thrown from a leach-tub near a pear tree. This tree presented a clean, healthy appearance, and had made a vigorous growth of fresh wood, while another pear tree, but 30 feet distant, presented just the opposite appearance.

No tree or plant will grow and thrive without an abundance of foliage, which is to the tree what lungs are to an animal; and an abundance of leaves will not grow unless the roots can come near the surface of the ground and find air, warmth and plant food. Roots which strike deep into the soil go down for moisture, mineral food, and to anchor the tree to the ground.

No orchard can be expected to remain long in a healthy, prosperous condition, which is being constantly cropped, either by its own growth or, what is too frequently the case, with some additional crops.

In order to maintain its vigor and usefulness, there must be an application of fertilizers; and nothing is better for this purpose than barn-yard manure, scattered liberally all over the ground, before the annual rains. Cleanings from the stables and droppings of stock contain all the essentials needed to insure a healthy growth of both tree and fruit.

It would be a good plan, where it can be done, to dig about a tree to the depth of from 15 to 18 inches, and at a distance from the trunk of 2 to 3 feet, according to the size of the tree, throwing into the excavation broken crockery, bones, broken glass, old shoes, grass and weeds, mingling therewith a liberal supply of ashes, leached or unleached, and surface soil. A vigorous pruning should be given to the tops, cutting off half to two-thirds of the long, slim limbs, thus encouraging a growth of foliage and of fruit near the body and large limbs of the tree. Most trees are carrying too many fruit buds and not enough leaf buds; and to allow fruit to grow at the extremities of long, thin limbs is simply to insure their breaking down, to the very great injury of the whole tree.

In some orchards I have noticed a sort of gangrene in the ends of limbs, causing them to die, in some instances one-quarter of the length of the limbs. This dead part, together with all dead sticks and decayed branches, should be cut off down to the living part, or to the crown or collar, which is the only true place to cut off a limb. Where the trunks of the trees have become scaly, rough and mossy, they should be thoroughly scrubbed with a preparation of unleached ashes, salt and water, made into a thin wash, and applied with an old broom.

Where the roots of trees have become deeply covered by repeated turning of furrows to the tree, as is too often the case, or by a deposit of soil about the tree where lands are overflowed, this soil should be removed, as no tree can long endure with its roots buried deep in the cold, damp soil. It will be found, if forest trees be examined, that their roots are near the surface, many of them being exposed above the surface. The practice of cropping the orchard with garden vegetables, as is sometimes done, cannot be too highly condemned, especially where Chinamen are permitted to grow them, for they utilize every foot of the ground, taking all the cream from the soil and returning little or nothing thereto. Garden vegetables are very exhausting to the soil. J. S. TIBBITS.

Santa Rita.

FORESTRY.

Fire Notices.

EDITORS PRESS:—Hon. C. Cole, formerly U. S. Senator from California, now residing in Los Angeles county, was born and brought up at Lodi, Seneca Co., New York.

The Senator has noticed the disastrous results attending the frequent fires on the watersheds of the Cahuenga mountains behind his Brea Rancho.

These fires have been followed, as they are everywhere, by destructive torrents and diminished springs. The Senator visited not long ago his birthplace in Seneca county, and he speaks of the changes that have taken place there as most alarming. Because what has happened there in a comparatively moist country with an unevenly distributed rainfall must be anticipated here from similar causes, where these effects would produce a desert uninhabitable by man.

He says that a stream with a rapid descent and ample flow of water ran through that county, upon which were situated numerous mills, about a quarter of a mile apart, run by water-power.

On his return he found the stream dried up, pastures where the millponds had existed, and, of course, not a single mill run by water-power. The forests and woody glades in which he had roamed and hunted as a boy had been cut off and were no more.

Those who sympathize with the work of the State Board of Forestry, in its attempt to put an end to the useless and criminally wasteful fires which are so prevalent upon our mountain watersheds, can obtain signs, warning against the setting of such fires, to place in their canyons or woodlands, by addressing me at Lamanda, Los Angeles county.

ABBOT KINNEY.

Protest Against Timber Waste.

At a regular meeting of the directors of the Los Angeles Board of Trade, held Monday, February 7, 1887, the following preamble and resolutions, offered by L. J. Mathews, were unanimously adopted:

WHEREAS, the waste, burning and useless destruction of the forests and brush on the mountain watersheds of Southern California threaten the agricultural population and the tax-paying power of the whole community; therefore, be it

Resolved, by the Los Angeles Board of Trade, that all the representatives in the State Legislature from this section are requested to take prompt measures to avert this serious danger.

Resolved, That a copy of this resolution be forwarded to each branch of the Legislature.

The resolutions have been sent to Senator Rose and Assemblyman Brierly.

Forestry in Fresno.

Over the signature "X." a correspondent of the Fresno *Expositor* furnishes facts and figures as follows concerning altitudes and natural reservoirs:

As there has been some inquiry concerning the various altitudes in Fresno, I send you those of various points on the road to Pine Ridge and beyond in Fresno county:

Name.	Feet.
Fresno City	250
Dry Creek Academy	680
Toll House	1925
Grape Vine Springs	2600
John Morrows	3800
Old Clipper Mills	4000
Old Phœnix Mill	4400
Donahoo & Humphrey's Mill	4700
Markwood Meadows	4900
Big Trees (Dinkey Creek)	6000

Examination shows that an altitude of 4000 feet is about the altitude where good milling timber is first reached, and that 6000 feet is about the highest altitude for milling timber. This shows the belt to which lumber timber is

restricted. However, the most important and valuable timber and brush to the country is that lying on altitudes from 6000 to 10,000 feet, which, for want of governmental care, is allowed to be destroyed. This is the great snow belt upon which we are dependent for water supply for irrigation. A great part of this belt is covered with thick brush and scrubby timber, which protects the snow from melting and stores up our water supply for summer use. If these are permitted to be destroyed it will lead to early and general thawing of the snow, which will rush down in heavy floods early in the season, to be followed by a failure of water supply, and the streams will dry up. The destruction to be feared is from overstocking these natural ranges with sheep which eat away the protecting brush, and from fires carelessly set by herders. This overstocking and carelessness will sooner or later affect our reservoirs. Some measures should be taken to prevent this destruction now going on, and the Government should refuse to sell any portion of these lands above the altitude of 6000 feet, and fix severe penalties for trespassing. It is a matter of importance that these natural reservoirs should be preserved, and it is none too early to call attention to it.

POULTRY YARD.

Caponizing—An Improved Method.

The old method, which required a horse-hair, skill and patience, has now been superseded by the improved instruments, which are so simple and operate so easily as not only to permit of their being sold at less than former prices, but a novice can soon learn. At our request, Mr. W. H. Wigmore, No. 107 South Eighth street, Philadelphia, kindly loans us the cuts, and describes the method as follows:

I would here state that the following illustrations were not drawn and engraved, but they were photographed from a live cockerel, and the hands shown are my own; besides, there was not a feather plucked from this bird's side. I generally bare enough of the flesh by wetting the feathers and turning them under as a man would in twisting his mustache. Figs. 6 and 7 are photographs of a dead cockerel. Each and every piece of my set is entirely new and original with myself. Any scoop-twister without "Patented June 22, 1886," stamped on it is an infringement.

First have a narrow table, box or barrel so you can move it around and get the sun on the fowl in any position you wish, as the sun is a great help to a learner. Lay the fowl upon its left side. Wrap the cord twice around the bird's legs above the knees. With one wrap they are liable to kick themselves out of the loop. This style hooks enables you to make a slip-loop quickly. The other cord, put once around his wings. The opposite ends of the cords, attach to a half brick or a weight of some kind, then let them hang down over the sides of the table as shown in Fig. 1; by this means you have them secure.

FIG. 1.

FIG. 2.

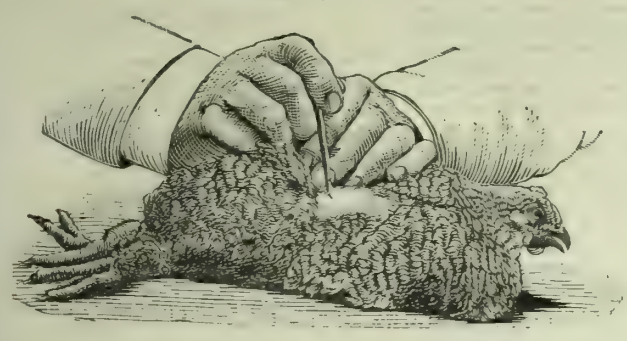

FIG. 3.

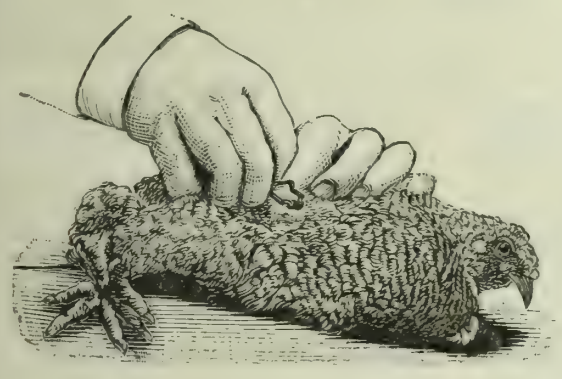

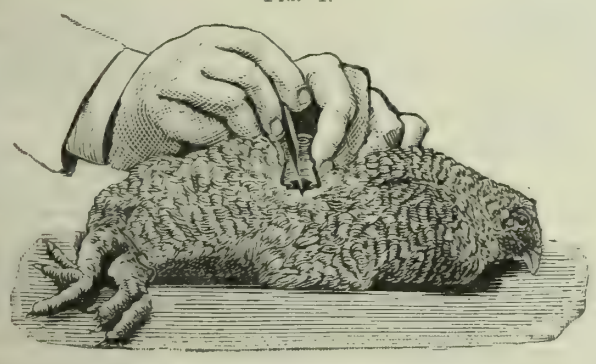

FIG. 4.

Wet the bird's side and feathers with cold water to prevent bleeding, and it will also make the feathers stay where you want them, by twisting them under as a man would his mustache. This will enable you to perform the operation without pulling a feather. Pull the flesh on the side down toward the hip, so when the operation is over the hole between the ribs will be entirely closed by the skin going back to its place. Therefore the opening in the skin will be three-fourths of an inch above that between the ribs, enabling the wound to heal up in a day or two. The incision must be made between the first and second rib, about ½ inch. When you are ready to cut, push the point of the knife in quickly ¼ of an inch, and hold it there a second, as the bird will work his ribs up and down just at that moment; then he will become quiet, when increase the cut half an inch. See Fig. 2. Lay the knife down, keeping the skin in place with the left hand. Now you are ready for the spreader. See Fig. 3.

Take the spreader between the thumb and first finger, press it until the two ends come together. Then insert the hooked ends in the incision with the spring ends toward the bird's feet. Now turn the spring part toward the bird's back, making sure to have the hooks between the ribs. Hold the spreader in position with the left hand. Take up the knife again. See Fig. 4.

Increase the opening by cutting toward the backbone, and forward on a line between the ribs, until it is large enough to admit the free passage of the scoop-twister. Care must be taken not to go too near the backbone. After a little practice you will be able to do this cutting and draw little or no blood by cutting on a line with the veins instead of crossing them. Should they bleed much, wipe it off with a damp rag or small sponge before you tear open the thin skin. Otherwise the blood will run in on the testicles and make the lower one harder to find. Take up the scoop-twister. See Fig. 5.

FIG. 8.

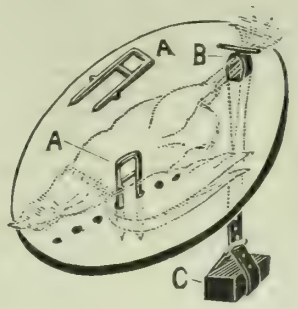

FIG. 5.

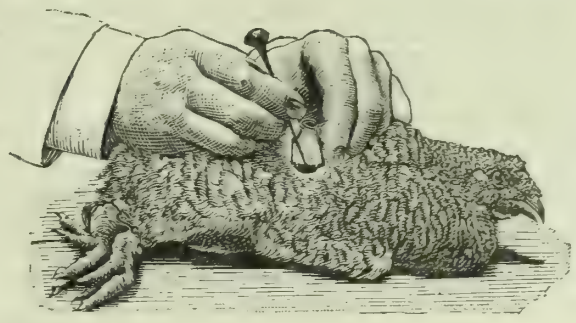

FIG. 6.

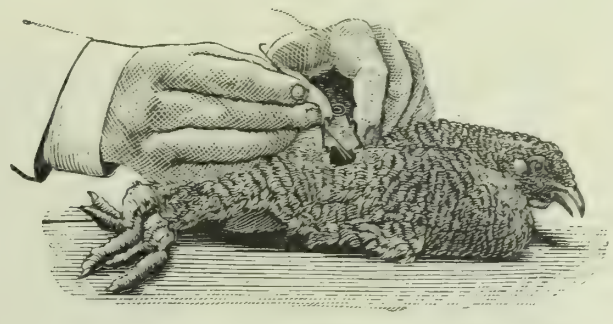

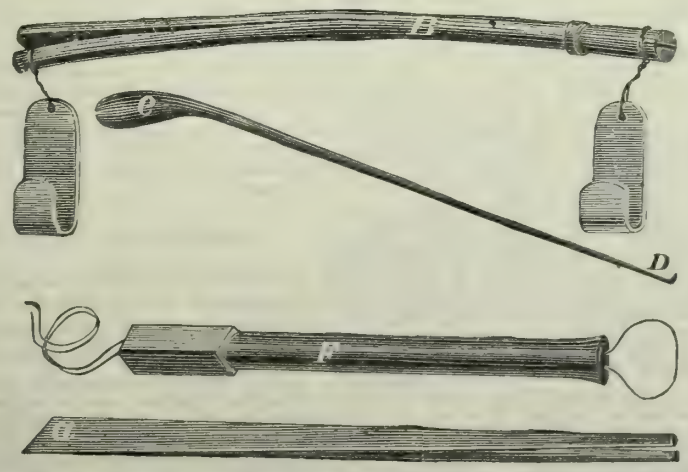

FIG. 7.

FIG. 9.

WIGMORE'S METHOD OF CAPONIZING AND TOOLS EMPLOYED.

With the hook end tear open the thin skin until you have the right testicle well in view, and plenty large enough to press the scoop-twister through.

This hook must be used with care, or you may puncture an artery or the bowels.

Take the probe in your left hand. With the ring handle push the bowels aside, and just below you will see the left testicle. Introduce the scoop-twister with your right hand (see Fig. 6), catching the lower or left testicle endways in the scoop as shown in Fig. 7.

Gently shake it to get it all in, and make the spermatic cord settle well down in the slot. Then begin to twist the testicle off. At this point learners will find the probe very valuable for keeping the testicles in the scoop, as it sometimes slips out, also for preventing the bowels being twisted up by the scoop. A number of these difficulties disappear with a little practice. An experienced person will find little or no use for the probe.

Now remove the right or upper testicle, same as the left. Both testicles are shown in Fig. 7, to give you their exact position. The left testicle should always be taken out first, as it is the hardest to remove. If you remove the right one first and cause the bird to bleed, it will run over the lower one, then you cannot see it as well, and will have much more trouble in getting it out. But when the left one is out it will not be over ten seconds before you have the right one out. I find most beginners want to remove the upper one first. They say they have a better view when the right one is out of the way, but that is only an excuse.

Many people like to do the easiest part first, therefore, I insist on the lower one being removed first.

If you should leave a small piece in by not getting it all in the scoop properly, put the scoop in again and catch it in the slot, even if it is no larger than a pin's head, as these are the pieces that produce slips.

If the testicle is very large, which you will find is the case with a four-months'-old Leghorn, take the scoopful out; then go after the balance until you have it entirely out.

If you cause much blood to flow, spoon it out with scoop-twister. The next day after the operation, if you find they have a windy swelling, just run a darning needle through the skin and it will all escape. Sometimes I just let them go and they come all right themselves.

If you should cut an artery in the operation, they are just as good for food as if they had been bled in the neck. If all right after the operation, they generally have a passage.

Most every writer on capons says it is more humane to twist than to cut their testicles off. Cockerels can be caponized at any age, but the older the more liable they are to bleed to death.

The heaviest and largest capons are produced by crossing a Dorking cock on Brahma or Cochin hens. The largest, with two successive crosses, is to mate a Houdan cock with Brahma, Cochin or Langshan hens, and then mate the pullets of the cross with Plymouth Rock cockerels, which gives yellow legs and skin. A stronger, large pit game cock, mated with Brahmas, or any of the pullets of the above crosses, makes not only a fair-sized capon, but one that excels in meat on the breast. A Brahma cock on Cochin hens is also excellent, while Plymouth Rock cocks on Brahmas or Cochins makes a fine capon. Avoid such breeds as Leghorns, Hamburgs, Black Spanish or Polish for capons. The Wyandotte may be used on large, coarse hens, however, whenever desired.

Mr. Wigmore, in describing Fig. 8, which is intended as a board for holding the bird, says that *A* is a staple to slide over the bird's wings, with two lugs on, about one inch from the points, to prevent forcing the wings too close together, which would be the case without them. The bar crossing the staple in the middle enables you to use the upper part for a handle. One point is longer than the other, to make its introduction into the board much easier. With seven holes in the board it will take any size bird. *B* is a strap-loop, with a pin across the top, to prevent the strap from falling through the board when not in use. At the other end of the strap is a weight (*C*) for keeping the feet down.

Chinese Instruments.—The beveled knife, *A*, on the forceps, is for making the incision. The whalebone, *B*, with a hook at each end, is the spreader for holding the wound open. Hook, *D*, is for tearing the thin skin open. Tube, *F*, with horsehair at the end, is for sawing off the testicle. Spoon, *E*, is for scooping out the testicles after they are cut loose, also for spooning out the blood. This set, I consider, takes great skill to operate with. I believe very few persons have patience enough to learn with this set. There are numerous other sets on the market, some of which are a trifle improvement over the Chinese. See Fig. 9.

The only instruments used are a knife, probe and scoop, the scoop being the one that does the work, as it not only catches and holds the testicles, but takes them out, as well as avoiding injury in any manner.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

A Visitor from Maine.

Temescal Grange had a full meeting on Saturday, February 19th. Every officer of the Grange was present. The meeting was made very interesting by the presence of visiting Patrons, including Brother Daniel Field, of Auburn, Maine, and members of Eden Grange. The first degree was conferred upon William and Nellie Webster, after which the Grange remained in session in the first degree, and under the Good of the Order, Brother Field was introduced, with a few remarks of welcome by the Master, wishing him to feel much at home with the Patrons of California.

In response to the request to address the meeting, Brother Field made a first-rate speech, saying that he enjoyed meeting with Patrons in California for the reason that, although 3000 miles from home, he felt that Patrons were one great family which reaches from Maine to California. Our work, sentiments, and feelings seem to be alike all over the Union. We strive for the same purpose and benefits for ourselves and the welfare of mankind. There are evidences of advancing prosperity of the P. of H. in Maine and other States.

The Order has brought forward and educated representatives of farm interests, to better speak for and maintain their rights, and farmers now more frequently find their way into office and positions of trust, for their own and the public interest. Ex-Governor Robie, who visited California with the Grand Army of the Republic at their recent encampment, and who has made an exemplary Governor, probably would not have been put forward and elected Chief Magistrate of his State but for the Grange and his good record as Master of the State Grange. His gubernatorial term ended, he has now resumed his labor of love for the Grange, and is repeatedly lecturing in the cause wherever he can do most good.

Being asked if it is true that more intoxicating liquors are drunk in Maine on account of having prohibitory laws there, he stated very positive evidence to the contrary, and showed that the law was retained by an immense popular vote. He counseled giving the elective franchise to women, and also more extended privileges in the administration of educational and social affairs.

Having met Bro. Webster in the East, while visiting the National Grange, it was now a gratification to see his son and daughter following their devoted father's footsteps into the Grange. The children of the farm should be encouraged early to come into the Grange. They should enter the fraternal circle for their own good, the good of the Grange and the happiness of themselves and parents.

Bro. Field, who is President of the Patrons' Mutual Aid Society of Maine, explained the great benefit the association had been to the families of departed Patrons, stating his belief that such an organization would much advance Grange interests here.

National Lecturer Mortimer Whitehead was mentioned in the highest terms by Bro. F., who believed a visitation by the National Lecturer in California would be highly enjoyed by the Patrons, and largely effective of good. Members of the State Grange of Maine, appreciating Bro. Whitehead's effective lecture-work, thoroughly surprised him by the presentation of a service of silverware, thus, for once, fairly getting the start of the wide-awake Lecturer. Bro. Field's statement that Bro. Whitehead is one of our very best Grange orators, and one whose bright, genial countenance bespeaks the entire frankness of his nature, was emphatically indorsed by Sister Webster, who also met Bro. Whitehead in the National Grange.

Bro. Field, who is over 70 years of age, appears well preserved in mind and body, and just such a genial Patron as would be welcome to every Grange circle. He has been an attendant at nearly all the meetings of the State Grange of Maine, and repeatedly at the National Grange. He comes to California for the benefit of Sister Field's health, and to visit his son in San Francisco, and other friends in the State.

The Worthy Master, on behalf of the Grange, expressed the hope that Bro. Field and wife would often meet with Temescal Grange; thanked the brother for his attendance, also the members present from Eden Grange, who had kindly joined in giving Bro. Field a hearty greeting. The hope was also expressed that Bro. Field's report eastward would be so favorable that a successful effort would be made to have Bro. Whitehead early visit our coast, by invitation of the Patrons of this State and others on the route that would be greatly benefited by his eloquent and earnest words in the cause of the P. of H.

Bro. Chester, secretary of the State Grange and Master of Eden Grange, having been called upon, expressed pleasure at being present and listening to the brother from Maine, who he hoped would go about visiting our Granges, both doing and getting good. He closed his well-timed remarks by calling out, on behalf of Eden Grange, their "leading orators," Judge Blackwood and Past Master O. Dennis. Bro. Dennis, with his usual becoming modesty, declined the oratorship of Eden Grange, and then made a remarkably good speech, mentioning the necessity of greater unity in the Grange in exercising the elective franchise in these times, and need of constant labor and unyielding fidelity to the Order. We shall pass on, but the Grange will remain, and through it our work here will continue to bless our own children, and other children of the world, long after we have gone. Well done, our labors will thus bring their never-ceasing reward. He was glad Bro. Field bore record of the good fruits of Grange education, and Grange confidence and co-operation in election affairs, through farmers voting for the best men regardless of party or boss rule. Patrons must make their voting power felt in regenerating governmental offices in this State and Union, and breaking up our fearfully increasing monopolies.

Brother Blackwood ably emphasized similar sentiments, to the pleasure and gratification of those present. He also spoke forcibly of the importance of receiving young people, to increase and invigorate our fraternal ranks and forward the march of true Grange progress.

After inviting the Eden brothers, in future, to bring their wives and daughters, according to their former custom, Sister Sheldon was called upon to represent the Matrons of Eden Grange, which was done in appropriate words. She urged that more thorough lecturing work be done in our State; that farmers should be more vigilant of their kindred interests and better attend the Grange.

Brother Goodenough, as a native of the State of Maine, indorsed very positively the statements of Brother Field as to the effect of prohibitory laws, as well as his plea in favor of woman suffrage, and made other pertinent remarks for the Good of the Order.

Sister Dewey believed the surest and quickest way to moral and social reform would be secured by woman suffrage.

Brother Kelsey spoke of the advocacy of Henry George (and socialists following his efforts) for placing the tax for all Government revenues on land, until land shall be forced out of the hands of monopolists, saying that such unjust and harmful doctrines should be strongly opposed in the most effective manner possible.

The defeat of Clunie's Fire Insurance and anti-Compact bill was mentioned, and the statement made that in effect 20 per cent, or more, additional premium is now being paid on a large proportion of fire insurance risks in California than was paid before the combination.

Brothers Frink, Bagge, Renwick, Sewell and others made brief and very acceptable remarks during the meeting.

Brother Dennis invited all Patrons to attend Eden Grange, on Saturday, Feb. 26th, at Haywards, when the questions of women's legal rights and suffrage will be discussed.

March 5th, Temescal Grange will confer the second degree, and expects to receive additional applications for membership. Patrons visiting or sojourning in Oakland, San Francisco or vicinity, are always invited to attend.

Our report is given from memory and by no means to be taken as *verbatim*.

Grange Social at Santa Rosa.

EDITORS PRESS:—The entertainment given by the members of Santa Rosa Grange, at the Grange hall, on the evening of February 14th, was a great success. There was a large attendance and all seemed to have an enjoyable time. The members of this Grange are already preparing for the entertainment of the State Grange next October.—OCCASIONAL.

The affair, so briefly disposed of by our valued correspondent, was noticed at length by both *Democrat* and *Republican*, from whose appreciative reports we cull as follows:

The Grangers have long been known as a social people. They have not often given the public an opportunity to know how friendly they are. Therefore those who are not members of the Order, but were fortunate enough to attend the social given by the younger members of Santa Rosa Grange, Monday evening, were somewhat surprised at the fun.

About 70 persons responded to invitations to meet at Hahman hall, at 7:30 o'clock. There were no silk trains nor flashing diamonds, but there was what more conduces to the enjoyment of all—a disposition to make each and every individual feel at ease and enjoy the hilarity, social pastimes and good-cheer of the occasion. The accomplished and handsome young ladies in charge had covered the floor with canvas and engaged Park's band for the dancers, so that all inclined to engage in that diversion had splendid opportunities, which were fully improved. Others enjoyed themselves with cards, charades, puzzles, and the full share of chatting that is an inherent part of such amusements. At 11 o'clock a splendid supper was served. During the evening a branch postoffice distributed a liberal supply of valentines to the members of the company, provoking much merriment. It was 1 o'clock in the morning when the band played "Home, Sweet Home," and there were not a few who wanted to stay and have more fun. All who were present agreed that the younger members of Santa Rosa Grange are entitled to much praise for the success of the social. Santa Rosa is to have the session of the State Grange this fall, and there is no doubt that that august body will be as well entertained by the members of Santa Rosa Grange as were its guests of last Monday evening.

Woman's Title to Her Home.

"A Butte County Woman" appeals, through the *Record-Union*, to our law-makers:

There exists to-day a law in the statute-book of California that is a shame and disgrace to the State. You are inviting families to come over and settle up its broad acres; and while you are doing this I have come to ask you if you will not also aid in defending the homes already established here.

All homes built upon all lands in this State, excepting U. S. homestead lands, belong wholly and entirely to the husband. No matter how faithfully the wife has toiled through all the best years of her life to help make that home, no matter how much time she has given to its inward and outward adorning, she has no legal right to it whatever. Her husband can convey it away from her and their children without her knowledge or consent, and leave them dependent upon the world. Shame on you, law-makers of California, for such a law as this!

Not many months since I stood by one poor toiling woman whose home had been lost to her for three years, and she had just been informed of the fact. Interest had been added to principal. Youth and strength had long since left her. A look of anguish and dismay had settled upon her face that will haunt me while memory lasts.

Looking out from that fair valley home, and to the encircling hills beyond, she queried thus: "What can I do to release from the grasp of that legal robber this home which is rightfully mine?" Nothing could be done. All was gone—irretrievably gone!

Other women have I seen who have been thrust out from their homes, attended by small children, to gain a living as best they could. And so I say to you law-makers now assembled at Sacramento, that unless this law is changed you will soon have an array of pioneer pauper women in your midst that will be pitiful to behold. Too old to build anew, hope and ambition gone, they will eke out an existence as best they can, and sink at last into unmarked graves. This is no fanciful picture; it is truth.

These women came to California in the long ago by sea and land—came with youth and health upon their brows. They have given all their middle life to the building of homes that are now the delight of Eastern tourists; but what is California doing for these aged pioneer women? Thrusting them out from these homes under sanction of law! Great heavens! Let us pray!

Yes, my toiling sisters, throughout the length and breadth of California, let us pray! Let us go to our law-makers and plead with them for the total extinction of this cruel and unjust law. Let us entreat of them, in the name of all that is holy, in the name of mother, wife and sister, to deal justly with us. Let us tell them that this law is a great injury to the best interests of this great and growing State; that it is sowing the seeds of discord in many homes, leaving dark shadows upon many thresholds that time will never obliterate. We will tell them the State homestead law to which they refer us has never been heard of by one-half the women of the State, and when heard of by those whose homes have been stolen from them, it is too late then to seek its protection; that its application to any home brings with it distrust and alienation.

But we will implore them to make during the present session of this Legislature a law that will give to all women throughout the State a legal title to their homes, whether built upon railroad, school or mineral land. Let the law so read that all such homes located upon these lands shall not be conveyed away from the wife, either by assignment or mortgage, without her consent and signature. We shall find among these law-makers young men who, during the months preceding the autumn election, passed among our mountain pines, seeking legislative honors, and glorying in the title of Native Sons. They threw out these inspiring words to other young men, who caught the inspiration and gave them the coveted prize. Can these Native Sons forget the Pioneer Mothers?

Success of the Citrus Fair.

The *Morning Call*, one of the most careful in its judgment of our San Francisco dailies, has the following friendly and appreciative words in review of the Central California Citrus Fair:

A good deal of inclement and, consequently, obstructive weather was experienced during the holding of the San Jose Citrus Fair. This was the first exhibition of the kind in that locality, and the people were not to be prevented from patronizing it, although it might in some instances prove to their discomfort. They attended not only from different portions of Santa Clara and surrounding counties, and, in fact, from all parts of the State, but also from the East. The display at the fair is represented from all quarters to have been creditable in the highest degree. The word "citrus" did not by any means limit the scope of its attractions, which were of a pleasing variety, including manufactures as well as natural products.

The object of the fair was fully accomplished. As we have had occasion heretofore to remark, in alluding to enterprises of a similar character, it enlightened the residents of that section of the State as to its capabilities in the way of soil, climate and industry, which knowledge had not obtained before. As to the Eastern attendants, they were delighted. They had, doubtless, heard much about California, but could not have realized that they would be treated to such an exhibition in the floral, horticultural and vegetable kingdoms in the mid-season of winter. The managers of the fair are gratified to know that it was a grand success in all its features, and will serve as another advertisement to attract people from all parts of the country to California as excursionists and permanent settlers. The people of Santa Clara have received such encouragement in this, their first fair, that we already hear their intention announced that it shall be annually repeated.

We will add that the credit for this great success is mainly due to members of the San Jose Grange, as leaders and managers, together with some personal friends. It is a well-known fact that this fair, with its extraordinary good effects for the welfare of the farming community and the property-holders and business men of San Jose and the Santa Clara valley, would never have been held, but for the organization of the San Jose Grange.

Starting a Grange.

The following instructions how to start a Grange, written three years since by W. M., James Draper, have been lately reprinted, in response to many petitions, in the *American Grange Bulletin:*

The Grange is emphatically a farmers' institution, and any person engaged in agricultural pursuits, and having no interest in conflict with the purposes of the Order, of the age of 14 years, and of good moral character, is eligible to membership.

Before attempting to organize a Grange, the parties should realize the importance of the work, that the responsibility may be assumed with due deliberation; for it would be better that no organization be attempted if the members do not propose to carry out the objects of the Order in full faith to themselves and the other members of the fraternity.

The number required to secure a charter for a subordinate Grange is not less than nine men and four women, nor more than 20 men and 20 women.

The membership fee for charter members is $3 for men and $1 for women. The regular monthly dues are 10 cts. for each member. This sum may be increased by a Grange if the amount received is not sufficient to pay the expenses of the Grange, such as hall rent, printing, stationery, postage, etc. There are no other demands upon the membership of the Order.

How the Money is Spent.

Of the sum received at the organization of the Grange, $15 goes to the National Grange for a charter and outfit. The balance remains in the treasury of the Grange, excepting that the Deputy organizing is entitled to a reasonable compensation for his services and expenses.

Of the sum received for dues from its members, each Grange pays to the State Grange 20 cents a year for each member on its roll-book.

Of the money thus received by the State Grange, one-fourth of the amount goes to the National Grange to defray the expenses of that body, and the balance is used to meet the running expenses of the State organization.

This shows that the expense of maintaining the largest and most important agricultural organization in the world is not only exceedingly small but is reduced to as small a sum as is consistent with its practical and successful working operation.

The First Steps.

After securing the co-operation of such persons as are in favor of organizing a Grange, write to the Master, Secretary or some Deputy of the State Grange for the necessary blanks, and make an appointment for him to meet the company at some convenient place, to explain the principal objects of the Order and the benefits to be secured to its members through united effort. If a sufficient number are present at this meeting, and are ready to organize a Grange, the Deputy can proceed at once and perfect the organization at that meeting.

During the time intervening before the reception of the proper documents from the National Grange, a board of officers can be elected, a hall or other suitable place for holding the meeting selected, and the various committees appointed.

In about a week or 10 days after the first meeting, the documents having arrived and officers been chosen, another meeting is to be called for the installation of officers, at which time the Deputy will be present to perform that ceremony, and give all necessary instructions in the organic law and ritualistic work of the Order.

Thus organized, the Grange is ready to go forward in its chosen work of elevating the calling of the American farmer, seeking the improvement of its members socially, intellectually and financially, by every means within its power, and by its connection with the district and State organization it becomes an important factor in extending the influence of the Order, that it may obtain its highest glory and power to bless our race.

GRANGE ITEMS.—The *Patron* is informed that South Sutter Grange had a special meeting Jan. 29th, to confer the third and fourth degrees on a class of seven. County Lecturer Frisbie was present, and they had a Harvest

Feast and good time generally....Montezuma Grange installed officers Feb. 9th, in the forenoon; then had a feast and social talk, and in the evening held an open meeting, with addresses on the aims and doings of the Order by Bros. Pilkington and Overhiser....Sacramento Grange meets at 10 o'clock to-day (26th) to instruct a class in the first and second degrees, have basket-lunch at noon and literary exercises afterward, to which visiting Patrons are cordially bidden.

Grange Work and Progress.

[Prepared Weekly by M. WHITEHEAD, National Lecturer.]

It is admitted on all sides that another crisis is at hand in our history as a nation. Capital and labor are drawing the lines more severely with every passing day. Will the farmers of America rise to the occasion, and, conservative as they are, become the "go-between" for these two giants, show them *both* the evil of their ways, and mark out the safe, middle ground, where each can stand the equal of the other? Capital is absorbing our wealth, and labor wants all our land. Capital and labor both, in all parties, are asking for "free raw materials." The makers of fraudulent butter are combining to repeal our law. Merchants gambling in "futures" unsettle the value of our products. Discriminations in laws, taxes and transportation are *against* the farmer. We must demand *equality* in all things. Our national financial system is soon to be entirely reorganized.

Will it be for the people or for capital? Our transportation questions are as yet unsettled, yet we are winning some of the final battles. Patrons, farmers, as a people and as a class, we never had so important duties resting upon us as now. Will we be equal to the needs of the hour? Will we be *united* and strong for the fray? Shall we continue to go forward or go backward? Our action, our work *now*, will help answer these questions. Let us realize our responsibilities.

Nerve ourselves for the labors, and seriously, aye, solemnly, enter upon the duties of the hour, remembering the charge, "Cast forth thy act, thy word, into the ever-living, ever-working universe; it is a seed-grain that cannot die; unnoticed to-day, it will be found flourishing as a banyan grove—perhaps, alas, as a poisonous hemlock forest—after a thousand years."

Senator Hawley, of Connecticut, lately delivered an address before the students of Hamilton college, in which he made some good points. Just such advice is found in the precepts of the Grange. "We demand respect for law and government from those who would destroy all government and solidify all property. * * * As educated young men, you must not forget that the Lord and your country have demands on you for what you have of talent. To be a politician in the best sense is second only to being a minister of the Lord Jesus Christ. The most cowardly thing on God's footstool is to run away from your Government. Though you may not be an active politician, keep informed in matters of politics. Always go to the caucus, the beginning of government. Know what is being done, and see that it is done rightly. Do your duty everywhere as scholars and American citizens, and everywhere above the plume and the bayonet shall wave the lilies and the palms of love and peace."

Even the organ-grinders that furnish the music on the streets of New York City have a trades union of 882 members. Unlike the Grange, and some other organizations, they are in favor of a "grinding monopoly."

The Hatch Experimental bill, appropriating $15,000 yearly to each State in the Union toward sustaining experiments in all matters pertaining to *practical* agriculture, has passed the Senate. The National Grange and the various State Granges have given their active support to this measure. It now becomes the duty of all good Patrons and progressive farmers to see to it that in some of our States this money does *not* go the same way that the appropriations made by Congress many years ago have gone; being absorbed and overshadowed by other colleges, and agriculture very much left out. Patrons, remember the plank in our platform which says: "We especially advocate for our agricultural and industrial colleges, that practical agriculture, domestic science and all the arts which adorn the home, be taught in their courses of study." It is easier to have the appropriation for Experimental Stations *start right* than it will be to get the money away again when it has once fallen into other hands. Act *now and act altogether.*

"The Order of Patrons of Husbandry is the grandest organization the world has yet seen for the elevation and education of the farmers and their families. Its good work is more apparent year by year."—*J. W. Lang, Executive Committee Maine State Grange.*

The foreign landlord is getting a firmer hold in our country every year. They do not even live among us, but draw their rents from American farmers, their tenants-at-will, in immense sums. The Duke of Sutherland, who is now in this country on a visit, owns 425,000 acres of land. He has a little patch of 1,358,000 acres in England. The Grange has already taken up this question of alien landlords. Our motto should be, "Not another acre of America's free soil for a foreigner who will not live among us, become a citizen, and share our dangers and our destiny."

Progress.

Four more new Granges—
Beaver Run, No. 813, Luzerne county, Pa.
Westminster, No. 228, Windham county, Vt.
Riverside, No. 507, Broome county, New York.
Laurel Dell, No. 633, Nebraska.

Sullivan Grange, Tioga county, Pa., increased its membership in 1886 from 14 up to 54 members, "with five more elected for initiation, and three elected for reinstatement."

L. F. Smith, Lecturer Grange No. 1111, Tennessee, organized June 17, 1886, with 22 charter members, writes: "We have been prospering ever since. We have tried the Order, and can cheerfully bear testimony to the fact that it is the best institution with which farmers can become identified."

Rhode Island has a Patron, if not a Grange. The postoffice address of the secretary of the last new Grange in Massachusetts is Woonsocket, R. I. It will soon spread "over the garden wall." Rhode Island's first Grange is already in sight.

Williamstown Grange, No. 85, New Jersey.—"We are initiating and reinstating members. We are now 11 years old."

Brother J. M. Blanton, Past Master Virginia State Grange and member of Executive Committee of National Grange, is in the field doing some "official" lecture work. He is an able speaker and always does good.

Thirteen candidates received the fourth degree at Rumford Grange, N. H., Jan. 24th, with installation by State Master, Brother McDaniels.

"We are in for a grand advance this year."—*A. A. Brigham, Secretary Massachusetts State Grange.*

"Thou canst not see grass grow, how sharp so e'er thou be,
Yet that the grass *has* grown, thou very soon canst see;
So, though thou canst not see thy work now prospering, know
The print of every work, time without fail shall show."

A FRIEND TO THE ORDER.—Referring to the recent organizing of a Grange in its neighborhood, the Northampton (Mass.) *Journal* says that it "heartily welcomes the new society to this vicinity. The organization of agriculturists and wage-laborers is a growing necessity, and the increased attention being paid to the demands of these classes signifies good and good only to the republic. They must be noticed and their demands for relief from the taxation of arrogant monopolies be met, sooner or later."

PLACERVILLE GRANGE.—The *Republican* gives notice that owing to the inclement weather the Harvest Feast of Placerville Grange, previously announced for Feb. 12th, was put off until to-day (26th) at 10 o'clock A. M. Members and others interested will note the change, and come armed and equipped as the law directs.

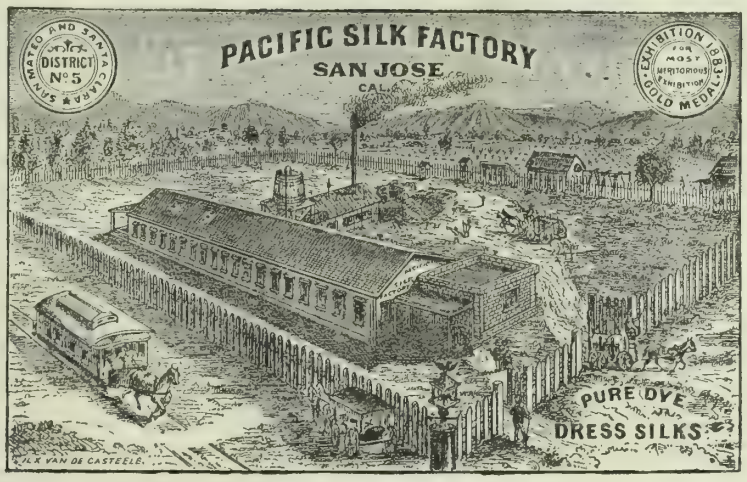
Shade Trees for Colusa Highways.

At a session of the Colusa county supervisors, held February 12th, the *Sun* reports, the following preamble and resolution were adopted:

WHEREAS, It is the province of the Board of Supervisors to encourage the planting of shade and ornamental trees on the public roads and highways of the county, under such regulations as they may adopt; therefore, it is, by the Board of Supervisors of Colusa county,

Resolved, That to any and all persons who will plant and cultivate shade and ornamental trees on any of the public roads and highways of said county, not less than three rods in width, shall receive for each and every tree thus planted and growing at the age of four years the sum of $1; provided, that the trees shall be planted in regular rows a distance of at least 20 feet from each other, and not more than four feet from the boundary of the road or highway; and provided further, that the county shall in no manner be liable for any injury to trees thus planted, but the same shall be protected at the expense of the persons planting the same, until it is satisfactorily proven they have reached the age above stated, and been accepted by the Board of Supervisors.

JAPANESE ORANGES.—A reader of the RURAL who has had some experience abroad calls our attention to the fact that there is a wonderful wideness in the value and desirability of different varieties of oranges propagated in Japan, and that a purchaser of trees which are brought from Japan should act with caution and use every means to determine that the trees he is buying are really what they are represented to be. We were shown circulars issued by large propagating companies in Japan, in which young orange trees are quoted all the way from *five cents* to *one dollar* each, and considerable discounts from these prices at wholesale. This, of course, opens the way for dishonest importers (if there are any) to bring a five-cent tree and claim that it is of a variety selling for a dollar, or of some other fine variety, or to bring cheap trees and sell them very low and still have them dear at the price asked, while other trees would be cheap at a much higher price. We state these facts simply to put tree buyers on their guard, and to advise them to take every means to prove that they are really buying what they desire to get. The same remarks would apply to other kinds of nursery stock as well as Japanese.



YOU can make your own "gas fitters'" cement thusly: Melt up 4½ pounds rosin, 1 pound beeswax, and stir in 3 pounds Venetian red; it will hold gas in.

SERICULTURE.

The Pacific Silk Factory.

Our San Jose correspondent, in his notes on the Citrus Fair on page 176 of this issue, gives a description of the silk exhibit and some notes on the industry. Thinking our readers might like to have a view of the establishment, we insert an engraving on this page. The following notes are condensed from a recent article in the San Jose *Mercury:*

The Pacific Silk Factory is located on the corner of Delmas avenue and San Salvador street, in the western portion of this city. The factory was established about five years ago, and is owned and run by H. X. Van de Casteele. The main building is 40 by 150 feet and contains the necessary machinery and 17 looms, of which ten are power and seven hand looms, and the daily capacity when running in full is 180 yards of black dress silk, gros grain and rhadame. Twenty-five experienced and imported laborers, consisting of men and girls, are employed and work by the piece—that is, by the yard, and earn from $1 to $1.75 per day. Necessarily some of the employes do day work. Generally the factory is run the year round, and the product is in the neighborhood of 55,000 yards of silk, representing $125,000. The very latest appliances in silk manufacture are introduced in the factory as soon as their utility is acknowledged, by which the management competes successfully with Lyons, France. The goods manufactured find ready market all over California, in Chicago, Philadelphia, Boston and New York. California does not produce enough silk to run even this factory continuously, and hundreds of dollars are sent abroad annually to Italy and Japan for the raw material. The climate of California, and the absence of atmospheric disturbances are peculiarly favorable to silk culture. Of the many kinds of silk-worms, no one produces a

quality of silk equal to that of the California worm, whose product brings a good premium in Philadelphia and France.

It would require a technical knowledge of machinery and mechanical terms to intelligently describe the appliances which are in operation at the factory, and which when described would not be interesting reading matter for the average reader. It is sufficient to say that the machinery for the operations of weaving silk is necessarily so delicate and accurate in construction that the slightest accident is called to the attention of the operator, by the stopping of that part of the machinery, which of course is automatic, where the fault exists. Mr. Van de Casteele kindly explained the application of the different machines to a *Mercury* reporter yesterday and expressed himself freely in regard to the industry. California, in his judgment, is the home of the silk-worm, the equality of the temperature and the absence of lightning and thunder, which kills the worm in large numbers when at certain ages, renders it ex tremely simple to raise the worm. The season for worms lasts from 45 to 60 days, and is a good field for any one who will make a proper experiment and raise cocoons, for which there is a good market in San Francisco. The Pacific Silk Factory, besides receiving the gold medal at our fair, has received a diploma at a Philadelphia exhibition.

The Silk Board.

The monthly meeting of the State Board of Silk Culture was held Feb. 19th, Isaac Trumbull presiding.

The secretary, Mrs. Rienzi, reported that she had received a large number of letters from numerous counties of the State asking for information regarding the silk industry. The inquirers live all the way from Shasta to San Diego, and several Australian letters were also received. About 1500 (Italian variety) mulberry trees have been distributed during the month. Twelve thousand white mulberry cuttings were also distributed.

The board will be able to distribute the eggs of French annuals by April. Three lots of these eggs are now on their way here. One lot is from France, another from Lombardy, and the third from Tuscany. They have all been microscopically examined by scientists, who pronounced them pure and placed their seal upon them.

The secretary reported that the new reeling machines were working admirably, and that several applications for positions as pupils had been received. There are now six pupils in the school of the board on Montgomery avenue.

One Swindle Pilloried.

Chief-of-Police Crowley has issued 5000 copies of the following circular, to be posted in every room of every lodging-house in this city:

Strangers in San Francisco, Beware of Mock-Auction Swindles.

The places in which they are held are fitted up as jewelry stores, with show-cases, safes, etc. The stock in trade consists of a varied and brilliant assortment of brass and white-metal watches, averaging about $3 in value. These places are opened for the express purpose of swindling strangers whose attention is attracted by the red auction flag attached to the door. Within you will see the bogus auctioneer, apparently auctioning off a watch; standing in front of him are several men dressed in farmers' or workingmen's clothes. They are apparently bidding, but they are the bogus auctioneer's cappers. A gold watch is put up and one of the cappers buys it very cheap. Another gold watch is put up, and the auctioneer descants upon it until you bid. The capper runs your bid up to $20, $30, $40, or as much as you will stand, when the watch is knocked down to you. You pay your money and get a guaranty that assures you the watch is "gold on a coin basis." This means that it is thinly gilded.

You are then approached by another of the cappers, who, while admiring your purchase, suggests that you have it tested, whereupon this capper leads the way to a poorly stocked jewelry store in the neighborhood. The clerk, who is also a confederate of the swindlers, asks you if you wish to have the watch tested. Upon your assenting, he takes the watch and proceeds to test it with acid. In a few minutes he informs you that he has tested it and demands $3, which you have to pay to get the watch, when he informs you it is brass. You find that you are swindled, but the capper suggests that you return and put the watch up for auction again, and not let on that it is brass, and that you may get more than you gave for it. You take his advice and pay the auctioneer for selling it, when it is promptly knocked down to a capper for about $2. Your friend, the capper, whose advice you have taken, is gone, and you are swindled again. The above is only one illustration of the many swindles resorted to by these mock-auction establishments, and is intended to prevent strangers in the city from being victimized.

We are thankful to note this action on the part of the authorities. Would that the dens of the Peter Funks were the only pitfalls against which warnings are needful! Among the score of cheats, by means of which the unwise and unwary are cozened, none is more pernicious than the lottery, in whatever form and however advertised, whether overtly, or disguised in reading notices, or masquerading as illustrated correspondence. We hope that legal measures will soon be enacted, potent to reach all unprincipled and venal persons who can be hired to aid tramontane sharpers in deluding and fleecing our foolish people.

COLFAX GRAPES IN LONDON.—The Placer *Argus* says that an English tourist stopped at Colfax last fall long enough to take with him four boxes of grapes, which he had ordered by telegraph the same evening of Mr. Whitcomb. The order was filled somewhat hurriedly and the fruit duly transferred and paid for. Nothing further was thought of the matter until a letter was received from London, England, written by the party who had bought the grapes, saying that they had arrived in excellent condition. This was rather surprising to Mr. Whitcomb, as he had no idea the grapes were to be subjected to so severe a test of their shipping qualities, and had neglected certain precautions which otherwise he would surely have taken, as, for instance, surrounding them with cork-dust.

OAK timber grows in abundance in Tulare and orders from along the line of the railroad, for the timber, are constantly coming in. A considerable quantity of wood is being shipped almost daily in response to this demand. The Tulare *Times* says: The roots and other portions of the trees which are not suitable for firewood and fence posts could be utilized as charcoal. There is no reason why the burning of charcoal should not be a profitable industry in this county. One of our citizens has already tried it and found it to pay. The demand for charcoal in this State is large and constantly increasing. We look with confidence for the time when our magnificent oak forests will be a source of vast wealth.

THE prospect for the future in this State is not surpassed by any other section in America. Each year brings to notice some new products of the soil unable to be produced in any other State. All these wonders constantly attract the attention of the enterprising and industrious settlers from all parts of the country. This city is in its infancy, in respect to the position it will some time occupy in reference to commerce, manufactures and trade. To the enterprising, prudent and wise young merchant, a bright future is in store; a prosperous and successful career must inevitably wait upon him. The next 20 years will see California one of the most prosperous States of America.

The Violet.

[Written for the RURAL PRESS by FANNIE H. AVERY.]

A violet sighed—it had its woes,
As well as do God's human flowers,
And sometimes bitter, restless throes
Disturbed the quiet of its hours.

It grieved just now because its lot
Was lowly placed and seemed confined:
It longed to be what it was not,
And do some work of noble kind.

Sweet violet! it did not know
That it possessed a wondrous dower:
A dower that neither high nor low
Could excel in uplifting power.

For as it mourned, and breathed its sigh
Fraught with rich fragrance on the air,
The perfume brought a passer-by
Associations dear and rare.

It woke thoughts of a dear one gone,
Whose mortal part lay 'neath the sod.
It called to mind an absent one,
But best of all brought thoughts of God.

Mrs. Mallie Stafford.

Those friends of Mallie Stafford, who hitherto have known her only through the stories and verses she has contributed to our Home Circle, will be pleased to see the likeness we present herewith. It served as frontispiece to "The March of Empire," the little volume of her sketches of early days in California and on the Western frontier, published two or three years ago.

Mrs. Stafford first came to the Pacific Coast with her husband in October, 1854, and the opening chapters of the book relate incidents of their voyage hither by way of the Isthmus. Their embarkation at Panama is described as follows:

How lovely is early morning in the tropics! An early breakfast enabled us to take a stroll along the beach. This was the day of departure, and already the fine steamer Golden Gate lay anchored in the offing. The bay of Panama is one of surpassing beauty. The gleaming shore, shell-strewn and even, slopes gently to the water's edge, reflecting, in its transparent beauty, rock, shells, islands and the myriad boats that float upon its surface. The bay abounds in islands, green and lovely, and almost burdened with a wealth of tropical verdure. Here are ornamental and picturesque haciendas, owned and occupied by the wealthy Dons. Through field and meadow roam their fat herds, and goats and sheep climb nimbly about upon the overhanging rocks, giving to the lovely picture an air of homelike beauty. In the offing lay moored numerous vessels—sailing ships, barks, steamships, etc.—and noticeable among them was a large British man-of-war. Her ponderous hull and ominous portholes, from which could be distinctly seen the mounted cannon, frowned darkly over the green surface of the bay. How fragrant was the breeze, blown shoreward from the islands! It was perfumed with an aroma of spices, oranges, the sweet scent of the coffee tree and the myriad odors of the fascinating tropics. Here everything suggests indolence, luxury, abundance. No busy hum of trade and commerce, no stir and strife of progress and improvement disturbs the ease-loving natives. The poorer classes, as a rule, collect the mango, the cocoa, the yam, the plantain, and other wild fruits for their living, and for their dress, but this was a matter which seemed to be of minor importance to them, a yard of cotton cloth being generally sufficient for a full suit.

It was not long after sunrise when preparations for embarking began to be made. The bay, gently sloping out to deep water for a distance of a hundred yards or more, was so shallow that even the small boats could not reach the shore. How were we to traverse this intervening stretch of sea? With us there was no modern Moses, who with a wave of his rod could bid the waves roll back and leave for our willing feet a dry roadway to the vessel. In my wanderings it had been my fortune to have been familiar with the various modes of travel known to christendom—steamship, canal-boat, flatboat, stage-ride, horseback, muleback—but the means necessary to be employed in order to reach the small boats was a "new departure" from any style of traveling which I had heretofore known. As the Central American native seems to be, to all intents and purposes, an amphibious animal, it was necessary, as the only available expedient, to call into requisition his services for this important undertaking. Previous to this many of the ladies had thought that a muleback ride comprised the realization of the horrible. What, therefore, must have been their despair when they saw that, in order to traverse that sheet of intervening sea, it was necessary—unavoidable—to take that celebrated "post-back" ride with which all early Californians are acquainted, either through experience or rehearsal.

The scene on the beach was one never to be forgotten. It is photographed on my memory with imperishable fidelity. Beyond, in the offing, lay the grand steamer, her officers and crew busy in making preparations for a speedy departure. Near by were the small boats, manned by swarthy natives; and on the beach were crowds of passengers and piles of baggage and freight. Among them all moved the dusky, half-nude figures of the natives, intent on making as many ten-cent trips (the price of transportation) as possible. The outlook was anything but desirable. Anxious faces looked seaward, and trembling voices inquired if the boats could not be "got nearer." Ladies looked dismayed, and fat people—men and women—were in despair; but whatever feelings of repugnance or fear we may have had to this novel mode of traveling had to be thrust aside. It was one of the things inevitable, and the placid bay was soon disturbed by the lithe figures of the natives, bearing their novel burdens to the boats. What a medley of voices!—screaming and crying and laughing, not to chronicle any harsher expression of feeling. A thin, slender native offered his services to an aldermanic old gentleman. "Me pack Mericano—ten cent," said the native. "O God bless me!" puffed the old gentleman, "I'm afraid—I'm afraid, my good fellow, I'm afraid you couldn't just stand up to it." "Oh, me pack—me pack," insisted the native. The gentleman, seeing no better opportunity, accepted of his services, but his thin shanks trembled visibly, and when, about half-way to the boats, the native slipped, it brought a terrific scream from the frightened voyager.

As we were all burdened with our traveling

MRS. MALLIE STAFFORD.

equipments, each tried to take what they could. As a consequence, many an article was dropped by its frightened owner and went bobbing over the smooth surface of the bay. Gripsacks, hand satchels, shawls, etc., were seen occasionally floating on the waves. They were, however, generally recovered by the agile natives. By the small boats we were conveyed to the ship's side, where a pair of steps were lowered to the water's edge, and by this means we ascended to the deck. If the sea happened to be rough, it was with great difficulty that the boats could keep their position near enough to the steps, in which event there was danger of losing one's footing and slipping between; fortunately we had no serious accident.

After the completion of the railroad across the Isthmus a stanch wharf was built by the company, and vessels since steam up to the wharf, receiving and delivering freight and passengers without the inconvenience which the early emigrant experienced. A gentleman whom I met years afterward, and who had shortly before visited the East, remarked: "Well, the railroad is completed across the Isthmus. The passengers step off the ship on to the cars—all very nice and very pleasant; but there's no more mule-back ride, no more post-back ride, and not a bit of fun." After much hurry and toil our gallant ship was freighted and filled, and a strong breeze having sprung up, the sails were unfurled, and under steam and sail she swung round and rapidly put to sea.

But our authoress had other and varied journeyings east and west, by team, by water and by rail, before she found her present *home* in Napa county, and different phases of experience are voiced in her poem,

"Across the Plains."

No more the long, unbroken trains
Of ox teams on the desert sands,
Bear onward, in the creaking wains,
The emigrant in weary bands.

The years that passed! the years that passed!
Bear witness to unwritten tales
And histories; for along the vast
Dim trackless sands and winding vales,
Once stirred, in Life's quick throbbing beat,
The tramp of many thousand feet.

They live with us, those years that made
Our young athletic State unfold
Her hidden powers of wealth, and laid
Her history in an age of gold.

And we, a part of that great throng,
Who bravely stemmed the threat'ning waves—
Or trackless waste, that all along
Was thickly marked with new-made graves;—
Oh, we cannot forget the old
Long journeys to the "Land of Gold."

To-day the shining track of steel
Stretches from East-land to the West.
We sit in gliding car and feel
The idle luxury of rest—
And templed cities, vast and fair,
Pass by like phantoms on the air.

But oh! our hearts cannot forget
The past—that is a part of us:
Those long-remembered times, which yet
Are sacred as the half-buried dust
Of those, who fainting found a rest
In the wild deserts of the West.

A Mean Fraud Miscarried.

While most of the swindling tricks we have to notice from time to time are played *upon* the "honest granger," we occasionally hear with regret of dishonest practice on the part of those who bring produce into market. For instance, a reporter visiting a large grocery in Santa Rosa the other day observed a young lady from the country just handing the polite clerk a milk-pail full of eggs. She remarked that they were sent in by a neighbor who had asked her to trade them off for sugar, tea and coffee. The clerk replied that he would trouble her to wait until he had counted them. He soon returned from the rear of the store, bearing the same pailful of eggs, and handed them back to the young lady, coloring up painfully. She asked him what the matter was. "The eggs are all bad," said he, "and we cannot take them." She made a few commonplace remarks and left the store.

Noticing the reporter's look of amazement, the clerk explained: "Yes, all those eggs—eight dozen—were bad; they were all taken from an incubator, after having remained bathed in the equalized heat of the apparatus for five days. I believe they have a way of telling after the fifth day whether the eggs will hatch or not, and, if the indications are unfavorable, they are taken from the incubator and, in such cases as you have just witnessed, are sent to the grocers. Now you see if we had not counted those eggs, we would have accepted them and perhaps you would have been one of the unfortunates to whom we would have sold a dozen or two." He added that such cases were frequent.

An attempt to pass worthless goods does not differ in principle from an attempt to pass counterfeit money—as we trust every one of our readers agrees without argument or question; and we should be sorry for the soul that had not self-respect enough to scorn any such meanness.

DANGEROUS DAINTIES.—A Carmelite lately gathered some mussels on the rocks, took them home and cooked them. He ate only three, but that small number came near being the death of him. He was soon taken with severe cramps, and his stomach had to be relieved by an emetic before he recovered. The *Argus*, noting the occurrence, adds an averment that the light of the moon has a dangerous effect on mussels, and they have proved fatal to more than one person eating them. We dare say it is risky to swallow the bivalves in question, but believe the alleged cause to be all moonshine.

A SUFFERER suggests that if there is any one who should be "rapped in slumber," it is the man who snores.

When Niagara Run Dry.

The remarkable snowstorm of Saturday, the 5th instant, reminds us of an extraordinary day of another character, as it appeared in Western New York. Thirty-nine years ago the coming spring a sight was witnessed at Niagara that was never seen before by that venerable citizen—"the oldest inhabitant;" neither had the memory of any such thing ever been handed down in the old folks' lore. It was nothing more nor less than an almost running dry of the great cataract, in which condition it remained an entire day.

A writer who lived near the falls wrote of it soon after substantially as follows:

The winter of 1848 had been one of the coldest on record. The ice was of enormous thickness. One day—I think it was near the end of April—a very stiff northeasterly wind came, and its force was so great that it moved the great fields of ice, then entirely separated from the shores, up the lake, piling the floes in great banks as they moved. The sight of those ice banks is described by those who witnessed it as one of most awful grandeur. Toward night the wind changed to the opposite quarter and grew into a terrible gale. The lake's surface was packed with miniature icebergs, and these were hurled back by the gale with such tremendous force that an impenetrable dam was formed in the neck of the lake from which Niagara river flows, and the great current of water which finds its way from the lake, to be dashed over the gigantic precipice at the falls, was so held in check that no more than one-quarter of its usual volume could find a passage through the immense pack of ice.

As this pack was stubborn, it was naturally but a very short time before the falls had drained nearly all the water out of the river. This occurred during the night, and we people who lived in Niagara village knew nothing of the phenomena until next morning. I awoke very early that morning, with the sense of something exceedingly strange oppressing me. It was some time before I discovered that the feeling came from the fact that the noise of the cataract was almost missing. I jumped out of bed, and found that scores of others had been awakened by the same circumstance, and were hurrying toward the falls to see what the trouble was. We found that the great Niagara falls was only about one-quarter of its former volume.

The American channel had dwindled to a creek in comparison with its original proportions, while the British channel resembled some ordinary river in the droughts of August. Goat island was as big as two Goat islands, as the water had shrunk from every side of it, leaving a wide expanse of wet, slimy, jagged rocks, which no eye in that vicinity had ever seen before. The bed of the Canadian rapids, far out into the stream, was dry, as was the space between the lower end of Goat island, and out beyond the tower. The rocks thus exposed were black and forbidding, giving the dry river-bed the appearance of a track of charred stumps. The Three Sisters looked forlorn in their enhanced dimensions. The great jet of water which had, from time out of mind, leaped into the air about 300 yards south of this group of islands in the great rapids, and which is leaping there to-day, was not leaping that morning, and, as some one remarked that day, the tremendous roar of Niagara had subsided to a moan.

The scene was at once desolate, strange, and awful to contemplate. The picture will never leave my mind. The whole village was out exploring caves, dark recesses, curious formations in the rocks, and other remarkable features of the cataract and rapids that no mortal eye had probably ever gazed upon before. These explorations were made safely to the very brink of the Horseshoe rapids. This remarkable condition of affairs at the cataract continued all day, and showed no sign of a change when the people went to bed that night. When we arose in the morning, however, the old familiar thunder of the falls was again shaking the earth as before, and the river and rapids were again the seething, whirling, irresistible torrent of old. The ice in the lake had shifted again, and some time in the night the long-restrained volume of water had rushed down and claimed its own.

Chaff.

A BEETLE will draw 20 times its own weight. About once in 10,000,000 times a lottery ticket will do the same thing.

A LITTLE fellow went to a blacksmith's to see his father's horse shod. The blacksmith began to pare the horse's hoof, and thinking this was wrong, the little boy said, earnestly: "My pa don't want his horse made smaller."

A BOSTON lawyer recently met his match in a witness who was giving evidence about an old lady's loss of mind. Lawyer: "Did she look as I am looking at you now, for instance?" Witness: "Well, yes—quite vacant-like!"

"HABIT" is hard to overcome. If you take off the first letter, it doesn't change "a bit." If you take off another, the whole of "it" remains. If you remove another, it is not "t" totally used up. All of which goes to show that, if you wish to be rid of a bad habit, you must throw it off altogether.

YOUNG FOLKS' COLUMN.

Jeff's Fortune.

[Written for the RURAL PRESS by J. W.]

CHAPTER I.

Now, boys, if you would like to hear a true story of a boy who determined to make his fortune and succeeded, just listen while I tell you of my young friend Jeff.

Jefferson Easton lived in the western part of the State of New York. He was bright and intelligent, but, like most boys of his age, he loved outdoor sports better than his books and school. Jeff, as he was called, had a good father and mother, a brother Lawrence, who was five years his senior, and a little sister whom he called "Tot." Lawrence was vain of his appearance and extravagantly fond of dress, but, unlike his brother, he took an interest in his studies, and his great ambition was to "make a speech" or speak a piece on exhibition day at school. He was always on the lookout for some high-sounding poetry that would impress his companions with his superiority. He carried with him an old volume of Shakespeare, studying extracts from it to be quoted as opportunity offered.

Mr. Easton was a farmer in comfortable circumstances, and he expected his boys, out of school hours, to assist him with the work of the farm, and as they grew older to share the responsibility of "looking after" things, as is usual with farmers' sons.

Lawrence's duty was to milk the cows. He disliked this work and looked forward to the time when Jeff would be old enough to take his place. He would start out for the pasture, pails in hand, grumbling to himself that some day he would find work better suited to his refined taste, and leave the drudgery to Jeff, who seemed to enjoy it. While milking he often recited aloud his choice selections. One day while performing his disagreeable task, he became very enthusiastic over his last new piece, and now and then would stop his work for a moment to gesticulate. Suddenly the unappreciative cow switched her tail in his face, causing Lawrence to make some ungraceful gestures, and to exclaim "Great Scott! I would not stand that;" and so saying, he firmly tied the offending tail to the fence, then proceeded to finish his recitation, as well as the milking, going from one to the other till the five cows were milked, and he felt relieved to think that his unpleasant duty for one more day was done. On meeting his father the next morning he was surprised at his angry manner as he demanded an explanation of the cow's unusual appearance; when it suddenly dawned upon our young orator that he had forgotten to release the cow. So, after waiting impatiently, she, like Bo Peep's sheep, had left her tail behind her.

Each year Jeff showed more plainly that he had an enterprising disposition and often declared that he would never settle down to the quiet life of a farmer, but would seek his fortune in the far West. These outspoken resolves rather displeased his father, for he had reckoned on Jeff stepping into his place on the farm and being a great comfort to him in his old age, and, with his energetic spirit, proving himself more useful than his brother.

The boys, by way of encouragement, had each a pig given to him, with which to do as he wished. When Jeff's pig was grown he took it to market and sold it, and then bought sheep, and so afterward traded till in time he was the owner of a fine pair of oxen. He worked faithfully for his father, and rendered every assistance to improve the old homestead, yet fully determined when of age to start in life for himself, his aim being to reach California. He reckoned that with what money he could save and that which he expected to get by selling his oxen he could make a very fair start. My friend was deliberate, energetic and determined, and when he had fully decided which was the best plan he persevered until he had accomplished the desired end. At last the longed-for time had arrived. On the morrow Jeff will be a man, free to act for himself, and, although he loved his father and mother as much as ever, he was still determined to leave home and seek his fortune. As each evening farmer Easton, with his family, gathered around the cheerful fire in the sitting-room, they formed a happy circle, but on this night a chilly feeling seemed to pervade the atmosphere. In one corner stood a small old-fashioned trunk and beside it a carpetbag. On the trunk sat Jeff, looking very serious, for early on the morrow he was to leave the old home and say "*good-by*" to the loved ones. Do you wonder he looked sad?

"Some one is knocking. Open the door, Tot," said Mr. Easton.

Neighbor Blake was ushered in. Jeff had anxiously waited his arrival, as he was to bring him $120 in payment for his oxen. He handed the money to Jeff, saying: "Be careful, my boy. Don't throw that in Salt river."

Jeff counted the money and put it in a little, old silk purse, which he twisted about his finger, quite satisfied that all things were now ready. His father looked sadly at him, and said: "You may feel happy now, my son, but in a few months, when you have spent all, you will be ready to say, like the Prodigal, 'I will arise and go to my father,' and will gladly return to your work on the farm, a poorer but a wiser boy."

"Don't discourage the lad, Easton. It won't do any good now, and it's a bad plan to throw a wet blanket over his prospects. Give him a chance to try his luck," said neighbor Blake.

Jeff's mind was too much occupied with his plans to allow him to sleep soundly that night, and he arose with the sun, dressed, sat down on the side of his bed and tried to collect his thoughts. He looked around at the familiar objects, perhaps for the last time, and his heart almost failed him. So he got up and busied himself arranging his boyish treasures, which he must leave behind him, as if he expected to return to them again. Then he went downstairs. Many were the words of good advice which Jeff received from his mother; many were the charges, also, as, "Write often," "Come back soon," and last, but most emphatic, she said, "Take good care of my carpetbag and be sure and bring it home with you."

Finally "good-by" was said, and amid tears and kisses, Jefferson Easton turned his back on the only home he had ever known to go forth among strangers.

CHAPTER II.

Jeff's plan was to go to Nevada, the then "booming State" of the Union. He thought he could find work on his way by which he could replenish his purse, and, by economy, furnish supplies sufficient to enable him to go up in the mountains, while he prospected for gold, which he never doubted he would soon find, and fully realize his boyhood's dream. Travel was slow in those days, and by no means either safe or sure, for the "red man" had almost entire possession of the Western States, and meant to keep it if possible, and for that reason the "pale faces" had to keep out of reach of their arrows or lose their "scalps."

Before long the money in Jeff's purse began to grow decidedly less, and he soon found it would be necessary for him to look around for employment.

One day, in the course of his travels, he came to a stream in which were floating some logs. He succeeded in securing them and got them on the bank. He then walked along in the direction from which they had drifted, knowing that they must have come from some mill. Walking on, he soon saw in the distance what proved to be a sawmill. As he approached, he met a man who evidently was the owner of the place.

"Good morning," said Jeff, pleasantly greeting him. "I found some logs in the river just below here, which most likely belong to you. I drew them out of the water, but thought I would inquire before making use of them."

"You are welcome to all that you find below the dam, as it does not pay us to go after them," was the reply.

From this time Jeff went each evening and secured the stray timber, and it was not long till he had quite a wood-pile. "Now," thought he, "I cannot take this wood with me, and can make no use of it here. I must turn it into cash. I will see what I can do. If the man at the mill will not buy it from me, at least he might pay me for the work of hauling it back to the mill."

His industrious and persevering spirit so pleased the man that he not only bought the wood, but offered to give him employment.

Jeff gladly took advantage of this opportunity to increase his funds. He worked hard and saved his wages, spending only for actual necessities. After working some months, he thought he had enough money to travel on; so he informed his employer that he intended to proceed on his journey, and, thanking him for his kindness, he made another start westward.

On he went toward the mountains, meeting occasionally with Indians, often with miners, with whom he sometimes stopped a few days and learned what he could from them, so as to profit by their experience. But he never forgot the object for which he set out—to find the wonderful gold mine.

Slowly but steadily he kept on, month after month, now working, now traveling. He sometimes met men who, like himself, were prospecting, and they would travel together, or rest awhile and hunt and lay plans for future action. It was said of Jeff by those with whom he came in contact, "Young Easton is a good fellow, but so fickle, he never sticks to anything very long; he is up and off before you know it."

They did not know that what appeared to them to be want of stability was really steadfastness of purpose and untiring effort to become an independent, self-reliant person—a man of one aim but not one idea. Many are thus misjudged and misrepresented by careless observers, who, on slight acquaintance, will condemn the truly worthy.

One year had now passed since Jeff left his home, and more than a month since he had heard from the folks, and some weeks since he had written to them. While sitting by the camp-fire, thinking of those he loved so far away, he saw an Indian coming toward him. The Indians were occasionally hired to carry letters to the miners in the mountains, and they expected to be well paid for them, when delivered. Jeff hailed him with delight as he handed him a package. He hastily glanced over each address, selecting one with his mother's familiar writing, and eagerly opened it. As he did so, a 25-cent currency stamp dropped from the letter, which his mother had inclosed, saying she thought he was out of money and could not buy paper and stamps, and so had been prevented from writing to her.

Jeff slipped the money in his pocket, and read on, as, "How fast 'Tot' was growing," "how the crops were coming on," and "how they all missed him at home."

That stamp was all the money Jeff ever received from home, and that he never spent.

[CONCLUDED NEXT WEEK.]

GOOD HEALTH.

Diet for the Aged.

Dr. H. C. Wood, in the *Annals of Hygiene*, gives the following: The teeth in old age are, of course, lost, and they should, unless under exceptional circumstances, be replaced by artificial teeth, for the thorough chewing of food is even more necessary in the old than in the young, because in the old the digestive powers are apt to fail. With the best artificial teeth mastication is apt to be imperfectly performed, hence the food of the aged should be soft and readily comminuted, and especially should it be of easy digestion. Very few old people need stimulating diet; very many are injured by an excess of nitrogenous food. The kidneys, like all other organs, are feeble, and if meats and other rich foods are used in excess, they greatly increase the strain upon these organs. Milk and milk products, or preparations of breadstuffs cooked with milk, should form a large proportion of the food of the ordinary aged person, but individual peculiarities differ so much that personal medical counsel should in all cases be taken, so that the diet may be regulated to the needs of the individual case. Very many old people are hurt by the use of food in excessive quantity; but little exercise can be taken, all growth has ceased, and the bodily furnaces which make heat are able to destroy but very little of food fuel.

Some little time since I had occasion to lecture on this subject at the Philadelphia hospital, and an assertion that I then made that most old people are more comfortable, enjoy better health, and probably live longer for the use of wine, has met with very severe disapprobation at the hands of some of the profession, whose strong sympathy with the temperance movement dominates their judgment. No valid reasons have, however, so far as my judgment goes, been brought forward to lead me to change my opinion. In the overfed American people the habitual use of wine during youthful or middle age and vigorous health is, we think, an injury rather than a good; but when the powers of life are failing, when digestion is weak, and the multitudinous small ills of feebleness perplex and annoy, one or two glasses of generous wine at dinner aid digestion, quiet for the time being much nervous irritation, and in no way do harm. The sum total of ruin wrought by alcohol in the world is appalling, but it is not lessened by shutting our eyes to the good that wine, properly used, may achieve. When in the aged there is a distinct failure of vital power, and especially of digestive power, the call for the habitual use of alcoholic liquors is, in my opinion, imperative. The danger of the formation of any evil habits when a man has crossed the line of 70 is so slight that the most conscientious physician need not hesitate in recommending the daily use of alcoholic beverages to his patient.

VINEGAR AND INDIGESTION.—It is the business of the saliva to digest starch, and by its alkalinity to stimulate the secretion of the gastric juice in the stomach. It is well known that the saliva is unable to act upon starch in the presence of an acid. Experiments have shown that even so small a quantity of vinegar as one part in 5000 appreciably diminishes the action of saliva upon starch. One part in 1000 renders it very slow, and twice the latter quantity arrests it altogether. From this it is evident that vinegar, pickles, salads, and other preparations in which vinegar is used, are unwholesome, especially when taken with farinaceous food, such as bread and other grain preparations. There is a popular notion that by the use of vinegar a tendency to increase in flesh may be antagonized. The physiological fact that fat is largely formed from the starchy elements of grain and vegetables, rather supports the popular notion; but this method of reducing weight should not be encouraged, as the loss of flesh is secured at the expense of good digestion.—*Good Health.*

PIMPLES.—Hearty eaters are more subject to pimples, especially on the face, than those who are somewhat abstemious in their diet. Persons who are troubled with pimples should eat simply to satisfy the wants of the body, but avoid anything like gluttony. Select good food and put aside articles that will disturb or retard digestion. Greasy, oily substances, an excess of sugar or butter, and coffee or tea have a tendency to interfere with the action of the stomach and intestines, and clog the blood with matter that cannot be disposed of readily by excretory apparatus. Keep the skin clean, too, by frequent bathing. For the removal of pimples, there is nothing better than a solution of salicylate of soda—a teaspoonful of the powder dissolved in a three-ounce vial of water. Use as a lotion; it is the best preparation to secure a beautiful, healthy skin which can be used, and the cheapest.

THE population of the State has increased considerably in the year 1886, between 30,000 and 40,000.

DOMESTIC ECONOMY.

Tested Recipes.

[Written for the RURAL PRESS by ADA E. TAYLOR.]

Stewed Tomatoes with Onions.—Mince a small onion very fine and fry slightly in a spoonful of butter; add one tablespoonful of sugar, half a teaspoonful of salt, and quarter of a teaspoonful of pepper, and boil together one minute; then add a quart can of tomatoes, stew half an hour and serve. If liked thick, a small cup of bread-crumbs may be added 15 minutes before serving.

Cup Custards.—One quart of rich milk, four eggs, one small cup of sugar, a little salt. Boil the milk, beat the whites of the eggs to a stiff froth; then add the yellows and beat again, then stir in the sugar and salt, pour in the hot milk slowly, and beat quickly while so doing. Pour into small cups which have been set in a dripping-pan; fill the pan with boiling water after it has been set into the oven. The custard may be flavored with any kind of flavoring. Bake them slowly, testing after the first 20 minutes with a straw; the moment it comes out smooth and dry it is done, but the more slowly they are baked the more creamy they will be. Eat hot or cold. If the milk is fresh they will keep two days easily, and be better the second one.

Corn Fritters.—These, though made in this case from canned corn, will be found almost as good as those from the fresh. Drain the liquor off of a can of corn and chop the grains very fine in a chopping tray. Add to this paste one cup of milk, a heaping tablespoonful of sugar, and one of melted butter, one teaspoonful of salt and a saltspoonful of pepper, and two tablespoonfuls of flour. Beat very thoroughly and fry by the spoonfuls on a hot griddle, with considerable lard, or they can be dropped into boiling lard and drained.

Strawberry Meringue.—Make either puff-paste or a rich pie-crust, roll a third of an inch thick, and cut into a round, the size of a large pieplate. Bake to a light brown in a quick oven, and when done, while still hot, lay on it a pint or more of strawberries which have been rolled in sugar. Have ready the whites of three eggs beaten as stiff as possible, stir in three tablespoonfuls of white sugar, and spread it over the strawberries. Return to the oven and let it bake till just tinged with brown; eat cold but fresh.

Jelly Pie.—One tumbler each of jelly and water, three tablespoonfuls of cornstarch, yolk of one egg, a small tablespoonful of butter. Boil jelly, butter and water together, then thicken with the egg and cornstarch, moistened in a little cold water. Pour into a pie tin lined with a nice crust, bake till the crust is done; then beat the white to a stiff froth, adding a tablespoonful of sugar, spread over the pie, and set in the oven till a delicate brown.

Frosting for Cake.—Take the whites of two eggs, one cup of sugar, juice of one lemon; beat together till light, spread on the cake, and set in the oven a few minutes. Do not beat the whites before adding the sugar.

RESTORING PLUSH.—It is customary to use ammonia for the purpose of neutralizing acids that have accidentally or otherwise destroyed the color of fabrics. This must be applied immediately or the color is usually imperfectly restored. After careful use an application of chloroform will bring out the colors as bright as ever. Plush goods and all articles dyed with analine colors, faded from exposure to light, will look as bright as ever after sponging with chloroform. The commercial chloroform will answer the purpose just as well. This chloroform will be found very useful, as chloroform, which is quite cheap, readily restores the color of faded plush garments.

HOW TO BRIGHTEN PICTURE FRAMES.—Picture frames will often look as though they needed regilding, when all that is necessary to improve their appearance is, to apply with a soft brush a mixture of white of eggs, two ounces, and one ounce of chloride. King's yellow and Indian yellow, if shadowed with burnt amber and gamboge, produce a very good imitation of gilt. Defaced gilding, if the result of the dust adhering to the surface, will look bright and new by being coated with wet fuller's earth, and on this drying it should receive a coating of ox-gall with a sponge.

TO KEEP LEMONS.—Lemons are a very cheap luxury for those living near cities, or having easy access to rapid transportation, and can be kept fresh for months by putting them into a clean-tight jar or cask, and covering them with cold water. Keep in a cool place out of reach of sunlight, and change the water often—not less than every third day; every second day is better. Lemons are excellent for winter use, or if one is bilious or inclined to rheumatism.

IVORY MAY BE CLEANED by scrubbing with a new soft tooth-brush, soap and tepid water, then dry the ivory and brush well, dip the latter in alcohol and polish the ivory until it has regained its former sheen. If the water gives the ivory a yellowish tint, dry the object in a heated place. If age has yellowed it, place the object under a bell-jar with a small vessel containing lime and muriatic acid, and set the whole in the sunshine.

The Week.

A succession of storms, variable winds, brief intervals of sunshine and white frosts during the clear nights comprises the weather program for the past week in Northern and Central California. There has been a chill in the air, which some think "bracing" and others deplore, but which is of industrial value in repressing the too forward blooming of the fruit trees. Already some trees are snow-white or blush-pink with their expanded blooms, and a dash of snow which has fallen on the higher lands and the cold air in the valleys will tend to prevent too general indulgence in spring-time adornment. In the south the rains have continued at intervals and confirmed the prospects of abundance. The weather has interfered with travel and mail delivery, the northern route being blocked part of the time by the snow on the Sierras and the southern route disarranged by washouts in the valleys. Apart, however, from these temporary ills the situation in our industries is satisfactory, and a few days of warmer weather will thaw out all classes of our population into activity and revive all lines of business. It looks as though the year will prove one of great advancement for the State and of profit to our citizens.

The Legislature.

The atmosphere around the State Capitol for a few days past has been thunderous and squally. The attempt of the House Committee to discover how a bill had been surreptitiously advanced on the file has led to an explosion, several seats are shaky and some of the members move around as if on earthquaky ground. It is the rule to place a bill on the file according to its numerical order, and it can only be removed from that line of regular sequence by a two-third vote. It now seems that several members have attempted to bribe one or more of the clerks to put certain bills in the advance of the file. It is a serious charge, this of attempting to mar the regular order of business in this way. Every member caught bribing clerks to tamper with the file should be instantly expelled and sent home to his constituency as damaged goods. Common decency demands this, and the Legislature that attempts to whitewash a member may as well speak for its shroud. It will not do to pitch two or three clerks over the wall as a sacrifice for the sins of the Legislature. It is a sneaking, corrupt practice, and any one who is unscrupulous enough to attempt to loot the treasury and plunder the people by such venal arts should be made a spectacle to evil-doers. Gentlemen of the committee, turn up your gas and make a thorough search. The people are in no mood to tolerate a dark seance performance in this matter.

It is a remarkable fact that up to Monday Governor Bartlett has had submitted for his signature only four bills, two of which were for the payment of expenses for the Legislature, as the result of 50 days' debate and talk in both houses. Only a few more days of the session are left; time is precious and business pressing, and yet the Assembly hall last Saturday afternoon would have done credit to a lunatic asylum. Could the people of the State have looked in upon the way these members were engaged in earning $8 per day, they would have felt inclined to abolish the whole body. Think of a legislative body where the cries of "rats," "shut up," and much more of that sort of slang rent the air. The Chairman was pelted by the members with huge balls of newspapers. Members were brought before the bar of the House and punished by being laid on the table. Yells and cheers were indulged in, as if a lot of hoodlums had captured the chambers, and all this scene of confusion and disgrace lasted for nearly two hours. Public business was never more grossly neglected nor the people more shamefully outraged than by this "legislative" racket.

Since the last issue of the RURAL the Senate bill repealing Section 1422 of the Civil Code, relating to the appropriation of water, has passed, and the Assembly bill introduced into the House by Wright, of Stanislaus, has passed that body. Should these bills become a law, as now seems likely, the legislators who claim on the one hand that irrigation will be made possible, and on the other that all the water of the State will be seized by monopolists, will have a chance to learn something of the measure. The fact is, the complexity into which this question has been thrown by laws and decisions of courts is apparently too great to be unraveled and straightened out by a Legislature with a thousand bills on hand and only 60 days to work in. The Vrooman Dynamite bill has passed both houses. It has been carefully prepared, and will possibly check the reckless and malicious handling of this powerful explosive.

THOSE RABBITS.—The Zealandia arrived without any of the Australian rabbits whose expected advent caused so much alarm among the friends of agriculture last week. But hares are not rabbits, and rabbits are *not* hares, though some small species of hare are popularly and improperly known in this country as "rabbits," and the opposition to the apprehended importation of burrowing rodents was based on sound principles and is not matter for ridicule.

The Value of the Sunflower.

The sunflower can readily be grown in almost every portion of California, and yet so few realize their worth as an agricultural product or their utility as an article of farm economy, that it is doubtful if more than one per cent of the farmers of the State have ever planted sunflowers with a view to determining their usefulness.

The time was when the sunflower was regarded in the same light as ordinary weeds. It was uprooted and tossed aside, but, within a few years last past, it has been demonstrated that the seeds are a most useful, as well as economical, article of food for poultry.

The experiment has been tried many times in some of the largest poultry yards in the Eastern States, and by several well-known parties in the same business in this State. In every instance, so far as we have heard, the result has been highly satisfactory; the crop has been prolific, and the value of the seed as a food for fowls has more than realized expectations. The flowers attain such an enormous size, and the stalks are so substantial, that both constitute an excellent fuel after the seeds are taken from the former. As an example of what may be done with the sunflower, it may be stated that several agriculturists of Santa Clara county have, for the past two years, regularly raised a sunflower crop for their fowls. Among these may be mentioned R. Greene and W. A. Bishop at Alma, C. W. Sturgis at Saratoga, and Thos. L. Vernon at San Jose. Last summer the first-named gentleman sent to the PRESS office two immense flowers, nearly a foot and a half in diameter, and which were subsequently placed on exhibition in the Mechanics' Fair. All the above named are actively engaged in fruit-growing, and to a limited extent general farming, and they speak in high praise of sunflower seeds for fowls. They assert that during the past two years their poultry has been unusually healthy, and the production of eggs has certainly been increased from 5 to 10 per cent.

The use of the seeds for feed was early suggested by W. Atlee Burpee, of Philadelphia, and O. S. Bliss, of Vermont, both of whom are veterans in agricultural life, and when first tried in Santa Clara county the results were watched by many with considerable interest. A few days ago Mr. Greene, while in the city, visited the PRESS office, and when spoken to upon the subject of sunflowers, said:

"I have planted them for two seasons past for the express purpose of securing the seed for fowls. The yield has, on each occasion, been large, and we now regard the seed as one of the best grains for the maintenance of the healthy and fine-looking poultry. It is medicinal in its effect and is very nutritious. Ever since we have been feeding the seeds to our hens we have had a larger production of eggs, and that, in connection with the continued excellent health of our fowls, is the best and most substantial recommendation. The kind of flower that has proved itself to be the best both for yield and quality is the 'Prize Mammoth Sunflower,' which I originally obtained from Philadelphia. It can be planted any time from March 1st to June 1st, depending somewhat on climatic conditions, and the hills should be from 3½ to 4 feet apart, one seed to each hill. Under ordinary circumstances, the yield will be from 35 to 40 bushels per acre. I consider the seed invaluable to my fowls and shall continue to plant it every season. If those readers of the PRESS who have poultry under their care will give the sunflower seeds a trial, I am sure they will agree with me in the matter, and bring profit to themselves in the improved health of their fowls and a larger number of eggs in the egg basket."

We would like to hear from other readers on the value of the sunflower, also the objections to it, if there are any.

From Santa Barbara County.

Mr. L. E. Blochman, whose business connections are with Weilheimer & Coblentz, of Santa Maria, called upon us last week, and talked in a very intelligent and interesting way of all that portion of the State. He says that previous to the recent rains, feed in the hill-country along the coast, as far down as Santa Barbara, was still in fair condition, owing to the moisture from the sea; but below that, it had all died out. In the interior of the county, also, it was dead; but the large feed of last year saved the stock. After the storm commenced, however, vegetation started again.

Mr. B. says there is not much cultivated grass, as yet, in their dairy region. Wheat, barley and maize are the crops chiefly raised, with pumpkins, etc., for fodder. Small white and butter beans are grown in great quantities in certain districts. The fruit possibilities of the county are great, and the approach of the railroad is awakening high hopes as to their horticultural future. In the valleys the soil is mostly light and sandy; the mesas are red land. Good land can be bought at from $15 to $35 an acre.

The artesian test-well at Santa Maria is likely to be started within a few weeks—sufficient funds, and even a surplus, having been secured.

Mr. Blochman takes great interest in the Signal Service, for which he has been a volunteer observer. He would like to see it placed under direction of the Secretary of the Interior, instead of the War Department, believing its efficiency and value would be enhanced thereby.

Stockton's Pavilion Located.

The question of leasing Washington square to the San Joaquin Valley Agricultural Society, to be used as the site of their pavilion, came up again at a special meeting of the Stockton City Council, Monday night. The large number of citizens in attendance showed the interest of the public.

The committee reported that two conferences had been held with the committee of citizens, and it had been agreed to recommend the use of Washington square for the erection of a pavilion to cost not less than $27,000, upon condition that such pavilion shall not be used for manufacturing purposes; that the building and grounds adjacent shall not be used on Sundays, except for meetings of evangelical churches; that no intoxicating liquors shall be sold or given away on the premises, except by exhibitors displaying their goods during the annual fair; that the grounds outside the pavilion be kept open for the use of the public at all times, except during the annual fair. The committee were also of one mind as to the way in which the duties and responsibilities of laying out, grading, planting and keeping the grounds should be divided between the city and the association. The only difference of opinion was regarding the period for which the lease or contract should be made.

On bringing the matter to vote, it was decided, eight to four, that the city grant the square by contract for a term of 20 years, reserving the right to extend the lease for 20 years longer, or to purchase the improvements, at their appraised value, at the end of the lease. By a like vote, the City Attorney and Judge Budd were instructed to prepare the contract and necessary ordinance, after which the Council adjourned.

The citizens present showed their approval by cheers. It is expected that the building will be commenced within 60 days, and finished in season for the fair next September.

San Jose Fair Matters.

Owing to the time required for the preparation of engravings, we are not able to give this week the pictorial review which we had intended, of notable exhibits at the San Jose Fair and other interesting sketches of persons and things in and about the Garden City. Next week we hope to have quite a collection of handsome views, with appropriate descriptions to present in our regular edition; afterward we shall collect these published views and salient points about the recent fair into an "extra," of which a large edition will be given complimentary distribution at home and abroad. The people of Santa Clara valley have shown much zeal and enterprise in the effort to make their splendid region better known, and it will not be without its reward. California is going forward in a most gratifying manner, and our desire is that the advancement should extend to every portion of the commonwealth. California is good enough all over for any one.

MATINS AT MIDNIGHT.—The *Delta* tells how, about 1 o'clock of a stormy February night, an immense flock of little chipping birds in a large oak tree in Visalia, near the electric light in front of an engine-house, attracted the attention of those near by their singing. It was raining hard and the darkness away from the light was intense. The little songsters evidently mistook the brilliant light for the first gleam of day-break, and, shivering on their perches, greeted what they supposed to be the coming day with songs of joy.

Taxation and Economy.

Taxation is defined to be a pecuniary burden levied on the property of the people for the support of the Government. It is a very clear definition, and yet there is no part of the mechanism of Government that has so perplexed and bewildered statesmen, financiers and political economists, as to shape and apply a good revenue system. The problem is to make it equal and uniform, to cause every one to contribute toward the support of the Government according to his means; to make the payment certain and as inexpensive as possible in collection, to have it levied at the time and in the manner most convenient to the people, and contrive it so as to take the least possible from their pockets. Sully, Adam Smith, John Stuart Mill, and many equally eminent men, have tried to solve this, and tried in vain, and yet one would think, to hear our law-makers talk, that it was a problem level with the capacity of a schoolboy.

It would seem at the first glance that all good citizens would gladly and promptly pay their quota toward the maintenance of the Government, and yet, perhaps, there is no duty that is more reluctantly performed. In earlier times the tax-gatherer was as odious as the hangman. The word publican among the Jews became a synonym of meanness. And that feeling has not wholly passed away. There is not an assessor who has gone through the county and city, making inquiry after property, who found it a pleasant task, and each could tell his story of the grumblings they heard, the rebuffs they received, equivocations to their questions, and perjuries black as midnight in rendering statements of property. In early times the tax-collector and the executioner traveled together, and a refusal to pay or an attempt to hide property met with certain death. Business would be lively among the undertakers had we such a system now. More than half the corporate property of the country would be clad in mourning and covered with flags at half-mast. At one time there was a law in Massachusetts, making a failure to pay taxes a misdemeanor, punishable in prison. The enlightened policy of our age has disposed of this arbitrary and cruel enforcement, and makes the tax a lien on the property.

One can easily understand why the tax-collector should be odious and the tribute paid reluctantly in despotic lands, but why are taxes paid so reluctantly now? One cause may be the natural aversion many have to paying their debts, but the real cause with a majority of our tax-payers comes from the fact that they feel they are not getting an equivalent for their money; that taxation has become unnecessarily excessive. Take as an illustration of the folly and extravagancies of the time the following partial exhibit of disbursements from the Harbor Improvement Fund:

Salaries of Commissioners	$18,808 33
Salary of Secretary	4,666 67
Salary of Assistant Secretary	3,427 50
Salaries of clerks in Secretary's office	2,836 41
Salary of Chief Engineer	6,000 00
Salary of Assistant Engineer	3,600 00
Salary of Draughtsman	3,565 00
Salary of Chief Wharfinger	6,000 00
Salary of Assistant Chief Wharfinger	3,600 00
Salary of Attorney	4,800 00
Salary of Superintendent of Dredging	4,800 00
Salaries of Wharfingers	60,689 73

Every one of these positions could be equally well filled at half the cost. The daily expenses of our Legislature exceed $5000, not taking into account the enormous waste in junketing trips and useless visitorial committees. Aside from the members of the Assembly, there are 95 names on the pay-roll of the Sergeant-at-Arms. The army of parasites, lackeys, waiters and the like employed by the two houses costs the people more than $1000 per day. Take another item. The amount awarded by the Joint Committee on Claims as damages to the property-owners on Telegraph Hill, whose lots have been injured by excavations made to provide material for the seawall, the Board of Harbor Commissioners pronounce to be exorbitant. But that is not all; the whole bill of damages is absurd and illegal. By what trick of logic can it be shown that the State is responsible for damages done to private property by contractors? These men agreed to construct the seawall and furnish their own material. The State did not specify the material should be taken from Telegraph Hill. The whole thing looks like a barefaced steal. Space would fail to catalogue the number of grab bills, running all the way from the Prefect of Sacramento, who claims he did something in 1850 and has not been paid, to the monumental cheek of the chap who wants $118,000 for decorating the Capitol on the occasion of the death of General Grant. And all this and much more of the same shrewd devices for looting the Treasury, augment the burdens of the tax-payers.

The Veterans' Home.

The Assembly of California has passed a bill granting $150 per annum for the care of such disabled and destitute Veterans as may be admitted to the Home at Yountville, and as the Senate will undoubtedly approve the measure, waiting Comrades will soon find the shelter and support applied for and so much needed.

In Washington the House of Representatives has passed the bill appropriating $100,000 to establish a Home for disabled Veterans west of the Rocky Mountains, the intent of the promotors of the bill being to turn over to the care and control of the General Government the Veterans' Home at Yountville, and thus relieve the G. A. R. and Mexican Veterans of the trouble of its management and the State of the expense of maintenance. The bill has been favorably reported upon by the Senate Committee, and, if reached this session, as it probably will be, it will be passed and become a law. The National Homes in the East are crowded, and the necessity of having a Home on this coast, to which needy and destitute Veterans of its several States and Territories can go for proper and honorable support, is apparent to all, and is demanded by both patriotic and economic reasons.

The Memorial Cottage erected by the General Committee of Management of the 20th National Encampment was formally received by the Board of Directors on the 12th inst. The cottage is an ornate two-story frame building, with a porch at each story entirely surrounding it, except on the rear, where it is not so wide. The body of the building is 60 feet long by 30 feet deep, with a rear tower-like attachment, containing the closets, bathrooms and lavatories. Each floor of the main building is divided into 12 apartments, large enough to comfortably accommodate at least two of the inmates. This gives 24 apartments in all, affording accommodations for 48 veterans. There is no plastering, the interior being finished throughout with wood, giving the interior a warm, comfortable and solid aspect. Both floors are provided with closets, lavatories and bathrooms, which are situated in the rear tower. There is a thorough system of drainage, and, in fact, nothing is wanting that will insure comfort and health. On the pediment in front, and looking toward the valley, is blazoned in gilt letters, "Memorial Cottage, 1886, 20th National Encampment." The cottage, gleaming white, is a conspicuous object to the visitor approaching the grounds from the railroad.

Although the Assembly Committee reported adversely to appropriating $10,000 for the construction of additional dormitories for the Home, that of the Senate has just recommended the expenditure by the State.

The bill which passed the House establishing "a National Home for veterans west of the Rocky mountains," and appropriating $100,000 therefore passed the Senate, increased to $150,000 and constituting Comrade J. A. Waymire resident manager. In this shape it was returned to the House of Representatives for its further action, which, it is hoped, will be speedy and favorable.

Until the Government assumes control, which would require some months after the appropriation is granted, the present management will be continued, and the aid of the State required.

THE HAY-FORK SWINDLER.—The Woodland *Mail* was happy last week, because Colter, of the Horse-Hay-Elevator combination, had been held for trial. (His plan for defrauding farmers was described in our issue of Feb. 12th.) Judge Ruggles held him to answer in the Superior Court of Yolo county, to the charge of being a party to a conspiracy, in which Jones, Rudolph and Pritchard were concerned with him. Bail was fixed at $1000, and Colter was conducted back to jail.

THE preliminary survey on the Santa Rosa & Benicia R. R. was begun Feb. 21st.

QUERIES AND REPLIES.

Washes for Scale Insects.

Prof. Hilgard, Berkeley: There having arisen a difference of opinion concerning the merits of two different kinds of tree washes, I now write you for information.

Wash No. 1 is made as follows: One and one-half pounds of sal-soda to every gallon of water; bring to a boiling point and add 1½ gallons of whale oil to every 25 gallons of sal-soda water. Apply hot.

Wash No. 2.—Two and one-half gallons of whale-oil soap and one-half gallon of water; boil, add two gallons of kerosene, churn thoroughly. When a perfect emulsion is formed, add 45 gallons of boiling water. Mix and apply hot.

Either of these washes is to be used as a general winter wash upon trees infested with scale, red spider, etc.

1. Is there any choice between the two? If so, which is the better?
2. Will sal-soda and whale oil permanently unite by mixing as described? If so, what is the nature of the union, and what is the product called?
3. If they do not unite, is there any benefit to be gained by applying them together?
4. Would not the same results ensue if either were applied separately?
5. What is your opinion of sal-soda as an insecticide? Would you recommend its use?
6. Would not common salt be as effectual?
7. What is your opinion of wash No. 2? Would you recommend its use?
8. Do you know of any wash that you consider better than either of the above?

There are a number in this locality who are greatly interested in the matter, and if you will kindly answer through the medium of the RURAL PRESS, the information will be more generally diffused.—JAS. H. KELLY, *San Jose, Cal.*

EDITORS PRESS:—Jas. H. Kelly, of San Jose, desires me to answer his questions through the RURAL. I would say:

1. As between a wash containing only whale oil in connection with a little sal-soda, and one containing both whale-oil soap and kerosene, the latter would, other things being equal, be considerably the more effectual.

2. By *long* boiling of sal-soda with whale oil, a soap is gradually formed. When they are simply heated together a short time, as prescribed in No. 1, the union is not permanent, but only just enough to cause a good emulsion of the oil. This is the answer to question No. 3.

As to 4 and 5. Sal-soda is a very weak insecticide, and can be effective only in very strong solution, and against young and tender scale; not against armored scale, nor even unarmored scale in the winter state. I cannot account for its use having come into vogue at all, unless it be because it was applied hot enough to damage the bugs. On that score I would not consider its effects, as such, worth the labor of a spraying.

6. Salt cannot be substituted for sal-soda in connection with whale oil, as it would prevent emulsion of the oil. Its insecticide effects are too slight to be of any practical use.

7. I should not consider wash No. 2 sufficiently effectual for general use as a winter wash. It would not hurt red spider eggs at all, and would only kill a certain proportion of any kind of scale.

All winter washes should contain a considerable proportion of caustic alkali, particularly potash, for the reason that the caustic will eat its way under the edges of the shield and so give access to the soap or kerosene, if not strong enough to act directly. In fact, nothing is more universally effectual than simple alkaline washes as prescribed in Bulletin No. 52 of the College of Agriculture, or in that lately issued by the State Inspector of Fruit Pests. But in preparing them it is absolutely necessary to know that you are dealing with a bona fide article, and not with one that is adulterated so as to render your work useless. The Bulletin above referred to gives some data in respect to the various qualities of alkalies in the market.

But such strong washes can be safely used only when the buds are fully dormant. In a more advanced stage, washes such as No. 2, strengthened with some alkali, or with sulphide of alkali, as in the wash now prepared by the Arctic Oil Works, should be used.—E. W. HILGARD.

[The University Bulletin, No. 52, to which Prof. Hilgard refers in his letter, gives chemical analyses of a number of commercial alkalies, showing some of them to be good and some badly adulterated. There are also practical hints given as to the preparation of washes and the application of them. This Bulletin was published in the RURAL, Feb. 13, 1886. Those who keep files of the RURAL can turn back to it. To those who have not a file handy we will mail a copy of the Bulletin on application.—EDS. PRESS.]

Charcoal Burning.

EDITORS PRESS:—To burn a pit of charcoal, let your correspondent A. S. H. remember, first and always, the prime necessity—perform the process of combustion with the least possible contact with air. Select a suitable place not too far from the dwelling, because the operation must be watched from time to time by night as well as by day. It is not necessary to dig much of a "pit" in the ground. Choose hard limbs of pine, spruce, or whatever wood is most available of that kind. Dry, dead limbs, if not decayed, take for choice. Set them up wigwam fashion, close together, fitting them as well as they will allow—the apex forming the chimney. Be careful to keep that chimney free, because the fire should be there applied to brisk "kindling" as far down as possible. Build round and round, taking the precaution to lay three or four straight pieces, three or four inches in diameter, along the ground from the outside to the center. These may have to be withdrawn to promote the draught.

The wood all being in place, it is now required to cover it thoroughly. In the absence of turf or sods, it must be thatched with leafy green boughs, or anything that will prevent the earth or dirt that is now heaped on from running through. Pack this soil covering carefully, exclude air as far as possible, excepting when the port-holes referred to near the ground are needed. The direction of the wind will determine which ones are to be opened. When the fire—after a few hours more or less, according to the materials—has got a good hold, close also the chimney. Visit the pit regularly, night and day; lessen or increase the draught, as may seem needed; and in a week or ten days the two or three cords of wood should be turned into good hard coal. When uncovered, water or dirt should be thrown upon coal that is too lively when spread out on the ground.

A larger pit would necessitate some change from this beehive-shaped construction; but the principle remains for the guidance of your correspondent. A. S. H. should report progress.—W. B. M., *San Francisco.*

Hygienic Instruction.

Ladies representing the W. C. T. U. are in Sacramento appealing to the Legislature that provision be made to secure instruction in the public schools on the effects of alcoholic indulgence upon the human system, hoping thus to educate the coming generation to avoid the evil. Petitions, bearing long lists of signatures, are being presented to the Legislature. In case any of our readers may desire to take part in the work, let them write the following at the head of a sheet of legal cap, add the signatures and forward the document to the Senator or Assemblyman from their district to present to the Legislature:

A PETITION.

To the honorable, the Legislature of California: Believing that prevention through the education of the people is the antidote for the vice of intemperance, we, the undersigned, citizens of ————, respectfully petition our Legislature, now in session, to enact laws requiring instruction in physiology and hygiene, which shall give special prominence to the injurious effects of alcoholic drinks and narcotics upon the human system, to be given in all schools supported by public money or under State control.

THE INDIA WHEAT CROP.—The crop year in India begins April 1st, and, of course, ends March 31st. The exports for the past five cereal years have been as follows:

	Bushels.
Year ending March 31, 1882	33,541,544
" " " " 1883	26,161,880
" " " " 1884	38,346,366
" " " " 1885	25,737,248
" " " " 1886	38,881,600

From April 1st to June 12, 1886, the shipments were 12,248,000 bushels. The acreage in 1884-85 was 27,820,673 and the yield was 9.80 bushels, which makes a crop of 272,642,593 bushels of 60 pounds each. The acreage for 1885-86, from which the crop now in process of shipment was harvested, was 26,230,720 acres, or 1,589,953 acres less than in 1884 85. The crop is said to be 16,000,000 bushels less than in 1884 85. If this deficiency is to be deducted from the surplus for export, it would leave only 23,000,000 bushels to go abroad. More than one-half of that quantity was shipped up to June 12th. Probably the true quantity for export for the year 1886-87 is about 25,000,000 bushels.

HOW HE KILLS COYOTES.—Mr. Grimsley, says the Visalia *Delta*, has an effectual way of disposing of coyotes. He takes a dead rabbit and drags it, with the entrails out, across the fields where they travel; he then hangs it up on a stake about four feet high, driven firmly in the ground out of reach of coyotes. This stake has a very large hole bored through it a little above the ground, which he fills with strychnined tallow—other grease won't do. The coyotes following up the scent of the eviscerated rabbit, come to the stake. The rabbit being out of reach, they commence licking the tallow and soon fall victims to the drug hidden within its palatable seductions. Rarely is the victim found more than a rod from the fatal stake, and his scalp is taken for the premium offered for it by the "county dads." The stakes are taken up each morning and with fresh bait put out again each evening, to avoid the risk of poisoning domestic animals.

AGRICULTURAL NOTES.

CALIFORNIA.

Calaveras.

THE OUTLOOK.—*Mountain Echo*, Feb. 16: The late rains and heavy snowfall have greatly benefited growing crops in this locality. Even the hillsides show a marked change during the past three weeks; grass is springing up luxuriantly, early fruit trees are putting forth blossoms, and if the usual frosts do not visit this section, an abundant yield of fruit may be expected. The agricultural outlook of this section was never more promising.

Colusa.

GOPHERS DROWNED OUT.—*Sun*, Feb. 19: On the DeJarnatt place, Sunday, over 600 gophers were dispatched. On Judge Bridgford's ranch five cents per scalp was offered in the morning, but as supply and demand regulate prices, he was forced to reduce the bounty at noon to two cents, and in the evening to one cent per scalp. At last accounts the market was glutted, and gopher hunters at a discount.

Contra Costa.

FRUITS AND FARMS AT BYRON.—*Gazette:* We have seen no imported raisins excelling in size, appearance, and flavor those from the Muscatel vineyard of Mr. A. Plumley, of Byron, and they are prepared in so attractive a manner as to take the eye at once. All who have tested pronounce them equal to the best in the market. He has 10 acres of table-grapes, 14 varieties, and 4 acres of pears, figs, and other fruit trees. Grapes, figs, and pears do especially well in his vicinity. The farmers of Byron and Brentwood have a standard reputation for wheat-growing, they have been so uniformly successful. Alfalfa is also a product of their farms, making from 6 to 8 tons per acre every year with four cuttings. Mr. Plumley has 40 acres of alfalfa, and there are 300 acres in his vicinity. The rain has insured the summer-fallow crop in that section, and the coming season promises to be prosperous. With a soil and climate that raises wheat, barley, alfalfa, vegetables, and all sorts of fruits to perfection, and admits of raisin-making as a promising industry, Byron's future seems well assured. Hon. G. W. T. Carter writes as follows: "I have 1000 Winter Nelis pear trees six years old, and 250 of same three years old, as fine trees for their age as can be found anywhere. When I planted, six years ago, there were plenty to prophesy that when they came into bearing they would not sell for enough to pay for the picking, instead of which they are worth more now than ever. I have a fine prospect for a crop this year. I consider this one of the best localities in the State for this pear, as it has never been known to blight and has a fine appearance peculiar to fruit grown in a dry climate, where there are no fogs or harsh winds. They ripen here in November and can be picked as late as December, making them more valuable than when they ripen early."

El Dorado.

PLANTING OLIVES AND ORANGES.—*Republican*, Feb. 17: In spite of the amiable folks who insist that El Dorado county is good for nothing, a number of orchardists are beginning to put out olive and orange trees. People are beginning to realize that it is worth while to experiment with citrus fruits in the western part of this county.

CARSON CREEK ITEMS.—Everything is in good condition to grow as soon as the rain ceases, and it looks as though we will have good spring feed and large hay and grain crops this season. Young calves can now be seen in almost every field, good indications that dairying time is at hand.

Inyo.

EQUINE IMMIGRANTS.—*Independent*, Feb. 12: This week Messrs. Sanger and Collins brought their horses and cattle from Kern county to their new homes near Big Pine. Their horses number 300 head, nearly all being work animals. Among them are a few Clydesdale and Norman stallions; these are very fine. The cattle also are all good stock. Teams loaded with farming machinery and implements formed part of the train, which looked like a small army in motion.

Monterey.

HARVEST HOPES.—Peach Tree cor. Salinas *Index*, Feb. 17: Farmers and stock-raisers are rejoicing over the prospect of a good year. A large area has been sown to grain in this vicinity, and, with our usual spring rains, harvest will be abundant.

THE REASSURING RAINS.—Soledad Cor. Monterey *Democrat*, Feb. 19: We have been badly afflicted with the "blues" on account of dry weather, but at last "the winds blew and the storm beat," and the heavens poured forth the much-needed rain. The farmers who a few days ago were predicting death from starvation now wear glowing countenances and joyful hearts, and are already inquiring the price of sacks.

Los Angeles.

MORE OSTRICHES.—Los Angeles *Times*, Feb. 8: Twenty-one ostriches, the rear-guard from Galveston of the 52 brought over from Natal by E. P. Hoyle, arrived by the S. P. yesterday, and were hauled in a covered truck to Washington Gardens, where their 22 predecessors were already on exhibition.

GRAIN ACREAGE.—Anaheim *Gazette*, Feb. 19: It is estimated that not more than one-half the area has been sown to grain in this county that was sown last year. But the product per acre will probably be more than the average.

AFTER THE RAIN.—Two weeks ago the prospects were brilliant for a season of unexampled drouth, and a more complete metamorphosis has never before been seen, even in this land of kaleidoscopic changes. As the soil was in condition to absorb the rain as fast as it fell, none of the precious moisture was wasted. It is only on land with a considerable admixture of sand that it is now possible to plow, the clayey and adobe soils being yet too wet to permit of cultivation. There is yet plenty of time, however, to sow barley, and it is almost a certainty that there is already enough moisture in the ground to insure good crops.

Napa.

JAPANESE PERSIMMONS.—*Register:* Dr. M. B. Pond, of Napa, has lately received 450 Japanese persimmon trees, direct from their native soil. They include five of the best varieties grown—those ripening between August and December. They were 22 days *in transitu* from Yokohama, and arrived in excellent condition, being packed in moss. They are all one and two-year-old trees, and will be planted immediately on the doctor's mountain ranch, northwest of this city. One hundred are already growing on the place; a part bore last season, and all will yield a good crop this year. By many persons the persimmon is considered one of the finest table fruits, and there is always a demand for it at good prices.

San Benito.

EDITORS PRESS:—Since the rain every one carries a smiling face. The grass, which has been trying all winter to show itself, is now covering the earth with a coat of green, making the stockman smile as he watches his cattle feasting on the luxuriant growth. Seeding was pretty well finished before the rain, though some would not "throw their seed away, but would wait until we got a generous downpour." Hence every team will now be busy, though it is very doubtful if we get in as large an acreage as usual, owing to the fact that the soil has not been wet enough, except in a few localities, to do anything but dry-plow until now. We have had from three to five inches for the storm, according to locality. Snow covers the mountains on either side of us. A few flakes fell in the valley, but melted as soon as they reached the ground. The weather does not look settled yet.—L. J. H., *Hollister, Feb. 15th.*

CO-OPERATIVE WAREHOUSING PROPOSED.—Hollister *Advance*, Feb. 18: A prominent stockholder in the Hollister Warehouse Co. expresses a willingness to dispose of his warehouse interests, and assist in organizing a co-operative warehouse association, to be composed of and managed by our farmers. Allowing each grain-raiser to take stock to the amount of what his storage at present costs him, this seems to be a feasible idea, and one that would greatly reduce storage rates.

San Bernardino.

A HILLFUL OF HONEY.—*Semi-Tropic:* Wednesday, Tom Baird and Mr. Reed, of Colton, found five hives in crevices of the rock on Slover mountain, and located the same with all the dips, spurs and angles. They blasted at one point and the yield was two five-gallon cans of pure honey. They report that old Slover is a mountain of honey, and they intend to make further locations and work their claims for all the sweetness there is in them. The whole mountain is alive with bees, and wherever ledges of limestone crop out and fissures occur, there is a two-to-one chance for a rich honey find. When the Slover mountain hotel is in running order, honey will be cheap and handy.

CITRUS SHIPMENTS.—*Valley Echo:* The total shipment of oranges and lemons from Riverside station for the season of 1886–87 to date, Feb. 17th, is as follows: Boxes shipped, 15,660; equal to 52 carloads.

Press and Horticulturist, Feb. 19: The shipments of oranges last season to this date were 31,386 boxes; this year 18,495. The storm has prevented gathering the fruit for nearly two weeks. Were it not for that, the amount would be very close, if not equal, to the amount of last year.

San Joaquin.

NEW STEAM-PLOW.—Stockton *Mail*, Jan. 29: A novel steam-plow, the invention of W. and J. Patterson, of this city, was at work near Reed's Landing to-day. In former experiments with traction engines the plow has been dragged through the ground, thus holding the engine back and causing the traction wheels to slip. In the Patterson machine this is ingeniously avoided. At the rear of the engine is an axle, turned by the steam, provided with arms which are set around in a spiral curve. Each arm is provided with a revolving disk, set slanting. When the engine moves over the ground the axle is turned and the arms are brought to the ground in succession much as if they were walking. The disks cut into the earth and turn it over as they rise. The inventors claim that by this means the old difficulty is avoided—the action of the plow "kicking" the engine along instead of holding it back. The machine weighs 5000 pounds. It takes 40 pounds of steam to run it without the plow, and only 50 to run it with a plow which turns up furrows four and one-half feet wide. It therefore requires but ten pounds of steam extra for every additional four and one-half feet in the width of the furrow. The engine can turn as easily as a spring-wagon, and travels from a mile to a mile and a half an hour; leaves a clean furrow, and cuts weeds. The plow may be raised or lowered at pleasure, by means of a lever, and the arms carrying the revolving disks are adjustable on the axle.

Santa Barbara.

HONEY OUTLOOK.—*Independent*, Feb. 19: Mr. Kelly, a beeman from over the mountains, was in town yesterday. He reports the prospects for a large yield of honey the coming season as very favorable.

A STRANGE SPECTACLE.—The lovely valley of the Carpinteria was clad in white last Sunday afternoon. About 3 o'clock a sort of soft hail—snow by courtesy—began to fall, and continued for about three-quarters of an hour. The ground was completely covered, all the trees and houses were also draped in the new color, and some of it remained apparent the next morning. The inhabitants were surprised and delighted at the unwonted sight.

Santa Clara.

GILROY ORANGES.—*Advocate:* Oranges from a tree in J. S. Miller's garden have been placed on the editor's desk. The tree from which this fine sample of citrus fruit is plucked has been unprotected during the winter. It is about 10 years old and has given a fair yield.

Santa Cruz.

A MODEL APPLE ORCHARD.—*Pajaronian:* Capelli & Dondero have nearly 40 acres of three and four-year-old apple trees, from which they expect fair returns this season. Their apple orchard is worthy a visit from any person interested in horticulture. Every tree is pruned nicely and kept clean; pests find no lodgment there.

THE BERRY BUSINESS.—The berry shipments from this valley last July amounted to 1732 chests, weighing 235,312 pounds; in August the shipments were 3379 chests, weighing 494,623 pounds. The shipping season lasted seven months, and the total reached 15,000 chests, weighing, in the aggregate, 1100 tons. Taking from this the weight of chests and drawers, it is safe to estimate the weight of berries produced at 700 tons, an average of a little over two tons to the acre. Berries did not average a high price last season—say five cents a pound, or $100 per ton. (Raspberries were high early in the season and strawberries brought a good price at times.) This would make the berry crop of 1886 worth $70,000. When we consider that the berry fields contain about 300 acres, these figures show a good return. But the cost of cultivating and picking takes half the proceeds, and then from the remainder has to be paid the cost of chests, drawers, boxes, freight, water, etc. With anything like fair prices the cultivation of berries is profitable.

Siskiyou.

SLEIGHING IN SCOTT VALLEY.—Ft. Jones *News:* Sleighing seems to be a favorite amusement since the heavy fall of snow Thursday night. No less than five sleighs were out yesterday. Three of them employed the morning hours in conveying the pupils of the Ft. Jones school to the schoolhouse.

Solano.

PLANTING ALMONDS.—Dixon *Tribune*, Feb. 19: Chiles & Godfrey will begin planting 50 acres of almonds as soon as the ground is sufficiently settled. It was also Mr. Larue's intention to plant 50 acres in almonds, but the lateness of the season and the demands of other duties may prevent. The work will, however, be pushed as far as possible and its completion left for next season.

Sonoma.

SOME SNAKES.—Pet. *Courier:* Tom Jones, of Vine Hill View, was pruning vines the other day. Having dropped his shears into a gopher hole, he put his hand down to get them, when he felt what he thought was a small rabbit. On pulling it out, what a surprise! It was a rattlesnake, six feet long, with 16 rattles and a button. He managed to kill it, and now there is a reward for a pair of prnning shears.

Tehama.

CAPAY VALLEY NOTES.—Cor. Red Bluff *Sentinel:* Everything looks nicely and farmers are in good spirits over the rain; no more dry-weather croakers now. Sheep are suffering a good deal from this storm, and there will be great loss in young lambs, although there is not much time given here to sheep raising or stock of any kind. The valley is principally devoted to wheat, barley, orchards and vineyards. I think that apricots and peaches do the best, although apples, pears and figs, and grapes of all kinds, do well here. There are several young vineyards that will produce well in another year. W. Levy, of Madison, has the largest vineyard in the valley. He has about 200 acres, mostly wine grapes, situated 14 miles from the mouth of the valley. T. D. Morrin, a little further up, has 25 acres in raisin grapes. Mr. Rubert has 20 acres in raisin grapes.

Tuolumne.

EDITORS PRESS:—This is the eleventh day of the greatest storm, or series of storms, that has visited this region in the 12 years since I came to Columbia. A howling tempest and violent downpour raged all last night, changing at 6 A. M. into snow. At the hour of writing—4 P. M.—15 inches lie upon the ground. There has been a fearful slaughter of fruit trees, for the snow was wet, heavy and clinging. It is impossible to note how many dwellings and barns have succumbed to the great pressure upon them. Two hard workers all day saved my house and barn from collapse.—J. WINCHESTER, *Columbia, Feb. 14, 1887.*

ARIZONA.

BEEVES.—*Hoof and Horn:* The drafts being made on Arizona by Southern California for beef cattle are constantly increasing in number and size. Hardly a week passes but what some representative of Southern Californian wholesale butcher establishments leaves the Territory with a trainload of such stock.

PLANTING STONE-FRUIT.—Phœnix *Herald*, Feb. 17: R. E. Farrington, the nurseryman, is planting an orchard of 7000 Muir peaches, for drying and canning, and another of 3000 apricots. These two orchards will represent almost as many peach and apricot trees as now exist in the Territory, and it looks as if at no distant day a home cannery will supply the market of Arizona with these fruits and thus keep at home a large amount of money that now goes to California.

NEVADA.

A MODEL RANCH.—*Stockman:* The Paradise valley ranch of M. Brandenstein & Co. is a model in every respect. Twenty-eight sections are under fence, and are divided off into seven fields, on which 2000 tons of hay is raised every year. The stock are driven to the hills in summer, and at the beginning of the winter season are returned to the home ranch and quartered in the inclosures. Everything has been reduced to a system, under the superintendence of J. G. Holleway; the cattle are graded and placed in separate inclosures; hospitals are at hand for the sick and weak cattle, and the result is that little or no loss is occasioned, no matter how severe the weather. The firm evidently believe in trusting to business principles in preference to luck, and the result is shown on the credit side of their ledger. During the season just passed the home ranch has shipped 2500 head of beef cattle to the firm's S. F. house, 500 head to their San Ardo ranch, in Monterey county, Cal., and they have 500 head of beef cattle in Paradise valley, which they are holding for the spring trade. Their buyer, L. Godchaux, has also shipped during the past year 1000 head of beeves, purchased from various stockmen, making in all fully 4500 head of stock which will eventually find their way to the firm's shambles in S. F.

Sonoma County Notes.

EDITORS PRESS:—Sonoma county has had a good soaking. The month of February has brought more than its share of rain. In some portions of the county, grain has suffered with too much water. There was a good deal of snow and it came lower down the valleys than it generally does. It was a strange sight—the ground covered with snow, and at the same time and place ripe oranges and olives hanging on the trees. Your correspondent saw this with his own eyes, and seeing is believing. But such an exception is necessary to prove the rule.

The cold weather and snow have hindered the growth of grass, and in a few instances have been hard for owners of sheep, especially where early lambs were among the flocks. Such cases are few, however, and the loss on any one owner is not great.

A leading nurseryman says he has had no difficulty in selling his entire stock; we therefore conclude that a good many acres of orchard are being planted in this county.

Although the price of hops was not very remunerative to growers last year, there have been many new hop-yards set out this winter. Most of the hop-growers build their own drying-houses, and this gives the lumberman and all his employes, the carpenter, the hardware merchant and the teamsters something to do.

County people expect one and possibly two railroad extensions soon. Should they realize their hopes, things will be lively in old Sonoma this year.

Santa Rosa is growing rapidly. Improvements on the grounds and streets around the new courthouse will materially better the appearance of that neighborhood. The new City hall, fronting the plaza, is almost completed and will be very substantial. Brick buildings and fine dwellings are in course of construction in many quarters; and while there are many fine stores and private houses here already, some of these new ones are even better than the best.

Vineyard men generally are through with pruning. Some few have even plowed a few acres of vineyard.

Roads in this county were not much damaged by the heavy rains of the past fortnight.

Country schools and the expectant schoolma'am are in a high state of excitement preparatory to the opening of the spring term of school.

The anniversary birthday of the immortal Washington will be duly observed by our people.

Citrus productions from Sonoma county may be seen at the office of the S. F. & N. P. R. R., under the Palace hotel, S. F. We will do better next time. OCCASIONAL.

Santa Rosa, Feb. 21, 1887.

THE wheat crop of South Australia, says an Adelaide dispatch, shows a surplus of 175,000 tons.

The Latest Fashions.

Ladies' Costume.

Fancy wool goods and plain silk are here combined in the costume. The skirt is fashioned in the popular four-gored style, and may be worn with or without a bustle and steels. Upon the gores is a drapery that falls even with the lower edge and is laid in wide kilt plaits that turn from the center. This drapery extends almost to the belt, and its plaits are stayed underneath. The other draperies are joined to the top of a shallow yoke, and the lower edge of the yoke is sewed over the top of the plaited drapery. At the back the drapery is very full and wide and comes even with the edge of the skirt; it is hemmed at the left edge, draped by three deep plaits in the right edge, and effectively arranged in a *bournous* loop and plaits at the top. At the right side it joins the right-side drapery, which is handsomely draped by plaits —which are all in the top—and falls to the edge of the skirts. This side drapery flares sharply from the front drapery, which it joins for a short distance below the belt; and the plaited drapery is very effectively displayed between. Plaits in the front drapery where it joins the side drapery, and also in the top, wrinkle it effectively. This drapery flares decidedly from the straight edge of the back drapery, thus here also displaying the kilted drapery with which it falls evenly for a short distance across the center of the front. A passementerie ornament is fastened where the front and right-side draperies meet. The basque has a pointed vest that is inserted in Breton fashion and is very ornamentally constructed. The upper part of the vest is a yoke, to which the lower part is gathered. Below the bust the lower part is shirred across to the point, and the vest is mounted on a smooth-fitting lining that is fastened with buttons and button-holes at the left side to a corresponding front lining that is much narrower. Upon these lining portions are arranged the fronts, each of which has a cluster of fine tucks extending from the shoulder to the lower edge of the yoke portion of the vest, and is smoothly adjusted by bust darts, the fullness between the tucks and darts being especially becoming. A handsome passementerie ornament covers the yoke portion of the vest and extends slightly below it at the center. At the back the basque is perfectly plain, its well-curved seams being extended to the edge; and over the bottom of the basque the yoke under the draperies is fastened with hooks and loops. The collar is in the high-standing style. The coat-sleeves are neatly trimmed on the upper side of their wrists with two overlapping *revers* of silk that turn toward the hand. For the kilted drapery, striped or bordered goods will frequently be used, while the combination plain and fancy wool goods will be chosen for the rest of the costume. The full portion of the vest will, however, look best made of soft silk, Surah, crepe, etc. All kinds of dress goods may be chosen for a costume of this style, and one material may be used throughout if preferred. Rich-looking costumes have the kilted drapery, the collar, the upper part of the vest and the sleeve decoration of olive plush or velvet, while the rest of the costume is of golden-brown rough or smooth wool goods. The large felt hat is trimmed with softly-folded silk and ostrich plumage.

THE President of the San Francisco Board of Trade, J. B. Stetson, in his annual report, says: The trade of San Francisco during the year 1886 has been fully equal in volume and amount to that of 10 years ago. When it is considered that by the construction of the railroad connecting Oregon and Southern California with the East we lost some of the territory formerly supplied, and now still retain the same volume of trade, it is evidence positive that we have gained in Central California all we lost in Oregon and Southern California. This will continue, and I believe the merchants in San Francisco can be assured by diligence of an increase in their transactions annually for many years to come. The effect of the citrus fairs of Sacramento in 1885 and 1886 is beginning to be felt in the increased inquiry concerning lands, climate, etc., in Central California. Many of the counties which had hitherto made but little effort to make known their genial climate and great productive qualities, are now moving in that direction, which is sure to be productive of great results at no distant date. In the southern part of the State there now exists a great activity in the purchase of real estate, creating that which is termed a "boom." That great influx of people in that section of the State is not without a beneficial influence on the central part of the State, as many of the visitors there also visit our city and vicinity, and from the well-known attractions here will be induced to settle upon our Central California lands.

A COSTLY CATHEDRAL SINKING.—St. Isaac's, the great cathedral at St. Petersburg, which was finished in 1859 and cost over $25,000,000, is slowly sinking into the ground, and the authorities do not know how to stop it. Possibly they might learn a lesson from the American engineers who arrested a similar settling of the Washington monument, the highest artificial structure on the globe.

THE six petroleum wells at Puente are now yielding 100 barrels a day.

The Harm Done by Hydraulic Mining.

Speech Made in the Assembly Chamber, Feb. 5, 1887, by Hon. Geo. Ohleyer.

MR. SPEAKER: The motion before the House is that the enacting clause be stricken out of Assembly bill No. 146, entitled An Act to prevent injuries to navigable streams. Such a motion upon such a subject is a most extraordinary procedure, even coming from gentlemen representing the opposition. The question is not whether mining of any kind *shall* or *shall not* continue, but it is whether or not the navigable streams of the State shall be preserved to the uses of this and coming generations. It would seem by the efforts of our mountain neighbors to kill this bill at its inception, that they feared a serious discussion might be had on one of the most important questions affecting the present and future well-being of this State. It will not do to say the bill is too severe, and therefore shall not be revised to meet the approval of a majority. Most bills introduced represent the interests of the locality from whence they came; to make them applicable to all alike is the work of the Assembly. Scarcely a bill has passed or will pass this body without being scrutinized and amended, let the same be good, bad, or indifferent.

LADIES' COSTUME.

We maintain that the policy of the measure is a good one, and before action is had we hope to show great necessity for some such legislation, and the necessity, at least in some instances, of the severity of this bill. By this we mean in cases where the orders of both Federal and State Courts are repeatedly and willfully violated. But this idea of protecting navigable streams from injury is not new or confined to our State, and they are protected by law against the indiscriminate dumping in of rubbish and debris of every kind from other sources as well as from hydraulic mines. Authorities are numerous on this subject, a few of which I will produce before I close. Notwithstanding the great increase in railroad facilities everywhere, navigable streams are receiving the fostering care of governments to a greater extent than was ever known. From $10,000,000 to $20,000,000 are spent annually by the United States in improving the harbors and navigable rivers in various parts of the Union, and during the last session of Congress at least one branch voted in favor of the construction of the Hennepin canal, which is to connect the great northern lakes with the father of waters—the Mississippi river—and thus, as was said, extend the lake navigation 500 miles further West or bring the West 500 miles nearer the seaboard. On September 3 and 4, 1885, there was held in St. Paul, Minnesota, a Northwestern Waterways Convention.

There were over 600 delegates present, besides visiting Congressmen from the South and other portions of the country, Government engineers and other citizens. They claimed a convention representing one-fourth of the territory and one-fourth of the population of the United States. The subjects considered were the care and improvement of the navigable rivers of the Northwest, and they resolved in favor of that and the construction of the Hennepin canal. The convention closed after adopting unanimously about 18 lengthy resolutions. The most interesting portion to us is the following preamble and resolution:

WHEREAS, In order to secure to the producers of this country the highest possible return for their products, to receive, in return, the exchanges for the same at most favorable rates, and to sustain our proper relations to foreign markets, the cost of transportation must be reduced to the minimum;

Resolved, That all navigable waterways and harbors of the United States should be thoroughly and extensively improved; that $250,000 per year for such improvements would not be an extravagant appropriation on the part of the General Government.

I apprehend that no argument is needed to convince any one on this floor of the value and wisdom of this western movement, but ask, shall we spurn from us here what we indorse for other sections? To us it matters but little how much navigation is enlarged, protected or improved east of the Rocky mountains. We are a community and law unto ourselves, and we must work out our own salvation with such assistance as we may secure from the General Government if we put ourselves in position to deserve it.

Mr. Speaker, it is impossible to overestimate the value and importance to this State of its navigable waters. Our rivers and bays float more commerce, compared to size, than any in the Union, if not in the universe, and yet we value them so lightly. Look at the shape and direction of our bays and rivers; the former borders on ten of the richest counties of the State, with unsurpassed navigation and a soil and climate nowhere excelled, and the latter, the Sacramento and San Joaquin rivers, drain two of the largest and most fertile valleys in America, to which their respective rivers are as much a necessity as arteries of commerce as is the warm flowing blood to the human system. These rivers come together in the center of the State and flow westwardly through San Francisco bay and its branches, and by the wharves of the great western metropolis, casting thereon one and a half million tons of the best wheat grown, and an endless variety of other products; an amount and kind that could not be transported by rail.

These free highways add immensely to the value of the products of these valleys, and it is not too much to say that in the matter of wheat at least $1 per ton is saved to our farmers by river transportation; thus adding one and one-half million dollars annually to the value of the crop. It is estimated by that veteran editor and political philosopher, Will S. Green, of the Colusa *Sun*, than whom no better authority exists regarding the Sacramento valley, that the Sacramento river is worth annually to Colusa county $500,000, and to the valley a million. The valley has a railroad on either side, and yet wheat is drawn to the river from beyond the roads, thus crossing them to enjoy the lower freight rates. No better illustration can be made of the importance of river transportation than a reference to an address made by Joseph Steffens, Esq., President of the Sacramento Board of Trade, to that body, in which is related the scenes of a trip from Sacramento to the junction of the Sacramento and Feather rivers, of which I had the honor of being a member. On pages 17 and 18 of Mr. Steffens' little pamphlet, the author relates the following:

In September this board invited the Congressmen from this State and representative men from San Francisco, Stockton and many other parts of the country, numbering about 50, to take a steamer trip of observation up the Sacramento river, from that point to the mouth of the Feather river. On this trip, soundings were frequently taken, and many places in the river were found where the water was only 2½, 3 and 4 feet deep. The river banks were a continuous line of water breaks and damage. Opposite the mouth of the Feather river the channel was 2½ feet deep, and in the main Feather river channel at its mouth stood a crane not knee deep in water. It was my first intention to take the party up the Feather river to Marysville in a light draft boat, but it was deemed advisable not to disturb the crane, so we passed up the Sacramento some three lengths of the steamer, and turned around in 27 feet of water, where the river-banks were natural, willow and tree lined. Just one item here to show the importance of the river and its value as a freight-rate regulator. In the 2½ hours up trip, we met the following steamers and barges. I give their tonnage capacity and their wheat cargoes to show what the rivers would allow them to carry, and the value of its carrying capacity, even in its crippled condition.

THE VALUE OF THE RIVER.

Steamer.	Capacity, Tons.	Cargo, Tons.
Neptune No. 2	110	50
Dover and barge	1000	600
Ceres and barge	800	400
Harriet and barge	800	400
D. E. Knight No. 1 and barge	600	300
D. E. Knight No 2 and barge	600	300
Totals	3910	2050

This is equal to 205 carloads of 10 tons each.

This will show the value and importance of this river. This happened within two and a half hours from the time we left Sacramento. As a further illustration of the value of this river I refer to a report of the 47th Congress, by the Secretary of War and the Committee on River and Harbors.

The Condition of the River.

Objection has been made to the Government's construction of levees to confine the waters, whereby the scouring force might be augmented, as thereby local and private interests would be subserved, which was held to be no part of the objects of river improvements. To this the committee replied as follows (page 55.):

The Sacramento river is navigable for 300 miles. For the first 20 years of existence of the State of California—from 1850 to 1870—that river carried the entire products and supplies of the middle and northern portions of the State, transporting more commerce on its bosom than any other river of its size and length in the United States. It carries the great wheat crop of the long and fertile valleys of the Sacramento and San Joaquin, which requires the services of 800 vessels of large tonnage to transport it to the consumers of the world. Its navigation is being destroyed by the inflow of detritus, the accumulated deposits resulting from hydraulic mining for many years past, which, in times of flood, are swept down from the headwaters and tributaries into its navigable channels. If this destructive inflow of detritus be not checked and stopped, the river will become unnavigable, and these great wheat-producing valleys will be absolutely at the mercy of a single railroad company without competition. The damage has already been done, and has been done by miners. The State will see that no more damage be done.

Will the State do it? That is the question that is now facing this Assembly. (Reads:)

The people who demand, and have a right to demand, that this great commercial river be kept open to navigation—the people who have a right to use it—had nothing whatever to do with the causes which led to its shoaling and filling up.

I want to read to you some names from a slip of paper. It is known to you all, of course, that hydraulic mines have been enjoined, and that the courts have universally stood by the people of the valley. By request the District Attorney of Yuba county furnished a list of hydraulic mines that have been running without consent of court, as follows:

Excelsior Water and Mining Co., once; Eureka Lake and Mining Co., seven times; North Bloomfield, once; Milton, three times; Blue Tent Mining Co., three times; Omega Mining Co., three times; Palace mine, twice; Manzanita, three times; Arnott, once; Indian Hill, four times; Cleveland and Sierra mine, twice; Cray, twice; Ophir, twice; Hints Hill, twice; Alpha, three times; Martin & Olson, twice.

Not long since the City Engineer of Sacramento was sent up into the mountains to see and report the condition of affairs up there, and I have received this communication from him, which I will read:

SACRAMENTO, Cal., Feb. 2, 1887.

To Hon. George Ohleyer, Sacramento, Cal.:

You ask me to describe briefly the mining operations now in progress in the hydraulic mining belt so far as I have any knowledge of the same.

Any recent information I have on the subject extends only to Bear river and its tributaries in the section of country between Dutch Flat and Nevada City.

In that section considerable hydraulic mining is being done. In fact, all the water that is to be had is being used for that purpose, amounting to about 2000 or 3000 miners' inches per day. The work that is being done is conducted almost entirely by Chinese, there being employed from 120 to 140 men hydraulicking and perhaps 50 or 60 more sluice mining and working over the old tailings in the canyons. Not more than 8 or 10 white men are working by the hydraulic process.

At some points the mining operations are being conducted in direct violation of the injunction of the courts by the Chinese under some sort of lease or other arrangement with the owners of the mines. Generally watchmen are kept to warn the workmen of the approach of strangers or of those suspected of being out in search of evidence of the contempt of court. By this means they often succeed in stopping operations before the same can be witnessed by the officers and evidence secured. Upon entering the mine it is generally found deserted, although the evidence of recent work is found on every hand. In some instances the mining operations are carried on at night, the more easily to elude detection.

Another difficulty experienced by the officers has been in identifying the Chinamen so as to be able to serve papers and make arrests for violations of the injunctions of the courts; the "boss" Chinamen, as they are called, keeping secreted, while the workmen are constantly

shifting about, and when questioned pretend they cannot understand.

From my recent observations I estimated that with a full supply of water, such as is had some seasons, from 15,000 to 20,000 cubic yards of mining tailings would be thrown into Bear river and its tributaries per day. For two successive days following a recent storm, when the water supply was abundant, fully that amount was put in each day.

Owing to the fact that the Chinese will work ground that pays a much less profit than any that the owners of the mines can afford to do, these Chinamen are now largely engaged in washing banks of very light material, which, years ago, were abandoned by the whites as unprofitable. On these banks the duty of the miners' inch is very materially greater than on the heavy banks of hard cemented gravel that were previously worked by the mine-owners. Very nearly the entire amount of the materials washed from these light banks is of such a character as to be immediately carried in suspension to the lower portions of the streams into which they are discharged, thus materially increasing, in proportion to the amount of water used, the number of men employed and the value of the gold obtained, the damage to the streams and the lands and other property contiguous thereto. I am, dear sir, yours truly,

L. F. BASSETT.

Action by Sutter County Supervisors.

The following resolution was unanimously adopted by the Board of Supervisors of Sutter county, at a special session held February 15, 1887:

WHEREAS, By reason of hydraulic mining in California, property in the Sacramento valley, exceeding in value $50,000,000, has been destroyed, and navigable streams and bays of incalculable value seriously impaired and threatened with absolute ruin; and

Whereas, Said work of destruction still continues in spite of the expenditure by the counties injured of over a quarter of a million dollars in anti-debris litigation, but is mainly carried on by Chinese, against whom the decrees of the courts cannot be effectively executed; and

Whereas, On the Bear river and its tributaries alone, as appears from the report of a Government engineer, there are at this time over 200 Chinamen and less than 15 white men engaged in dumping and discharging debris by the hydraulic process of mining into said stream, and the same condition of affairs practically obtains on the American, Yuba, and Feather rivers; and

Whereas, Practical experience has taught us that the Chinese are irresponsible, are not easily identified, have no known employers, and that the actual workmen are so frequently changed that civil process is unavailable against them; and

Whereas, Senate Bill, No. 101, now pending before said body, if amended according to the minority report of the Committee on Mines and Mining Debris, is a just bill, the passage of which by the Legislature would enable us to protect our property and our navigable streams from destruction by unlawful mining at the hands of Chinese as well as white men, and would injure no man who respects the person and property of his neighbor; and

Whereas, The peril of our situation is imminent, our condition practically helpless, and we deem the occasion one of great emergency;

Resolved, That our Senator and Assemblyman be, and they are hereby, instructed, and the representatives of other sections most earnestly solicited to use their best efforts to pass said bill.

L. P. FARMER, Chairman.
[SEAL.] Attest: A. H. HEWITT, Clerk.

CONNECTING THE GREAT LAKES WITH THE MISSISSIPPI.—The project for a steamboat connection as above has long been under consideration by engineers and by Congress. The trouble seems to be to select some one of the several routes proposed. Reference to the various routes is made in the following extract from an Illinois journal, which evidently favors the Hennepin canal: "The Board of Army Engineers, appointed under the provisions of the last River and Harbor bill to examine into the feasibility of the work, finds that the proposed canal is feasible, and because of its commercial importance is worthy to be undertaken by the General Government. But it recommends the non-acceptance by the United States of the Illinois canal under the provisions of the existing act of the Illinois Legislature. This means that a recession would be necessary by the people of Illinois, and this would take the subject out of Congress for the next three or four years. The board also, by its indorsement of the Marais d'Osier or northern route, as against the Rock Island or southern route, puts a damper on many friends of Hennepin. Most of the engineers who have made surveys have favored the Marais d'Osier route, but Gen. John Newton, when at the head of the Engineer Corps, always overruled his subordinates and upheld the Rock Island route because of its superior commercial advantages. But he is no longer with the department, and the Marais d'Osier people have their own way. The Hennepin canal scheme is not dead; it will live again, and, we believe, will at no very remote day become an actual realization."

WOODEN BOLTS in house-building, and their superiority over nails, is thus commented upon by an English journal: "Why do you make so lavish a use of nails in the carpenter work of our houses, to the exclusion of the honest, old oaken pin? Pull down any building, if it be merely a barn, more than 200 years old, and you will not find a single nail in the original work; rafters and joints were all bolted together so stoutly as almost to defy the tools of the destroyer. Many an old manor barn, when pulled down of late years—as, unfortunately, only too many of them are—has shown itself to have been better built than most palaces are now. There are arguments in the way of economy of time, and so on, in favor of the use of nails in house-building; but they are as nothing compared with the solid advantages of using wooden bolts. The iron nails in time canker and rot rafters and floors, but wooden bolts hold them together 'like grim death,' and render a house practically indestructible."

Central California Citrus Fair.

[Written for the RURAL PRESS by H. M. H.]

Literary Exercises.

Thursday Evening, Feb. 10.—After an overture by the band, Prof. J. W. Rainey sang in cultured style a tenor solo, "Ah, so true" (Estabrook), with violin obligato by Miss Lessie Rainey and piano accompaniment by Mrs. J. W. Rainey. Being heartily encored, he sang, to the great amusement of the audience, a medley known as "The Song Jokes."

Messrs. Gebhart and Metcalf followed with a well-rendered duet, "How Dear the Hour" (Keleber), but failed to respond to an encore.

Miss Etta Herman's alto solo, entitled "Longing" (Willard), was loudly encored, and answered with "We'd Better Bide a Wee."

The program concluded with a vocal trio, "Te Sol, Te Sol," or "Thee, Only Thee" (Verdi), which was admirably sung, with appropriate gestures, by Prof. J. W. Rainey, Mr. Elmer Chase and Miss Lina Hillman.

Monday Evening, Feb. 14.—A fancy dance, "La Cachucha," was well executed by Miss Nellie Paul, who declined a recall. Miss Mattie Fowler, of Evergreen, gave an excellent recitation which elicited applause. Miss Lena Voltz, with remarkably fine effect, sang "Songs of Home," and, as an encore, the "Swanee River," Miss Eva Hunkins ably supporting her with a piano accompaniment.

Tuesday, Feb. 15. — The exercises opened with a march, "Rebecca Commandery," and an overture, "Blossoms of '87," played by the band. Miss Ruth Fowler's recitation, "The Little Hero," was much enjoyed. A vocal solo, "The Switzer's Dream of Home," by Miss Hannah Buckley, received prolonged applause, which was responded to with the selection "Ruby." Miss Lessie Rainey, a musical prodigy, so charmed her auditors with a violin solo, "Conzonetta," that she was encored, responding with "Home, Sweet Home." The band closed the exercises with the "Surf Polka," cornet solo and other selections.

Wednesday, Feb. 16.—First on the program was the "13th Regiment Quickstep" and an overture, "Poet and Peasant," by the band. An instrumental solo by Mrs. L. Callisch receiving an encore, "Way Down Upon the Swanee River," with variations, was rendered to the delight of those present. Miss Cora Finch, whose appearance was greeted with great applause, sang "Wooing" in charming style, and being recalled, gave, without accompaniment, "Home, Sweet Home" to spell-bound hearers. Mr. Oppligar's cornet solo, "Clover Leaf," was well appreciated, and a selection from the "Bohemian Girl" was given as an encore. Mr. Harrell's bass solo, "I'm King O'er the Land and the Sea," was so pleasing that he was compelled to add "A Hundred Fathoms Deep." The band closed with "Enchantment" and the "Hot Shot March."

Thursday, Feb. 17.—The band having opened with a well-received overture, Misses M. E. Boots and Lina Hillman, assisted by Miss Eva Hunkins, pianist, sang, with fine rendition, a duet entitled "Mira o' Norvia," which was encored without effect. Mr. Charles Knox, a young man with a tremendously heavy voice, rendered a bass solo, "Friend of the Brave," with excellent effect, and, being encored, sang "Sweet Peace, be Still." Miss Jennie Black's vocal solo, "Stars, the Night is Dawning," was thoroughly enjoyed, and the applause being long and loud, she sang "The Old Maid of Lee." Miss M. E. Boots then sang "Oh, So True," Prof. Harry Tuck accompanying her with a violin obligato. Miss Mattie Fowler sang, with pleasure to her hearers, "The Nightbird's Coming;" encored, she responded with "Kiss Me Good-Night and Go." The band closed the exercises with the "Consolidation March" and the "Champagne Galop." The program for the evening was prepared by Chas. T. Boots, of the University of the Pacific.

Mr. Flickinger's Fruit.

Mr. J. H. Flickinger brings from the "Pacific orchard," near Berryessa, a fine display of preserved and dried fruit. The cannery being located in the orchard, none but choice, ripe fruit is preserved, and it is put up the same day that it is picked. His apricots, peaches, cherries and plums in glass, are unusually large, and attractively arranged in the form of a pyramid. His canned fruits, including apricots, lemons, cling and Crawford peaches, Washington and egg plums, white and black cherries, are of excellent quality. He exhibits a ton and a half of dried prunes in a huge box nine feet long, six feet wide and one foot deep. His apricots and prunes are for the most part sun-dried, and are claimed to be equal to any other dried fruit produced in the valley. The cannery will be enlarged the coming season to meet increasing demands. Excepting the remnant on exhibition, Mr. Flickinger's fruit crop of the past season has all been sold. Part of his canned and dried fruit finds a market in Philadelphia and Chicago, but most of it goes to England.

Mr. Flickinger's orchard, three miles from the San Jose postoffice, contains 200 acres and consists of 20,500 trees, viz.: 7000 apricots, 7000 peaches, 4500 French prunes, 1000 cherries, and 1000 Washington and egg plums.

The oldest trees were set out near the close of 1880, and the youngest in the spring of 1886, the object being to supply the choicest canned and dried fruits for Eastern and foreign markets. His success has surpassed his most sanguine expectations—a crop having been gathered from all two-year-old trees.

From the "Pacific orchard" some large fruit has been taken; *e. g.*, peaches weighing from 8 to 15 ounces, and Moorpark apricots, from 2 to 4 to the pound. Santa Clara valley is certainly the home of the finest Moorparks which are raised here with greater success than elsewhere in the State. Being the best apricots grown, they find a ready market whether they are green, canned, or dried.

The orchard being in the warm belt, there is not frost enough to injure fruit.

Last season's crop amounted to 200 tons. Mr. Flickinger estimates his fruit crop the coming season from 17,000 trees at not less than 800 tons, which he will preserve in tin and glass, or evaporate.

The plan of putting up the ripe fruit where grown is simply perfection. All the fruits preserved are picked, when ripe, and put up within a few hours, consequently retaining their original freshness and high flavor.

Fruit which has to be transported 50 or 100 miles before canning must be picked more or less unripe; hence the superiority of that put up in an orchard cannery.

Mr. Flickinger is not a packer of other people's fruit, but all preserved by him is from his own orchard. Realizing that his goods must be brought into competition with the products of European countries and the East, and that an attractive and convenient shape is of great commercial importance, he has established works in Berkeley, where he will manufacture his own flint-glass fruit-jars.

Displays of Oranges.

E. Ditto, Jonas Higgins, Mrs. S. F. Smith and E. Beckwith, all of Los Gatos, exhibit oranges.

Mrs. Miller, of Laguna valley, three miles from Milpitas, displays oranges and lemons.

Ada B. Cameron, of Laguna district, shows oranges and olives, as well as lemons from four-year-old trees.

J. F. Tobin, of Los Gatos, has some fine oranges arranged in the form of a Maltese cross.

Mrs. B. P. Rankin makes a good exhibit of lemons.

Mrs. F. L. Taylor, of Los Gatos, has an orange pyramid, at the apex of which is an orange five inches in diameter; also a cluster of 13 oranges.

B. F. Bachman, of Los Gatos, brings a box of Languedoc almonds.

Dr. Knowles, of Los Gatos, exhibits a pyramid of unusually fine oranges.

I. Berger, of Mountain View, exhibits a limb bearing oranges.

Mrs. Thos. Gibson, of Los Gatos, has a vine of prolific peas.

Mr. B. H. Gordon brings from his farm in the eastern hills a radish 16 inches long by 26 inches in circumference.

Mrs. S. A. Lee shows a beautiful center-table, completely overlaid with seashells.

Mrs. A. Nash displays a frame containing sea-moss, arranged in the form of leaves, with petals of seashells.

Honey.

Henry French, a San Jose groceryman, has an exhibit of beautiful comb honey, put up in three-pound boxes, having a glass end, through which the fine quality of the honey is displayed. The boxes are paper covered and are very neat.

Mr. J. H. McMillin exhibits a section of bird's-eye redwood, 12x2½ feet, and another piece, 18x4½ feet, from Bear Creek Mill, Santa Cruz Co.

Mr. A. C. Bassett, superintendent of the Northern Division of the Southern Pacific Railroad, brings from the Loma Prieta Lumber Mills many small specimens of knotty redwood, finely polished.

Wines.

Mr. J. C. Merithew, of Cupertino, brings from Prospect vineyard a magnificent display of wines and brandies in bottles, which are prettily arranged in a pyramid, over which is an arch bearing the name of the vineyard. The following are the varieties on exhibition: Claret, Riesling, port, Angelica, Muscatel, sherry and grape brandy, Bonanza brandy. Mr. Merithew, whose 40-acre vineyard is 14 years old, began to make wine in 1876.

Chas. Lefranc brings from the New Almaden vineyard four boxes of handsome oranges, and some Grenache and white wine.

Mrs. Hagemeyer, of Alameda, displays fine oranges.

H. C. Pitkin, of the Willows, sends specimens of edible cactus.

T. Conant, of the Willows, shows a box of odorous quinces.

Oscar Promis exhibits dried prunes of excellent quality.

Mr. A. R. Woodhams exhibits a root called the *megarrhiza*, which contains about two cubic feet, and has a very pungent and bitter taste. It is labeled as follows: "Warranted to be good for the memory and to make men tell the truth." Many visitors, including newspaper correspondents, tried it to their infinite disgust.

Mr. Isaiah Shaw, of Berryessa, shows a bearing castor-bean tree, seven feet high and one and one-half inches in diameter.

New Floral Displays.

Miss Mattie Ross, of the Willows, sends in a design of a butterfly wrought with mignonette and speckled with pansies; also a double horseshoe of pansies and maiden-hair ferns.

Mrs. Capt. Aram shows a basket of camellias, narcissus, daphne, heliotrope, white gilly flowers and maiden-hair ferns, all grown out of doors.

Mrs. S. I. Sanders, who lives near Berryessa, shows an exquisite double bouquet of camellias, fuschias, variegated pinks, ageratum and maiden-hair.

Mrs. P. W. Coil, of Lincoln district, shows a basket of many kinds of outdoor flowers, over which hangs a bunch of strawberries.

Mrs. John Bubb, of Lincoln, sends a beautiful floral piece.

Dr. Vanderburg, of Los Gatos, shows a beautiful variegated camellia, grown in the open air.

Mrs. Beatty, of the Willows, exhibits a basket of smilax, maiden-hair ferns, violets, pansies and primroses.

Gazing at the floral decorations, one forgets for the time that spring has not come. Fresh flowers in large quantities have been supplied daily from San Jose and Santa Cruz, the latter now showing 68 species and from 700 to 800 varieties.

Vine and Fig Tree.

Mr. N. Cadwallader contributes a two-year-old fig tree 12 feet high and 1½ inches in diameter. It was grown in J. Rock's nursery.

Messrs. Spencer and Covel have twined a grapevine, which, having been cut back, has grown out to a length of 27½ feet in one year. A card bears the sentiment, "This is the country where you can sit under your own vine and fig tree."

Pacific Silk Factory.

The Pacific Silk Factory, of San Jose, Mr. H. X. Van de Casteele, proprietor, makes an interesting display of silk in all its forms, from the raw silk of the cocoon to the manufactured dress goods. The cocoon, which is spun by the silkworm around itself before going into the chrysalis state, is an inch long and contains about 250 yards of yellowish fiber. Skeins of raw silk, 250 yards long, are made from the cocoons, each one contributing a fiber. Mr. Van de Casteele shows skeins in four stages of bleaching. After being dyed, the fibers are woven into silk goods.

Considerable money is sent abroad annually to purchase raw silk, of which California does not produce enough to supply this factory. There are 17 looms, a winding machine and a steam engine, beside other apparatus necessary to a complete equipment. From 25 to 28 hands are employed, the weavers working by the yard and being held responsible for losses resulting from defective manufacture.

The factory has a capacity for making daily 180 yards of grosgrain, which is pure silk goods. The manufactured article, when 22 inches wide, sells at $2 per yard, and when 21 inches wide, for $1.50. Rhadame or satin, 21 inches wide, brings $1.75 per yard. In every bolt the name of the factory, the name of the firm for whom the bolt is made, and the name of the grade of silk are woven. O. A. Hale & Co., whose stores are located in San Jose, Salinas, Sacramento and Petaluma, order the grades known as the "Garden City," "Nonpareil" and "Satin Rhadame." For Keane Bros., of S. F., the brands called the "Standard" and "Golden State" are manufactured. A. & J. Martin, of San Jose, handle the goods, and Brown & Metzner, of S. F., are the agents for this coast.

The goods, which are competing successfully with the silks of Lyons, are readily sold in this State, Chicago, Boston, New York and Philadelphia. The annual product is 55,000 yards, worth $125,000.

On account of its favorable climate, and especially its freedom from thunderstorms, California is peculiarly adapted to the rearing of silkworms, which here produce a fiber elsewhere unsurpassed.

Japanese Fruit.

Mr. H. E. Amoore, president of the Japanese Tree Importing Co., of No. 120 Sutter street, S. F., is exhibiting specimens of orange trees of the seedless Oonshiu variety of oranges recently mentioned in the RURAL. He shows some Ooji tea plants and trees of the cumquot, which is a dwarf citrus fruit, three-fourths of an inch in diameter, somewhat like a sweet lemon, and much prized for preserving. Mr. Amoore tells me that he spends 10 months of every year in Japan and China, where he has been engaged in business for 20 years past. He says his company has purchased 16 acres of land near Vacaville for a nursery of Japanese fruits and flowers.

Photographic Views.

Mr. A. P. Hill, the portrait and landscape painter, has taken a score of photographic views of the interior of the fair. By the bromide process some of these have been enlarged into pictures strikingly realistic.

Loryea & McCauley exhibit excellent photographs, including views of the Lick Observatory, statuary pictures and children's photographs, for which the firm is justly celebrated.

The photographs colored by Mrs. A. P. Hill are of more than ordinary merit. The coloring being in oil, instead of water-colors, is perfectly transparent, and consequently does not conceal any part of the likeness. So perfectly natural do the portraits appear, that one imagines that he can see blood underneath enlivening the complexion.

Lick Paper Mills.

A good exhibit of paper, manufactured at Agnews, is made by the Lick Paper Company. A roll of paper in one piece, seven and three-fourths miles long, required three hours for its production. Several kinds of paper, such as news, Manila, raisin, book, and a special paper for wrapping citrus fruits for shipment, are on exhibition. The mills are run night and day, except Sunday; 10,000 pounds of paper are manufactured every 24 hours.

"PERFECT" GANG PLOWS

Are the only Steel Beam Gang Plows of the Bench Beam Series of Plows that will not clog in heavy stubble or weedy land.

They are so constructed that there is AMPLE SPACE under the beams and between the bottoms to let the stubble and weeds freely pass through.

"PERFECT" GANG PLOWS are made with either three or four bottoms or plows, each cutting 8 or 10 inches, securely ganged together, making a Gang Plow which is UNEQUALED for LIGHTNESS OF DRAFT, strength, durability, and GOOD PLOWING QUALITIES, and is in reality a "Perfect" Gang Plow.

MOLDBOARD VIEW OF "PERFECT" GANG PLOW.

The "PERFECT" GANG PLOW will plow in any soil, as the bottoms are shaped after patterns that have been found to work equally well in adobe and free soils. The moldboards are made of the best iron center steel, chemically hardened, and well polished.

If you contemplate purchasing a Gang Plow, don't fail to call and see the "PERFECT GANG" before you purchase.

HUBS AND BOXES of carrying wheels ARE DETACHABLE, and when worn out can easily be removed to put new ones in their place.
Each carrying wheel is provided with its own Regulating Lever, by which the driver can easily adjust either side of the plow to make it run level and true.
THE REGULATING LEVERS are VERY LONG and SECURELY BOLTED to the steel frame of the plow, and coupled to the crank axles by a heavy piece of round iron, which is adjustable to the regulating levers at three different holes, enabling driver to adjust his plow so that he can handle it with the greatest ease.
The "Perfect" Gang Plow is also provided with a long LAND GAUGE Lever, by which the driver can adjust his plow to take more or less land as he may desire.
There is no danger of breaking the crank axles of the "Perfect" Gang Plows, as they are made of heavy 1⅜ inch round iron and are fastened to the frame by wrought iron brackets.

Ventura County Notes.

EDITORS PRESS:—New life has been infused into all classes in this county since the rains, long delayed, commenced, about one week ago. Up to that time the prospect for a fruitful season was certainly disappointing, but now fine crops are assured, though much grain will be sown later than usual. In this portion of Ventura county, the rainfall for the season, to the 5th inst., was only about one inch, and the hills were brown and bare; grain-fields looked unpromising, and the dust was thick on our roads. Since the date mentioned, the weather, most of the time, has been stormy, and now we have had over ten inches of rain, and, evidently, there will be much more. The soil of this section of the county is a deep, sandy loam, which quickly absorbs moisture, so that, soon after the heaviest storm, the land may be worked to advantage. It would be difficult to find soil more productive than this, especially when it can be irrigated.

The acreage sown to grain in this county to date is much smaller than usual, owing to the dry weather. But, as soon as the rain ceases, many plows will be at work. Along the coast, south of the town of Ventura, lies an extensive barley-growing region where, in ordinary years, the yield per acre is large, owing to the productiveness of the soil and the prevalence, during the summer, of fogs. The shipping point of this section is Hueneme, one of the best along the southern coast. A large proportion of the products of the beautiful, fertile and extensive Santa Clara valley of Las Posas, Coloma, Simi, Conejo and other valleys, is shipped from this point. All the valleys named are very productive, as is also the Ojai valley, where the finest of wheat is produced. We are confident that the crops of the county will this year equal those of average seasons.

There are few (possibly none) counties in the State that have greater and more varied resources than Ventura. We are aware that it is the custom—carried to extremes in many parts of the State—to write flattering, overdrawn descriptions of soil, climate, and resources and future development. But, while not writing for the purpose of puffing the county, having no individual interest in its prosperity, we may truthfully say that there is no richer county, agriculturally considered, in the State, though her resources are but partially developed. The mineral resources of the county are also very large.

More wealth is centered in Los Angeles county than here, for owing to the lack of railroad facilities in the past, Ventura's population has not attained large numbers; capital has not been to a large extent invested, and there has been no "boom." But a few days ago the first passenger cars from Newhall reached this place, and now travelers from San Francisco, Los Angeles and other points arrive here daily. Soon the rails will be laid to the pretty town of San Buenaventura, and then, in a few months, to Santa Barbara. All this means much to this county, which, until now, has been comparatively isolated, and already many persons are investing in land. Large Spanish grants, containing from 10,000 to almost 100,000 acres, yet remain intact within our borders, which will, in the course of a few years, be subdivided. Most of this land is rich, productive. There are excellent opportunities to purchase good farms here, upon reasonable terms, but the tendency of the real estate market is upward. The climate is said by many, well able to judge, to be superior to that of Los Angeles county. During last month there were 26 clear days in Ventura; the lowest temperature was 36° above; average, lowest 46° above; highest, 75°; average, highest 63½°.

Santa Paula and vicinity is one of the healthiest, most productive sections of the county. One farmer, near this village, raised squashes last season that had to be loaded on sleds when they were taken from the field. The largest one weighed over 250 pounds. A neighbor raised beets of over 80 pounds weight. The soil is of great depth everywhere, in places over 100 feet.

Oranges thrive in the above-named locality and we think could be successfully grown in all the valleys in the county. Trees in this neighborhood hang full of the golden fruit which will soon be marketed. Banana trees grow thriftily in the open air.

No county in this portion of the State is so well watered as this. Numerous streams, heading in the mountains clear and pure, find their way to the ocean here and there along our coast line. From several of these, water is taken for irrigation. Grain, flax, beans, corn, the staple products of this county, are grown, for the most part without irrigation; the finest fruits and nuts likewise. R.

Santa Paula, Feb. 14, 1887.

DR. W. J. DOBBINS, of Vacaville, has put out 8000 prune trees, one-half of which will come into bearing this year. During the fall of 1886, he experimented in drying with an Acme Steam Evaporator, and the results were so favorable that he has just purchased of Batchelor & Wylie a No. 2, to be set in place by April 1st. A sample of his manufacture was pronounced quite equal to the best French prunes.

SMALL-POX at Los Angeles is causing a good deal of apprehension. Most of the cases are light, but more than a dozen of them have been reported.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

357,424.—BALANCED SLIDE VALVE—A. J. Stevens, Sacto.

357,246.—WINDOW SASH—T. A. Sweet, Paso Robles, Cal.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

THE TEREDO.—W. H. Dall, curator of the Department of Mollusks, U. S. National Museum, writes as follows to the San Francisco *Chronicle:* "In yours of the 23d of January is a long, and for the most part, accurate article on the teredo; this name being taken in the general sense of referring to the whole group of timber-destroying mollusks colloquially so termed. But the writer has fallen into an error which is worth correcting. The siphonal end of *teredo navalis* which he copies from Appleton's Cyclopedia, is correctly drawn and named. The animal which bores the piles in San Francisco harbor, and which is figured in the same article, is not the *teredo navalis*, but a *xylotrya*, probably the *x. pennatifera* of Blainville. The teredo does not have the feather-shaped processes near the siphonal end (which are called pallets by naturalists), but has an oval or spoon-shaped pair, as represented in the figure copied from the cyclopedia."

Deep Sea Wonders

Exist in thousands of forms, but are surpassed by the marvels of invention. Those who are in need of profitable work that can be done while living at home should at once send their address to Hallett & Co., Portland, Maine, and receive free, full information how either sex, of all ages, can earn from $5 to $25 per day and upward wherever they live. You are started free. Capital not required. Some have made over $50 in a single day at this work. All succeed.

HORSE-BREEDING ON THE RANGE.—It has become a generally recognized fact that the raising of good, large work-horses is by far the most profitable of live-stock farming. This recognition has extended to the great ranges of the far West, where this industry has assumed a vast importance. Messrs. Bluett & Evans, of Oregon, now have 7000 horses on their ranges; the Post Percheron Horse Co., of Wyoming, has 4000; the Percheron Norman Horse Co., Colorado, 4200; and Gov. Warren, of Wyoming, some 2000. All these great breeding companies, the most extensive and wealthy in the United States, and many others of lesser importance, use only the best pedigreed Percheron stallions for their herds. And it is a notable fact that nearly all the stallions in use on these ranges have been selected from the Oaklawn Stud of M. W. Dunham, at Wayne, DuPage Co., Illinois, who has imported about 2500, and now has nearly 500 on hand.

Consumption Cured.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma, and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French, or English, with full directions for preparing and using. Sent by mail by addressing with samp, naming this paper, W. A. NOYES, 149 Powers' Block, Rochester, N. Y.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER

Easy Binder.

Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, best and cheapest of all economical and practical file binders. Newspapers are quickly placed in it and held neatly, as in a cloth-bound book. It is durable and so simple a child can use it. Price, size of Mining and Scientific Press, Rural Press, Watchman, Fraternal Record, Masonic Record, Harper's Weekly, and Scientific American, 75 cents; postage, 10 cents. Postpaid to subscribers of this paper, 50 cents. Send for illustrated circular. Agents wanted.

A New Discovery.

By a skillful combination of chemicals, the Capital Soap Company has prepared a Soap, "The Le Roi des Savon," or King of Soaps, which will do all ordinary washing without any rubbing.

Young Girls

Are at a critical period when they are about maturing and developing into women. The lack of watchful care at this time may result in fixing irregularities upon delicate organs and entailing a long list of "female weaknesses." All this may be avoided, and the young woman come through this period clothed in all the beauty and strength of a perfectly healthy organization by the aid of Dr. Pierce's "Favorite Prescription," prepared especially for female troubles by one of the most successful physicians of the day.

Russell Sage

Is a well-known operator in Wall street, who is generally considered as "up to snuff." Hence, it may have been quite natural that a countryman who reads the papers recently called at his office and asked for a package of Dr. Sage's Catarrh Remedy. He discovered his mistake, but he made no mistake in the article called for. This Remedy, when applied with Dr. Pierce's "Nasal Douche," will surely and rapidly eradicate the most aggravated case of catarrh, with all its unpleasant and dangerous accompaniments.

* * * * Male weakness and loss of power promptly cured. Book, 10 cents in stamps. World's Dispensary Medical Association, 663 Main street, Buffalo, N. Y.

It Should Always be Borne in Mind

That time is the only really impartial test of genuine merit, and that according to the universal law of "the survival of the fittest," few sewing machines have withstood this test. Therefore, the only safe thing to do is to buy what time has proven to be the fittest"—the "DOMESTIC" SEWING MACHINE.

HALL'S SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia, Boils, Blotches, Pimples, Scrofula, Tumors, Salt Rheum and Mercurial Pains readily yield to its purifying properties. It leaves the Blood pure, the Liver and Kidneys healthy and the Complexion bright and clear.

J. R. CATES & CO. PROPRIETORS,
417 Sansome St. San Francisco

CLIMAX SPRAY PUMPS.

To those in want of a first-class Spray Pump we can say that these Pumps are, without a doubt, the very best Spray Pumps to-day in the market. Made expressly for service in the Orchard, and the only Pump having all its parts, valves, etc., made of non-corrosive metal, and has received the highest awards over all others for the past three years. Send for circulars and prices.

CLIMAX SPRAY PUMPS,
18 California St., S. F.

Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from $5000 to $500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. **

ORCHARD and VINEYARD ONE-HORSE SINGLE and TWO-HORSE GANG PLOWS, and Vineyard Cultivators of all kinds.

These Plows are Guaranteed to be the Best Orchard and Vineyard Plows made. Read the Testimonials below.

The single plow can be set to any position, and can be run to or from the trees or vines and within an inch of them without any injury to the same. The handles are also movable, and can be changed from one side to the other to suit the circumstances. This plow has several advantages over all other Vineyard and Orchard plows. Among these are: By changing the beam, no matter to or from the land, the plow will always run in a straight line. By the revolving drop clevis, the plow can be set to or from the land, or in depth. With this plow a man can plow a straight furrow, when he could not with other plows where the beam runs across them. It works as well in adobe or gravelly soil as in sandy or loamy. The plow weighs about 50 pounds. This plow will fill a long-felt want among orchard and vineyard men, who fully appreciate its great value. Plow and Singletree patented May 17, 1884.

PRICE LIST.—Single Plows, with singletrees, $15; Gang Plows with Garden City Plow bottoms attached, $35; Doubletrees with Patent Singletrees, $4.50. Extra Shares, $3.00. Extra Shares can be had of me.

TESTIMONIALS:

HOLLISTER, Sept. 11, 1886.

J. A. BILZ—Dear Sir: I take pleasure in testifying to the good merits of the plow and harrow made by you, which I have used at my vineyard to my entire satisfaction. WM. PALMTAG.

RUBY HILL VINEYARD, PLEASANTON, CAL., July 24, 1886.

J. A. BILZ, Esq., Pleasanton, Cal.—Dear Sir: Your two-horse Vineyard Gang Plow is a great success. It saves $2 a day over the old method of plowing, and is light in draft. We have two of them with which we turned under weeds this last spring over a foot high, and left the land in excellent condition. CRELLIN BROS.

CRESTA BLANCA VINEYARD, LIVERMORE, CAL., Nov. 27, 1886.

MR. J. A. BILZ—Dear Sir: I have tried several vineyard plows on my place, but none have given such good satisfaction as yours. I take pleasure in recommending it to those who desire good work done economically.
CHAS. A. WETMORE.

FRESNO VINEYARD, April 9, 1886.

I have tried Mr. Bilz's double plow, and although very skeptical at the time, I must acknowledge it worked well, and I am much pleased with it. I have made up my mind to put them in the vineyard.
D. D. HUDSON, Supt.

PLEASANTON, Sept. 9, 1886.

J. A. BILZ, Esq.—Dear Sir: I take pleasure in recommending your two-horse Vineyard Plow which I know to be a success, having purchased three of them in plowing in the past season, in my vineyard. Undoubtedly, they are the best implement of the kind I ever used. They are light in draft. It turns the ground over well, and is so regulated you can plow any depth you desire, and it leaves the ground even. It also turns the weeds under better than other plows I have used. I have saved $2.50 per day on each plow. I would not be without the plow for twice their cost. Yours truly, J. A. ROSE.

LIVERMORE, August 1, 1886.

J. A. BILZ, Esq., Pleasanton, Cal.—Dear Sir: We have used one of your Vineyard Gang Plows during the past season and believe it to be a good plow, doing the work in a thorough and economical manner, and can heartily recommend it to those wishing an implement of this kind. Yours respectfully, S. OSTERHOUT.

LIVERMORE, Feb. 1, 1886.

MR. J. A. BILZ—Dear Sir: I have tried your vineyard plow and find that it works well and gives perfect satisfaction, and I take pleasure in recommending it to any one who wishes a good vineyard plow. Your patent singletree is also a success, and when used in an orchard will save many a tree from being injured. Yours truly,
F. KURTZ, Foreman of C. A. Wetmore's Vineyard.

Persons interested in Vineyards and Orchards are invited to call at my shop and examine and try the plow. It is warranted to do all claimed for it. For further particulars apply to

GRAND AUCTION SALE!

WEST COAST LAND CO.,

San Luis Obispo, Cal.

Incorporated March 27, 1886. **CAPITAL, $500,000.**

DIRECTORS.		OFFICERS.	
GEO. C. PERKINS	San Francisco.	JOHN L. HOWARD	President.
JNO. L. HOWARD	San Francisco.	ISAAC GOLDTREE	Vice-President.
ISAAC GOLDTREE	San Luis Obispo.	R. E. JACK	Treasurer.
R. E. JACK	San Luis Obispo.		
C. H. PHILLIPS	San Luis Obispo.	C. H. PHILLIPS, Secretary and Manager.	

The WEST COAST LAND COMPANY now offering in subdivisions the

PASO ROBLES RANCH,

Of 20,400 acres, less 6000 acres sold to settlers in the past four months;

THE SANTA YSABEL RANCH,

Of 20,200 acres;

THE EUREKA RANCH,

Of 11,000 acres, and 12,000 acres of the

HUER HUERO RANCH,

All lying in a body, on the S. P. R. R., at its terminus in SAN LUIS OBISPO COUNTY.

Will sell

AT PUBLIC AUCTION

About March 22d (for date see later advertisement) **the balance of the Paso Robles Ranch,** consisting of town lots in Templeton, 800 acres in 5 to 12-acre lots adjoining Templeton, and 14,000 acres in ranch subdivisions;

ALSO,

2100 acres of the **Huer Huero Ranch** in 20 subdivisions.

These are all agricultural and fruit lands, in quality equal to any in the State, with an average annual rainfall exceeding that of Santa Clara county, and require

NO IRRIGATION.

Title, U. S. Patent and to be free and clear of all incumbrances.

TERMS OF SALE.

Lots in Templeton, cash, U. S. Gold Coin. All other tracts one-third cash; balance in 4 equal payments, at 2, 3, 4 and 5 years; interest 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser.

An additional charge will be made of $5, for deed in sale of town lots, and $25 in other cases for expenses of sale, including making and recording all papers.

Schedule price of ranch subdivisions average $20 an acre; of 5 to 12-acre lots, $50 an acre.

SALE WITHOUT RESERVE,

Providing that no bid will be entertained at less than 60 per cent of schedule prices.

Ten per cent of cash payment (but in no case less than $100) required at fall of hammer; 30 days to complete sale. Parties failing for 30 days, forfeit sum paid.

Parties going from Los Angeles take P. C. S. S. Co.'s Steamers from San Pedro to San Luis Obispo. From San Francisco, take 8:30 A. M. daily train, S. P. R. R., to Templeton.

Parties wishing to inspect said lands with a view to purchasing at the Auction, or any of the Company's Land at private sale, will be shown the property free of charge by applying at the Company's office in Templeton.

Maps of all the ranch subdivisions, of Templeton, of the 5 to 12-acre suburban lots, and a general map showing the location of the Company's lands with a new descriptive catalogue are in press and will be sent free on application after the 25th inst. (February, 1887.)

Address:

C. H. PHILLIPS, Manager,
San Luis Obispo, Cal.

FRESNO COUNTY.

BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, to 20 acres, being 2½ times the usual amount supplied for colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is $3.75 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without teams are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for $150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads. Nearly one-half already sold.

Price, $22 to $40 per acre, on very easy terms to actual settlers.

☞For further particulars call on or address

O. J. WOODWARD, FRESNO, CAL. L. SHARPE, SELMA, CAL.

INSECTICIDES!

CODLIN MOTH WASH,
WHALE-OIL SOAP, Etc.

Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most *reliable* advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

Literary Exercises.

[Unfortunately our correspondent's notes became disarranged, and the accounts of the evenings' exercises do not follow the order of dates. The following paragraphs are supplementary to those in the second column of page 176.—EDS. PRESS.]

Wednesday, Feb. 9.—After two selections had been played by the band, a platoon of Company B, Fifth regiment, Captain A. K. Whitton, gave a bayonet drill, in which rare proficiency was shown, reflecting credit alike upon themselves and their commander.

Friday, Feb. 11.—The band having rendered an overture, "Moonlight Will Come Again" was pleasingly sung by a quartette, consisting of Misses H. Buckley and O. Knox, and Messrs. J. H. Hughes and Elsworth L. Rich. George Babcock rendered a vocal solo, "Good Night, Sweetheart," in fine style. Miss M. E. Boots gave a vocal solo, "Titania," and as an encore, "Thou Hast Learned to Love Another" with pleasure to all present.

The program was concluded with "Good-Night, Gentlefolks," by the quartette above mentioned.

Saturday Evening, Feb. 12.—Hon. J. Simms, Assemblyman from Nevada county, delivered an eloquent impromptu address. Mrs. Skelton, of S. F. followed with an address, of which the *Mercury* furnishes the following synopsis:

Husbands and Wives.

"A man is not a man until he has got a good wife to help him along; he is but a sorrowful creature compared with him who has a loving, virtuous wife. People who get married nowadays do not treat the matter as a sacred obligation. They regard it in about the same light as a picnic or an excursion. At the altar the husband says 'with all my worldly goods I thee endow.' That doesn't mean that his wife has to ask him for every 10 cent piece she requires. It doesn't mean that he should speak of the property they possess as 'mine.' A great many husbands treat their wives worse than strangers, and the little attentions which they bestow before marriage are discontinued and their wives are excluded from the business affairs of their husbands. The eastern people in this beautiful hall tonight must be ashamed, as I was once, at the wonders of this State. Here you get more sunshine to a yard than they have to a mile in the East. You can't find a fairer valley than that of Santa Clara. If you want to go up high you can climb the Santa Cruz mountains, from where you can look down on your neighbors a distance of 3000 feet. We are wont to regard California as the gem of America, but it never will be until its women are enfranchised, and of all the laws passed by the Legislature none better could be adopted. One of the errors committed by young married people is that of going to board in a hotel instead of keeping house, and this is the cause of many difficulties. Some men don't like to hear women express opinions and are quite astonished when they find that women know as much as they do. These views belong to the dark ages, and I hope no one in Santa Clara valley possesses them." She spoke of the evil effects of parents neglecting to give proper attention to their children, and compared the growth of a child to a beautiful lime tree before her. If neglected it would grow up warped, gnarled and knotted, but if properly cultivated and cared for, it would become beautiful and productive of good. She referred to the evils of intemperance, and made a strong plea for prohibition and the enfranchisement of women. She closed by paying a glowing tribute to Santa Clara valley, and said "it well deserves the name of a paradise." Her remarks were repeatedly applauded.

Tuesday Evening, Feb. 15.—The program announced for this evening was as follows: Music by Parkman's band; vocal solo, Miss Hannah Buckley; recitation, Miss Ruth Fowler; vocal duet, Misses Bessie Newhall and Maggie Bird; orchestral selections by the band.

Friday Evening, Feb. 18.—Parkman's band, which played every evening during the week, introduced the exercises with an overture. Messrs. C. Sturmann, F. Bunemann, H. Hirsch, A. Schmidt, F. Hauer, A. Graessle, L. Magenheimer and H. Roehr, of the San Jose Turn Verein Glee Club, sang "Good-Night" (Abt), and "Farewell, My Love," as an encore. Mr. Charles Trephagan sang "Poor Old Dad," and as an encore, "When the Roses Come Again." "Dem Golden Stars" and "Roll, Jordan, Roll" were well rendered by Messrs. Jacox, Butler and Smith. The "Soldier's Farewell" (Kinkel) was sung by the Glee Club. Mr. Harrell gave inimitably a baritone solo, "Rocked in the Cradle of the Deep." Mr. Travis closed the exercises with a drum solo.

Saturday Afternoon, Feb. 19.—A banquet was tendered by the management to the ladies of Santa Cruz and to the members of the press. On tables placed on the stage was spread a sumptuous feast, to which 45 persons sat down. A toast given by Hon. Cyrus Jones to the ladies of Santa Cruz was responded to by the reading of a telegram, as follows, from Mrs. Isabel H. Raymond, Secretary of the Santa Cruz Development Association: "Santa Clara and Santa Cruz—the queen counties of Central California! May the bond of friendship between them, woven of fruit and flowers, never be severed."

President Jones then proposed the toast, "The Press," to which Captain Frank Dunn gave a response.

President Jones then proposed the following toasts: "Santa Cruz," responded to by Mr. A. Loomis; "Los Angeles," Mr. Conrad, of the Los Angeles *Tribune;* "Stanislaus," Mr. G. A. Goodell; "San Francisco Press," J. E. Baker of the *Alta;* "Press of Santa Clara County," S. W. DeLacy; "San Jose *Mercury*," A. M. Kelley; "The Central California Fair," H. A. Brainard, of the *Santa Clara Valley;* "Literary and Musical Talent," Mrs. E. O. Smith.

The following named ladies and gentlemen participated in the banquet: Mrs. A. Pope and Mr. Loomis, of Santa Cruz; Mr. Goodell, of Stanislaus; Mr. and Mrs. Conard, Los Angeles *Tribune;* Miss Peck, San Francisco *Chronicle;* J. E. Baker, of the *Alta;* Mr. Dewey, of the RURAL PRESS; Henry A. Brainard, *Santa Clara Valley;* Mr. Kelley, of the *Mercury*, and S. W. DeLacy, Alfred Cridge and T. O. Smith, of the *Times;* Mesdames Buzzo, L. J. Watkins, E. O. Smith, A. J. Corey, M. Hale, J. Jones, Engalls, Hooker, K. Secord, N. A. Saunders, L. C. Feely, Beckford, T. O. Smith, Aram Walten and Potter; Mr. and Mrs. Newhall, Mr. and Mrs. A. P. Hill, Mr. and Mrs. Woodhams and Mr. and Mrs. G. W. Tarlton; Misses Walton and Watkins, of San Jose; Miss Gleeson, of New York, and Messrs. Ross, Keesling, Little, Gilmore, Corcoran, Secord, Adams, Jones and Dunn.

In the evening the pavilion was crowded to its utmost. Promenading and dancing were carried on till a late hour, many young ladies appearing in white. At 10 o'clock the band played "Home, Sweet Home," and the 14 days' season came to an end.

Miscellaneous Exhibits.

F. H. McCullough, of Los Gatos, shows Washington Navel and Mediterranean Sweet oranges, Eureka lemons, and Prœparturiens walnuts from four-year-old trees.

Mr. C. R. Seely, of San Jose, exhibits oranges and walnuts.

Mr. W. W. Montague, of Los Gatos, shows a fine cluster of oranges.

Mr. Wm. R. S. Foye, of Berryessa, sends five boxes of oranges.

Mr. A. S. McWilliams, of the Willows, shows Egg and Silver prunes.

Judge R. P. Peckham exhibits from the San Jose Woolen Mills blankets, cassimeres and ready-made clothing.

An extensive display of canned goods is made by W. H. Wright, superintendent of the San Jose Fruit Packing Company.

Mr. C. Schofield shows raisins and prunes.

Mr. F. F. Britton, of the Willows, brings prunes, walnuts and sage.

Mr. L. Bamhiser, of the Willows, has a box of English walnuts.

Mr. C. L. Holcomb, of Berryessa, shows two boxes of raisins.

Judge Logan, of Santa Cruz, sends lemons.

Mrs. H. C. Pitkin, of the Willows, enters three specimens of cactus fruit.

Mr. E. A. White, of Hester district, sends Yellow Danvers and Globe onions grown from seed selected annually for 11 years.

Mr. A. R. Woodhams, of Milliken's Corners, sends a specimen of cactus and its fruit.

A box of raisins has been received from Happy valley, Shasta county.

Mr. Geo. W. Wilson, of San Jose, brings a box of Smyrna figs.

J. W. Eastin brings a sample growth of prune tree.

Mr. R. D. Fox, nurseryman, of San Jose, makes an elegant display of potted plants.

A box of raisins is brought from the Lone Hill vineyard, Santa Clara county.

Mrs. Conklin, of Los Gatos, enters some beautiful lilies.

Hon. Cyrus Jones exhibits a box of oranges.

Mrs. W. Whittle shows the tree melon.

Mr. Thos. Gibson, of Los Gatos, has a basket of oranges and a vine of green peas.

Miss Maggie Tennant, of Eden Vale, brings a basket of flowers.

Mr. L. Parkhurst, of the Willows, exhibits excellent white winter pearmains and Newtown pippins.

Ada B. Cameron, of Laguna district, shows excellent late potatoes.

The Oakland *Times'* exhibit includes lemons grown by John Ballard, Juan Galligos and Mr. Curtner, of Warm Springs; oranges grown by Judge Garber and L. Stone; citrons, pomegranates and dried olives and persimmons by G. W. Watson and H. Delger, of Oakland.

Mr. E. W. Harrison, whose beautiful 10-acre farm is located within the San Jose city limits, shows some remarkably fine English walnuts from a 20-year-old tree which measures 4½ feet in circumference, is 24 feet in hight, has a 38-foot spread of limbs, stands in soil 16 feet deep, and has borne for 15 years, yielding 4 bushels of nuts the past season. Mr. Harrison exhibits some excellent dried prunes from his eight-acre orchard, long ears of corn and monstrous red beets.

The Management.

Too much credit cannot be given to Hon. Cyrus Jones, the president, and Capt. Frank Dunn, the secretary, who worked incessantly for several weeks previous to the opening of the fair, traveling through the county and soliciting exhibits from the fruit-growers. The other hall directors who worked very hard for the success of the fair are, Messrs. G. W. Tarleton, A. V. Woodhams, Horace G. Keesling, Mrs. N. A. Sanders and Mrs. S. T. Ingalls.

The Committee on General Decoration, who are entitled to their meed of praise for the superb arrangement of bamboos, palms, ferns and other ornamentations, are Mr. D. C. Feely, chairman, Mr. and Mrs. S. P. Sanders, Mr. and Mrs. A. Loomis, Mr. W. H. Gilmore and Mr. Joab Powell. The Special Decoration Committee were Mrs. E. O. Smith, chairman, Mrs. L. J. Watkins, Mrs. Dr. J. K. Secord, Mrs. Sarah Paddock, Mrs. A. P. Hill, Mrs. Dr. A. J. Cory, Mrs. T. O. Smith and Mrs. M. G. Buzzo. The happy disposition of fruits into sundry artistic devices greatly hightened the effect. In the work of this committee, which also had charge of the floral exhibits, the master hand of the artist is plainly seen.

Mrs. E. O. Smith, whose labors have been untiring, constituted the Committee on Literary and Musical Entertainments. Mrs. A. J. Fowler, Miss Mattie Fowler, Mrs. Henry McClay, Mrs. D. B. Fuller and Mrs. Gilbert Cain, who made the evergreen display so attractive, are deserving of special mention.

Conclusion.

The Citrus Fair has proved an unqualified success, surpassing expectation and surprising, beyond measure, the oldest inhabitant. Everybody knew that citrus fruits are successfully grown in this part of the State, but nobody surmised that so astonishing a display could be made. Truly this is a land flowing with milk and honey, a land of flowers in perennial bloom, a land where one may sit under his own vine and fig tree, a land of olives like the one of ancient story, a land where the almond tree flourishes and the grasshopper has not become a burden, a semi-tropical land of golden fruits, but little removed from the Golden City.

THE BETTER IT GETS, ETC.—Voluntary compliments from a good source, like the following, are encouraging to all connected with a journal striving faithfully to serve its constituents. Such a substantial communication stimulates all to put forth their very best efforts. It also reminds us that, all in all, we have much to encourage the RURAL from kindly manifestations coming to us in many varied but unmistakable ways of appreciaton, for which we are thoroughly grateful.—EDS. RURAL.

WATSONVILLE, Feb. 19, 1887.

Dear Sir and Brother: I am reminded by your little label that the time has again rolled around when it is in order to remit for the RURAL, which to me is always a pleasure. The oider it grows the better it gets. This time I will take advantage of your liberal seed offer, a list of which I send. Inclosed find $3.25 for same with the RURAL. Wishing you continued success, my wife and I join in tendering to Sister Dewey and yourself our kindest regards. Yours respectfully and fraternally,

A. P. ROACHE.

BEDS AND BED CLOTHING.—The covering of a bed ought to be light as well as warm. Woolen blankets are far more healthful than are heavy comforters which admit of no ventilation, but instead, absorb and retain the exhalation from the body. Beds and bed clothing should be aired frequently. Many housewives consider the airing of the sleeping-room all sufficient, but this is a mistake. Not only should mattresses be turned and aired at least three times each week, but pillows and bolsters ought to be beaten, shaken and exposed to the sun, every two or three days. If beds and their furnishings are not carefully cared for the bedding soon comes to have a stuffy, disagreeable odor, and that odor means sleepless nights, for perfect rest is gained only in a bed that is fresh and clean.

THE KING COOK BOOK.—Evidently the King of Hearts intends to make his own tarts hereafter because of the ill luck which befell the queen's baking. The first official announcement of this fact is the publication of the "King Cook Book," a collection of choice recipes contributed by ladies of Sacramento, and published by the Capital Soap Co. of that city. It has 150 pages, most of which are filled with recipes to which the initials of the contributor are affixed as a certificate that they have been tried and approved. A few advertisements are thrown in for spice. The price of the book is 50 cents.

J. N. LUND, of the Piedmont Poultry Yards, in Oakland, has not only taken high rank as a breeder of Wyandottes, Langshans, Plymouth Rocks and other popular varieties of poultry, but prides himself on his Homing Antwerps and Scotch terriers.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

W. J. FREEMAN—Sierra and Butte Cos.
A. J. HARE—El Dorado Co.

NORMAN HORSES.—Jas. A. Perry, of Riverview Stock Farm, Wilmington, Ill., has just arrived at Petaluma, Cal., with a fine lot of imported Norman horses. They arrived in fine condition after an overland trip of 14 days, and can be seen by all lovers of fine horses at the Petaluma stables. Stock-breeders, who have seen them, pronounce them the best lot ever imported into California. Mr. Perry was the first importer of Norman horses from France into California. He brought out the Duke de Chartres, Crown Prince and Rollin, three of the best-known, most celebrated and valuable Norman stallions ever brought to this coast. The numerous and splendid progeny of these three stallions have placed Sonoma county in the front rank of fine horse-producing counties. This is his sixth importation to Petaluma, and purchasers from him have always found their horses to be as represented. In fact, satisfaction was given in every case. See advertisement in this paper.

AGRICULTURAL BOOKS.

Sold by Dewey & Co., Publishers "Pacific Rural Press."

CALIFORNIA FRUIT GROWER.—A practical Handbook for the orchardist (in preparation).

CATALOGUE OF EUROPEAN VINES—With synonyms and brief descriptions, by I. Bleasdale, D. D. Invaluable to those growing the vinifera. Price, in pamphlet, 50 cents.

ORANGE GROWING IN CALIFORNIA—By T. A. Garey, of Los Angeles. The most comprehensive treatise on the growth of this fruit. It contains full instructions for growing the trees, planting and care of orchards, etc.; 227 pages. Price, 75 cents.

SILK GROWERS' MANUAL—By W. B. Ewer, A. M. A practical treatise full of useful hints for beginners in this State; 20 pages. Pamphlet, price 25 cents.

FRUIT GROWERS' CONVENTION REPORTS.—These annual conventions have resulted in bringing out the best and most useful information concerning the growth of different fruits in this State. The subjects discussed are of the most direct practical value and the facts laid down will prove helpful and suggestive to all in the fruit business. We have the reports of 1881, 1882, 1884, and 1885—the first for 10 cents, the others at 25 cents each.

THE AGRICULTURAL FEATURES OF CALIFORNIA—By Prof. Hilgard, 138 large pages, bound in stiff cloth, with colored maps, $1. This book is the best general review of California soils, climate and productions in existence.

NEW IMPORTATION

—OF—

NORMAN STALLIONS.

Theodore Skillman has just arrived from France with the choicest importation of Norman Stallions that has ever reached the Pacific Coast. Mr. Skillman has selected these horses from the best in France, with a view to the improvement of draft horses on this Coast. They are young and sure to suit the tastes of intending purchasers as regards color, etc., a number being coal-black. He has also on hand some Imported French Coach Stallions. These horses are now very popular in the East and have long been the favorite carriage horses of France. Their merits speak for themselves. Come and inspect this rare collection of horses and be convinced that they are the best ever seen on this Coast.

☞Catalogue for 1887 sent free on application.

DAIRY MACHINERY.

Woolsey's Improved Steam Generator

Has all the requirements of a first-class Efficient and Economical Boiler.

Woolsey's Improved Steam Cheese Vat.

Constructed with a View to Equalizing the Temperature in every part thereof.

Received first premium at the State Fair in 1873, and in 1881. Its chief merit consists in being separate from the heater, thereby avoiding all artificial heat in the cheese-room.

This Generator and the Improved Steam Cheese Vat, which it is designed to operate, has **superseded all others** in the vicinity of Gilroy, and has received the highest praise from cheesemakers wherever it has been tried.

S. F. Market Report

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Feb. 23, 1887.

The past week was broken by cold rains and a holiday, consequently trading in all lines was light. The eastern wheat market has fluctuated to some extent, with a weaker closing to-day. The English wheat market has ruled fairly steady, closing as follows:

LONDON, Feb. 23.—Cargoes off coast, slow; cargoes on passage and for shipment, very little demand; Mark Lane, quiet; Cal. wheat off coast, 36s 6d; Cal. wheat just shipped, 37s 9d; Cal. wheat nearly due, 36s 6d; Liverpool wheat, spot, very quiet; Liverpool wheat, Cal., 7s 4d@7s 7d.

Foreign Review.

LONDON, Feb. 21.—The *Mark Lane Express*, in its weekly review of the British grain trade, says: The deliveries of native wheat have been very small, and the London market is steadier. Prices at the leading provincial exchanges show an advance of 6d. The sales of English wheat during the past week were 49,427 quarters, at 32s 11d, against 73,557 quarters, at 29s 4d, during the corresponding week of last year. Country flour is slow of sale, but values are slightly hardened. Foreign wheats are a shade steadier. The supplies continue so large that improvement is impossible, unless in the event of war. Foreign flour is slow of sale and weak. American brands are cheaper. Corn and barley are dull. Oats are in demand. There were six arrivals of wheat cargoes. Two cargoes were withdrawn and three remain; one American red winter, one Californian and one Oregon. To-day's market was firmer. Both English and foreign wheat were 6d dearer. Flour was irregular and some sales were 6d lower. American corn was 6d cheaper. Oats were 3d lower. Linseed was firm and 3d dearer.

Eastern Wool Markets.

BOSTON, Feb. 19.—Manufacturers have not felt disposed to purchase beyond immediate wants, and trade the past week has been quiet, with no material change. Sales, 1,563,500 lbs. Holders are not over-anxious for sales, and have faith in the future. On the other hand, manufacturers hope before long to be able to purchase supplies at lower rates. Meantime the market remains inactive. The movement of woolen goods continues unsatisfactory. The orders that are being placed are unusually small. Oregon wool is in fair demand. California wool is quiet. The sales include 50,000 lbs fall at prices working up to 20c, and 30,000 lbs spring on private terms. In Western unwashed and unmerchantable fleeces there have been sales of 10,000 lbs medium at 25 to 30c; 5000 lbs medium at 30c; 30,000 lbs fine at 21c, and 4000 lbs on private terms. The receipts of the week have been 4625 bales domestic and 1529 bales foreign, against 5138 bales domestic and 2134 bales foreign for the corresponding week last year.

NEW YORK, Feb. 20.—The wool market was quiet, and, although no change in prices was quoted, the tendency seems in favor of the buyer, especially for fleeces. Foreign wool is quiet but steadily held. The sales of the week included 10,000 lbs delaine at 38@39c; 20,000 Eastern Oregon at 23@24c; 10,000 scoured do at 57@58c; 5000 scoured Colorado at 45@47c; 20,000 fine Montana at 22@24c; and 10,000 Territory at 18½@22c.

The leading feature of the Boston market has been the presence of one of the largest Chicago dealers, who has been trying to place 1,000,000 lbs of Wyoming and Montana wools, and seems determined to close out his wools, to do which he has named prices lower than corresponding wools have been and are held for here. This has affected the general market for Territory wools, which can be quoted about 1c lower than a week ago. Among sales were 165,000 lbs Territory at 18@26c.

The Philadelphia market is quiet, but the aggregate movement is fair and prices are well maintained. Among sales were 10,000 lbs scoured California at 46½c; 6000 lbs pulled California at 54c; 6000 lbs defective California at 17c; 65,000 lbs Oregon fall defective at 18c.

New York Wheat Market.

NEW YORK, Feb. 20.—Wheat, spot, has had fair inquiry the past week from both shippers and millers. Prices, though somewhat fluctuating, ruled ¼@½c higher. Futures have been active and irregular, closing heavy at bottom prices, with May off ⅞ of a cent, at 91⅞ cents, but other months down ¾@⅞ of a cent, as follows: April, 90⅛ cents; May, 91⅛; June, 92½; July, 93⅜; August, 93⅝; September, 94⅜.

Dried and Canned Fruit at the East.

NEW YORK, Feb. 20.—Raisins—Dull. Sales are reported of 1200 boxes of 2 and 3 Crown loose California at $1.25@1.50. Two Crown loose Muscatel, quoted at $1.25@1.30; London layers, $1.65; California Londons, $1.50@1.90.

Prunes—Turkish, quiet, at 6¼c; French, quiet and steady, at 8¼@8⅜c for sixties and nineties.

Citron is in limited supply and firm at 18¼@18½ cents.

Currants—Quiet, at 4¼@4½ cents.

Canned Goods—Tomatoes are very steady, and prices well maintained. Peaches are doing rather better. Canned peaches $2.25, pears $2.50@2.75, plums $2, grapes $1.50@2, apricots $2.

California Fruit in Chicago.

CHICAGO, Feb. 20.—Oranges have been somewhat steadier during the week, as there are not many more Floridas to come forward. A fair demand was noticed for California bright Riversides at $2.25@2.50, and California Navel oranges, according to quality, $3.50@6.00.

Dried Fruit—There is no regular demand for dried fruit of inferior quality. Choice bright apples, either sun-dried or evaporated, are steady. The demand at present is only moderate; still good fruit is scarce and holders are not anxious. Other kinds of fruits are very quiet. Peaches are especially steadier. It is said that California peaches are superseding domestic fruit of that kind here, as the California variety is thought to be better. In California dried fruits there was a light trade at about former prices. Prunes, French, per lb, 8½@11½c; plums, pitted, 11@13; peaches, halved, 12@14; peaches, halved, pared, 20@21; figs, 6@8; nectarines, 9; pears, 8@10; raisins, London layers, 20-lb. boxes, $1.45@1.50; loose Muscatel, $1.30@1.35.

California Products in New York.

NEW YORK, Feb. 20.—Seeds—Steady, with a fair jobbing business. California yellow mustard, 3⅜@3½ cents.

Honey—The stock is reported running very low, and a bare market is soon anticipated.

Beeswax—The stock is about exhausted here, there being little or no Southern and Western remaining. California, on the way, is held at 25c.

New York Hop Market.

NEW YORK, Feb. 20.—The market drags. Outside of moderate purchases by brewers, there is no business to speak of. Fine goods are fairly firm; medium grades steady. Pacific Coast crop, 1886, prime to choice, 22@24c; do., fair to good, 17@21c; do., crop 1885, good to choice, 8@10c.

Local Markets.

BARLEY—The market has fluctuated very little the past week, encouraging the belief that stocks are being concentrated. On Call, to-day, strong buyers took all sold and bid for more. Recorded sales were as follows:

Morning Session: Buyer season—300 tons, $1.02⅝; 500, $1.02¼; 100, $1.02⅞. Seller season—100 tons, 97¾c ₩ ctl. Afternoon Session: Buyer season—200 tons, $1.02½; 1600, $1.02¾; 100, $1.02¼. Seller season—200 tons, 97½c. Seller 1887—100 tons, 91c. Buyer 1887—100 tons, $1.05; 300, $1.05½; 100, $1.05⅝ ₩ ctl.

BUTTER—The demand is slow, barely equal to the receipts, which are again increasing. Improved pasturage, it is claimed, will increase the production still heavier. The market closed weak.

CHEESE—The market holds strong under light supplies, light receipts, and a good demand. Very little eastern is seeking this market.

EGGS—The market continues weak, notwithstanding an increased demand is reported. Several heavy consigments from the East have put in an appearance.

FLOUR—The market is quiet, with some shading in prices to close out consignments.

WHEAT—The engaged tonnage shows a slight increase. It is now thought that holders who did not wish to pay taxes have sold, and after the present week sellers will be fewer. Trading the past week was light. On Call there was fair trading in options, but at prices showing very small fluctuations, even when a decided decline at the East was reported. To-day's sales were as follows:

Morning Session: Buyer season—500 tons, $1.55; 1500, $1.55¼; 800, $1.55⅜; 2000, $1.55⅝. Buyer 1887—300 tons, $1.59; 300, $1.58⅜; 400, $1.58½; 400, $1.58¾ ₩ ctl. Afternoon Session: Buyer season—1500 tons, $1.55¾; 1100, $1.55⅝. Buyer 1887—300 tons, $1.59 ₩ ctl.

[COMMUNICATED.]

Market Information.

Bags.

There have been free sales for June-July delivery, at 6¼ to 6⅜ cents for standard Calcutta bags. At the close it is claimed that 6½@6¾ cents is asked for the same delivery. This advance restricts sales.

Cereals.

European mail advices report the statistical position of wheat very strong, although the early receipt of new wheat from Australia, Chili, and India was being used by the bears to depress prices for cargoes of Californian. It is quite certain that even with this strong lever the market will not sink to as low figures as ruled the forepart of last year. The war talk abroad is not having the effect on the market it would, were it not generally believed that much of it is inspired by stock speculators and also newspapers so as to make their papers sell. Eastern advices continue to note a lessening visible supply, with last week's returns showing a decided falling off, compared with the preceding week. The New York and Chicago markets for future delivery ruled fairly steady during the week. Crop advices from the large grain-growing States continue favorable.

On this coast, crop advices from the State of Oregon and Washington and Idaho Territories are of a most flattering character. The acreage seeded is larger than last year. The stock of old wheat is reported to be less than at this time last year. In this State the acreage seeded to wheat has been largely added to the past week, with plowing still going on in the more favored localities for late seeding. The plant of the early sown grain is reported to be looking well, although, as a rule, it is not high, yet it has strong roots and is well stooled out.

In the local wheat market there was a strong market at a slight advance on Thursday and Friday last, followed by an easier tone on Saturday, but Monday there was a steadier feeling. The bears vainly tried to break values, but failed, for apparently strong buyers took all offered, which creates the impression that there is a large short interest which may be compelled, later on, to fill at higher prices. The war talk has caused an advance in grain insurance on shipments to Europe, but then this is only a small item and will not react against wheat values.

Barley has ruled fairly steady throughout the week. The consumption is very large, with the probabilities that it will be increased very considerably by April next, when railroading is more generally commenced in this State. The stock in this State, it is now claimed, is very considerably below what the bears on Call claim. Crop advices continue favorable, with the outlook for a large yield to the acre quite good.

Under heavy importations from the West, and free receipts from the Northern coast, oats are weak with sellers shading prices on all grades not strictly choice.

Corn is in heavy stock, with free shipments on the way from Kansas and Nebraska. The market is heavy and in buyers' favor.

Rye and buckwheat are quiet but steady.

Feedstuffs.

Dealers continue, by private circulars and otherwise, to depress hay, but are not successful in their efforts except for the poorer grades. Choice hay continues to command $13 to $14 per ton, with now and then a sale of something extra reported still higher. The crop this year, it is conceded, will not be much if any over one-half of last year's, as very few fields of grain will be cut for hay.

Ground feed is generally weak, owing to a lessened demand.

Fruits.

Oranges arrive freely, but find a ready market at steady prices. Shipments up north continue free.

Lemons and limes are steadier, but as yet the demand is only fair.

Apples are in light supply, consequently they command higher prices. With warmer weather, later on, receipts from the East will, it is thought, be quite liberal.

Choice, well-packed raisins, in attractive boxes, find ready sales, but other grades are slow even at concessions. Eastern advices report the stock of poor raisins largely in excess of trade requirements.

For dried fruits there is a good demand, but so far as can be ascertained, values are unchanged.

Live-Stock.

Beef cattle are steady, with a lighter demand reported. Mutton sheep are barely steady at the advance. Spring lambs are in good demand. Hogs are very firm with offerings lighter. In horses there is nothing new to report; the demand is slow, with prices favoring buyers. Milch cows are in fair inquiry.

The following are the wholesale rates of slaughterers to butchers:

BEEF—Extra, 7@7½c; first grade, grass fed, 6½@7c per lb.; second grade, 5½@6c; third grade, 5@—c.

MUTTON—Ewes, 5½@6c; wethers, 6@6½c.

LAMB—Spring, 12½@15c. Yearlings, 7@8c.

VEAL—Large, 7@8c; small, 9½ to 10c.

PORK—Live hogs, 3¼ to 3¾c for heavy and medium; hard dressed, 5½ to 7c per lb; light, 3 to 3¼c; dressed, 5 to 6c; soft hogs, live, 2 to 2¾c. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Vegetables.

Potatoes show another advance under continued light receipts and a good demand. Some Burbank seedlings from Oregon sold as high as 2½ cents per pound on the wharf. New potatoes come in sparingly, and sell high.

Onions are strong at a slight advance for the more choice grades. Cut onions, if sound, sell well.

Root vegetables are without essential change.

Cabbages are in good demand at full prices for filling distant orders.

Cauliflowers are firm, with a good demand ruling.

Early vegetables from the southern counties come in sparingly, and consequently fetch fancy prices.

Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1887.	1886.
On the way	200,209	145,697
In port, disengaged	119,453	69,263
In port, engaged	17,311	65,544
Totals	336,973	280,504

The above gives a carrying capacity as follows: 1887, 539,156 short tons; 1886, 448,806 short tons; increase over last year, 90,350.

Several wheat vessels were taken the past week. Charters are weaker.

Hops are firmer, with more trading reported, but at no higher prices.

Turkeys are weak, but other poultry is firm at full prices.

In wool there is no business. Eastern advices report a slow market.

Tallow is weak at a slight decline.

Honey continues to hold to strong prices.

Beeswax is unchanged.

Nuts are steady.

Mustard seed is dull, as are grass-seeds. The demand for the latter is controlled by the weather.

Hams are stronger, with some sales reported at an advance on our quotations.

Beans are very strong and in quick demand at the advanced quotations.

Fruits and Vegetables.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

A Treatise on the Horse and his Diseases

By B. J. KENDALL, M. D.

35 Fine Engravings showing the positions and actions of sick horses Gives the cause, symptoms and best treatment of diseases. Has a table giving the doses, effects and antidotes of all the principal medicines used for the horse, and a few pages on the action and uses of medicines. Rules for telling the age of a horse, with a fine engraving showing the appearance of the teeth at each year. It is printed on fine paper and has nearly 100 pages, 7½x5 inches. Price, only 25 cents, or five for $1, on receipt of which we will send by mail to any address. DEWEY & CO.,
252 Market St., S. F.

SHERWOOD'S NEW NOVELTY STEEL HARNESS.

Sherwood's Novelty Harness as Used in Plowing.

OVER 10,000 SETS SOLD WITHIN THE LAST YEAR.

PRICE, - $17.50

Collars.....$3.50
Lines..... 2.25
Bridle..... 3.25
Extra.

Reasons Why Sherwood's Steel Harness is the Best and Should and will be Universally Used:

1. It is a common sense Harness. 2. It is made of material that will last a lifetime. 3. In plowing, dragging, logging and scraping there are no whiffletrees. 4. In all farm work you can change from plow to wagon quick. 5. In plowing in the orchard, you can't bark fruit trees. 6. In plowing and cultivating hops it has no equal. 7. In plowing along the fences you can get two furrows closer. 8. Horses cannot step over the traces or calk themselves. 9. A small boy will handle plow readily. 10. There is no weight on plow beam. 11. Team works one-third easier. 12. There is no chafing, crowding or fretting of team. 13. For man and team it has no equal. Do not hesitate, but order at once from your nearest agent.

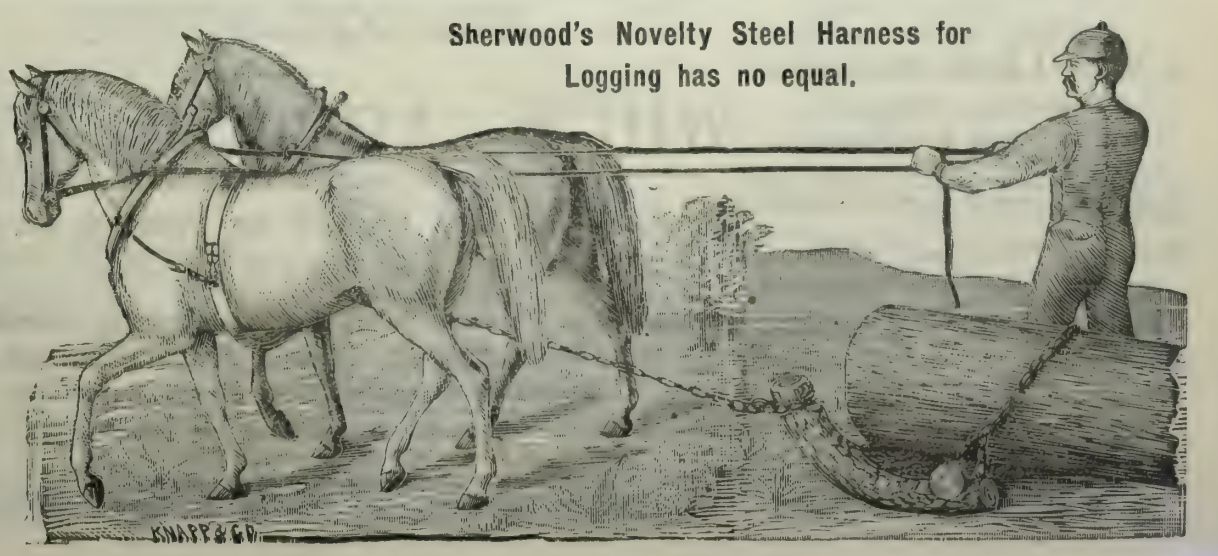
THIS HARNESS is just the thing for PLOWING.
FOR LOGGING it has no equal.
For the SCRAPER it is so handy—no Tugs or Whiffletrees to bother team or driver.
Sherwood's Novelty Steel Harness as a WAGON HARNESS is the "DANDY."

WE ARE RECEIVING TESTIMONIALS EVERY DAY FROM THE LARGEST FARMERS IN THE STATE.

TESTIMONIALS.

CLAYTON, CAL., January 8, 1887.

MESSRS. TRUMAN, ISHAM & HOOKER, San Francisco—GENTLEMEN: I deem it but just and proper to report upon a trial of the Bilz Vineyard Plow I bought of you, and would say it is a splendid implement and the best I ever used. I want to return the patent evener and doubletrees, however, mainly because I have no use for them, as I find the Novelty Steel Harness a hoss and no mistake. When I got it home my foreman attempted to give it a cold shake (a thing so common with hired men), but to all that I paid no attention and ordered it put on and thoroughly tested. After two days trial this doubter became enthusiastic over the "humbug," as he termed it, and now says he thinks "you can't most always sometimes tell until after you find out." The Novelty Steel Harness is the thing for plowing sure and of course is very good for other farm work. I will do anything I can to recommend these goods for you. Yours, very truly, R. C. TERRY.



CHICO, CAL., November 27, 1886.

MESSRS. TRUMAN, ISHAM & HOOKER, San Francisco—GENTLEMEN: Yours of the 18th inst. duly received; also the Steel Harness. Permit me to say in reply, that I have used the same kind of harness for two years, that I have already six sets, using them only in orchards and vineyard. My foreman in the fruit department is much pleased with them.

Very respectfully, yours, JOHN BIDWELL.

TRUMAN, ISHAM & HOOKER,
421--427 Market Street, San Francisco, Cal.

Sherwood's Novelty Steel Harness for Logging has no equal.

33d YEAR. # STOCKTON NURSERY. 33d YEAR.

WHITE ADRIATIC,
SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Præparturiens, Macrocarpa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobolan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

TRY THE PERSIAN MULBERRY.

NO SCALE.—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.
STOCKTON, CAL., October 27, 1886.

This is to certify that we the undersigned have this day thoroughly inspected the Stockton Nursery; that we found no Scale or indication of Scale, and that to the best of our knowledge and belief the Stockton Nursery is free of this dreaded pest.

ARCTIC OIL WORKS,

Manufacturers of

INSECTICIDE!

FOR ERADICATING AND DESTROYING ALL PESTS THAT INFEST FRUIT TREES AND PLANTS, SUCH AS

SCALE BUG, HARVEST FLIES, TREE HOPPERS, PLANT LICE, Etc.

It has been fully tested by the Agricultural Department of the State University, and pronounced a success, the endorsement of which we append. It is put up in convenient forms for use both in liquid and paste state.

For Sale in Barrels and 2 and 5-pound Cans in paste form, and in Barrels and 5-gallon Cans in liquid form.

Copy of Letter Received from the University of California, College of Agriculture, Berkeley, dated December 4, 1886.

J. N. KNOWLES, Esq., Manager Arctic Oil Works, San Francisco—DEAR SIR: We have lately tested the Insecticide preparation of Whale-Oil Soap sent by you to us, and have found it to be very effectual against the Scale infesting Orange and Bay Trees here; also against the Thrips. From our previous experience with a similar composition, I think it will be found fully effectual against any small Insect Pests not specially protected like some of the armored Scales, and against which any Wash short of strong lye cannot be used. Respectfully,

E. W. HILGARD, Professor of State University.

OFFICE, 28 California St., San Francisco, Cal.

B. V. CUTTINGS.

Bordeaux Varieties.

I OFFER FOR SALE, AT $10 PER M., 200,000 CUTTINGS of the following renowned varieties, tule-packed, F. O. B. at depot: Cabernet Sauvignon, Cabernet-Franc, Merlot, Verdot, Malbec, Tinturier, Portal-Ploussard, Mondense, Petite Sirrah and Grosse Blue. Also from $2.50 to $5.00 per M. all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price. Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

GREGORY'S ALL SEASONS CABBAGE AND CATALOGUE

My vegetable and flower seed catalogue will be sent *free* to all who write for it. It is full of fine engravings, with over forty of the best of all the new vegetables. It contains among its vast variety a larger number of home grown seeds, I have reason to believe, than can be found in any other catalogue published in this country. Farmers who make money from valuable new vegetables are those who, being the first to raise them, get a monopoly of their markets. Such will plant largely of this king of all the early drumheads, the All-Seasons Cabbage; for, my friends, *it has come to stay!* JAMES J. H. GREGORY, Marblehead, Mass.

Over 6,000,000 PEOPLE USE

FERRY'S SEEDS

Their Seeds are *popular* because they are *good.*

D. M. FERRY & CO. are admitted to be the LARGEST SEEDSMEN *in the world.*

D. M. FERRY & CO'S Illustrated, Descriptive & Priced SEED ANNUAL For 1887 will be mailed FREE to all applicants, and to last season's customers without ordering it. *Invaluable* to all. *Every person using Garden, Field or Flower* SEEDS *should send for it.* Address

NURSERYMEN AND SEEDSMEN, SACRAMENTO, CAL.

PRICES GREATLY REDUCED FOR SEASON OF 1887.

Adriance, Platt & Co.'s "BUCKEYE" MOWERS, the only Genuine "BUCKEYES."

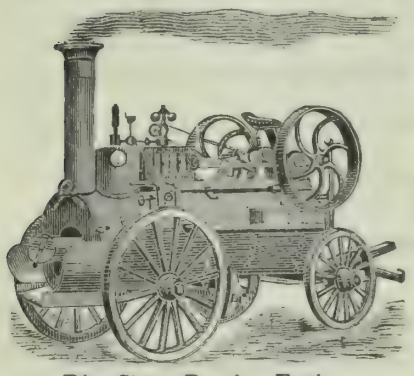
Adriance "Buckeye" Mower at Work.

The preference which has been shown for the harvesting machinery of ADRIANCE, PLATT & CO. by so many thousands of farmers in all parts of the world has nowhere been more decided than on the PACIFIC COAST, where their "Buckeye" Mowers and Reapers have so many years been recognized as STANDARDS OF EXCELLENCE IN PRINCIPLE, MECHANISM AND WORKMANSHIP.

The above firm has been manufacturing the original "BUCKEYE" machines for more than 30 years, during which time we have been their agents in California, and there have been in the meantime about 24,000 of their machines sold here, all having given the best of satisfaction. We could cite no better evidence of their superiority and popularity than the above statement. Don't experiment by buying unknown and inferior machines.

THE TAYLOR SULKY RAKE.

THIS MONARCH OF BOTH

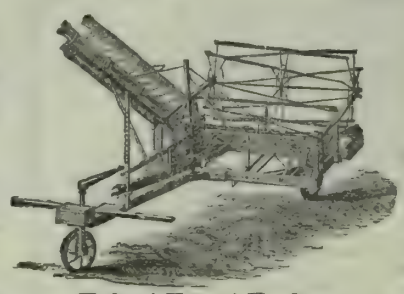


HAND AND SELF-DUMPING Rakes

Has been much improved, and is the best Rake in the market, working directly upon the axle by means of a simple clutch in the wheel, does away with that breaking and wearing out of small pawls and ratchets, and winding up of grass in cogs and other gear on outside of hub. Anybody who can drive a horse can operate it successfully.

BUY THE "TAYLOR."

Rice Straw-Burning Engine.



Rice Straw-Burning Engine.

THIS IS THE ONLY ENGINE WHICH HAS EVER BEEN THOROUGHLY SUCCESSFUL IN USING STRAW FOR FUEL.

The Rice Engine is the only reliable Straw-Burner manufactured. For perfect work and durability they have no equal. No engines made can compete with them. We have spared no expense to make them what they are—

The Only Reliable Straw-Burners in the World!

We do not cheapen them in their construction and thereby imperil human life, which has been so freely destroyed by boiler explosions in this State.

Hodges' Haines' Headers.

HODGES' HAINES' HEADERS

ARE the ONLY GENUINE HAINES' HEADERS

They are the best improved and most practicable Headers in the market. Many important improvements have been added, which must be examined that their great value may be appreciated.

All of our Hodges' Single-Gear Headers have Self-Adjustable Reels, Patent Beveled Finger Bars, Extra High Patent Iron Wheels, Center Pitmans, Patent Tongue Irons, Improved Belt Tighteners, Balance Springs on Levers, Loose Gear Spur Wheels, Wood Frame Steering Post, and Grooved Steering Wheels. The above-named improvements can be obtained only on Headers made by A. J. HODGES & CO., and sold only by us. We ask you to compare them with other kinds in the market before purchasing.

DO NOT FAIL TO SEE THEM BEFORE YOU BUY.

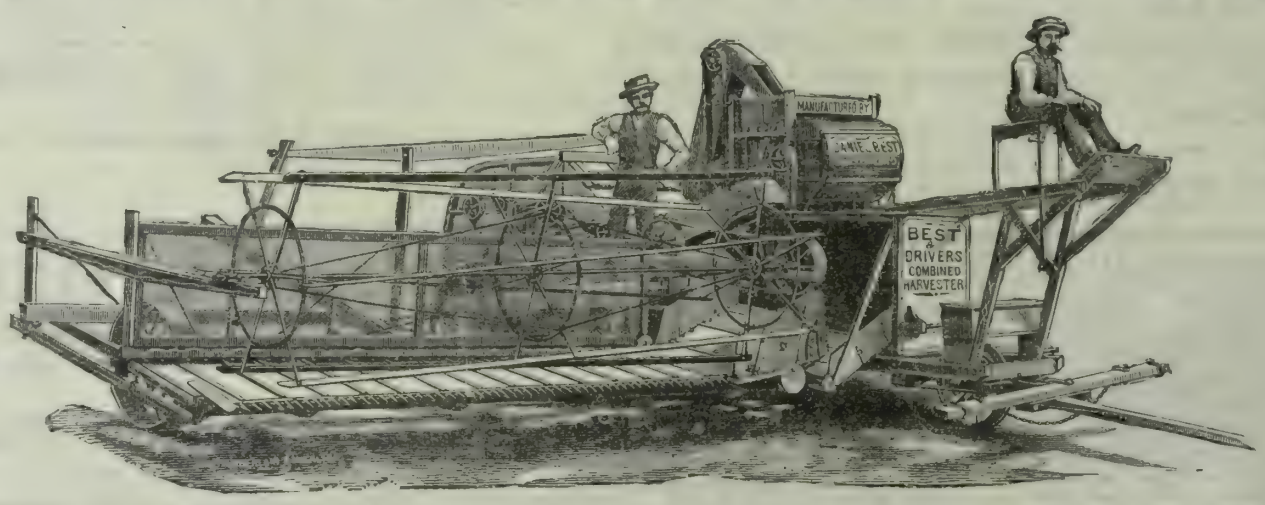
Send for our New Catalogue for 1887.

HAWLEY BROTHERS HARDWARE CO.

San Francisco, Cal.

BEST & DRIVER'S IMPROVED COMBINED HARVESTER for 1887

Manufactured at the



DANIEL BEST AGRICULTURAL WORKS, San Leandro, Cal.

STANDARD SIZE

—IS—

14 Feet.

Will make any size that is ordered.

Belt

—AND—

Geared.

The BEST & DRIVER IMPROVED Combined Harvester, without doubt, will be the Leading Machine this season, is the verdict of all those who have inspected it.

IT H S VALUABLE IMPROVEMENTS THAT ARE NOT FOUND IN ANY OTHER COMBINED HARVESTER MANUFACTURED. SPACE WILL NOT ALLOW US TO ENUMERATE HERE; AN INSPECTION OF THE MACHINE WILL CONVINCE YOU.

The Gearing is composed mostly of Spur Wheels, and so compactly arranged that should the frame of the machine weave because of the unevenness of the ground, there would be no danger of the gearing getting out of line, causing it to cut or bind in the boxes, which occurs with other Harvesters in which the gearing is more scattered.

We have succeeded in getting that combination of Lightness, Adaptability and Strength which is the result of thought and skill, taking from some parts and adding to others, making our Harvester from four to six horses lighter draft, and yet retaining as great strength as the heavest machine manufactured. The Header is very rigid and so balanced and hinged that it is no trouble to save down and tangled grain. A boy ten years of age can manage it.

I wish to call your attention particularly to the separating qualities of my Harvester. The agitators are so arranged that the grain is completely shaken from the straw, and my new AUTOMATIC GOVERNOR on the fan completely governs the blast on the shoe, so that at any speed which the machine travels, the blast will be the same. Making a saving of a great amount of grain that would otherwise be blown over the riddles; but, instead, will go into the sack, which in a season will more than pay the harvestin expenses, over and above any **Combined Harvester** that has not the **Automatic Governor.**

Each **Harvester** has one of my celebrated **Grain Cleaners** ttached, which needs no recommendation from me, as the grain growers of California can testify as to its merits and superiority over other Cleaners on the Coast.

Every machine is thoroughly tested before it is allowed to leave the factory, so there will be no trouble or vexatious delays in the field. The Lumber is thoroughly kiln dried that we use in the construction of our Harvesters, so that they will not fall to pieces under a hot sun.

Write for Circulars. For further information, prices, etc., address

Please call at my Works, near the Depot, San Leandro, and examine our Harvester. I have sample machine belted and attached to the power of the factory, and will take pleasure in showing how it works, so that you can become familiar with the working of the machine before taking it into the field.

IMPROVED GRAIN CLEANERS, and MILLS.

I desire to call your attention to my latest Improved Cleaners that I make for any and all Combined Harvesters. The great success I have had with my Cleaners, made to run with Thrashing Machines, as well as the satisfaction given by my Fanning Mill and Warehouse Mill, induced me to design and build a Cleaner, especially for the Combined Harvesters. I make the following sizes, viz:

45-inch for 18-foot cut and over.
40-inch for 14 to 18-foot cut.

This Cleaner is the most successful Combined Harvester Cleaner ever offered to the public, and I can guarantee it to be the most perfect Cleaner now in use. I have made a great many valuable improvements that have never yet been introduced, the merits of which will be quickly understood and highly appreciated by those who have use for the Cleaner. It is made strong and durable, and of such size and capacity that it will easily handle and thoroughly cl an the grain as fast as any Combined Harvester will thrash it, and it has proven to be the only Cleaner mounted on Harvesters, that will thoroughly clean foul grain, and make it merchantable.

DANIEL BEST, San Leandro, Alameda Co., Cal.

PACIFIC RURAL PRESS

TWENTY-FOUR PAGE EDITION.

Vol. XXXIII.—No. 10.] SAN FRANCISCO, SATURDAY, MARCH 5, 1887. [$3 a Year, in Advance; Single Copies, 10 Cts.

The Abolition of Tolls.

All persons doing business across the wharves of San Francisco are interested in the bill before the Legislature, abolishing the collection of tolls on wharves belonging to the State. The bill was drafted by the Joint Committee of the San Francisco Chamber of Commerce and Produce Exchange. Wharfage we understand to be a charge on goods for being landed or loaded from a wharf; dockage is a charge against vessels for landing at a wharf or for other accommodations in harbor; tolls is a charge on goods, in transitu between the city and the other towns and cities of the State, that pass over the wharf. It is the last charge this bill contemplates abolishing.

The Harbor Commissioners in their last report say:

The present board, with the law as it found it on coming into office, has been compelled to collect the revenue from merchandise by the system of tolls and toll collectors, or leave it uncollected. But it does not hesitate to characterize the system as a most objectionable one. That it should be condemned on account of the expense that is inseparable from it, does not admit of question. But the expense of this mode of collecting revenue is not the only objection to which it is obnoxious. If collectors should be disposed to act dishonestly, no effective checks can be employed to prevent their embezzling the public funds; nor, if they should be guilty of peculations, would it be easy to detect them. And even if we could secure satisfactory guarantees that all collectors would be scrupulously honest in the discharge of their official duties, still they would be liable to make grave mistakes, through want of judgment in estimating quantities, whether by weight or measure, which would cause the law for the collection of revenue to operate unequally and consequently unjustly.

The commissioners have undoubtedly here put their finger on the real cause why this burden has not been removed. The water front of this city is a favorite asylum for superannuated political hacks and fuglemen, and the chance for stealing is more than their virtue can resist. We speak according to books, as the following statement taken from the commisioners' report two years ago will show:

Collected by tolls	$343,108 72
Deduct amount paid by R. R. Co.	79,070 70
Amount collected by collectors	$264,038 02
The amount of salary paid collectors	$70,996 24

This shows the cost of collecting the tolls by collectors was 26.8 per cent of the amount collected.

About 30 men are employed in this service. Surely, to state the matter as mildly as possible, no system could be more wasteful than this. Besides this extraordinary wastefulness, the imposition of these tolls is most vexatious, because it is felt by every one who crosses the water front of this city. And then, what a pitiful spectacle, for a great State to place an army of agents on its wharves collecting five-cent pieces from all who are engaged in handling the commerce of this port. When a ship pays dockage and the merchant to whom a cargo is assigned pays wharfage, there the harbor taxation should cease. The temper of this Legislature does not encourage any hope of the abolition of this system of tolls, but the matter should be kept before the people till sufficient public sentiment is made to compel our legislators to perform their civic duties.

A Horticultural Association has been organized at Anderson to encourage the growth of fruits and vines and invite immigration.

Orange Monument.

Our engraving shows one of the decorations at the San Jose Fair, which combined use and beauty in a charming manner. It is an orange monument of surpassing beauty which stood in the southeast corner of the building during the fair. It consisted of a framework 10 feet high, entirely covered with branches having oranges upon them. This charming exhibit was made by Mr. Geo. E. Pinder, of Los Gatos. The monument contained over 1900 oranges, and was surmounted by a bearing lime tree from the nursery of N. E. Beckwith, at Los Gatos. This was, however, removed before our sketch was prepared. Mr. and Mrs. T. O. Smith, G. W. Tarleton, Mrs. M. G. Buzzo and Mrs. A. Loomis were the builders.

ORANGE MONUMENT—EXHIBIT OF G. E. PINDER AT SAN JOSE FAIR.

State Horticultural Society.—There was an interesting meeting on Friday, February 26th, with papers on the prune and the cork oak, which we will give in our next issue.

The Southern Citrus Fair.—It seems that the proposed citrus fair at Riverside (for which a date was first set Feb. 22d and then March 8th) has been finally abandoned. The ostensible reason is that the lack of interest on part of some growers did not warrant the committee in proceeding with the venture. It is now announced that Colton will take up the enterprise which Riverside abandoned and endeavor to carry it to a creditable issue. We trust it may succeed and that it will be carried forward with the aid and co-operation of all adjacent regions. Colton has become a point of great importance, and its growth has been very satisfactory. With the help of its thriving and progressive neighbors, it has the material to make a notable exhibition which will be of value to the rich region round about.

Citrus Fruit Culture.

Possibly some readers may get an idea, from the large space we have given to the citrus fairs held at Sacramento and San Jose, that we are advocating citrus fruit-growing as a fit industry for the vast area of country tributary to these centers. Nothing could be farther from our intention. First of all the fairs have shown that most excellent specimens of citrus fruits can be grown in certain localities within the districts named, but to conclude that therefore these fruits can be grown successfully everywhere, is as great a mistake as to claim that any other class of fruits can be successfully grown everywhere over a large extent of our country. California has a great variety of adaptations, but success depends upon getting the right thing in the right place, and this should always be borne in mind when talking of the growth of citrus fruits, as well as of all agricultural crops.

We understand the reason why so great prominence has been given to the showing of citrus fruits at our winter fairs in the upper part of the State, has not been with an idea of advocating their growth generally as a business enterprise, although there is reason to place it upon that basis in certain localities. Citrus fruits have come to be considered the world over as exponents of mild winter climates; they have been accepted, as it were, as the measure of winter mildness; as more expressive to the common mind than the records of the thermometer. The upper part of the State placed its claim to genial winters upon the accepted ground and has demonstrated by its show of semi-tropical productions that it is not as cold as some have been inclined to think. One of the most important local results has been the awakening of our people to the possibilities of their own districts. People know better now what excellent things their own neighbors are doing, and the consequence has been an increased loyalty to California at home, and a far better understanding of her resources abroad. The conclusion from this demonstration is not that Central California should be covered with citrus fruit trees. No one who knows the facts would claim that they would all succeed; nor would it be a good business enterprise to plant them, even if the trees would all do well. There are other growths which are profitable and to which certain parts of the country are better adapted. The lessons of the citrus fairs are not that these should be neglected. The fairs have not changed in the slightest the general proposition which is true in California, that growths should be selected according to the special adaptations of the localities in soil, exposure, water supply, etc. There are also matters of cost of transportation and other factors of success in any enterprise which must always be considered.

We suppose our friends generally understand that we have no interest or disposition to serve narrow sectional ends in the showing which we make of successes in any branch of agriculture. We are for the whole State—for the very best which any part can do, whatever it may be. If at one time the deeds of one section seem prominent, it is because events transpiring there are, at the moment, such as to claim especial attention from the journalist, and that at another time the center of interest will change to other regions where the local outcroppings of progress seem more marked.

ARBORICULTURE.

The English Walnut in Central and Northern California and Oregon.

EDITORS PRESS:—Many have been the inquiries received by me about the English walnut and its chances of success in Central and Northern California and Oregon; but as there seems to be no end to such inquiries, and walnut culture may be regarded as a question of paramount interest to a large portion of our people, you will allow me to discuss it once more in your columns.

Here are some samples of the questions put to me regarding the English walnut:

Will it do well 10 miles from the sea, and at 200 feet elevation (Santa Barbara)? Will it grow without irrigation where prunes and olives do? Will the walnut do well in rocky soil? At what age does it go into bearing? Is it preferable to plant one-year-old trees than older ones? Would you advise the planting of walnuts where the mercury goes down to 10 degrees above zero? Why does not the English walnut bear in our State (Oregon)? Will the walnut bear 75 miles inland as well as nearer to the sea? Does the walnut require rich ground to bear well? What is the soil best adapted to the walnut? Will it stand the heat of our valleys? Will it stand the cold of our mountains? What is the reason that 20 and 30-year-old walnuts do not bear? What is the profit in growing walnuts? What varieties would you recommend? Is it safe to remove large trees? Can the English walnut be grafted on the black walnut? What is the commercial value of the Præparturiens? Is the walnut free of insect pests? and a hundred other such questions.

I will try to condense my remarks in such a form as to answer those questions as clearly as possible.

The whole trouble about the English walnut in California, Oregon—in fact, all over the Pacific Coast north of Tulare—and the asking of so many questions on its hardiness, productiveness and the like, is due mainly to the wretched kind known on this coast under the name of "Los Angeles walnut" or "California common English walnut," and, unfortunately, the only kind propagated on the Pacific Coast for a great many years, and whose propagating should be altogether abandoned by nurserymen. No matter how well that kind might do in the southern end of the State—and it is an open question whether other kinds wouldn't do better—it is a fact that in Central and Northern California and Oregon it does badly; and why? Because it is a kind more adapted to a warm climate, exempt from late frosts in the spring and early frosts in the fall; and it is a fact that this Los Angeles variety is too early in budding out and too late in forming the terminal bud—that is, in maturing its wood. In other words, it is a too delicate kind for four-fifths of the whole area of this State, Oregon and the territory north and east of us, where only "hardy" kinds should be planted. But worse still—and I do not know to what to attribute that serious defect—north of Tulare the Los Angeles walnut is rendered completely barren by imperfect blooming, the staminate blossoms or catkins being out while the pistillate or female blossoms, or nuts, are yet in a dormant state, and the catkins being all gone and dropped when the nuts are out, the latter, not being fertilized, drop off in their turn, after having reached the size of a large pea.

As spring is getting close at hand, I would like every one having such large, barren walnut trees to watch closely their trees at blooming time, and see for themselves how correct I am in my explanation of the trouble with that kind of walnut and its barrenness. I have ascertained that this Los Angeles walnut blooms imperfectly in many counties of Central and Northern California and Oregon. Here in this county, Mr. E. M. Preston, president of the Citizens' bank, had a 30-year-old walnut cut down a year or two ago on account of its being barren; so did Mr. I. Ott, who cut down two 20 year-old trees that never bore any nuts. Another 30-year-old Los Angeles walnut on Mr. Ben Locklin's place has never borne but a few nuts. Dr. R. M. Hunt had three such large barren walnuts in his fine grounds, but after witnessing the wonderful transformation of Mr. Charonnat's trees at Canada Hill, near this town, he had his trees grafted into the California Late Præparturiens, and they stand now completely transformed from a barren to a most prolific kind. Messrs. Geo. E. Turner, K. Casper and others from this place are having barren English walnuts and black walnuts grafted also into Præparturiens. In Haywards, before his starting to New Orleans, Mr. Jessup, I was told, had a fine avenue of such barren trees cut down. Mr. W. B. West, of Stockton, speaking of the hardy French kinds, said: "I have never lost an inch of wood from any frost that occurred since they were planted, while the Los Angeles trees, near them, have been cut to the ground many times." Mr. C. M. Silva, of Newcastle, Placer county, complained to me several years ago of having such unproductive trees upon his place.

While at San Jose several years ago, I saw at Mr. D. C. Vestal's, near that place, two magnificent Chili walnut trees from which Mr. Vestal was having bushels of a very pretty soft-shell nut. Near by was one of those Los Angeles walnuts, and Mr. Vestal made the remark that that tree frequently had its wood cut back by frost both in the spring and fall; not so his two great "Chilians," which were never injured by frost and always matured their wood well. Now, had Mr. Vestal had only that Los Angeles walnut on his place, he might have come to the conclusion that the climate and soil of the Santa Clara valley were not adapted to the walnut; while it was, on the contrary, that *kind* of walnut that was not adapted to the climate of that beautiful portion of our State, the Santa Clara valley.

The same defect in that "Los Angeles" kind is reported more or less from all parts of the State, at least north of Tulare, also from Oregon; and people, not knowing to what to attribute the unproductiveness of this kind of walnut, which, until 8 or 10 years ago had been absolutely the only one of that family propagated throughout these two States, had come to the conclusion that the climate of Central and Northern California was not adapted to the English walnut, and that that of Oregon was too "wet" for the well-bearing of that tree. And now I rise and say it is not so! No part of California is better adapted to walnut culture than that immense stretch of territory from the San Joaquin valley and Santa Cruz's fair shores to the northern end of the State, way up to old Shasta, *provided* the *right* kinds are planted—that is, those "hardy French kinds," as Mr. West calls those fine and fertile varieties introduced from France into this State those late years.

Mr. Charonnat's Walnuts.

But to show the readers of the PRESS who reside in Central and Northern California and Oregon how well adapted to walnut culture is that immense belt of territory, I will give them the history of Mr. L. Charonnat's big trees, which stand on the side of a hill, of a rocky, red clay and granite formation, up in the snow belt of the Sierras, at 2800 feet altitude, which trees bore such a tremendous crop, proportionally to their size, the very year (1886) that the walnut crop of Southern California was a partial failure.

In the spring of 1860 Mr. Charonnat sent to Sacramento for an English walnut and pecan; the trees when planted were four years old. The pecan turned out to be a California black walnut, and, in 1872, Mr. Charonnat grafted a limb (one-half of the tree) into the English or Los Angeles walnut, taking the graft from his other tree, in the expectation that the catkins of the black walnut, later in blooming out, would fertilize the nuts of the Los Angeles walnut, whose catkins, Mr. Charonnat had already remarked, always came out and dropped fully two weeks before the nuts or female blossoms were out. This plan did not work, the Los Angeles kind being so early in blooming out, and the black walnut so late, that the catkins of the black walnut and the nuts of the Los Angeles walnut never were out at the same time, and the transformed half of the black walnut remained as barren as the mother tree, the black walnut half of the tree keeping on to bear good crops.

The other tree, the Los Angeles walnut, up to 1880, after having reached the ripe old age of 24 years, had borne during all that time but 17 nuts, 11 of them on one favorable year. Some years, says Mr. Charonnat, that tree was cut back successively three times in the spring. It was about that time that I proposed to Mr. Charonnat to graft his two trees into my California late Præparturiens, a very hardy and prolific kind. The Los Angeles walnut top was cut back down to 12 feet from the ground, also the other limb or half of the black walnut, letting stand that half of the tree grafted into the Los Angeles walnut, just for an experiment; and both trees were *annular-budded* in the fall of 1880, four buds succeeding on the Los Angeles walnut, and two on the black walnut. In 1884, the first time that the new tops commenced to bear, the Los Angeles walnut (then completely transformed into a Præparturiens) yielded 637 nuts; twice as many in 1885; and 6300 in 1886, the long limbs bending down under the heavy burden of the nuts. In the fall of that year, that tree measured 66 inches round, near the ground; 57 inches, six feet from the ground. It was 35 feet in hight and had a top 30 feet in width, showing already bunches of two, three, four, and even six nuts. The top as it now stands looks very small in proportion to the trunk, and will probably be fully developed in two or three years.

The Præparturiens part of the black walnut was relatively as much loaded; but the most singular was that for the first time the Los Angeles part of the tree bore, and bore pretty well, the nuts having been duly fertilized by the catkins of the Præparturiens. Thus was the problem, in the eyes of Mr. Charonnat, fully solved; and the fact well demonstrated that the barrenness of the Los Angeles walnut was due to its defect in blooming and its earliness in budding out. The nuts borne on the Los Angeles side of that black walnut were large with a rather hard shell, but a fine and sweet kernel. I honestly believe that mountain nuts of all sorts have sweeter and richer flavor, and are more full than valley nuts. That black walnut, with the top half Los Angeles and half Præparturiens, measures six feet and six inches in circumference near the ground. The most curious fact about it, though, is this: At the time the Los Angeles side of the tree is fully out in the leaves, with catkins also in full bloom, the Præparturiens side looks dead, hardly starting out yet. It shows, too, how much reliance can be put in the sayings and writings of theorists: "Never graft *early growing* kinds on those of later vegetation," they say. And now look at the Los Angeles half of that black walnut, the most early growing kind grafted on the very latest growing one, and growing so splendidly. A good many things read one way in books and turn out another way in practice. So is it the case with the various modes of grafting the walnut as we see them in the works of well-known authors.

The history of these two trees of Mr. Charonnat is the best answer that I can give to many of the questions put to me in regard to the practicability of grafting the English walnut on the black walnut, the best kinds of walnut to grow, the adaptability of the soil and climate of Northern California to nut-growing. It is also an answer as to the profits to be derived from walnut culture, that tree of Mr. Charonnat, completely transformed into a Præparturiens, having yielded 160 pounds of nuts last year, which at the present market price would bring $30, a pretty good income for a tree with such a small top yet; and it was a remarkable fact that those two trees bore so heavily the very year that the walnut crop of Southern California proved to be a partial failure.

Grafting over Walnuts.

I have, in former numbers of the PRESS, described the manner of transforming large trees into other kinds through grafting. In that way can all those large, barren trees or inferior kinds of walnuts, be grafted, into prolific, hardy and superior kinds. As the top of the trees, to make them grow shoots to be annular budded in the fall, has to be cut back in the spring, it is well at the same time to try cleft grafting, but it should be done in this way, as more apt to succeed: The cleft instead of running through the center of the stock or limb to be grafted, should be made to run sideways in the sap like the chord of a segment, and the grafts should be made of small twigs as little pithy as possible, cut wedge-like, but less on one face than on the other, so as to have the pith exposed only on one face.

Budding.

As to annular-budding, it is an easy enough operation, but it should be done on shoots of the year's growth and at least of the size of the middle finger; on smaller shoots it is very liable to fail. Such budding should also be made right at the base of those shoots and where the wood is perfectly round. Shield-budding is rather hard to succeed with, but when tried be careful always to have the shield of bark taken from the scion fully two inches in length and very broad. Such shield-budding is more like plate-budding, so large is the shield of bark that it reaches more than half-way round the stock.

Here, by the way, I will describe a little improvement of my own in budding the walnut, either through the annular or shield method. Walnut budding to take well, I have found out, must be made in such a way as to have that part of the ring or shield of bark right under the eye, proper to spread out tight over the exposed wood of the stock. For this purpose the bandage has to be run close to the eye, right under and above it, letting it stick out, of course. But the base of the leaf stem is sometimes so large, and at any rate so much in the way, as to prevent the tightening up of the bandage sufficiently to make that portion of the bark right under the eye spread out tight over the wood of the stock, a condition *sine qua non* of success; for whenever a little hollow remains right under the eye proper the operation will fail. The ring or shield of bark may solder well and keep green, but there will be a black spot in the center, or the very eye be dried up and black; that's what is called "blind" budding.

This is what I do to permit a good tightening up of the bandage: With a sharp budding-knife (such knives should always be kept very sharp) I cut off the base of the leaf stem down to where it would naturally drop off in the fall; thus obtaining a smooth surface over which to run the bandage as tight under the eye as above. Only two, as a rule, sometimes three, and very seldom four, buds can be used from a scion of any length, be it six inches or six feet. These good buds are right at the base of the scion; all the buds above are too angular to be used. This renders buds very hard to be had sometimes. The best way to obtain good buds and in desirable quantities when having large trees to graft, through annular-budding in the fall, is to plant three to four years old trees of the kind it is desired to bud; cut them back an inch or two above the ground, letting the trees throw four to five shoots, which, by the fall, will have attained a proper size. All those shoots but one, the straightest, which has to be left to stand as the future tree, are used for budding purposes.

Requisites of a Good Variety.

As to the best varieties of walnut either to plant or graft, I would simply recommend those filling as near as possible the following requisites:

First, being "hardy," or late in budding out and maturing their wood well.

Second, being fertile—that is, bearing heavy crops.

Third, being "perfect bloomers"—in other words, with catkins and nuts out at the same time.

Fourth, bearing good-sized nuts, with a thin shell. The shell does not need to be too thin, for that would be a defect, but thin enough to be easily crushed with the fingers. They should be well filled and with a sweet meat covered with a thin pale-yellow skin; a thick and dark-brown skin being generally bitter.

Thin-shelled walnuts, of whatever size, but easily crushed with the fingers, are generally those that bring the best prices either for market or for making oil; they are also preferred by all classes of people, especially confectioners, as they give in weight more meat than those kinds with thicker and heavier shells.

Here are some figures on mountain-grown walnuts:

Large-fruited Præparturiens, 30 to 35 per pound; second generation Præparturiens, mixed—that is, from various trees—40 per pound; Los Angeles, 42 per pound; California black walnut, 42 per pound; Serotina, 44 per pound; California late Præparturiens, 45 to 50 per pound; third generation Præparturiens, 50 to 55 per pound. Nuts should be well dried to ascertain accurately their regular weight.

From the seed there is a great variety of nuts obtained—all kinds of shapes and sizes. When having seedlings in bearing, and desiring to graft large trees, always select from those seedlings bearing the largest and thinned-shelled nuts.

"The Sea Breeze as a Walnut Fertilizer."

All kinds of theories, before I had myself explained what caused the unproductiveness of the Los Angeles walnut, north of Tulare, had been advanced, and the fact that that walnut was doing so well in those small sheltered valleys of Southern California, bordering the sea, gave rise to the strange theory that walnuts could not do well—that is, bear well—too far inland; that they should be nearer the sea and have the ocean breeze to gently blow toward their way. The idea that a land shielded from coast or ocean breeze by a range of mountains, or too far from the sea, could not bear well, is, I will say, if not absurd, at least incorrect. In Persia—the very home of the English walnut—the latter is known to do splendidly and bear large crops, hundreds of miles either from the Persian gulf or Caspian sea. Such is also the case in Afghanistan, 400 and 500 miles from the sea. In France, in the Alps and Jura mountains, 400 miles from the Mediterranean sea (a longer distance from the ocean), walnuts are found in large numbers and bearing immense crops; the same in Spain, in the old Kingdom of Castilla, hundreds of miles both from the Mediterranean sea and ocean. And right here, in California, we see those large trees of Mr. Charonnat bearing such heavy crops, 170 miles from the sea, and at 2800 feet up in the mountains. This theory does not explain at all the barrenness of the Los Angeles walnut, which, in Central California, is found "barren" close to the sea, as well as far away inland.

"At What Age Does the Walnut Bear?"

This is a question often put to me. In general, people planting fruit or nut trees are impatient to have them come into bearing. I have always remarked that trees well taken care of bear sooner than trees not planted right and left almost entirely to themselves; such trees, at the same time, bear larger crops and nicer fruit. The walnut is not precisely an exception to that rule. The English walnut and all its varieties, including the Præparturiens, go to *regular* bearing at seven, eight or nine years of age, oftener at nine than at eight or seven. The nuts borne on trees two to five years old, like we see with the Præparturiens, have all to be fertilized by the catkins of bearing trees in the neighborhood; the wind carrying the pollen far away and scattering it broadcast all over the land to a pretty good distance; in that way are the nuts of such small and young trees fertilized and able to mature. This early bearing in young walnuts, wonderful as it is, does not amount to much by itself, since it is not *regular* bearing; however, it denotes a great fertility in the kind, and in fact such trees do bear heavy crops at the very start. To go to *regular* bearing, a walnut must bear catkins, or staminate or male blossoms. People having young walnut trees, about eight or nine years of age, can very well tell whether their trees will have catkins the ensuing spring, as the embyro catkin can very well be detected on the side of small limbs on the main stalk under the form of sharp-pointed little cones, quarter of an inch in length; shorter on the black walnut. The moment a walnut produces catkins it is going into bearing. So is it the case with filberts and chestnuts.

Best Soil for the Walnut.

We have often seen it stated by some people that the walnut, to do well, requires a very deep soil and of a sandy loam. No doubt the walnut will grow faster in rich and deep soil; but that it is *necessary* to have it planted in such soil to *do well* is entirely incorrect. In the rocky and granite soil of our mountains, in the red clay of our foothills, the walnut will perhaps grow more slowly, but nevertheless do and bear relatively as well. Indeed, all kinds of soil are well adapted to the walnut; but when planted in poor and rocky soil, large and deep holes should be dug, at least four feet wide and three feet deep, the scrapings from the surface thrown right in the bottom of the holes, and manure used in planting the trees. Once well rooted, no trouble about the trees doing well and bearing nuts rich in oil in such rocky soil.

Mr. L. I. Fish, of Martinez, has two Præparturiens walnut trees on his place, which, says my informant, is not well adapted to walnuts, as there is not more than three to four feet of soil, underlaid with an impervious hard-pan, which even grapevines cannot penetrate. Mr. Fish gave those two trees a watering with a hose from his windmill tank three times dur-

ing the summer and mulched the ground around them with straw. Poor and shallow as that soil is, one of those nine year-old Præparturiens bore last year 32 pounds of nuts.

Mr. Ed Muller, right on Commercial street in Nevada City, planted a Præparturiens among some boulders in front of his residence. The tree, now nine years old, went into regular bearing last year, and gave Mr. Muller a nice little crop of 254 of the prettiest little paper-shell nuts I have ever seen. The prolific little tree was the admiration of all passers-by, but could not catch the argus eye of our reporters in search of something new to put in their papers.

Mr. I. B. Ducray, on an old abandoned mining claim near this town, has several nine-year-old Præparturiens and Serotinas also gone into regular bearing, one of them being perfectly loaded with catkins, which denotes a very big crop of nuts for the coming season. Mr. Ducray's land is nothing but soft decomposed granite, or bed-rock, with a little mixture of yellow clay and rocks, but holding the moisture well.

I could give many other such instances of the adaptability of our soil, poor as it is, to the walnut, a soil where Los Angeles walnuts and black walnuts, 25 to 30 years of age, have grown already to such large dimensions.

"What Degree of Cold Can a Walnut Bear?"

This is a question having reference altogether to the hardiness of walnut trees through the winter months in countries where the mercury goes below zero. I am not able to answer this question satisfactorily. I know this, though, that in the Jura and Alps mountains in France, where it is as cold as in Pennsylvania, large walnut trees can be seen there and bearing well; but how the walnut would do where the thermometer goes down to 15° below zero, I could not positively tell. Planted in such a climate, the young walnut, it seems to me, should have some kind of protection till it is of bearing size, or at least till it is made to branch out at seven or eight feet; for it is a well-known fact that young walnuts are more sensitive to very cold weather than older ones. A walnut after having reached bearing size can stand very cold weather, especially those hardy kinds that mature their wood well before winter; but whether it could stand 15 and 20° below zero I am not able to tell.

It is an idle question to ask whether the walnut would do well without irrigation where the prune, olive and other fruit trees do.

Trees for Planting.

Is it better to plant one-year old trees than older ones? No; it is not. The walnut being a tree not going into bearing before eight years of age, the older the tree is when planted, the sooner will it go into bearing. A large walnut will stand transplanting as well as an apple tree, if it is well supplied with lateral roots and fibers. If planting large walnut trees or trees four to five years of age, be sure that the trees have lateral roots and never mind the tap root. A walnut with only a smooth tap root, and no lateral roots, is liable to perish; more so where the soil is dry and climate warm. If a walnut is planted in an orchard among large fruit trees, it cannot be expected that it will grow as fine and large as if planted by itself. Give a walnut room, air and sun, if you want it to grow rapidly and bear well. A splendid place to plant a walnut is right by the stable.

A person living far away from a nursery may be compelled to plant smaller trees, which may be sent by mail or express, but otherwise and whenever large trees can be obtained from any nurseries close by, I say, plant large trees.

What is the Profit in Growing Walnuts?

Soft-shell walnuts are the most profitable to grow, so great is the demand and so large the market. A Chicago firm, writing to me a year ago, said that what they wanted the worst from California was nuts, for which, they added, there is an unlimited market. "Perhaps you can do us some good on walnuts, as they are one of our main articles in the line of California products."

Messrs. Pancoast & Griffiths, foreign and domestic fruit dealers in Philadelphia, write to me under date of October 12, 1886: "We notice an account of your walnut interests in last issue of the PACIFIC RURAL PRESS, and we write to ask you to *direct* us to the principal growers and shippers of the same. We think we can interest them to ship here such seasons as this when local nuts are a failure. We get only a few California walnuts here from New York, and they go now very nice in the presence of the Naples and Grenoble imports. There, California walnuts are 13 to 13½ wholesale."

Mr. I. B. Mathews, in a communication on the walnut to the Santa Ana *Blade*, says: "The walnut seems to be more suitable to sections near the coast than the orange or vine. It suffers little from fogs, mildew, insects or blights, that are often injurious to the latter. Its fruit ever commands a ready market and always at remunerative prices. It is nothing unusual for a single tree to bear from $30 to $50 worth of nuts at a time."

Insect Pests.

I have never noticed any insects on the walnut, neither scales nor worms, nothing whatever. Strange to believe, though, codlin moths have tried the husk of the walnut. On my inquiring about worms having attacked the nuts of his trees, Mr. Fish, of Martinez, wrote to me: "You have been reported correctly; we found some walnuts punctured by a worm. It was the codlin moth, I am sure. There were not more than a half dozen nuts probably attacked. One shell was perforated probably when it was quite green and soft; the others only went to the shell. I have no doubt about it being the codlin moth."

In Europe there is an insect that penetrates into the nut, but through the seam at the head of the nut, where it bores itself through very easy, as that is the softest part of the nut, and which the point of a penknife will easily penetrate.

The commercial value of the Præparturiens is the same as that of all other soft-shell kinds from California, whether Los Angeles or any other sorts.

I will conclude this article on the walnut by answering a question put by a subscriber of the PRESS, under the head of

Stunted Walnut Trees.

Says Mr. V. Newmark, of Benicia: "I have a few English walnut trees, ten years old, which are very much stunted by having been planted too near a row of cypress and gum trees. They have never borne any fruit. Will it pay to dig them up carefully and plant them where they will have more room, or would it be cheaper to get a fresh lot from the nursery? Does a tree ever resume its growth after being stunted so long a time?"

It will certainly pay to dig up such trees carefully and plant them where they will have more room; ten-year-old trees have such a start on two, three and four year old stock from nur series, that efforts should always be made to save such large trees. I would therefore advise Mr. Newmark first to remove his trees where they will have *plenty of room;* then to dig large and deep holes, making the ground quite rich through a liberal supply of old rotten manure; and in removing the trees, try to remove them with dirt sticking to the roots, cutting the tap root back, but being careful to save as much of the *lateral* roots as he possibly can. The trees should be given some three or four good waterings through the summer, and the trunk shaded from the sun, so scorching in that part of the State, with two boards nailed so as to form the letter V. If the trees belong to the barren kind referred to throughout this article, it may be well to cut the top back and bud in the fall with a better kind the shoots that the trees are bound to grow, of the proper size, through the summer, if planted and taken care of as suggested here. By the way, when cutting a walnut back, always apply grafting wax or mastic over the wound, on account of the pithy nature of walnut wood.

Walnut trees are sometimes stunted in nurseries, when the nuts are planted the small end down; nuts should always be planted with the suture or seam up and down—that is, perpendicular to the horizon; not only walnuts, but also chestnuts, almonds and filberts.

Nevada City, Feb. 10, 1887.

THE DAIRY.

Feeding Beets.

EDITORS PRESS:—I have just read in your last issue the article on "Feeding Beets," and for fear that some of your many readers might lose a "valuable cow" by *not* cutting them, I pen these lines. I have fed beets to cows for many years, and never cut them if large, but *small* ones, say from one to two pounds, I always cut, as a cow will take a whole one in her mouth and try to eat it; by so doing she is in great danger of getting choked. I have had several that nearly lost their lives in this way, but I happened to be present and saved them by pulling the beet out of their throats. My mode of cutting small beets is to take them by the root and strike them on the blade of an old spade, made sharp, and fastened on to the side of a box, into which they fall. In this way I cut them very fast, add a very little salt and bran, and they are about as good feed as I know of for milch cows, and my horse is very fond of them.

The article, "Cost of Morning-Glory Remedies," also in your last issue, is decidedly *rich*. We need *facts* more than theories.

IRA W. ADAMS.

Bay State Garden, Calistoga.

Holstein-Friesian Record.

EDITORS PRESS:—My imported prize-winning cow, Lena Wit Menlo, No. 987, H. F. H. B., and No. 1469, winner of the "Free for All" cow class and sweepstakes at Alkmaar, Holland, in March, 1885 (a fair that would rank similar in grade to a world's fair in the United States), a few days ago beat her Holland record of 78 pounds or 9.8 gallons. On the 18th of February she gave birth to a bull calf which weighed 120½ pounds. On the 23d of February she was milked dry at noontime, and was then milked three times between then and noon of the 24th, and gave in the three milkings 10½ gallons of milk—89 pounds. Owing to the stormy weather, she was not turned out and had no green feed whatever, so that this test was made upon dry feed alone, and, I believe, is the best record ever made on dry feed.

As soon as the grass springs up I will give her a 30-days' test. In the meantime, however, would be most happy to have parties interested in this class of cattle, or doubting the record, call at my ranch and see for themselves. I will give affidavits and weights, as found by my foreman and milker, in your next issue.

FRANK H. BURKE.

Menlo Park, Feb. 25, 1887.

THE FIELD.

Summer-Fallow in the South.

A constant reader of and occasional contributor to the RURAL, living in Los Angeles county, sends us a copy of an article he has written for the Los Angeles *Herald*, urging the value of summer-fallow. As has been frequently stated in our columns, the practicing of summer-fallowing has proved of great value in the central valleys of the State, and we shall be glad to know more of it at the South. The article is as follows:

There appeared in the *Herald* of the 15th inst. a well-written article which every farmer in Los Angeles county should "read, mark, learn and inwardly digest." The writer's views upon summer-fallowing, "volunteering" and the early and late rainfalls of each season are the soundest I have yet seen in print. Many years' experience in the Eastern and Central States has proven that by summer-fallowing, land will yield more in the long run than when seeded every year, and the crop is surer. In this State the necessity for summer-fallowing becomes more apparent every year. We will take this season for example. It is estimated by men in a position to know that less than one-half of the land usually sown to grain in this county has been sown during the present season. Experience has shown that grain sown here after the first of March rarely reaches maturity. It is just heading out when early-sown grain is ripening, and the hot weather of the early summer months is sure to wilt and destroy it. The ground is now so wet after the late rainfall of nearly 12 inches that it will be impossible to plow in most localities for a week to come. All farmers know that if seed is sown when the soil is too wet, the ground "bakes" and the crop is destroyed. For these reasons it follows that but little more seeding will be done this winter, and as much of the early-sown grain suffered during the late long dry spell, there will be less than half a crop harvested in this county during the present year. It is not altogether owing to the fact that farmers were afraid of a dry season that so much land was left unseeded. It is only where there is considerable sand in the soil that land can be plowed when dry, or after a light rainfall. A great deal of the rich mesa land in our best grain-growing localities cannot be plowed until it is thoroughly soaked by a heavy rain. Many of our farmers did not sow simply because they could not plow. But how different all would have been had summer-fallowing been adopted. The land plowed in the spring, after our heavy rains are over, lies mellow as an ash heap, and can be sowed at any time during the following winter, let it be wet or dry. The farmer, having but half the work to do that he had under the old system, can bide his time and sow his land when everything is propitious. He will put in his crop more carefully, and the result will be that with but little more than half the labor and expense, he will harvest a larger and better crop from half of his farm than he did under the old slipshod, hen-scratching and dry plowing system from the whole of it. This is the very season in which to inaugurate the summer-fallowing system in Los Angeles county. Half of the land is now unplowed and unseeded. It is now too late to sow with any certainty of getting a crop. But the ground in two weeks from now will be in a splendid condition to summer-fallow. The weeds will all be up and can be turned under and killed. It will not pay to "volunteer" anything this year. The volunteer grain that sprouted with the rain in November last got such a "setback" from the dry weather following that it will not pay to harvest. Weeds flourish where grain will die; and the weeds have got such a start of the volunteer and dry-sown grain that they will choke it out. So plow it under. It will make good manure for the soil, but nothing else. It used to make good "hay," but the livery-men have got so particular nowadays that they object to "volunteer hay" when it is more than half last year's stubble and this year's wheat. When the volunteer crop was allowed to ripen and was cut and thrashed, it was sold to the miller, who converted it into "rolled barley;" but these same livery-men soon got tired of feeding a mixture of barley, clover burs, mustard stalks and weeds, and demanded clean grain. By summer-fallowing and careful farming we can raise good crops every year, and with care in the selection of seed we can raise the cleanest and best wheat and barley in the world. Our wheat is in demand the world over; so is our barley, if it is clean and bright. But, heretofore, our barley has been so dark, and so mixed with wild oats and weeds, that it is not fit to export. We can change all this with but little trouble, and *now* is the time to inaugurate the much-needed change. The man who summer-fallows his land will, in a season like the present, be sure of his crop, and can look forward with complacency to the high prices for grain sure to rule; while the man who did not summer-fallow, and has in consequence been unable to plow or sow (like many of us this year), having nothing to sell at these high prices, will wish that he, too, had tried a little summer-fallow.

Morning-Glory Again.

EDITORS PRESS:—Like Mr. Sneath, I believe in economy, but it is well not to make mountains out of mole-hills. Let us see if Mr. Sneath's figures cannot be reduced somewhat as to cost of salting morning-glory. Salt fit for the purpose I had for $1 per ton spread on the patches. This would cost somewhat more in other localities (cartage and freight). As to the extra inch that Mr. S. would put on, I will only say that a two-horse load is usually sufficient for a dozen patches, the single plants returning only requiring a small shovelful. The straw needed to burn off with (to destroy any seed that may have ripened) is only worth $1 per load in localities where freight is not higher than $1 per ton. Usually there is enough waste straw and other refuse on a farm for the purpose. We will not imagine that every farm has acres of the weed. Though we claim to have some model farms in Alameda county, and more especially in the western part, I do not think many grain farmers would care to pay even the low price of $2 per cord for manure (I never heard of any sales), but there are no doubt other plans to destroy the weed. A grove of eucalyptus, set close, would no doubt kill it, and would secure some return at the same time.

On farms rotated by pasturing, large straw-stacks could be put on the patches (in many cases at least) directly from the separator and with very little extra expense. Keeping the weed always out of sight by cultivation will doubtless also prove effectual, but it should be borne in mind that the roots are liable to be dragged over other parts of the field and thus secure new foothold.

OBSERVER.

Alameda Co.

ENTOMOLOGICAL.

Spraying for Scale and Fungus.

EDITORS PRESS:—During the past seven years, Winter Nelis pears in Sonoma valley have been a failure, owing to the pear blight. The trees every season would be white with blossoms, which, after a time, would turn black, leaving but few fruit buds to set. Bartlett pears within the fog belt are suffering from black pear fungus; this black scab on the fruit retards its growth and greatly reduces its market value.

W. G. Klee, Inspector of Fruit Pests, in his valuable reports recommends a wash that is very simple, comparatively easily prepared, at little expense, which is a sure cure of different mildews, and a destroyer of all fungus life, as well as the black pear fungus. The best results are obtained to apply it warm at about 130° Fahr. by means of a spray pump. Apply it about the first of June, when the fruit is well set. I am going to test it, but I am beset with difficulties at the start. In spraying with Gould's pump warm mixtures of 130°, how must one manage to keep it at that temperature? If it is heated in kettles at the house it will be apt to cool rapidly when emptied into a tank and carried to the orchard. I fancy a galvanized iron tank arranged with fire-box underneath placed on low wheels, short-coupled, light draught, would be desirable and save valuable time, but, having little mechanical skill, desire to learn the best method. Will you show what can be done, and investigate the subject in the interest of MANY FRUIT-GROWERS?

Sonoma.

[In the University orchard an old iron boiler, brick-shaped and about two feet broad, one foot high and three feet long, is used. It is placed upon bricks, thus being raised a few inches from the ground, and a fire is built underneath. The wash is thus heated a few degrees higher than it is desired to have when the fluid reaches the trees. From this boiler the hot wash is drawn off into a cask mounted upon a sled just large enough to hold it and the standard, upon which the force-pump is fastened. One horse pulls this sled along from tree to tree. The man who drives the horse also pumps the wash while standing at a tree, and the spray is applied through two spray hoses and nozzles, one man managing each. It is found in practice that the wash remains sufficiently warm until the barrel is emptied, when it is returned to the boiler and refilled. There are many ways of rigging up an outfit to do the work. If we had a fire under the wash all the time, we should want to watch the thermometer very closely. It is easy to get the wash too hot and do harm.—EDS. PRESS.]

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Grange Work and Progress.

[Prepared Weekly by M. WHITEHEAD, National Lecturer.]

We have passed the twentieth milestone of our journey as an organization; success has come wherever the field has been well prepared, the crops carefully tended and the sheaves safely garnered. The great need of our Order now seems to be to let the world know we "still live," that we have come to stay, and the Order of Patrons of Husbandry has not only done more up to this time for protecting and advancing the true interests of the farmers of our land than all other orders or societies combined, but that it has still greater possibilities for the future, and is the one well-tried and proven plan by which —if we will—we can place agriculture where it of right belongs, in the front rank, and command for its followers that respect, fairness and equality that belongs to them by birthright and the blessing of God Himself.

It is *action* we need now more than ever before. Working Granges are the successful ones. Most of us know the principles of our Order now full well. We have been learning them many years, but

"Who learns and learns, but *acts* not what he knows,
Is one who plows and plows, but never sows."

At this writing the President has not named the members of the Interstate Commerce Commission. It is to be hoped that he will recognize our Order and the farmers of our country in appointing one representative of our class on the Commission. Besides Bro. J. J. Woodman, the names of several other good Patrons are "at the front" and being urged by their many friends. Among them are Bro. Leonard Rhone, Master of the Pennsylvania State Grange; Bro. Wm. A. Armstrong, Master New York State Grange; and Bro. Victor E. Poillet, Past Master Pennsylvania State Grange. It would thrill the hearts and nerve the hands of all true Patrons to hear that either of these able leaders in our cause had received the appointment. They have all done much to bring about this legislation controlling interstate commerce.

No wonder the oleo folks are bringing all the pressure possible on Congress to head off our Oleomargarine law. They are being beaten more and more at all points. Here are two items of many we might give to prove this:

In Pennsylvania the Supreme Court has affirmed the constitutionality of the State law prohibiting the manufacture, sale or keeping for sale of oleomargarine. The Court holds that the Act was not in conflict with any provision of the State or Federal Constitution and was entirely within the limits of legislative authority in these words, "The fact that the prohibited substance may be harmless as a food makes no difference with the case, for the sale of a mixture of pure milk and pure water has been prohibited;" and the constitutionality of that prohibition has never been doubted.

A big business has been done at Chicago in oleo oil for making artificial butter. But the oleo oil market there now is absolutely flat. Butterine makers are buying nothing, and quotations are only nominal. It has been predicted that not more than two licenses for dealing in oleo oil will be taken out by Chicago parties in May. The oleomargarine act has evidently proved the death-knell to the manufacturers of artificial butter. There is, however, a large export demand for this oleo oil. Let those "doubting Thomases who are sometimes heard to say, 'The Grange is accomplishing nothing, never benefited me a dollar, etc., etc.,'" figure up the millions of dollars this oleomargarine law, so ably worked for and supported by the Grange, has already put into the hands of the farmers of our country.

"Our Order is gradually gaining ground throughout the country; we are no longer looked upon as mudsills of society. The leading papers of the country are speaking of our movement in the highest terms, when they see that we are organized not to tear down but to build up, and elevate and educate the farmers of our country. Even politicians pay us respectful hearing, for they very well know if the farmers in this country were thoroughly organized and voted together that they would elect every officer from the President down. We have every reason to be proud of the progress we have made and the high standing we occupy, as well as the esteem in which we are held by nearly all classes."—*S. C. Carr, Master Wisconsin State Grange.*

The Lecturer of the National Grange earnestly hopes that every Grange in the United States will send to Harper Brothers, New York city, for a copy of "Railroads and the Republic," by James F. Hudson, price $2. It should be read in the Grange, chapter by chapter, by the Lecturer. The passage of the interstate commerce bill does not end our battles with corporations; we must *study* this transportation question, and this I consider the best book yet published.

Another valuable book that should be read, studied and thought about by every Patron and patriot is "Our Country, Its Possible Future and Its Present Crisis," by Rev. Josiah Strong, D. D. Published by "The Baker & Taylor Co.," No. 9 Bond street, New York city. Price, 30 cents, by mail, in paper covers.

"We live in a new and exceptional age. America is another name for Opportunity. Our whole history appears like a last effort of the Divine Providence in behalf of the human race."—*Emerson.*

And we believe the Grange is a grand help for those who would improve this "Opportunity" for freedom and humanity.

Progress.

Seven more new Granges:

Stafford, No. 55, Tolland county, Connecticut.

Northampton, Massachusetts, 40 charter members and 10 applications.

Upper Lisle, No. 508, Broome county, N. Y.

Lawrence Grange, No. 117, Belmont, N. H.

Victor Grange, No. 677, Clinton county, Mich.

Beaver Run Grange, No. 813, Luzerne county, Pennsylvania.

Spring Valley Grange, No. 814, Bedford county, Pennsylvania.

Two new Pomona Granges:

Penbroke, Maine.

Norfolk county, Virginia.

Georgia is coming to the front in Grange work. State Master Kimbrough and State Secretary Taylor have organized and are pushing a real revival. The *Georgia Farmer* is helping; its last issue said: "The State Grange of Georgia is today more determined to battle on in the warfare for the farmers' rights and interests than ever! So long as one of either shall last, so long have we plighted faith to stay! Conscripted by necessity, yet volunteers by aim and principle, upon neither of which fear we the noonday sunlight of criticisms."

Algona Grange, Iowa, has lately taken 18 new members.

Nashua Grange, No. 13, New Hampshire, has dedicated a new Grange hall.

Evans Grange, No. 35, Illinois, is building a new Grange hall.

"Leave the old paths where your fathers, unheeded,
Wrought out existence 'mid poverty's pain;
Lo! in your hands are the keys that they needed,
Let them not rust with inaction again."

Farmers Pooling Their Wheat.

The farmers of the Walla Walla valley, believing that they have been discriminated against in freight rates on wheat, have taken action, which is described by one of our northern exchanges substantially as follows:

The Walla Walla Board of Trade took the initiative and surveyed and profiled a route of 51 miles from their city through the Eureka flats to a connection with the Columbia river and the Northern Pacific railroad, near Ainsworth. This move attracted the attention of the Northern Pacific and its friends, and soon two propositions were made to the Board of Trade by Eastern capitalists. One was that they would build a railroad from Walla Walla to the Northern Pacific for $75,000. The other plan proposed by the heaviest farmers seems to be the one that will give them relief, and powers of attorney are being rapidly signed by the farmers, whereby they bind themselves to go to the railroad that will, on or before October 1st next, furnish transportation to them for their grain, at a cost not to exceed four dollars per ton to tide-water on all the grain that they will raise on their farms, less that necessary for seeding and home use during 1887 and 1888, the railroad accepting to bind itself never to increase that rate. Meanwhile surveys have been made from Wallula up the Walla Walla river, via Milton, to Walla Walla, Waitsburg and the Eureka flat country, by parties supposed to be in the interest of the Northern Pacific railroad, and there is little doubt that before the present harvest is garnered, the farmers of that wonderfully productive section will be relieved from their unpleasant predicament.

It was telegraphed last Saturday that the wheat contract had been signed by hundreds of farmers in the vicinity of Walla Walla alone, and a million and a half bushels had been already guaranteed.

IN THE GRANITE STATE.—It is a laborious work that Lecturer Whitehead is carrying out in New Hampshire in his series of 45 lectures delivered in 33 towns during the allotted 25 days in January. The earnest, convincing arguments and entertaining oratory are having a grand effect on his hearers, whether at the public or private meetings. The snowstorms and blows have seriously reduced his audiences in some localities, but we feel confident that a genuine and cordial welcome has been extended him wherever he has gone. For effective work Bro. Whitehead cannot be excelled in his defined assignment, that of speaking to the people. His manner and style of delivery create confidence in him at once, while his logic and reasoning clearly prove that he keeps well posted and thoroughly conversant with all the leading questions of the day pertaining to the farmer and his work, and the development of the Grange in its onward and upward march as an educational agency of the farmer and his family, and that can never be too loudly extolled. The weekly communication sent in from his office is receiving merited attention by the agricultural press, and thus aids in keeping our Order and its work well before the reading, thinking people.—*W. H. Stinson, in Farmers' Friend.*

REVIVING THE GRANGE.—"D." writes the *Am. Grange Bulletin:* "One great help we have discovered is this: We placed all dropped members upon the roll-book free of charge—they that availed themselves of the offer being charged dues for their reinstatement. Quite a number are coming back. Then we appointed every member a missionary to try to bring in two new members each."

GRANGE ITEMS.—We observe in the *Patron* that Yuba City Grange conferred the third and fourth degrees on a class of five February 19th, and enjoyed a social lunch and literary exercises afterward....Washington Grange has adopted resolutions of respect, in view of the death of A. A. Van Sandt, one of its most zealous and esteemed members, and lately its Worthy Master.

PLEASANT EVENING AT DANVILLE.—The entertainment given by the young people of Danville Grange, Feb. 18th, must have been a signal success. The Martinez *Gazette* says that the hall was crowded and "Nevada, or the Lost Mine," was admirably performed, the cast being as follows: "Nevada, the Wanderer," Fred. Glass; "Vermont," an old miner, J. Conway; "Tom Carew," a miner, Rollo Glass; "Dandy Dick," a miner, J. Moore; "Silas Steele," J. C. Jones; "Jerdan," a detective, M. Stone; "Jube," a black miner, F. Moore; "Win Kye," a Chinaman, H. Baldwin; "Mother Merton," Miss F. Stone; "Agnes Fairler," Miss I. Hall; "Moselle," a waif, Miss L. Jones. The scenery and stage decorations were appropriate and attractive. The musical portion of the entertainment was of a high character, consisting of a vocal duet by Miss Wilcox and Miss J. Labaree, instrumental duet by Misses Lizzie Elliott and Lottie Wood, instrumental solo by Miss J. Labaree, and selections by Messrs. Schwartz and son. Mr. Charles E. Howard acquitted himself well as master of ceremonies. A social dance followed. The receipts of the evening were $80.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

POULTRY ASSOCIATION.—Oakland *Enquirer*, Feb. 24: The Fancy Poultry-Breeders' Association met last evening and elected the following officers: F. H. Miller, Pres.; W. Woodward, V. P.; Ed. Flannigan, Sec.; D. D. Hayes, Treas. The object of the association is to encourage raising improved breeds of fowls. A committee was appointed to prepare by-laws.

HAY SENT ABROAD.—Livermore, Feb. 28: Shipments of 100 tons of Livermore hay to Panama by the Pacific Mail steamer and several carloads to the Sandwich islands have been made from this place.

Butte.

VINE, ORANGE AND OLIVE.—Oroville *Register*, Feb. 24: Gen. Bidwell is planting out 500 olive trees, and expects next year to largely increase the number. He is also setting out 100 orange trees. It is significant of the value of foothill lands that the General has selected his ranch in Big Chico canyon. T. B. Hutchins, of the Central house, is rooting 12,000 grape cuttings and setting out 3500 rooted vines. The latter include White Muscat, Flame Tokay, Black Prince and Black Hamburg.

Contra Costa.

ROOST-RAIDER RIDDLED.—Martinez *Gazette:* For weeks some "varmint" has been making nightly raids on the Alhambra poultry yards, owned by Jasper Jones. Mr. Jones set traps for the animal, and last Saturday discovered that one of them was missing. He also saw wildcat tracks on the ground. Charles Hickman, who is working on the premises, started out on the trail with a shotgun and soon found the animal in the canyon above Mr. Barney's, with the trap attached to one forefoot. His catship succumbed to a dose of shot and was dragged back to the house triumphantly by his captor. He weighed 24 pounds.

Humboldt.

FROM TRINITY RIVER.—Cor. Humboldt *Standard*, Feb. 26: The sun shines brightly, and the snow is fast disappearing from valley and hillsides. The farmers that are behindhand are taking advantage of the present fine weather to get their late grain in. The grain that is now up is looking fine. The outlook is for a very large crop the coming summer.

FROM BOULDER CREEK.—A young man who returned from Boulder creek on Saturday reported that feed was getting short on the ranges in that section, and that the cattle and sheep had eaten everything within reach. Lord's train of pack mules had been sent there for the winter, but owing to the shortness of feed they will be removed to Arcata for better protection.

Lake.

SNOW AND STOCK.—Lakeport *Democrat*, Feb. 25: Notwithstanding the unusual and heavy snowfall for this section, we do not learn that stock has suffered to any extent. H. A. Humphrey was down from Snow mountain on Tuesday, and reports plenty of snow there, but says the loss of sheep has not been greater than he experiences every winter.

Los Angeles.

BUSY AND CONFIDENT.—Santa Ana *Standard*, Feb. 26: Plowing, planting and sowing is going on rapidly now all over the valley where it is not too wet. The farmers have an assurance of a remarkably fine crop this year, for the heavy snow on the mountains east of town is a guaranty of more rain before long, also an indication of plenty of water in the spring and summer for irrigation.

Mendocino.

ROUND VALLEY ITEMS.—Cor. *Dispatch and Democrat*, Feb. 20: Felix Purcell, a hop producer of this place, talks of increasing his acreage of hops, in anticipation of a boom in that industry....The sheep-raising fraternity are very busy just now, gathering the stragglers home from their neighbors' herds in order that they may be better prepared for the lambing season....Purcey and Fred Handy, sons of the Hon. Philo Handy, who have leased half the Johnson & Handy sheep and range, are deserving of a great deal of credit for their skill and management. Their corrals and other accommodations necessary to the handling of a band of sheep are second to none....Some of our citizens recommend importing a breed of dogs which could stand a chase of 48 hours without rest, in order to chase the poor coyote to his lair and there deliberately exterminate the sheep-thief.

Merced.

CROP PROSPECTS.—Merced *Argus*, Feb. 26: The precipitation has been light, yet with average spring showers, the coming harvest cannot fail of being up to the average. Should the spring prove dry, the crop will be light, though a failure is not probable. Taking all into consideration, this portion of the valley is in good condition; feed is plentiful and cheap; the young grain is sufficiently advanced to justify calculations for an average yield, the condition of the soil for plowing gives farmers an opportunity to summer-fallow an unusually large body of land for next fall's sowing, a large proportion of which is new land. Stockmen also claim that feed is sufficient for stock to thrive, and no complaint has been so far made of loss of stock by the winter storms.

Napa.

WINE TRADE.—St. Helena *Times*, Feb. 23: About 500,000 gallons of wine have been sold so far in the upper portion of our valley for low prices; another 500,000 gallons will probably be disposed of for similar prices, as the owners will not be able to hold on. Of the balance of our '86 vintage, estimated at 4,800,000, about 75,000 gallons were made up into brandy; over 1,500,000 are in the hands of parties with direct trade—such men as Carpey & Co., Napa Valley Wine Co., G. Migliavacer, Niebaum, Wineberger, Beringer and others. The balance of over 2,000,000 gallons the owners will not sell for less than 20 to 25 cents.

Nevada.

APPLES AND WINES.—*Record-Union*, Feb. 23: A box of Spitzenberg apples and different samples of wines from Wm. Ragsdale, of Magnolia, in Nevada county, near Clipper Gap, show the excellencies of soil and climate of that section for such products. The apples are as fine in quality, size, color, firmness and flavor, as have ever been exhibited in this market; while the wines, which are only "home-made," and produced without any fixed rule, or attempt at blending, show a native purity and quality which afford the highest evidence of almost unequaled adaptability of soil and climate for wine productions. There are abundance of cheap lands in that vicinity, lying in Nevada and Placer counties.

AGRICULTURAL ASSOCIATION.—Grass Valley *Union:* The directors of the 17th District Agricultural Association met at Nevada City, Feb. 19th; present, Directors Perkins, Dresbach, Hayford, Maslin and Granger. V.-Pres. Hayford presided in the absence of A. Walrath, who had resigned as a director and president of the association. Cal. R. Clarke presented his credentials as director under appointment from the Governor. The election of president of the association being in order, Cal. R. Clarke was elected to fill the unexpired term. A resolution was unanimously adopted tendering the thanks of the association to the Hon. A. Walrath for the interest he has always displayed in the welfare of the association and the fidelity with which he has discharged his onerous duties.

THANKFUL FOR SNOW.—North San Juan *Times*, Feb. 25: Nothing could be more beneficial to the fruit-raisers in this section of Nevada county than the snow that now covers the earth. If it lasts until the first of April it will be a God-send. The snow will keep the sap from flowing to the body and branches of the trees, and prevent early budding and thereby escape the spring frosts. Bartlett pears will be plentiful next fall.

Placer.

AFTER THE STORMS.—*Herald*, Feb. 26: P. Ahart, a large farmer and sheep-raiser of Western Placer, was in Auburn Wednesday. The grain, he says, looks well, but the late cold, stormy weather has been fatal to young lambs. He and O. P. Richardson, his neighbor, have both lost heavily of young lambs.

San Benito.

OLIVES.—*Free Lance:* J. I. Hodges has in his garden two large olivé trees, each over 20 feet in hight. They were planted years ago, by Col. Hollister, and have borne each season for many years. This year the crop was abundant, and was purchased by Judge Logan, of Santa Cruz, who will pickle them. The trees are of the Mission variety, and grow on the ordinary soil of the Hollister valley.

CHEESE.—Now that grass is springing so abundantly, the dairymen are making increased quantities of cheese. G. F. Mitchell is making 11 large cheese daily, weighing 25 lbs. each. The San Felipe factory is turning out six large and seven or eight small cheese daily, which at present prices pays well, the last sales having been 16 cents.

San Bernardino.

THE GAGE CANAL.—*Valley Echo*, Feb. 24: The water was turned into the Gage canal permanently on Monday, Mr. A. J. Toogood being appointed temporary superintendent. Mr. L. C. Waite was the first to use the water for irrigating purposes. Water can now be had at all times for lands entitled thereto.

Santa Barbara.

LOMPOC ITEMS.—Cor. Santa Barbara *Press:* A large area of barley has been sown and some wheat; but wheat is not a safe crop to raise here. Much more grain will yet be sown. Good barley has been raised here, sown the 1st of April, especially when the rains come late. A large amount of mustard will be sown, as last

year's crop was quite remunerative. Beans will not receive so much attention as they have some years past, but will make a considerable item in the shipping list. Potatoes have paid quite well the past year. Dairying has not been so encouraging this season so far as in the past; but now that we have had abundant rainfall, dairymen will be able to make up for lost time. Shipping has been somewhat uncertain for the last month, owing to the stormy weather. Some produce and hogs are being shipped by every boat that calls.

Solano.

PLANTING OLIVES.—Dixon *Tribune:* The fruit-growers of Cordelia are taking a new departure in the matter of digging vines and substituting olive trees. F. S. Jones has just received 5000 cuttings and 250 trees of two-year-old growth, which he intends to plant on his farm.

ALMONDS ON LEASED LAND.—John and Enoch Anderson have recently leased of Jno. C. Drummond a tract comprising 80 acres of choice fruit land, which they design planting in almond trees. The terms of this lease are for 10 years, at an annual rental of five dollars per acre, and at its expiration the orchard reverts to Mr. Drummond, who will then, upon a moderate computation, find himself possessed of an income of $8000 per annum from this 80 acres.

Sonoma.

BIG BEETS.—*Democrat:* J. Roberts sent some samples of mangel-wurzel beets to S. F. Saturday morning, one of which weighed 43 pounds and measured five feet in length. The smaller ones averaged 30 pounds in weight and were fair samples of the productiveness of the soil surrounding Santa Rosa.

THE OUTLOOK.—Petaluma *Courier*, Feb. 23: More grain was sown than usual; the season for seeding was auspicious and crops were planted in due season. We hear the most favorable reports from all parts of the county. We have had all the rain we needed. Stock has so far wintered well, and with a little extra feed, with which most farmers are supplied, will come out all right in the spring. Sonoma county is all right, and our prospects for the coming harvest could not well be brighter. The entire county looks as green as in the spring, and almond trees are in full bloom.

BUTTER FOR JAPAN.—A. L. Whitney & Co. have commenced shipping butter direct from Petaluma to Japan. They recently made their first shipment to Tokio, and the butter gave such good satisfaction that a second shipment was made, and this week the third went off. The trade promises to be a large one.

WALNUT TREES.—*Argus:* A great many walnut trees are being planted in and around Petaluma.

Siskiyou.

WINTER IN BUTTE CREEK VALLEY.—Cor. *Dispatch and Democrat*, Feb. 18: Snow is 18 inches deep on the level. Seven degrees *below* zero is the coldest we have had. This is said to be the hardest winter old settlers have experienced for years. Those who have stock are feeding; but there will not be many lost, as the people are well supplied with hay.

Tehama.

A HERD OF HEREFORDS.—Red Bluff *Sentinel*, Feb. 26: There arrived here yesterday, consigned to B. A. Bell, of the Gallatin ranch, 22 thoroughbred Hereford cattle, ranging in age from eight months to two years. They were bred by T. L. Miller, of Beecher, Ill., a man famous in the Hereford cattle business. They are real beauties, and are in splendid condition considering their long ride. Mr. Miller is now in Sacramento, and is thinking seriously of starting a thoroughbred Hereford farm in Northern California.

Tulare.

GRAIN PROSPECTS.—*Delta*, Feb. 24: Since the late heavy rains everybody at Lakeside is busy seeding, and as most of the farmers had their old land seeded before the rain, they are breaking up new land; so the acreage of grain will be much larger in this section than it ever has been before....A Three Rivers correspondent says: We are about through sowing grain. That which is up looks well. The ground is too wet to plow this week, so we are grafting and setting out trees. Almond trees were in bloom about two weeks ago.

Ventura.

HUENEME NOTES.—Cor. *Free Press:* Of course the rain, about eight inches, was very opportune. It has put all our farmers in a happy frame of mind, and not alone the farmers but the entire community. The grain fields are looking very well, and give promise of abundant crops. But the weather is cool and the grain grows very slowly.

NEVADA.

A NOBLE NORMAN.—*Nevada State Journal:* M. H. Hardy & Co., of the Oasis ranch, Toana, have sold the noted Norman Percheron stallion colt Elector to Messrs. Rhodes & Bragg, of Long Valley, Lassen county, Cal. This fine animal will be four years old the coming spring, is 18 hands high, girt 7 feet, coal black, and will weigh, when grown, 2200 pounds. His pedigree for seven generations, on both sides, shows large stock, and that, together with his size, form, color, style and action, proves him the best draft stallion of his age that ever crossed the Rocky mountains. He took the first prize at the World's Fair, 1884-85. Messrs. Rhodes & Bragg have been traveling in search of a suitable animal to place at the head of their herd, for the purpose of breeding graded stallions to supply the demand from Eastern California and Western Nevada, and hearing of this famous colt Elector, a member of the firm came on and was so well pleased with him that the purchase was immediately concluded, and the young horse will be shipped to California.

OREGON.

FROM THE RANGES.—Lakeview, Feb. 24: Snow has been falling here at intervals for a month. Reports from the Winter range state that fully 25 per cent of the cattle and many sheep have perished for want of food. Horses are in better condition, as they are better "rustlers" for outside feed. Stockmen who are feeding report no losses. Hay and wood are scarce in town. The weather is not severe at present, but there is a good depth of snow.

NOT HARD ON LIVE-STOCK.—Portland, Feb. 28: The snow is all gone. The Columbia to the Dalles is open for navigation. Eastern Oregon specials say that the snow is going off rapidly, and there will be but little loss of cattle and sheep.

BANANA PLANT SHOWN BY JOHN ROCK AT THE SAN JOSE FAIR.

Banana Plant in Fruit.

On entering the pavilion during the recent citrus fair at San Jose, one obtained a glimpse like that shown in the engraving on this page, the prominent object in the foreground being the thrifty banana plant from John Rock's nurseries near the city of San Jose. This plant stood 10 feet high, had a stalk 8 inches in diameter, and leaves 6 feet long by 18 inches broad. The bunch of fruit, 18 inches long, was still green, and the blossoms had not disappeared. The plant was in fine show condition and was much admired.

The camera, though charged with the special duty of catching the banana, captured also a vista of the inner parts of the pavilion, including a group of people who may be regarded as Eastern capitalists delighted with the grand display made of California productions. One is apt to meet many such people at our industrial fairs in all parts of the State.

Viticultural Convention.

The convention in this city next week under the auspices of the California Grape-Growers' and Winemakers' Association, promises to be one of the most important meetings of the kind ever held in the State. The sessions will be held at the Grand hotel, on Market street, in the large room commonly known as "Music Hall." The following program gives dates and hours for the different themes which will be considered:

First day, Monday, March 7th—11 o'clock, examination of wines and other exhibits; 3 o'clock, address by the president; 8 o'clock, addresses by M. M. Estee on "Grape-Growing and Wine-Making in California," and "Handling Young Wines in Cellars," by H. W. Crabb. A free discussion on both questions is invoked.

Second day, Tuesday, March 8th—9 o'clock, sampling of exhibits; 3 o'clock, "Experiences in Fermentation in 1886 and Prospects of the Wine Industry," by John T. Doyle; "Co-operation in Viticulture," by Prof. George Hussman, and "What Constitutes Pure Claret; its Requisite Qualities as a Beverage, by Arpad Harazsthy; 8 o'clock, "Eastern Markets," by E. C. Priber, and "Fine Wines," by Charles Bundschu.

Third day, Wednesday, March 9th—9 A. M., sampling continued; 3 P. M., "Table Grapes and Raisins;" general discussion; "Coloring and Adulteration of Wines," by H. A. Pellett; 8 P. M., "Treatment of Wines After Fermentation," by Prof. E. W. Hilgard; discussion of the same subject will follow.

Fourth day, Thursday, March 10th—In the morning, sampling of exhibits continued; at 3 o'clock, "Climatic Conditions in Developing Wines" and "Condensed Must," by C. A. Wetmore. In the evening, election of officers of the association. The remaining samples will be further examined on Friday morning.

PLEURO-PNEUMONIA.—The Hatch Pleuro-pneumonia bill has passed the Senate, and, having amendments, had to return to the House. If the bill becomes a law, we shall secure an authentic copy as soon as possible for the information of our stock-growing readers.

THE alarm about smallpox in Los Angeles appears to have subsided. Mayor Workman stated, on the 1st, that no new cases had occurred for over a week.

CHIEF JUSTICE MORRISON, of the Supreme Court of California, died on Wednesday last.

The Rain.

Precipitation for the Month and Season.

The following table prepared by the United States Signal Office shows the rainfall for February and for the season to March 1st, with the average for the season to that date:

STATIONS.	Total for February.	Average for season to March 1st.	Total for season to March 1st.
Olympia, W. T.	4.30	44.83	35.10
Spokane Falls	1.60	....	10.20

Sinclairville Stock Farm Notes.

Messrs. B. B. Lord & Son, of Sinclairville, N. Y., write us:

Our stock is wintering finely, and the herd are in splendid condition. Cows have commenced dropping their calves, and the spring trade opens with most flattering prospects.

Our correspondence is daily increasing, and the demand for first-class Holstein cattle was never better.

Last week, J. M. Stevenson, of the firm of Stevenson Bros., Bulger, Penn., visited the farm, and selected some extra fine animals to head their valuable herd of Holsteins. Like many others, he best expressed his appreciation of the great Barrington by placing one of his sons first upon the list; Zymel's Barrington, 1841, H. F. H. B., one year old, whose dam has a milk record of 87½ pounds per day, grand-dam 84½ pounds milk per day, and 18 pounds of butter in seven days. The dam of her sire has a milk record of 81½ pounds per day, while Barrington's dam, the wonderful and beautiful Hamming, has a milk record of 99 pounds in single day. This calf is indeed a treasure, and will be a credit to Mr. Stevenson's judgment of the cattle. He also purchased three cows and one yearling heifer.

Schuiling, 3350, H. F. H. B., a handsome animal, with milk record of 80½ pounds in single day, will head his herd of females.

M. Cook, of the well-known Canadian firm of M. Cook & Sons, the pioneer Holstein breeders of Canada, is now our guest. This firm has purchased all their Holsteins from our importations, and has now decided to place at the head of their herd a son of Barrington, and a daughter of Hamming.

He takes Jenne B 3d's Barrington, 4207, H. F. H. B., who, like all the famous Jenne B family, is in himself a grand acquisition; and also Hamming 3d, 5361, H. F. H. B., out of Hamming, already described, and sired by Neptune Jr., 1916, H. H. B. The value of these selections cannot be overestimated. He also purchased Sir Archibald, 3045, imported by us, and one of the best known bulls in Canada; having taken more sweepstake prizes and medals, both gold and silver, than any other Holstein bull in the Dominion.

The Independent Farmer.

An Eastern View.

How pleasant it seems to live on a farm,
Where nature's so gaudily dressed,
And sit 'neath the shade of the old locust tree
As the sun is just sinking to rest:
But not half so pleasant to hoe in the field,
Where the witch-grass is six inches high,
With the hot scorching sun pouring down on your back,
Seems each moment as though you would die.

'Tis pleasant to sit in the cool porch door,
While you smoke, half reclined at your ease,
Looking out o'er your beautiful fields of grass,
That sway to and fro in the breeze;
But not quite so pleasant to start with your scythe,
Ere the morning sun smiles o'er the land,
And work till your clothes are completely wet thro',
And blisters shall cover your hand.

In keeping a dairy there's surely delight,
And it speaks of contentment and plenty,
To see a large stable well filled with choice cows,
Say, numbering from fifteen to twenty;
And yet it seems hard, when you've worked from the dawn
Till the sun disappears from your sight,
To think of the cows you have yet got to milk
Before you retire for the night.

In raising young pigs there is surely a charm,
When they sell at the present high price,
And of all the young stock which a farmer can raise,
There's nothing that looks half so nice.
How cheerful one feels as he leaves them at night,
The encouraging number of eleven!
But his joys slightly wane when he goes out next day
And of live ones can count only seven!

'Tis pleasant to sit by a warm winter fire,
When the night draws its curtains around,
With wife and children to make home complete,
And peace and contentment abound;
But ecstasy fades when you shoulder your ax,
And trudge off a mile through the snow,
While the cutting west wind drives the snow in your face,
So you scarcely can see where you go.

But no one disputes that the farmer is blessed
With true independence and labor—
Whose food don't depend on the whim of mankind,
Like that of his mercantile neighbor;
For God, in His mercy, looks down from above,
And paternally gives him his bread,
Provided—he works eighteen hours every day,
And devotes only six to his bed.

A Plea for the Story-Teller.

[Written for the RURAL PRESS by I. H.]

Not long since one of the contributors to the Home Circle said some pretty sharp things about the "continued stories" which from time to time appear in its columns. That the adverse opinion which she expressed is not shared by the great reading public is proved by a glance at any of the popular magazines or literary papers of the day.

Serial stories are one of their principal features—it would seem one of their chief attractions; and the majority of readers, whether old or young, take pleasure in keeping up for weeks and months an interest in the characters and incidents thus brought before them in regular installments.

Clearly it is a matter for individual preference. If a busy man or woman finds it an annoying tax on attention and memory to recall what Mr. Jones or Mr. Smith was saying or doing in the last week's number of the family paper, by all means let Mr. Jones or Mr. Smith be dropped, and the story of their performances ignored.

It is not for the purpose of forcing upon any one the opposite opinion that I write, but merely to put in a plea for the story-teller who does not always act from *malice prepense*.

There is probably no one who imagines that the writer of a story for the RURAL PRESS sits down with the deliberate intention of covering so many sheets of paper, and forthwith proceeds to create characters and devise situations whose description shall require the necessary number of words.

Something very different is generally the method employed. It may be in some leisure half hour, or while the hands are busy with merely mechanical tasks leaving the mind free, that an idea presents itself which gradually unfolds and takes tangible form and shape.

The characters which are to appear in the yet unwritten story develop themselves, as it were, and the author feels as keen a delight in making their acquaintance as if they were real creatures of flesh and blood.

Not until they have been daily companions for a week or a month—it may be for a much longer time—is the pen taken up and the attempt made to introduce them to others. Then the incidents, dimly defined before, are distinctly portrayed, and the story, long or short, is completed.

Of course it is possible to rewrite it, to condense and curtail; but there is a limit to the process beyond which one cannot go without injury to the interest of the story. Nor is the shortening always desirable. Take, for instance, the charming account of the "Evolution of Mrs. Thomas." Who would willingly spare any of the details by which M. H. F. has brought us into intimate acquaintance with each member of the family, and made them our familiar friends? Ours would have been the loss had she cut down the pretty, simple story to the limits imposed by one appearance in the columns of the paper.

It may seem a strange thing to say, but it is true, nevertheless, that the author of a story cannot at will alter its construction and control the actions of its characters. Some one lays down a popular novel with the exclamation, "Why did he bring it to such an unsatisfactory end? Why did not Mary marry Tom?" Why indeed? Probably because no other conclusion seemed possible—because Tom and Mary were real individuals to the author, and carried out their own plans and had their own way, leaving him nothing to do but to tell the tale.

Does this theory offer an excuse for works of an immoral tendency, for the miserable sensational novels whose mission is only evil? By no means. The mind which can take pleasure in the contemplation of worthless characters and debasing deeds must be very far astray from the paths of rectitude and virtue; and if the indulgence of such imaginations is reprehensible, how much worse to express them in written words and bring their evil influence to bear on other minds and other lives.

The responsibility resting upon every one who writes for the public begins before the fingers grasp the pen, in the habits of thought, the very imaginations of the heart. If a strict guard is kept there is no danger of any spirit of evil going forth to mislead or to destroy. But this is far away from the original topic, which was only to bespeak an intelligent sympathy for the story-teller who may transcend the usual limits; and to beg the editor not to consign to the waste-basket any manuscript whose only fault lies in its being a "continued story."

Walnut Creek.

Keep Your Best for Home.

There is no place where good manners and punctilious etiquette is of more value than in the home. It is the moral agent of good breeding; it is the law that governs the manifestations of kindness and good feeling, and also the law that restrains unkind and ignoble traits of human nature from expression.

Keep your best temper for home. In society, on the streets, in business, everywhere, it is easier to control that attribute, if we guard the hasty word, the peevish tone, the irritating action, in the home circle, and study to wound none of its inmates.

Keep your best spirits for home. Nowhere do gloomy and depressed spirits tell so disastrously as at home. The parents may have just cause for anxiety and care, but it is wrong and unjust to shadow the young life of children with anxieties they cannot appreciate, and cares they cannot understand. The tendency to brood over trouble or misfortune increases with its indulgence. So, also, the disposition to be cheerful and happy at all times increases with cultivation. This is by far the most admirable trait. Those who are sunshiny and cheerful in charac ter always have the most friends, and where are friends so true and loyal and so desirable to perpetuate as those of home and family? The old comparison of the bent twig is as true in this case as in any other, and children who grow up in an atmosphere of foreboding of the future, anxieties about the present and cynical reflections on the motives and actions of people about them, are training a tendency to be miserable and sad, and in their turn cast shadows, instead of sunshine, on the path of all about them.—*Selected.*

TEACHING HIS WIFE A LESSON.—The *Record-Union* tells how a well-known citizen of Sacramento was going up J street the other evening, when he espied his wife a short distance ahead of him, evidently "out shopping," and apparently thinking only of what it was best to buy and where to buy it. A day or two before they had been speaking of the boldness of thieves in snatching ladies' purses, and she expressed the belief that there was little danger if the owner of the purse was careful, and she was Old Care personified. So when her husband saw her swinging her purse gracefully as she moved along, he determined that he would teach her a lesson. Quickening his steps, he soon overtook her, snatched the purse and ran away a few yards—but only a few, for he was followed by a screech loud enough to be heard half a mile. As he had not bargained for too much notoriety, he retraced his steps, remarking, as he came up, "Don't be foolish, Annie!" and was about to add something more, when the light shone fairly in the lady's face and he found that it was not his wife, but a stranger! She listened to his apologies with a tolerable good grace, but there crept into his mind a suspicion that somehow there had been a mistake as to the recipient of the "lesson." He vows, however, that his wife shall never hear of it, from him at least.

The Celebrated Peak's Cave in Derbyshire, England.

[Translated from the German Works of JOHANNA SCHOPENHAUER by PROF. GRANVILLE F. FOSTER.]

We now entered a narrow, frightful valley. No tree—not so much as a trace of vegetation; only bare, steep rocks, among which we were obliged to pick carefully our way—rocks which threatened every moment to bar effectually any further progress. We were traveling through the very bleakest, saddest, most frightful region in England. At last we reached Castleton, the most wretched little town we had as yet laid our eyes upon in all England. Soon as possible after our arrival, we hastened toward the Peak's cave, which lies only a short distance from the town. Its entrance is indeed grand and imposing. Before us rose a row of enormous rock masses, almost perpendicular, of wonderfully jagged forms, and with tree-crowned summits. In one of the vast masses had nature hollowed out a gigantic arched gateway, 42 feet high and 120 feet broad, through which one seems to look into impenetrable darkness. Adorning the front of the vaulted gateway, like columns supporting the roof of a portico, were enormous, fantastically shaped stalactites, between which wild briars rankly grew, and around which wild ivy twined and crept, hanging therefrom in gay and delicate festoons, which fluttered gracefully back and forth in the breeze. From the roof depended vast masses of rock, which seemed to threaten ruin to the head of him who would unwittingly seek to penetrate the mysterious recesses of the under world.

We stepped into the cave. The midnight blackness soon softened into a mild twilight, as the eye accommodated itself to the little light. And now we readily perceive in the first great room of the cave a large number of women and children, assiduously spinning—as wretched a set of shapes as the imagination can well conceive. Like gnomes, crouched they in this cold, clammy darkness, here prolonging in a most miserable manner their wretched lives. At night they sleep in little board huts, which they erect for themselves within the cave and of which we saw a considerable number standing around. As soon as we were seen approaching we were surrounded with a host of importunate beggars, vehemently demanding money. We were fortunate in having taken the advice of our host at Castleton, and thus providing ourselves with a good supply of copper coins, with which to purchase our freedom from their persistent importunity. The warmth of the cave in winter, which renders buildings ordinarily well built unnecessary, the small sums of money collected from strangers, and above all, the freedom from taxes, which are only demanded from those living in the sunlight of the upper world, have induced these poor people to choose a dwelling-place so damp, dark and disagreeable.

After disposing of our store of change we purchased lights. Each one of our party carried one and the guide, who led in the advance, two, and thus we proceeded deeper into the dark background of the cave. As we were passing along our attention was called to several stalagmitic and stalactitic masses, for each of which the guide had a name. Now a low, narrow door is opened, through which passing we are ushered into a grand vault, from the roof of which hung down gigantic masses of rock, which ever and anon seemed just starting to fall upon our poor, devoted heads. The glimmer and shimmer of our flickering torches lent a double horror to these masses and increased the illusion that they had started to fall, for they seemed actually to move as we passed on. Soon the vaulted chamber became lower and lower, until, bent almost double with uncertain steps over the slippery, uneven ground, we were obliged to wend our way through a mere chasm in the rocks, which here ascended almost precipitately upward, or there descended in like manner downward. The air was clammy, or as we might truthfully say, tough, since we had actually to press ourselves through it by main force. At length we reached a spot where again we were able to lift up our heads. Here we found ourselves in a small chamber by the bank of a subterranean stream, which, like the mythical river Styx, rolls cold and still its murky waves through the regions of everlasting night. A straw-filled skiff lay moored at the shore in which two persons, stretched out at full length, could lie near one another. The guide stepped into the water, which reached almost to the hips, and in this position pushed before him the skiff, while we lying upon the straw hardly dared to breathe. We sailed under rocks which lay distant scarcely a hair-breadth from our heads, which threatened every moment to annihilate us. On either side was there not so much as a single inch of bank or shore upon which to set so much as one's foot. Never was the idea of being buried alive more vividly realized in imagination than by us here in this coffin-like skiff, with the dark and gloomy rocks above us. The guide was obliged to wade quite bent over. Let him but inadvertently strike his head against a jutting rock with force enough to render him insensible, and we, oh, horrid thought, would be in a manner terrible to conceive of lost, perhaps beyond recovery. Busied with these gloomy reflections, we continued our underground voyage a considerable time until we were able to land. Tightly grasping the torch, we mounted out of our coffin. Dizzy from our extraordinary voyage, we were compelled to rest awhile to recover ourselves ere we could look around, and hardly had we done so when dizziness again threatened to seize us. Here were we in a vast dome 120 feet high, 270 feet long and 210 feet wide. Here and there, as in a great church, sparkled like stars a crowd of scattered lights. This is the temple of everlasting stillness, into whose pitchy depths a single beam of the sun-lighted upper world, or a sound of its joy, has never entered. In this boundless space we felt even more uneasy than in the narrow chasms and constricted chambers, because the great distance from all life was here the more painfully apparent from the vast space which visibly separated us therefrom. With toilsome steps and slow, we clambered over or crawled between masses of torn and rough rocks until again we reach water. Here, standing still, our astonished ears were greeted with tones of music which seemed to float to us out of the distance as though some one was playing a musical instrument in some far distant room. Here, our guide plunging again into the water, took, one by one, each visitor on his shoulder, and waded a considerable distance to the rocks, on the opposite side of the stream. We saw a little round hole, into which the water was incessantly pouring from all sides. Here we found the cause of the musical tones, which seemed awhile before to reach us from a great distance—the continual, hasty dropping of the water into the hole in the rock caused air waves to be formed, of a sufficient number per second to create a musical tone. The floor was strewn with the most fantastic stalagmitic forms. Just as fast as we were able to do it, we hastened forward, and in a lofty, vaulted portion of the cave, a peculiar surprise awaited us. A choir of men greeted us with a slow, monotonous song. With lights in their hands, which they continually swung back and forth, there they stood 40 feet above us, in a kind of niche in the wall of the vaulted chamber. Their song was somewhat harsh; a little out of tune, wild, plaintive, but nevertheless not at all unpleasant. After this wonderful reception, our progress was resumed. With anxious step, and bending over, we glided by or climbed over more rock-masses until we reached a small-sized chamber, more frightful and awful than any preceding—a very ante-room to the dominions of his Satanic majesty. Here, at our feet, gaped a black abyss, into which we, trembling, tried to peer. The guide showed us a steep, clammy footpath, which led to the bottom over slippery limestone rocks. "This is the Devil's Cellar," remarked the guide, as he led the way with his light down the steep incline into the abyss, whose lowest parts must have reached a depth as great as the hight of Niagara falls. The few visitors carefully surveyed the dizzy and dangerous descent, and none essayed to follow, but were content to look into the yawning gulf beneath, while the guide, with a few lights, cautiously descended. By aid of the flickering lights we beheld below us bold, bow-like recesses, mighty towering pillars, all formed by nature, while in the greatest depths we caught glimpses of the water as it passed, purling and gurgling along in its subterranean channel. Finally the guide ascended and we commenced our return journey. At length we reached the second room from the entrance, and here a distant glimmer of daylight reaches our eye, long accustomed to the darkness, filling us with indescribable joy. Two hours had we remained in the dwelling-place of night and of eternal stillness. Now, as we stepped forth into the joyful sunlight, and are greeted again by the mild, cheerful summer air, blowing a breeze warm and lively, it appeared to us as though we had just awakened out of a disagreeable dream.

Sunol Glen, Cal.

Wordsworth's Masterpiece.

[Written for the RURAL PRESS by F. H. A.]

In a letter to the RURAL some weeks ago I referred briefly to the high quality of Wordsworth's poetry, and said I preferred it to that of a more sentimental character. I can, however, recall the time when Moore was my favorite and I thought Wordsworth dull. "Lalla Rookh" I liked particularly well, especially the poem in it entitled "Paradise and the Peri." This I learned by heart, and most of the "Melodies" as well. But that was when I looked more at the letter of a thing than the spirit of it. As we grow intellectually we grasp by degrees the inner meaning of all that comes under our observation. And the more we expand in mental breadth and insight, the more significance we perceive in everything. A writer who had this faculty of looking beneath the surface in a high degree thus expresses himself on this matter:

"I hearing get who had but ears,
And sight who had but eyes before;
I moments live who lived but years,
And wisdom learn who knew but learning's lore."

How many can testify to the truth of this! Some have come to know it through a great and overwhelming grief; others, by a sudden flash of light thrown by some kindly hand or thoughtful book; others, from the very first seem alive and sentient to the hidden purport of things.

Wordsworth and Emerson are the two men

who have been said to have reached the high-water mark of thought of the age. It appears to me there are others of whom the same may be said. Among these, Carlyle and Thoreau are prominent. Both these writers were the friends of Emerson. He recognized and understood, perhaps more than any other, the genius of Carlyle; and of Thoreau he said, when that writer passed away from earthly sight, that America knew not how great a son she had lost.

Perhaps because of his more cheerful tone of mind, Emerson's spiritual eye saw keener and farther than that of Carlyle. He has defined the true poet with a truthful, vigorous pen in his poem, "Merlin." I shall quote a little from it, because it is my own idea of the poet's vocation, which does not consist in stringing rhymes together, but in depicting, as nearly as he can, truth. This is the charm of Lowell's poetry, Mr. Berwick's essay on which, and his selections from, I read with much interest; and this is the charm of Wordsworth's. I think both these poets answer to Emerson's description of the poet to his liking:

"A trivial harp will never please
Or fill my craving ear;
Its chords should ring as blows the breeze,
Free, peremptory, clear.
No jingling serenader's art,
No tinkle of piano strings,
Can make the wild blood start
In its mystic springs.
The kingly bard
Must smite the chords rudely and hard,
As with hammer or with mace,
That they may render back
Artful thunder which conveys
Secrets of the solar track,
Sparks of the supersolar blaze."

I still like Moore, but his songs, bright and joyous, sweet and pathetic as they are, only interest and charm; they do not satisfy. We do not catch many glimpses in them of those

"shining bars
Of light that fall from heaven's glow."

Our eyes are often dazzled by the luster of such rays in Wordsworth. His sublime ode (as Coleridge has well called it) on immortality more than any other of his poems shows what he has done toward seeing and voicing truth, though this feature characterizes most of his work. This production of his Muse alone would be enough to crown his name with imperishable poetic glory; his other poems are but stepping-stones to it. It is the focus of the most brilliant of his piercing rays of thought. No other subject has such vital interest for mankind, and the poet that conceived the idea of giving his feelings about it to the world merits the world's highest praise and admiration.

Matthew Arnold places Wordsworth as a poet after Shakespeare, Milton and Goethe, thus putting him ahead of Byron, Burns, Moore, Coleridge and many others. And the reason for this is because he deals so powerfully with life—"because he deals with that in which life really consists."

As in nearly every fine poem, some portions of the "Intimations on Immortality" excel others in subtility. How beautifully he expresses the feeling that man has, that there is something in him that is not of earth:

"Our birth is but a sleep and a forgetting;
The soul that rises with us, our life's star,
Hath had elsewhere its setting
And cometh from afar;
Not in entire forgetfulness,
And not in utter nakedness,
But *trailing clouds of glory* do we come,
From God who is our home."

I italicize the words in the line before the last, because to me they seem peculiarly exquisite. I shall not attempt to paraphrase them, nor the following. I would make but clumsy work of it:

"Earth fills her lap with treasures of her own;
Yearnings she hath in her own natural kind,
And even with something of a mother's mind,
And no unworthy aim.
The homely nurse doth all she can
To make her foster child, her inmate man,
Forget the glories he hath known,
And that imperial palace whence he came."

* * * * *

"O joy! that in our embers,
Is something that doth live;
That Nature yet remembers
What was so fugitive."

The lines I like the best in the poem are the following. Before I read them in Wordsworth I came upon them in some book and copied them, because I thought them so surpassingly beautiful. The poet's name was not given, and I did not know who the author was until I read his grand ode:

"Hence, in a season of calm weather,
Though inland far we be,
Our souls have sight of that immortal sea
Which brought us hither."

The last two lines of the poem, in the light that science is continually shedding on the meaning and connection of natural objects, are a splendid finale for so great a masterpiece:

"To me the meanest flower that blows can give
Thoughts that do often lie too deep for tears."

Some one asked a little while back in the columns of the RURAL, "What shall we read?" There is so much to read that one feels bewildered what to recommend for perusal. We must try and read the best, at all hazards, and the poems of William Wordsworth are among the classics, and will certainly be efficacious in, as he himself hopes, helping "to make men better, wiser and happier."

YOUNG FOLKS' COLUMN.

Jeff's Fortune.

(Concluded from last week.)

[Written for the RURAL PRESS by J. W.]

October had now set in and no gold had "turned up" yet. Jeff was getting discouraged. Several miners were going further north, and he concluded to go with them. He would see more of the country and perhaps be more successful.

One afternoon, while sailing up a narrow river in a primitive looking steamboat on their way to Washington Territory, Jeff persuaded the captain to allow him to land with his gun, his intention being to shoot awhile and then, by a short cut through the woods, to reach the point where the boat made her regular landing and get on board again. Permission was granted and he went ashore.

He struck right into the forest and became so interested in shooting that he did not notice the time till it began to grow dark and there was no river in view. He looked around him in dismay. What if he should be left there? He knew there was no village nor settlement for miles, nothing save the scattered tents of hostile Indians. There was no time to be lost. His first impulse was to run in what he believed to be the direction of the river, and this he decided to do; so, shouldering his gun, he ran as fast as he could. Occasionally he caught a glimpse of the river, between the trees. This guided him as to direction, but the distance was greater than it appeared to Jeff.

Almost breathless with running and the fear of being left, he sat down in despair; but, realizing that he must act promptly or be left in the woods, he rose, rushed on and was soon gladdened by a full view of the river. He instantly fired a shot to attract the attention of the captain, and continued to do so, at intervals, as he ran. He could now see the boat nearing the bank. They had heard the signal and waited for him at the landing, and as he stepped on board he drew a long breath and said: "Safe at last!"

"If at first you don't succeed, try, try again." This advice, old as it is, if followed will insure success; and if Jeff had not possessed the determination expressed in this saying, he never would have found his fortune.

Spring found our young friend again in Nevada, fully equipped for prospecting. One sultry day in July he again turned to the mountains. Halting awhile on a rise of ground to rest his horse, his gaze was riveted on the stretch of land beneath him, as the peculiar whiteness of the ground attracted his attention. What can it be? What was it? The whole surface was covered with white foam, like a vast field of soapsuds. His curiosity was fully aroused. He had never seen anything like this before, so he proceeded to investigate. He made his way to the spot as soon as possible, and picking up a piece of this crude, whitish material, he tasted it. From experience he knew the substance contained alkali. He spent some hours in marking out, with stakes, this large area, to show that it had been "taken up, as there were many prospectors in the mountains in search of gold, silver, or anything that might prove valuable. He must secure, or "lay claim to," this tract before going further, or some one else could appropriate it to his own use.

Jeff then went to the nearest mining camp and found a man who could analyze the substance and test its value. Handing him a piece of this soft white mineral, he inquired what it was.

"Where did you get it?" asked the man.

"Never mind where I got it. Can you tell me what it is?" said Jeff.

"Well, it is the richest crude borax that I have ever handled," was the reply.

Jeff felt satisfied he had found a prize, and walked away happy in the knowledge that he had discovered, and was in full possession of, an inexhaustible "borax marsh," for such it proved to be. It was the bed of a lagoon, seven miles long and three miles wide, and the borax deposit was the result of volcanic action, which had taken place in the geologic ages.

Jeff immediately wrote home to tell the good news of his grand success, and told his brother Lawrence if he would come to Nevada he was willing to share his good fortune with him, as there was enough and to spare, if they would only devote their time and means to the business of "working the mine."

Lawrence gladly accepted the offer, and soon joined his brother. They had many difficulties to overcome. The roads were rough and long. From the nearest railroad it was 200 miles to the marsh. The hauling being done by mule-teams, it often required weeks for the journey; yet in a comparatively short time they began to realize some return for their labor and expense, and before many years they were considered among the most prosperous men of the times.

* * * * *

In Western New York, on a clear, cold evening in December of 18—, a carriage rolled rapidly along over the frozen ground and stopped before an old farmhouse. The door was opened, sending out a stream of light into the darkness, thus giving a better view of the stranger as he alighted. In the doorway stood a young girl about 16. She closely scanned the visitor as he approached, and then, with a cry of delight, she said: "O mother! it is Jeff!"

We will leave the mother to welcome her son alone. As we enter the family sitting-room, it seems but little altered since we last saw it. The cheerful fire still burns upon the hearth. The change is in the occupants. Jefferson Easton, as he now appears, tall, brown and bearded, could scarcely be recognized as the sad-faced youth who sat upon his trunk in the corner during our last visit.

His mother's hair is streaked with silver, and her once happy countenance seems marked with sorrow which is visible even through her joy at the return of her son.

"Tot," no longer a child, feels her importance as a young lady as she listens with deep interest to her brother's recital of his travels.

The vacant chair at the fireside explains the cloud that marred their happiness. The father's face was missing. Only one month before Jeff's return, his father had been suddenly stricken with paralysis, and, after one week of unconscious suffering, had passed away. After this explanation by his mother, a short silence ensued, during which the thoughts of each were with the absent one.

Jeff left the room, but soon returned, and handing his mother a carpet-bag, said: "Mother, I have obeyed your last injunction to me as I left home. I have brought you back your carpet-bag. Does it look natural? Open it!"

Nervously she did so. Taking out a package, she read, "For mother," and on opening it found a gold watch and chain. Another was marked "For Tot," and she displayed a handsome set of jewelry. A larger roll contained a silk dress for each. With a grateful heart and beaming face, she kissed her son through her tears.

Jeff could not remain long at home, as business required his attention in Nevada; but he went joyfully forth to his new home, taking with him his mother and sister, to show them that his boyhood's dream had been realized. And there we will leave them, enjoying Jeff's fortune.

DOMESTIC ECONOMY.

ORANGE CAKE.—One-half cup of butter; stir to a cream; then gradually add two cups of powdered sugar. Beat separately the yolks and whites of five eggs, reserving the whites of two for the frosting. Stir the yolks with the butter and sugar, and then add the grated rind of an orange and all the juice except one tablespoonful, and one-half a cup of cold water. Mix two teaspoonfuls of baking powder with 2½ cups of flour and sift twice. Stir the flour in gradually and beat well; then add the whites of the eggs, beaten to a stiff froth. Bake in layers. Use the whites of the two eggs and the spoonful of orange juice reserved from the cake to make a frosting to put between and on top of the cake. It will require about two small cups of powdered sugar.

CHICKEN CROQUETTES.—One can of boned chicken, one cup of mashed potatoes, one-half cup of drawn butter. Chop the chicken very fine and season with salt and pepper. Beat two eggs very light, and when the drawn butter is boiling hot, pour it upon the eggs; then stir in the chicken and set the mixture away to cool. Make into shapes, not too thick; brush them over with egg; roll in fine cracker crumbs, and fry in a wire basket in hot fat. Cracker dust can be purchased in pound packages, and is a great convenience, beside being more evenly powdered than that which is rolled at home.

CUP PUDDING.—Make a batter as if for waffles. To one pint of milk allow two eggs and enough flour to thicken. One teaspoonful of baking powder should be stirred into the flour. Fill a sufficient number of teacups with this and with fruit if you wish, currants and raisins in layers. Then set the cups in a steamer and let the water boil underneath for a full hour; serve while hot with a sugar and butter sauce or cream. Jam or chopped apples can be used in place of currants and raisins.

WHITE GRAVY FOR FISH.—Put into a pint of boiling water, or the water the fish has been boiled in, a small bunch of savory herbs, a little piece of lemon rind, four cloves, four peppercorns and a little salt, letting them come to a simmer, and then strain; stir into the liquid a tablespoonful of flour, with two ounces of the best butter, mixed smoothly together. Let it boil five minutes. Chop a hard-boiled egg and put in tureen with the gravy.

FIG PUDDING.—Six ounces of fresh grated breadcrumbs, six ounces of suet chopped fine, five ounces of sugar, one-half a pound of figs chopped fine, one cup of sweet milk, one-half glass of brandy, one-half a nutmeg, one-half a teaspoonful of soda, one teaspoonful of cream tartar and three eggs. Steam three hours and serve with wine sauce.

FRUIT SNAPS.—One and a half cupfuls of sugar, one of butter, one-half cupful of molasses, three eggs, one teaspoonful of soda, one cupful of raisins, one of currants, one tablespoonful of ginger, one of cloves, one of cinnamon, one of allspice, sufficient flour to roll out as soft as can be cut. These will keep several months.

GOOD HEALTH.

How to Keep off Rheumatism.

A writer in the Boston *Herald* avers that nearly every person inclined to rheumatism, but as yet free from chronic changes in the joints and muscles, can, by proper conduct, entirely overcome the defect and never experience a recurrence of the disease.

A subject to rheumatism should secure a healthy habitation, located on rising ground, perfectly drained, in pure air, and accessible to sunlight. Perfect ventilation is at all times essential, and the means of heating should be sufficient to permit it.

To promote a healthy action of the skin is of infinite importance, and for this purpose Turkish baths are advised. When judiciously used they are not only powerfully preventive, but are curative of rheumatism. How often to take them each person must decide for himself, influenced by their effect upon him. In exceptional cases they may be indulged in daily for a time, but as a rule once or twice a week is sufficient.

Every morning on rising the subject should take a cold sponge bath, after which he should be rubbed down with coarse towels until his skin is in a glow. This will not only keep it in good tone, and the pores properly opened, but it will invigorate the entire system, nervous as well as circulatory, and will also render him less liable to take cold.

Certain dietetic restrictions are imperative. Fries and stews are forbidden; the same may be said of salads and all articles of food rich in fats. Pastry is also interdicted; in fact, nothing should be eaten which is in any degree burdensome to the digestive organs. Subjects to rheumatism are, as a rule, inclined to be bilious and suffer from indigestion; to guard against these disorders, the food should be of the simplest character, concentrated, and yet nutritious. If one does not feel the denial of tea and coffee too great a hardship, he should dispense with them, and drink, instead, for breakfast, milk or cocoa—that is, if they are well borne. At that meal toast or coarse bread, such as brown bread, is to be preferred, and butter may be used, but not too generously. Oatmeal may very properly be the first dish partaken of. Eggs act differently on different people; for those who bear them well they are indicated, either poached, dropped or lightly boiled. Easily digested fish may be included in the first meal. Bacon is the least exceptionable of all salted meats, and its occasional use can do no harm; what fresh meat is eaten daily should be taken at the midday meal. Long fasting is injurious for all predisposed to rheumatism. It is therefore advised that dinner be taken between 12 and 1 o'clock. If hunger is felt during the afternoon, a cracker and a glass of plain soda, Star or other mildly alkaline waters will satisfy its cravings. It is important to remember that the daily quantity of meat needed by a person in health, who lives on a mixed diet, is three-quarters of a pound; those inclined to rheumatism should never indulge more liberally. At dinner it will be well to forego soup, as it is apt to "sour on the stomach." Within the limits stated meats may be taken, and preference is to be given to those which are easy of digestion. If one loves fish, he might well make it the principal dinner dish. In selecting vegetables, again digestion is to be considered, and only those which are well borne on the stomach are to be indulged. Lemonade for dinner is a pleasing drink; all malt or alcoholic liquors are forbidden. Instead of pastry, boiled rice, bread, tapioca or other puddings equally as light, may be partaken of, and a small quantity of fruit is acceptable. Nuts and cheese cannot be allowed. If a person who enters upon this dietetic regimen feels faint and the need of food late in the afternoon, he will find a biscuit and a glass of Apollinaris or Star water sufficient. As is the usual custom in this country, supper between 6 and 7 o'clock is the proper time. It should be light—berries and milk in summer and a few raw oysters in the colder months. Those who are wedded to tea may take one cupful, if weak, but cocoa would be better. Toast, rusks or light biscuits and a little fruit can be indulged in to satisfy any reasonable appetite. Cakes and sauces should not enter the diet. Eat slowly and masticate all food well. If hungry at bedtime, a glass of milk will be all that is needed.

It is possible only to barely outline the dietetic treatment which a subject to rheumatism should pursue. The rule should be to carefully avoid all substances which are at all likely to cause indigestion, as that is a potent contributing cause of rheumatic affections, and also to exclude from diet both food and drinks which are likely to cause an excess in the blood of that acid constituent which is notably increased in rheumatism. No less important than the dietetic restrictions is sufficient daily exercise in the open air. Unless it is taken, one susceptible to the disease cannot long escape it. A walk of nine miles each day, or muscular effort equivalent to it, is imperatively demanded. Let the subject live as any sensible man knows he ought to live, and there is but little danger of his suffering from an attack of rheumatism.

The Week.

The rains continue in the valleys; on the mountains and in the extreme north the snows are still falling. It is turning out to be rather a heavy winter, even if it was so late in beginning. During the last week there have been some matchless days, and followed as they are now by warm showers, vegetation will make rapid progress. Our reports from snowless districts are generally favorable in regard to the growth of grass and grain, and there is little complaint so far of too forward fruit trees. In the live-stock counties of the north there has been some hardship and loss because of the hard storms and heavy snow, and those farmers have been happiest who had most hay in stack or barn. Our losses and discomforts have been slight indeed, compared with the disasters upon the great interior plains of the continent. Generally speaking, the disposition of the people is cheerful and hopeful; the throngs of Eastern people are charmed with the more recent weather, and investment in California city and country property is brisk.

Congress and the California Legislature are both in their death throes. This week will finish Congress unless the President calls an extra session, and the California legislators will fly homeward unless they desire to enjoy Sacramento society at their own expense. Congress has taken some very important action this winter, and the California Legislature, though much it has been scolded, has done some good things. It needs the rest of the week, however, to complete its record for good or ill.

Agricultural Experiment Stations.

The outlook for the progress of experimental work in agriculture in California is most gratifying. In his report to the Board of Regents of the State University on Tuesday of this week, President Holden, alluding to the new permanent fund as just provided by the Legislature, said in substance:

It appears to me that the direction in which the University should expand is the very one in which its efforts will be most appreciated by the people at large. The University should be an intelligent leader of the people of the whole State in enabling them to take possession of their inheritance. It should conduct various economic surveys in agriculture, in viticulture, in biology, in mining, in topography, etc., and constitute itself a central bureau where any citizen can obtain a professional and expert opinion free of all charge, upon any subject of public interest, and not strictly of a private nature. The Department of Agriculture has fully performed its duties in this respect in the past, and will continue to do so in the future, but I can see many ways in which the other technical colleges and departments may make themselves not only useful but indispensable in the development of the State with the new means now made available for this purpose. The newly provided income will make this service not only possible, but an imperative duty. It is for the Board of Regents to devise ways and plans for this new expansion.

In his memoranda of the needs of the several departments of the University, submitted by President Holden, it appears that he advises that "the Lick Observatory receive some $20,000, the Agricultural department some $24,000, and generally that increases should be made in the more practical departments, leaving the departments of the College of Letters to be supported by the general fund." This position of President Holden will be noted with great pleasure by the friends of industrial education, as surety that the new funds are to be faithfully devoted in good measure to the kind of the work the people most desire, and it was on the expectation of such expenditure of the money that the project for the permanent endowment of the institution won such general support. It would have been altogether impossible to have secured the endowment had not the University thoroughly commended itself to our industrial classes by its work during the last decade.

The directions in which the increased University funds will be used will be several. The force for instruction and experimentation in various agricultural branches at Berkeley will be increased and better facilities for the work will be provided. It seems now possible to localize the experimental work at various points in the State, as Prof. Hilgard has always desired to do. The new funds to help out at the central station in Berkeley, supplemented by the money to be derived from the United States (through the Hatch Experiment Station bill which seems to have finally passed both houses of Congress), will enable the Regents to establish a number of local experiment stations in various parts of the State, so as to conduct experiments under the diverse local conditions prevailing. It will not be possible, of course, to establish many at first, but possibly the number can be added to each year. We notice that President Holden in his report to the Regents says:

Prof. Hilgard agrees that at least three stations will be necessary. The grounds for each need not be greater than 10 acres, and suitable ground will be given, no doubt, by private property-owners. There should be stations, it is thought, near Tulare, near Los Angeles, near Vina, Tehama county, and at Mount Hamilton. Each station will cost about $4000 the first year. There should be viticultural stations at Cupertino, Mission San Jose, Fresno, Vina, and somewhere in the foothills.

Of course other important districts will also be considered. One reason the places named were selected, perhaps, is that enterprising citizens in those parts have already offered to cooperate with the University in establishing such stations. If this is done and local property-owners and public-spirited citizens will come forward with donations of land and subscription of funds for part of the support, the number of stations can be largely increased, as it is every way desirable that it should be. Some months ago we mentioned the Tulare district as one of the most enterprising and progressive in the State, and also as a region where very novel, important and interesting conditions had been observed to govern agricultural practice. It is very desirable that Tulare should pursue this idea of co-operating with the University for a local establishment in their district. We understand that citizens who have been spoken to about it are quite favorably disposed, and it is believed that a sufficient interest can be aroused to secure the early establishment there of such a station. We also presume the proper encouragement would be made in the other places mentioned in Prof. Hilgard's recommendation, and in other places which have not yet been mentioned in this connection. We commend the subject to the attention of our readers and to local agricultural societies. Of course, selections of locations will have to be made on the ground of the widest practical value of the data which can be secured by experiment, but between places of equal standing in this regard, a choice may often rest upon the financial and moral support which enterprising citizens may bring to the undertaking. As we remarked at the outset, everything seems now very favorable for most active and valuable work in agricultural experimentation and investigation in this State.

Our Illustrations.

The photographotypes in this issue of the RURAL PRESS we think will prove pleasing to our readers, far and near, as they represent the exhibits in the San Jose Citrus Fair with exactness and with greater truthfulness than such views could be obtained in any other way. This is especially favorable to those abroad, who can rely upon the fact that the pictures are not the fancy of any artist, but the reflected light of "Old Sol." Therefore the views cannot be considered as exaggerations made to order for booming purposes. We regret not being able to give illustrations of some other exhibits deserving of great credit. The exhibit of oranges from Knight's Ferry, Stanislaus county, and by the Catholic Fathers, from Saratoga, Santa Clara county, were among the best exhibits which our engravers have not portrayed. More views, however, may be given in our future issues. The stormy weather has somewhat interfered with the prompt appearance of these engravings. Our engraving facilities will be constantly improved, so that greater benefits will soon inure, we trust, to a wider range of our readers in the course of time. Views taken in the interior of a building are among the most difficult of all for photograving, but we think those familiar with the late fair will recognize agreeably the views our enterprise has fortunately been able to present to them, and through our extra large circulation to the public.

Forestry.

The bill to enlarge the powers of the State Board of Forestry, and to provide funds for its work, passed the Assembly on Tuesday and is now awaiting the Governor's signature. On another page of this issue may be found a forcible article by Abbot Kinney, chairman of the State Board, urging the importance of the forestry work to California. We are glad the Legislature has acted so promptly and thus given us the chance to announce the final passage of the bill in the same paper that presents such cogent reasons for its enactment. It shows the advantage of writing for such an influential journal as the RURAL PRESS. As the bill has passed, Mr. Kinney's article may serve another purpose, to wit, to strengthen popular sentiment in favor of the enforcement of the law when it becomes operative. There will be need of considerable popular preaching before all the people are fully informed upon this matter.

As we understand it, the bill for making Washington's Birthday "Arbor Day" for California is still before the Legislature. We trust it will be passed, even though the remaining life of the Legislature be short. The idea should commend itself to every one.

The Legislature.

Wednesday was the 59th day of the session. The Telegraph Hill Damage bill that proposes to pay $97,000 for damages done by the seawall contractors came up in the House Tuesday as a special order, and was defeated as it should be. It is clear on the face of it that if any damages have been done the contractors alone are responsible, as they took the contract agreeing to furnish the material. Tuesday Governor Bartlett sent a message to the Senate announcing that he had made the following appointments of trustees for the Home for the Care and Training of Feeble-Minded Children: Mrs. Kate B. Lathrop, of San Francisco, Abram Block, of Santa Clara, and Mrs. Julia M. Judah, of San Mateo.

The Tax Levy bill for the thirty-ninth and fortieth fiscal years, which was introduced in the Senate Tuesday, provides for the State Board of Equalization to fix an ad valorem rate of taxation upon each $100 in value of taxable property of the State, after allowing 12 per cent for delinquencies in and cost of collection of taxes for the thirty-ninth fiscal year, for the general fund $2,500,000; schools, $1,800,000; interest and sinking fund, $250,000; for the fortieth fiscal year, for the general fund $2,312,000; schools, $1,800,000; interest and sinking fund, $250,000—a total of $8,962,000.

The Act to establish an industrial home of mechanical trades for the adult blind of California, creating a Board of Directors for the management thereof, and appropriating $65,000, was Tuesday in the House ordered to a third reading. The Brooks Pilot bill has been hung on the tenter-hooks of the Senate Committee on Commerce and Navigation to die. The wobbling on this bill in both Houses has been peculiar. Can it be that a powerful loadstone has been concealed about the capital?

A bill amending Section 2995 of the Civil Code has also been approved. It provides that mortgages may be made upon—

First—Locomotives, engines and other stock of a railroad.
Second—Steamboat machinery, the machinery used by machinists, foundrymen and mechanics.
Third—Steam engines and boilers.
Fourth—Mining machinery.
Fifth—Printing presses and material.
Sixth—Professional libraries.
Seventh—Instruments of surveyors, physicians or dentists.
Eighth—Upholstery and furniture used in hotels, lodging or boarding houses, when mortgaged to secure the purchase-money of the articles mortgaged.
Ninth—Growing crops.
Tenth—Vessels of more than five tons burden.
Eleventh—Instruments, negatives, furniture and fixtures of a photograph gallery.
Twelfth—The machinery [casks], pipes [tubes] and utensils used in the manufacture or storage of wine, fruit, brandy, fruit, [syrups] or sugar [also wine, fruit, brandy, fruit syrups or sugar], with the cooperage in which the same is contained.
Thirteenth—Pianos and organs.

The bill appropriating $10,000 for the erection of a cottage at the Veterans' Home has been approved by the Governor, and also for the support of aged persons in indigent circumstances at that institution, appropriating $150 per year each.

The bill appropriating $250,000 for the erection of additional buildings for the patients of the California Hospital for the Chronic Insane, one-half to be used during the 39th fiscal year and one-half during the 40th fiscal year, and the bill to protect the manufacturing industries of the State, are also before the Governor. The latter provides that all goods manufactured in whole or in part in this State shall be stamped with the name of the manufacturer and the place where they are manufactured; and the Abbott-Wright Irrigation bill, providing for the formation of irrigation districts and prescribing the manner in which they shall be governed, are all before the Governor awaiting his approval.

Thirty-Two Page Extra.

Our 32-page extra of the San Jose Citrus Fair will be completed and mailed in a few days to a large number of representative farmers in the East, in the Santa Clara valley, in other parts of this State and the Pacific Coast. This extra will be made up in part of the matter that has already appeared in the RURAL concerning the Citrus Fair; also, additional matter not already inserted in our regular issues, which will appear in our columns hereafter.

San Jose.

One of the liveliest sketches in the vivacious writings of Bayard Taylor is a description of the valley of Santa Clara, which this great traveler declared to be one of three loveliest valleys of the world. Thridded by the Coyote and Guadalupe rivers, whose course was marked by the white trunks of the sycamores, gleaming like silver through the glossy foliage; the park-like groves of live-oaks that would have delighted the soul of an ancient Druid; the Santa Cruz mountains on the west, nearly 4000 feet in hight, covered with pine and redwood forests, upon which the golden setting sun dashed its most gorgeous ray-brush; the Coast Range hills on the east, where the full glory of the rising sun was displayed in rose color softly touched with violet, and overhead the blue, matchless luster of the sky, all combined to make a picture so new and dazzling that this great magician of words exclaimed: "Here the great artist seems to have taken a new palette, and painted his creation with lines unknown elsewhere." Near the heart of this lovely valley, like a charming picture in a charming frame, is situated the Garden City of California. It is about 80 feet above the level of the sea, and, including its eastern and western suburbs, has a population of 22,000 souls.

San Jose possesses many historical attractions. The town was laid out about the beginning of the century, and the ruins of some of the old adobe houses built before the American conquest may still be seen. The Mission of Santa Clara was founded by the Catholic Padres in 1677. The first California Legislature assembled here on the 25th of December, 1849. The city was incorporated in 1857, and in 1865 there was no municipal debt and it has been out of debt ever since. It is generally conceded that San Jose is the handsomest city in the State. The streets are broad, well laid out, and generally lined with shade trees. The buildings are elegant and the ample gardens and yards filled with every variety of beautiful ornamental trees and shrubs, fruit trees, and flowers. The drainage is excellent. The fire alarm and telephone system are of the best. The courthouse is of Roman-Corinthian style of architecture, and with the jail cost a quarter of a million dollars. San Jose is lighted with a six 4000 candle power electric light, placed upon an iron tower, 200 feet high, erected over two intersecting streets in the heart of the city. In addition there are several single lights on masts in various other parts of the city. San Jose has long been noted for its superior educational facilities. The public school buildings are numerous, convenient, and admirably arranged; the course of study and corps of teachers the equal of the best anywhere. The College of Notre Dame, Santa Clara College, and the University of the Pacific, are all amply equipped for conducting students along the higher ranges of education. The church buildings, as a rule, are handsome, well appointed and replete with every convenience promotive of the comfort and devotion of church-goers. There are five Masonic bodies, one Red Men's Lodge, six Odd Fellow Lodges, two A. O. U. W., one Chosen Friends, one Red Cross Lodge, two Knights of Pythias, one Legion of Honor, two Native Sons of the Golden West, two Patriotic Order Sons of America, one U. A. O. D., one A. O. H., one Knights of Honor, one Knights of Labor, two Good Templars, one Order of Herrman Sohne, two medical societies, two Posts Grand Army of the Republic, two Woman's Relief Corps, and one Ladies' Loyal League—the latter being the first instituted in California. There are four banks, half a dozen fine hotels, a free library of some 5000 volumes. San Jose is just now enjoying quite a boom of prosperity, property has appreciated, buildings are going up in every direction, and one of the latest enterprises is the erection of a palatial hotel, and it is reported that the elegant residence property of Captain Maddox, on North First street, has been bonded for $50,000 as the site.

San Jose is the center of attractions. The whole country is almost one vast orchard. Artesian wells are numerous and of great value. One of the most charming features is the magnificent drive to Santa Clara, known as the Alameda, a leafy lane of willows and sycamores for three miles. As the trees stand close together and are of a large size, they form a dense and continuous arch of shade. Between the rows of the trees runs a horse railroad, and a turnpike that most every afternoon is crowded with gay turnouts and people in the finest equipage. The whole way is bordered with neat and elegant homes embowered in vines, fragrant shrubs and flowers. Another favorite drive is on the Santa Clara avenue, a smooth pike to Alum Rock Springs, in a mountain canyon seven miles away. The spring and little plat on which the hotel stands belong to the city and is part of a reservation for a park of about 400 acres, wild and picturesque in the extreme. This is the favorite picnic ground, and it would do one's soul good, as it has ours, to see the average San Josean eat cold ham, chicken, hard-boiled eggs, etc., and loll away the afternoon, spinning yarns and cracking jokes, while the young people, under the thin pretext of gathering ferns or sipping sulphur water, strolled away into the woods. Twelve miles west of San Jose, and near the village of Saratoga, is the Pacific Congress Spring, so called on account of the resemblance of the waters to the famous spring of Saratoga, N. Y. It is a picturesque spot and a popular resort all seasons of the year. Twelve miles southwest from San Jose is another picturesque canyon, the location of the famous quicksilver mine of New Almaden, second only in importance to its namesake in old Spain. The road is level and the drive delightful. The most important, perhaps, of all the attractions of San Jose is the Lick Observatory on the summit of Mount Hamilton, 26 miles distant on the eastern range of mountains. The road is of easy grade, finely constructed, and the scenery for beauty and variety is unsurpassed. It is a beautiful drive no stranger can afford to neglect. But space would fail to do full justice to all the notable features of this city, and we can truly say that in healthfulness, salubrity, the intelligence of its population, its wealth of trees, flowers and shrubbery, fine drives and varied scenery, the numerous pleasure and medical resorts, schools and church privileges, San Jose stands in the front rank of California's list of popular cities.

E. BORGUIGNON'S FLORAL MONUMENT AT THE SAN JOSE FAIR.

THE COLONY AT TOPOLOBAMPO.—We are sorry to have so disheartening news to chronicle as is telegraphed this week, from Benson and Nogales, regarding the Sinaloa colonists. Straggers, returning northward in small parties, claim to have been greatly deceived and assert that the locality where the immigrants were located is simply a barren waste. The water was very impure and had to be brought 90 miles on the backs of burros. Most of the settlers were families with small means, having barely money enough to reach the promised paradise. They were, therefore, in close quarters on their arrival, and found no means of subsistence. One of the deserters said: "It is all right for us who have no family; but what can be the feelings of a man who has a wife and four or five children and no money to return or means of sustaining them in the colony? And there are plenty such there." Worse yet, smallpox has broken out among them—about 60 cases being reported, and six deaths. Quite a number of the fugitives are at Guaymas, not having funds to get out of Mexico. The last lot of immigrants are reported to be making arrangements to return to the North and East.

A MERCED FARMER has poisoned over 20,000 jack rabbits in the last four years.

Floral Decorations.

We doubt whether fairs in other States and countries are so rich in floral decorations as those of California. There are, of course, floral exhibitions in other parts of the world where the professional florists vie with each other and produce marvels of beauty, but we refer to the fairs as a rule—fairs of general character. Such exhibitions are often deficient in their floral departments, but in certain parts of California one can always count upon a grand collection of cut flowers and potted plants, whenever the pavilions are open for entries. San Jose is thus to be depended upon. The district is splendidly adapted to the triumphs of the floriculturists, and this natural endowment is made good use of by the flower-growers. Our correspondent's letters have shown that the recent Citrus Fair was specially fine in its floral features, and we are sorry that we cannot show all the worthy displays. The engraving on this page shows one of the leading pieces of flower-work, as prepared by E. Bourguignon, florist of San Jose. The picture can, of course, give but a faint suggestion of the beauty of the arrangement or of the materials used in it. The design is a floral monument standing over five feet. With perhaps a pardonable local pride a resident of San Jose interpreted the floral language as follows:

The front of the cubical base is studded with the choicest of flowers, and is intended as an emblem of Central California. The other three sides, trimmed with common flowers and coleus leaves, and presenting a less attractive appearance, represent the other portions of the State. Above the base is a globe completely environed with rare gems of the floral kingdom, typifying Santa Clara county. At the top of the monument, spreading at an angle of 75 degrees, a fan, arrayed in the most exquisite specimens from the hot-house, symbolizes the city of San Jose. Upon each division of the monument the initials of the part of the State represented are deftly wrought in flowers.

Of course one has the right to use flowers to please individual tastes and to give them such significance as suits. If the significance does not please all tastes and all interests, one has only to admire the flowers which bloom for all, and interpret the arrangement according to his own predilections.

The floral monument shown in the engraving was only a single feature of Mr. Bourguignon's floral display, which was varied and comprehensive and won him good opinion for his floricultural skill and enterprise.

BIG WATER AND LAND COMPANIES.—The San Jacinto *Register* says that articles of incorporation have been filed in the county clerk's office at San Diego by the Lake Hemet Water Company and the Lake Hemet Land Company. The capital of the former company is $2,000,000, divided into 100,000 shares of $20 each. All the stock has been subscribed. The principal place of business is Los Angeles, but the money will be expended and the works located in the San Jacinto valley. All the stockholders, with one exception, reside in Los Angeles. It is proposed to impound the water of the San Jacinto river in the mountains in a large reservoir and store a two-years' supply. Water will also be furnished to dwellers on the mesa lands. Some 25,000 acres of land will be irrigated by this means. The same gentlemen are the incorporators of the Lake Hemet Land Company, which has a capital of $1,000,000.

A COMMERCIAL INTELLIGENCE COMPANY.—Articles of incorporation were filed last week by the American Foreign Markets Association. The objects are to gather information regarding commercial and mercantile matters from all parts of the world, and to distribute the same for the use of its members. The directors are W. L. Merry, Columbus Waterhouse, Andrew Crawford, J. M. Knowles, Joseph Elfelt, A. D. Sharon, John Partridge, C. F. Richard, O. C. Stouder, of S. F., A. C. A. Parkes, of Portland, Or., and W. E. Sharon, of Virginia City, Nev. The capital stock is $600,000, divided into 1200 shares of $500 each.

FORESTRY.

Our Duty in Forest Preservation.

EDITORS PRESS:—There are certain laws of nature applicable to the individual that are universally recognized. If a man jump or fall from a housetop or from a hight, he will come to the ground with a force proportionate to the distance he falls. It is only a question of hight as to the certainty of death.

If a man remains under water more than a few minutes, he will be suffocated and die. The laws of nature pervade all life, but none of them are as clearly recognized and observed as those bearing on the immediate welfare of the individual. One of the laws of nature only commencing to be recognized in America is that the capacity of the earth to support mankind is dependent on the maintenance of a certain proportion of it in forest.

This proportion varies with local conditions, topography, etc. The penalty of violating this law is as certain as that of violating any other law of nature. The climate changes; the variations of temperature become more sudden and extreme, the winds more violent, the water supply becomes at one moment excessive and destructive, at the next totally lacking.

The earlier civilization of man did not recognize this law, and, as a consequence, the scenes of its former activity are now deserts. Syria, Persia, Palestine and many parts of the south of Europe are now desolate, with only here and there an oasis.

These countries, once so busy and populous, now sustain only a scant and miserable population.

The ruins of Babylon, Baalbec, Palmyra and Carthage are now invaded by the sands of the desert. As man progressed and recognized more and more cause and effect, he perceived this law of nature.

The European governments have one after another adopted a system of forest preservation, until now all of them recognize forestry as one of the most important departments of Government.

These forest departments have turned out to be sources of revenue instead of sources of expense. The net returns of the entire forest preserves in Alsace and Saxony are nearly four dollars a year per acre.

Thus, while the integrity of the forests is maintained, the full enjoyment and use of its products is guaranteed to the people.

The last report of the Board of Forestry shows that we do not have to go to foreign countries to see the disastrous results of forest destruction. We have only to go into the Tejunga and Soledad canyons to see the extraordinary power acquired by the water rushing from their burnt and denuded mountain-sides.

Brush, trees and even grass have a great retarding upon falling rain. Each branch, twig, stem and root, together with the fallen leaves and humus of the forest, offers innumerable impediments to the flow of water.

Thus the water has an opportunity to sink into the ground and replenish the streams.

It is certain that rains falling on a wooded watershed can neither evaporate nor flow off so rapidly as upon one that is bare. Thus, if one billion cubic feet of water fall upon a wooded watershed and 24 hours be required for the surplus water to flow off, it would take about two hours for the same waters to flow off a bare watershed. Consequently 12 times as much water would pass a given point at any time during its delivery upon the drainage outlet of a bare watershed as could pass from a wooded one.

Applying this to the springs in the Tejunga, Soledad, and Los Angeles valleys, it will be at once seen that destructive results must follow a complete denudation of these watersheds.

In the San Gabriel valley even the legitimate clearing of the foothills has given rise to numerous torrents which can be seen by any one driving through it.

In the St. Phalaz valley, in France, this fact has received a complete demonstration.

There two watersheds exist of almost exactly the same area. One of them is wooded, and the other not. When the rain falls in this district there flows from the bare watershed a large and muddy torrent which always does more or less damage. From the wooded watershed a stream flows that increases very little, does no damage, and persists long after the muddy torrent has entirely disappeared.

There is probably no country and no climate where the effects of forest denudation will be so promptly manifested as in California.

We have a long dry season followed by a rainy one, and no part of the State is far distant from steep, high ranges of mountains. The debris in the Sacramento valley from the mining interest covers about 50,000 acres of valley land. But in the single valley of the Durance in Southern France over 150,000 acres of the richest lands in Provence have been covered by sand and bowlders from the once-wooded but now barren mountains of its watershed. Mining debris is nothing to what must come if our mountains continue to be denuded of their verdure.

The people of California, and especially of Southern California, cannot afford to see the burning, waste and destruction of the forests and brush on our mountains.

We cannot afford to see our springs diminished or our valley lands turned into the beds of torrents. Measures for protection are of vital importance.

The measures suggested by the State Board of Forestry are: The creation of a forestry police to put out and prevent fires, and to protect the forests generally; the withdrawal from sale by the General Government and the State of all timber and brush lands unsuited to agriculture, and the placing of such lands under the guardianship and control of proper officers. The duty of these officers will be similar to those of European foresters.

They would sell the ripe timber and firewood for the benefit of the Government, maintain the reproductive power of the forests, and thus preserve the mountain watersheds permanently in verdure, while utilizing to the best advantage the products of the forests.

The present system of the Government in dealing with timber land is entirely unsuited to the lumber industry. It invites fraud, perjury and waste.

The State Board unearthed 600 cases of fraudulent land entries in the interest of one foreign corporation in the county of Mendocino, and these practices, together with open robbery, are notoriously common on the Government timber lands.

The State school lands are also treated even worse. Until the State Board took hold of the matter there seemed to be no protection for them at all. The whole present system is bad, We sincerely hope that the bill introduced in Congress by Col. Markham, at the suggestion of the Board of Forestry, will pass. This bill will create the system just outlined.

The beauty and grandeur of the forests of California is something to be proud of. They attract to us many visitors and colonists. But they have a utility far beyond any esthetic considerations—and the welfare of the people of the State demands their preservation.

All persons interested in maintaining the taxpaying and productive power of the southern counties should read the recently published report of the State Board of Forestry.

The bills now before the Legislature provide for the support of the Board of Forestry, and will allow it to continue its good work. The scientific forest survey and forest map of the State can be completed, the distribution of seeds and plants can go on and tree planting be encouraged. An Arbor Day will be provided for. These bills should pass.

San Gabriel, Cal. ABBOT KINNEY.

STOCK SHOW AT LIVERMORE.—A stock and stallion exhibition for Alameda, Contra Costa and San Joaquin counties is to be held at Livermore Saturday, March 12th. As this is the first annual show at which cattle, as well as stallions, are provided for, a large increase in the number of entries is expected.

Hon. C. W. Breyfogle.

Dr. Charles Wesley Breyfogle, the present mayor of San Jose, was born in Columbus, Ohio, June 7, 1841. He graduated from the public High school in 1859, and from the Ohio Wesleyan University in 1862, receiving, three years later, the degree of A. M.

He entered the army as First Lieutenant of Co. E, 9th Ohio Volunteer Cavalry, and having been promoted to the captaincy of his company, was honorably discharged on a surgeon's certificate, after a service of 14 months.

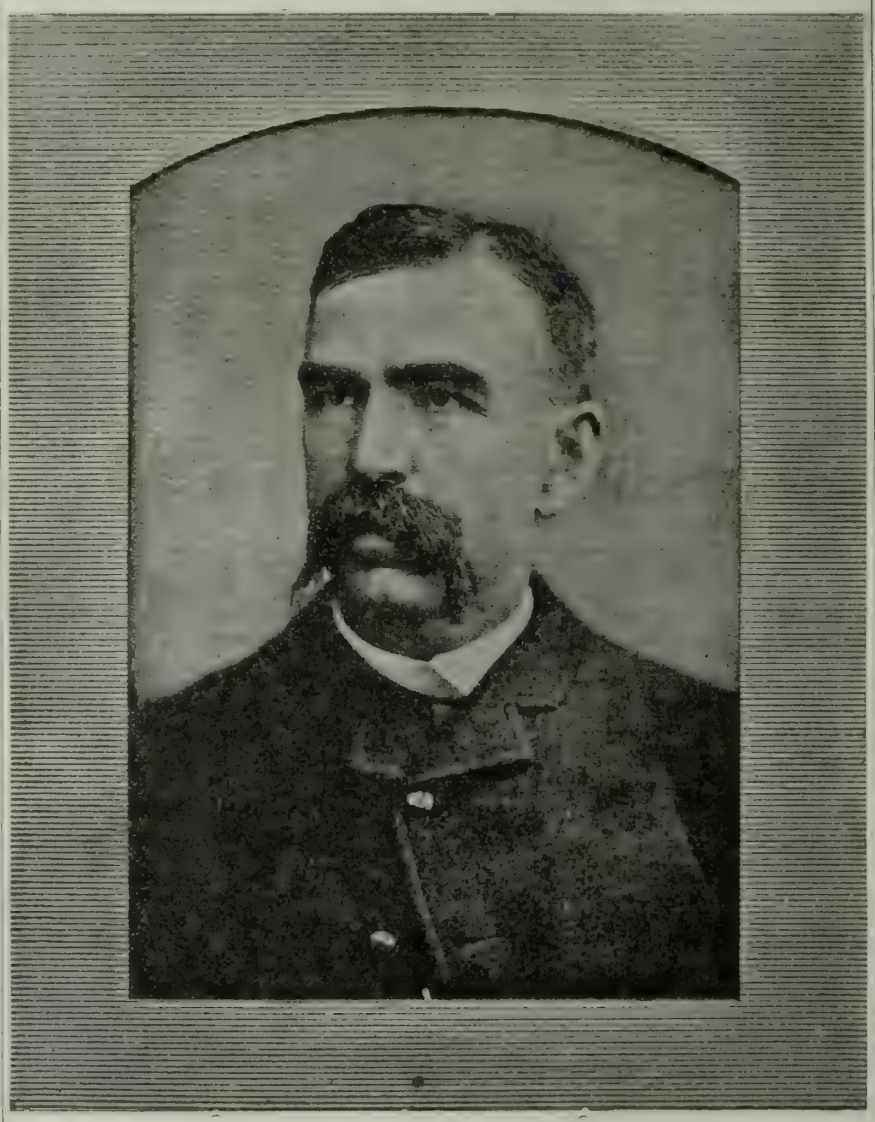
Twenty-three months' arduous study of the law in the office of Judge Rankin, of Columbus, O., caused Capt. Breyfogle to become blind. Rest and treatment, however, effected a cure.

His own need of medical assistance led him to become deeply interested in the study of medicine, which, indeed, had always been his preference, although his father preferred law—and he decided to enter the medical profession.

Having graduated from Hahneman Medical College, at Philadelphia, in 1866, he commenced his career as a physician at Louisville, Ky., and continued there till 1872, when failing health caused his removal to San Jose, where he has practiced since.

Dr. Breyfogle's social nature is seen in his connection with many of the leading Orders, of which he is an honored member.

In the G. A. R. he has risen to the dignity of Past Senior Vice-Commander, and in the Knights of Honor he is a Past Dictator. He stands high in the Masonic fraternity, being Past Eminent Commander of San Jose Commandery, No. 10, Knights Templar. In the I. O. O. F. he has filled several important positions. He is a Past Grand in the Subordinate Lodge and a Past Chief Patriarch in the Encampment. Over a year ago, when the military branch of the Order was reorganized, under the name of Patriarchs Militant, Dr. Breyfogle was made Brigadier-General for the Department of the Pacific. He is president of the Odd Fellows' Hall Association of San Jose; president of the San Jose Building and Loan Association, which, beside assisting many of its stockholders in the purchase of homes, has declared large dividends. He has recently been elected president of a new organization known as the Garden City Savings Union, which is an institution of much the same character as the last-mentioned.



For many years he has been an elder in the Presbyterian church, and in 1876 was a representative to the Brooklyn General Assembly. From 1880 to 1882, he was a member of the San Jose Board of Education, and left his impress upon the department in the introduction of vigorous measures for the improvement of the schools, which were raised to a higher proficiency than they had ever before enjoyed.

Though Dr. Breyfogle is a man whose opinion on political questions meets with profound respect among politicians, he is not a politician. His nomination for the mayoralty, by the Republicans, was one of those rare instances wherein the office seeks the man. Being of a retiring disposition, he might have remained in private life had not some one, unsolicited by him, suggested his candidacy, and had not a general conviction prevailed as to his fitness for the office.

His election in 1886 has been followed by an administration prudently and economically conducted, and marked by considerable public improvement. Some leading members of the opposite party would not, if they could, reverse the popular verdict. Having advanced ideas on matters of public policy, being a firm believer in the doctrines of the moral law, a man of strict integrity, and faithful to public trusts, Mr. Breyfogle is a most worthy and efficient mayor. He is an enthusiast in any good cause, and an incessant worker. He possesses shrewd financial ability, every enterprise that has felt the magical touch of his guiding hand having proved eminently successful. His private affairs have been managed equally well, and he has acquired a competence.

His wife, who is a lady of some fortune, comes of a family noted for business talent. He has a daughter attending the University of the Pacific, and a little son. The elegant family residence is beautifully located on the corner of Third and St. James Sts., in view of St. James Park.

As a physician he is accurate in a diagnosis. Though of positive opinions and determined disposition, yet he is benign, affable, capable of strong attachments, and wears invariably a characteristic smile. Moreover, he has a commanding influence and is immensely popular. Such a man has the Garden City chosen for its mayor.

HON. C. W. BREYFOGLE, MAYOR OF SAN JOSE.

Gold Mines

Are very uncertain property; for every paying mine a hundred exist that do not pay. But if you write to Hallet & Co., Portland, Maine, you will receive, free, full particulars about their new business, and learn how some have made over $50 in a single day at it. You can live at home and earn from $5 to $25 and upward per day wherever you are located. Both sexes; all ages Capital not required; you are started free. Send your address, and all will be proved to you.

To Correspondents.

To the numerous correspondents of this paper who are asking for private information concerning the price of land, the climate, etc., in this county, we have to say that it is impossible for us to answer all such letters through the mail. In this paper itself an intelligent reader may gather most of the information that is needed, and Bailey & Phillips, the solid and reliable dealers in real estate, who have an office under the Auzerais House, in San Jose, will cheerfully furnish the rest. They will answer all letters, and we can assure our readers that the statements they make may be depended upon.

FLOWERS, BOUQUETS, ETC.

With the many improvements inaugurated at my Nurseries during the season, I am now better prepared than ever to furnish all manner of designs for exquisite Bouquets, Flowers for Marriage Ceremonies, private and public Parties and all other Entertainments. Will also rent shrubs in pots or boxes for Hall or House Decorations. Mourning Wreaths and other Funeral Designs to order at the shortest notice, and on reasonable terms. EMIL BOURGUIGNON, Sainsevain Villa, near Narrow Gauge Railroad, ¼ mile from Depot Telephone No. 84, free to all patrons. Floral Depot, 72 N. 1st St., San Jose

TO THOSE WHO CONTEMPLATE TAKING UP THE BOOK BUSINESS, we wish to say that we are prepared to do better by them than any other house can afford. We carry the finest line of popular subscription books on this Coast, and by a system of training, can make a success of the most inexperienced. Book Agents, we ask you to look into this. Address for terms, books, and territory, BANCROFT & CO., 607 Market St., San Francisco.

Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from $5000 to $500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. **

Reasons why Sherwood's Steel Harness is the Best and should and will be Universally Used:

1.—It is a common sense Harness. 2.—It is made of material that will last a lifetime. 3.—In plowing, dragging, logging and scraping there are no whiffletrees. 4.—In all farm work you can change from plow to wagon quick. 5.—In plowing in the orchard, you can't bark fruit trees. 6.—In plowing and cultivating hops it has no equal. 7.—In plowing along the fences you can get two furrows closer. 8.—Horses cannot step over the traces, or calk themselves. 9.—A small boy will handle plow readily. 10.—There is no weight on plow beam. 11.—Team works one-third easier. 12.—There is no chafing, crowding or fretting of team. 13.—For man and team it has no equal. Do not hesitate, but order at once from your nearest agent. Address

TRUMAN, ISHAM & HOOKER,
San Francisco, Cal.

CLIMAX SPRAY PUMPS.

To those in want of a first-class Spray Pump we can say that these Pumps are, without a doubt, the very best Spray Pumps to-day in the market Made expressly for service in the Orchard, and the only Pump having all its parts, valves, etc., made of non-corrosive metal, and has received the highest awards over all others for the past three years. Send for circulars and prices.

CLIMAX SPRAY PUMPS,
18 California St., S. F.

A NEW COLONY

On the new extension of Southern Pacific Railroads, on the lands belonging to R. T. BUELL, Esq., near Los Alamos, Santa Barbara county, Cal. Parties desiring to visit the property now, can go via San Luis Obispo and take the cars from thence to Los Alamos, thence by stage to the Colony. 20,000 acres of the best lands in California, subdivided into 20, 40 and 80-acre farms; $20 to $30 per acre. INTERNATIONAL IMMIGRANT UNION, 401 California St., San Francisco.

BATCHELOR & WYLIE,

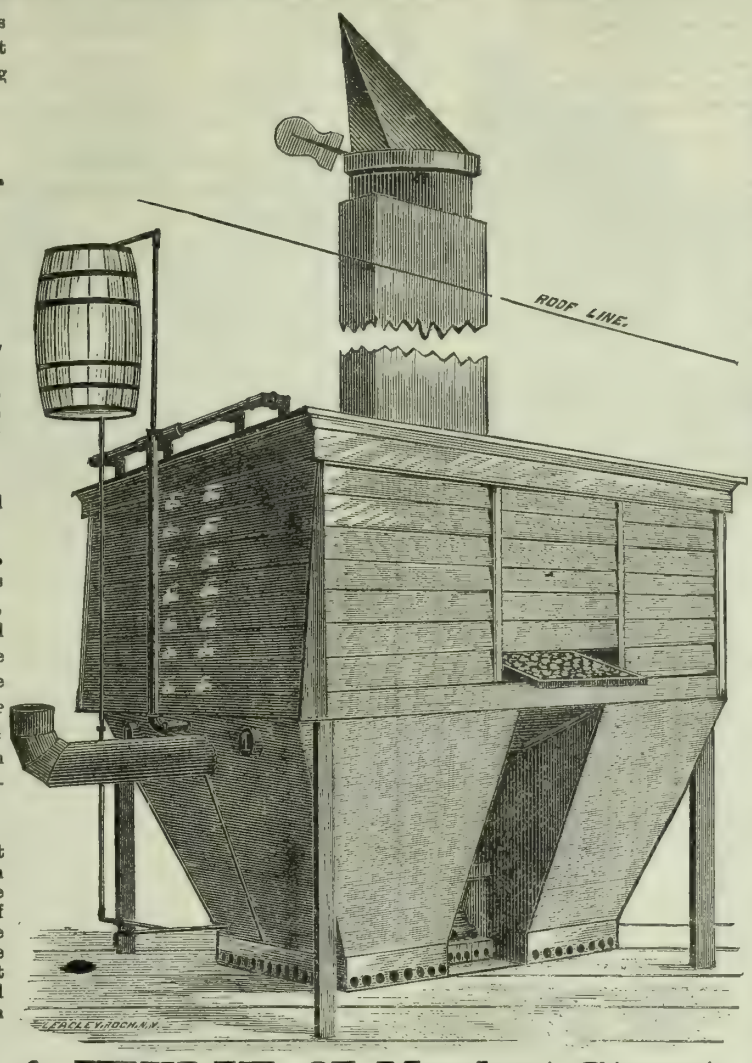
—SOLE AGENTS FOR THE—

ACME STEAM HEAT EVAPORATOR CO., of Charlotte, Mich.

When any person investigates the different processes by which fruit is evaporated, with a view of making it a profitable business, he ought to look to the following vital points, to wit:

Absolute Safety from Fire.

Greatest Capacity with Least Labor and Fuel.



Quality that Brings the Highest Price, Produced with the Least Skill.

A Machine that is Durable, the Capacity of which can be Increased at will, with a Proportionately Decreased Cost.

We KNOW that all these qualities are embraced in our Acme process.

The subjecting of fruit to a high degree of heat, and carrying the moisture over fruit partially dried, is wrong. On the contrary, the true theory is—a direct, low degree of heat that will not burn or scorch, and good ventilation. Sufficient heat to force the moisture out of the article dried, is all that is necessary, if the moisture is carried away immediately. Our machine does this in such a manner that the moisture from one drying chamber does not go through or interfere with the contents of the other chambers, and this is accomplished without cooling the steam chambers.

☞We have two sizes of the Acme Steam Heat Evaporator. The one shown here is the No. 2, which is only about half the size of the No. 4, and can be operated with heated water in the chambers instead of steam, if desired. In using heated water we also use the heated air from the furnace in combination with the heat from the water. We believe we have the most perfect process of evaporating fruit yet introduced, and would be pleased to send Catalogues to any person interested in fruit evaporating. Address,

THE MACHINE

By which the foreging results are attained, consists of a succession of flat steam chambers, placed one above the other, in close proximity, leaving room between them for the introduction of trays of fruit.

These chambers are filled with steam, or heated water, by a continuous current of even pressure, which imparts a uniform heat to the machine, thus securing even drying.

As the moisture is expelled from the fruit it is carried away from the machine, without coming in contact with any other fruit, thus preventing cooking or steaming, and also hastening the process.

Moisture thus removed does not need to be disposed of by evaporation, thereby avoiding the necessity for intense heat; while, by applying heat of the same temperature from both above and below, we dry the fruit on both sides (which no other machine does), thus inclosing, in a measure, the juice, which a further subjection to heat so cooks as to render it fixed and safe, so far as keeping is concerned, as jelly.

Thus we retain the flavor, so essential to good fruit, but impossible by any other process.

In these machines two tiers of steam chambers are placed side by side with a space between them.

The steam chambers are inclined toward the outside, which causes all water from condensation to flow to the outer edge, whence it finds its way out, through the lower connections. This arrangement enables us to have the spaces of uniform width, and leaves the second connection free at all times, for the passage of steam.

Through the devices attached to the machine, the degree of heat is under the control of the operator; but it is also true that the immediate removal of moisture is as important as a high degree of heat.

The hood gathers the heated vapor which rises through the center of the machine, conducting it to the flue from whence it passes out of the building.

In use there is a constant flow of vapor through the drying chamber into the space between the tiers of chambers, thence up through the hood and flue above it. So perfect is the operation that no moisture escapes into the room where it is operated.

BATCHELOR & WYLIE, 37 Market Street, San Francisco.

WHAT SCHOOLS

Have better music than those that use the sterling good

School Music Books

Of Ditson & Co.? Carefully compiled, attractive, musical and popular, they are the ones to choose, the next time a change is needed. Please examine.

FOR THE LITTLE ONES.

Kindergarten Chimes ($1) is a charming book with songs, plays, games and full instructions for teachers. **Gems for Little Singers** (30 cents, $3 per doz.) is a nice picture song book, as is **Fresh Flowers** (25 cents, $2.40 per doz.)—this last having Sacred music only. **Am. School Music Reader**, Book 1, (35 cents, $3.60 per doz.) First book for learning the notes.

FOR COMMON SCHOOLS.

We can recommend nothing better than the favorite **Song Bells** (50 cents, $4.80 per doz.) for a general collection, and for learning the notes, Book 1 (50 cents) and Book 2 (60 cents) of the **Song Reader**, by Irving Emerson and O. B. Brown. An eminently practical book by practical school music teachers.

FOR THE HIGHER SCHOOLS.

Song Greeting (60 cents, $6 per doz.)'is the newest and best book, containing a large number of songs and glees in excellent taste, solfeggios and voice exercises.

Please send for full lists and descriptions.

☞Any book mailed for retail price.

OLIVER DITSON & CO., Boston.

SINGLE-ACTING ENGINE.

TESTIMONIAL.

OFFICE OF THE EUREKA ELECTRIC LIGHT CO.,
EUREKA, CAL., Feb. 15, 1887.

San Francisco Tool Co., San Francisco, Cal.—GENTLEMEN: In answer to yours of Feb. 8, 1887, would say: The four engines purchased from your Company in January, 1886, have been running continuously ever since, from 12 to 16 hours each day, not excepting Sundays, and have never given any trouble; and, furthermore, they have never cost us anything for repairs. I consider them fully as economical as our slide-valve engines, which we are using. One of them is a balanced valve, Haskins' make, and the other is the New York Safety Power Company's make. The relation to the cost of keeping your Single-Acting Engine in repair to the cost of keeping the Slide-Valve Engines which were purchased the same month we purchased your engines, and working under the same conditions, is, that while there has been no expense in either material, or labor on the engines furnished by your Company, the expense of keeping the Slide-Valve Engines in good running order, has cost, on an average, $5 to $12 per month for each engine.

A portion of the time the Single-Acting Engines have been run by the fireman, and I can recommend your engines to parties that are not close to a machine shop, and do not want to keep an engineer and fireman, as with your engine all the attention they require is to fill the oil cups once every 16 hours, and turn the steam on and shut it off. The balance of the time the engine takes care of itself. Yours truly,

A. A. OSBORN, Superintendent.

This paper is printed with Ink Manufactured by Charles Eneu Johnson & Co., 500 South 10th St., Philadelphia. Branch Offices—47 Rose St., New York, and 40 La Salle St., Chicago. Agent for the Pacific Coast—Joseph H. Dorety, 529 Commercial St., S. F.

CONSUMPTION.

I have a positive remedy for the above disease; by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give express & P. O. address. DR. T. A. SLOCUM, 181 Pearl St. N. Y

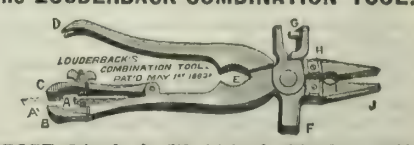
DAIRY MACHINERY.

Woolsey's Improved Steam Generator

Has all the requirements of a first-class Efficient and Economical Boiler.

Woolsey's Improved Steam Cheese Vat.

Constructed with a View to Equalizing the Temperature in every part thereof.



Received first premium at the State Fair in 1873, and in 1881. Its chief merit consists in being separate from the heater, thereby avoiding all artificial heat in the cheese-room.

This Generator and the Improved Steam Cheese Vat, which it is designed to operate, has **superseded all others** in the vicinity of Gilroy, and has received the highest praise from cheesemakers wherever it has been tried.

THE VINEYARD.

The Principles and Practice of Pasteurizing.

University Experiment Station Bulletin, No. 66.

The numerous inquiries now being received in regard to the practice of, and appliances needed for, Pasteurizing of wines render it expedient to put in print, for general information, the main points in the premises.

The essential point to Pasteurizing is to heat wine to the temperature of 150°, or thereabouts, out of contact with air. This heating should be done as quickly as possible, and after the proper temperature has been reached it is best, other things being equal, to cool the wine as quickly as possible.

Several objects are accomplished by this heating. The one most generally aimed at is to kill the germs of all kinds of fermentation that may exist in the wine, in order that it may be safe from farther changes under their influence. Another is to advance the wine toward maturity. Also, to forestall any farther deposition of sediment, by the coagulation of the albuminous matters it still contains, and which endanger its soundness.

The general plan in the construction of Pasteurizers is usually the same as that of the various kinds of still condensers; only, in this case thewater around the worm is hot, and the cold wine in passing through the worm is heated to the proper point by allowing it to move with greater or less rapidity, in a solid column, so that a thermometer inserted at the exit end will show steadily the desired temperature. Beyond the thermometer, the wine passes into a cooler, from which it is delivered into the (well-cleaned) storage or shipping packages. In many cases, it is delivered into these directly from the Pasteurizer, and allowed to cool in the tightly bunged casks.

Wines of sufficient age, that have ceased to deposit sediment and are bottle-ripe, may be pasteurized in the bottles themselves, in a water-bath having the proper temperature. This is the preferred practice in the case of high-class wines.

The temperature must be carefully guarded, since if it either rises too high, or continues too long even at its proper point, the wine may acquire a "cooked" taste, and may lose its natural bouquet. Immediately after the operation the wine is somewhat flat, but in the course of a few weeks not only fully recovers its zest, but is found very much advanced toward maturity.

The Rationale of Pasteurization.—The effects of this process upon the wine may be thus summarized:

1. All fermentative germs of whatever nature are killed by the heat; the more promptly, the higher the heat and the alcoholic contents of the wine. Wines poor in alcohol, and especially those containing a remnant of sugar, require a higher temperature than those fully fermented out, and rich in alcohol.

2. Acids present in the wine are under the influence of the heating, partly neutralized by entering into combinations (ethers), which form part of the flavors of older wines. Hence, acetified wines become of milder taste at once, and even milksour ones gradually lose their "scratchiness," if not too far gone.

3. Wines while maturing in the cask are always found more or less impregnated with atmospheric air (oxygen), the gradual absorption of which forms a most essential part of the maturing process. After pasteurizing, the wine is found free from oxygen, proving that it has been absorbed during the process, thus often accomplishing in a short space of time an advance toward maturity that at the ordinary temperatures would have required months.

4. When the heat is raised sufficiently high (to about 160°, which can be done without injury to most classes of wine), the unstable "albuminoid," substances of new wines that continue to cause the formation of deposits of lees, for one or even two years after the completion of the vinous fermentation, are at once rendered insoluble and thereafter cease to give trouble; the wine, after having been cleared by settling or filtration, forms no more deposits, and can, if necessary, be bottled.

It should be understood that while pasteurization puts an end to all farther fermentation, it does not interfere in the least with the ordinary process of maturing in the cask. But, save in cases of emergency, it must not be practiced before the completion of the after-fermentation.

Should a wine, however, be found to be "going wrong" while the after-fermentation is progressing, it may be pasteurized to stop farther damage, and will then be ready to be started on a healthy after-fermentation the following season, or sooner if the materials (*e. g.*, condensed must) are at hand.

Pasteurization thus stands in lieu of any and all *antiseptics* heretofore used in the wine itself; it should replace sulphuring no less than salicylic acid. Of course, sulphuring will always be eminently useful in the cleansing or disinfection of caskage, and remains indispensable in clearing the cellar of foul germs.

Precautions Necessary to Insure Success.—While a well-pasteurized wine is secure against farther action of the ferment germs previously contained in it, it is, like any other wine, subject to re-infection from foul packages, bungs, pumps, hose, etc., as well as from impure water and air. Impure water used in rinsing packages is a fruitful source of trouble, and the bottling of wine in close, musty, unventilated and unsulphured cellars is responsible for many bottles of damaged wine, especially if the corks used have not been scalded in hot water. From want of these reasonable precautions, it has often been reported that pasteurizing is not the universal cure for wine diseases that, with proper care, it has always proved to be. Just as a dose of quinine cannot permanently prevent the denizens of malarious valleys from contracting chills and fever, so Pasteur's admirable process does not secure wine against injury from carelessness and filth.

The Practice of Pasteurizing.—Among a score of varied appliances brought forward by different inventors, a few only have gained wide acceptance. For California practice the "intermittent" patterns will hardly be considered; of those intended for continuous operation, which alone are adapted for large-scale practice, there are essentially two types. In one (including the "oenotherms" of Terrel des Chenes and of Carpené) the cold wine passes through one or

TYLER BEACH, ESQ., OF SAN JOSE.

several metallic (block tin, or copper tinned) pipes immersed in water heated by proper furnaces, or by steam; in the other, the pipes are replaced by a ring shaped space between an inner and outer cylinder. The former system has on the whole been more generally accepted.

As has been stated above, the overheating of any portion of the wine must be carefully avoided. Hence the temperature of the water-bath must not greatly exceed that desired for the wine, since otherwise the outside portions would, in traversing the pipe, be heated up too high and therefore be "cooked" (the same objection lies against heating the wine in a closed tank by means of a steam coil, as has sometimes been done). Hence again, large pipes are unsuitable, as the temperature would be taken too slowly, and as a single small pipe would reduce too much the working capacity of the apparratus, the inlet pipe is made to branch into a number of these, disposed in the form of either a ribbon, or a loose bundle, of coils. In Terrel's apparatus (which may be considered the most perfect) the cooler is similarly arranged.

For ordinary purposes, however, this complex and somewhat costly construction is very commonly replaced by a single pipe forming a long coil of somewhat greater diameter than those in Terrel's apparatus; and this form, being easily constructed by any plumber, is sufficiently well adapted to the needs of small producers.

At the winery of Mr. Juan Gallegos, near Mission San Jose, a Pasteurizer of satisfactory working and output consists of a 90-gallon "farm boiler," within which is placed a coil consisting of 130 feet of ½-inch block-tin pipe, held in form and position by four straps (U-cross section) of strong galvanized sheet iron, to which the coils are soldered, so that the whole can be freely handled and taken out of the boiler when not in use. A similar coil in a wooden tank forms the cooler, and the capacity of the apparatus is about 450 gallons per day (ten hours).

The Pasteurizer in use at the viticultural laboratory of the University has a coil of ¼-inch block tin pipe, 30 feet long, immersed in a 15 gallon boiler; a 20-foot coil of the same pipe forms the cooler. The capacity of this single pipe is 8 to 10 gallons per hour when the tank water is kept at about 160°; with ten similar tubes and a bath temperature of 170° (which is admissible for many wines) in a 100 gallon boiler, the hourly capacity would be over 100 gallons, or say 1000 gallons in ten hours.

A large apparatus according to Terrel, with a capacity of 250 gallons per hour, costs at the factory $240.

In order that any of these appliances may work with perfect regularity, it is best that the wine should descend by gravity from a supply cask, adjusted once for all to such a hight above the heater as to form a proper pressure column; into this supply cask the wine to be treated is pumped as needed. Pumping the wine directly into the heater is objectionable because of the spasmodic action, by which some portions of the wine may escape adequate heating, while others are overheated. For the regulation of the flow to the exact temperature desired, a faucet (tinned inside) is interposed between the cask and the heater; it is convenient to have another placed between the heater and the cooler, or the receiving cask. The inlet pipe must descend to the bottom of the heater, so that the wine moves *upward* in the spiral; otherwise accumulation of gas bubbles causes irregularities. When a cooler is used, fuel may be saved by using in it, instead of water, the wine that is to be heated and may thus be given a part of its increase of temperature.

It will thus be seen that pasteurizing is an exceedingly simple operation, which can be performed by any intelligent laborer who can read a thermometer and adjust a faucet.

Utility of Pasteurization.—When it is considered to how great an extent the general use of the pasteurizing process can do away with the most serious difficulties under which California winemakers labor, its importance can hardly be overestimated. Our hot vintage season and the imperfect methods of fermentation still so commonly practiced, render our wines peculiarly liable to the introduction of noxious germs, which develop so soon as the after-fermentation is completed, if not sooner. Pasteurizing will put a final stop to these dangers, provided proper care and cleanliness is used in handling them afterward.

It is the common practice to ship our wines when very young, and they go to long distances and pass through great alternations of temperature. Once pasteurized, they will stand this treatment without material danger or deterioration. If given rest for some weeks after the process, they may be fined, if necessary, and will arrive nearly as clear as they left the shipper.

One of the most serious sources of complaint against California wines in the East is that they "will not keep," the cause being very generally the fact that, being too young to be bottled like imported wines of greater age, they undergo unsound fermentation in the bottles, as they still contain germ food, and possibly germs of all kinds. All this is done away with by pasteurizing, without the need of salicylic acid and without injury to the wine.

I believe that when these matters are fully understood by our winemakers and shippers, the Pasteurizing of wines before shipment will become the rule instead of the exception. A prudent shipper dealing with valuable wines, of the perfect soundness of which he has the slightest doubt, will not jeopardize his pecuniary interest and his reputation by omitting so simple and inexpensive a means of insuring their perfect safety. Wines made with all proper precautions may still go, unscathed, as they come from the storage casks, but even the additional "age" imparted by Pasteur's process will, when wines are properly graded and valued, generally pay for the labor involved.

But all inducement toward the improvement of our product vanishes so long as the wine-dealer continues to preach and act upon the maxim that "wine is wine" in his dealings with the producer. The communistic principle is fatal to all individual improvement and progress, whether applied to society or to wine production; it stands next to adulteration and stretching in barring the progress of the wine industry in California. E. W. HILGARD.

Berkeley, Feb. 25, 1887.

Tyler Beach.

Tyler Beach, a resident of San Jose since 1854, was born in Warren county, N. Y., Sept. 29, 1832. When he was five years old his parents removed to Saratoga county in the same State; thence in May, 1845, to Walworth county, and in 1847 to Columbus county, Wisconsin, whence he started for California in November, 1853, by the Nicaragua route.

Having arrived in San Francisco in February, 1854, he reached San Jose April 18th.

For two years he followed the business of boring artesian wells. He next engaged in farming and dairying. On the 3d of April, 1861, Mr. Beach married Miss Martha Ann Smith, a native of Iowa. Mrs. Beach is an amiable lady, whose life has been devoted to the proper rearing of her family, and to making those around her comfortable.

The family consists of two daughters and five sons; namely, Sylvia E., wife of Mr. Frank Andrews, of San Francisco; George H., of Benson, Arizona, train-dispatcher and acting superintendent of the Arizona & New Mexico railroad; William H. S., a late graduate of the University of the Pacific; Charles S., graduate of Empire-street grammar school; James T., Henry S., and Sarah Della, who are attending the San Jose public schools.

The first to start an ice trade in San Jose, Mr. Beach continued it from 1861 for 22 years. During a period of 15 years he conducted a wood and coal yard, which old residents remember as located on St. John street, in the rear of his hotel property.

The St. James hotel, of which he is the proprietor, fronts on First street and overlooks San Jose's glory and pride, the St. James Park, whose evergreen foliage and lawns, winding paths, and pleasant shade delight the weary traveler.

Mr. Beach conducts his hotel with a view to pleasing his guests, whom he provides with every comfort. From his ranch, three miles distant, his table is supplied with dairy and farm products, which, being unadulterated and wholesome food, stimulate the appetite. Among those at his table may be found many of his old friends, who have boarded at his hotel for years. Genial by nature, he gains the lasting friendship of all with whom he comes in contact.

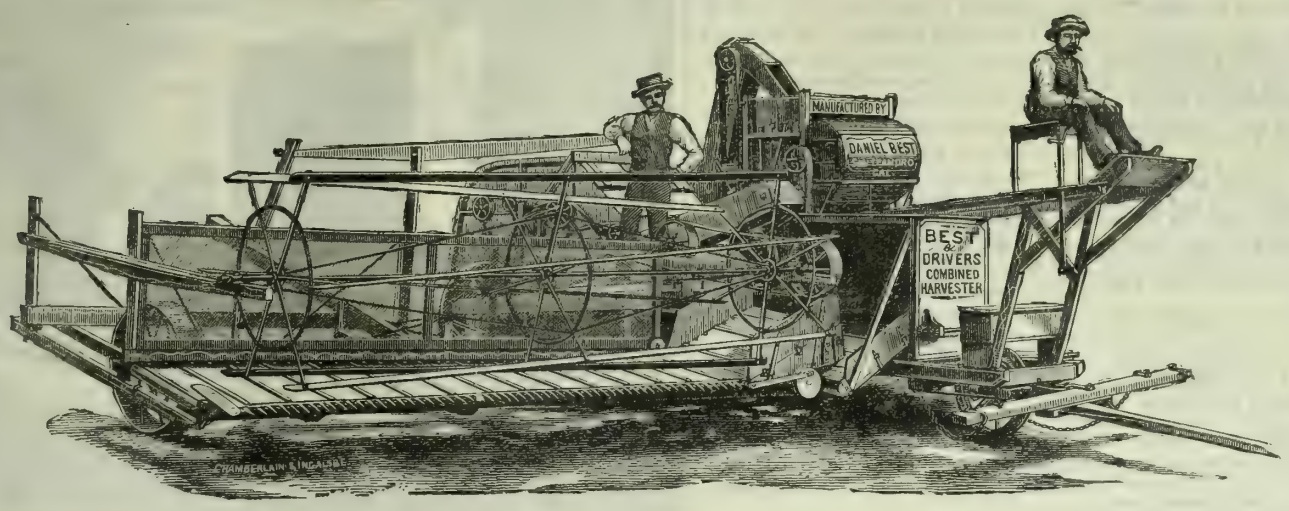
Mr. Beach has achieved considerable success in raising thoroughbred stock. His Ayrshire and graded Durham cows, and Berkshire and Essex pigs, include some of the best specimens to be found in the United States.

Besides the property mentioned, Mr. Beach owns several pieces of valuable real estate, as well as a quicksilver mine which is not being worked on account of the low price of quicksilver.

Having a keen perception and clear foresight, his opinion on financial questions and measures of public policy is highly esteemed by his townsmen, who consider him a good representative of an Jose's business talent.

BEST & DRIVER'S IMPROVED COMBINED HARVESTER for 1887

Manufactured at the



DANIEL BEST AGRICULTURAL WORKS, San Leandro, Cal.

STANDARD SIZE

—IS—

14 Feet.

Will make any size that is ordered.

Belt

—AND—

Geared.

The BEST & DRIVER IMPROVED Combined Harvester, without doubt, will be the Leading Machine this season, is the verdict of all those who have inspected it.

IT H S VALUABLE IMPROVEMENTS THAT ARE NOT FOUND IN ANY OTHER COMBINED HARVESTER MANUFACTURED. SPACE WILL NOT ALLOW US TO ENUMERATE HERE; AN INSPECTION OF THE MACHINE WILL CONVINCE YOU.

The Gearing is composed mostly of Spur Wheels, and so compactly arranged that should the frame of the machine weave because of the unevenness of the ground, there would be no danger of the gearing getting out of line, causing it to cut or bind in the boxes, which occurs with other Harvesters in which the gearing is more scattered.

We have succeeded in getting that combination of Lightness, Adaptability and Strength which is the result of thought and skill, taking from some parts and adding to others, making our Harvester from four to six horses lighter draft, and yet retaining as great strength as the heavest machine manufactured. The Header is very rigid and so balanced and hinged that it is no trouble to save down and tangled grain. A boy ten years of age can manage it.

I wish to call your attention particularly to the separating qualities of my Harvester. The agitators are so arranged that the grain is completely shaken from the straw, and my new AUTOMATIC GOVERNOR on the fan completely governs the blast on the shoe, so that at any speed which the machine travels, the blast will be the same. Making a saving of a great amount of grain that would otherwise be blown over the riddles; but, instead, will go into the sack, which in a season will more than pay the harvestin expenses, over and above any **Combined Harvester** that has not the **Automatic Governor.**

Each **Harvester** has one of my celebrated **Grain Cleaners** ttached, which needs no recommendation from me, as the grain growers of California can testify as to its merits and superiority over other Cleaners on the Coast.

Every machine is thoroughly tested before it is allowed to leave the factory, so there will be no trouble or vexatious delays in the field. The Lumber is thoroughly kiln dried that we use in the construction of our Harvesters, o that they will not fall to pieces under a hot sun.

Please call at my Works, near the Depot, San Leandro, and examine our Harvester. I have sample machine belted and attached to the power of the factory, and will take pleasure in showing how it works, so that you can become familiar with the working of the machine before taking it into the field.

IMPROVED GRAIN CLEANERS, and MILLS.

I desire to call your attention to my latest Improved Cleaners that I make for any and all Combined Harvesters. The great success I have had with my Cleaners, made to run with Thrashing Machines, as well as the satisfaction given by my Fanning Mill and Warehouse Mill, induced me to design and build a Cleaner, especially for the Combined Harvesters. I make the following sizes, viz:

45-inch for 18-foot cut and over.
40-inch for 14 to 18-foot cut.

This Cleaner is the most successful Combined Harvester Cleaner ever offered to the public, and I can guarantee it to be the most perfect Cleaner now in use. I have made a great many valuable improvements that have never yet been introduced, the merits of which will be quickly understood and highly appreciated by those who have use for the Cleaner. It is made strong and durable, and of such size and capacity that it will easily handle and thoroughly cl an the grain as fast as any Combined Harvester will thrash it, and it has proven to be the only Cleaner mounted on Harvesters, that will thoroughly clean foul grain, and make it merchantable.

SHEEP AND WOOL.

Cured of Sheep-Killing.

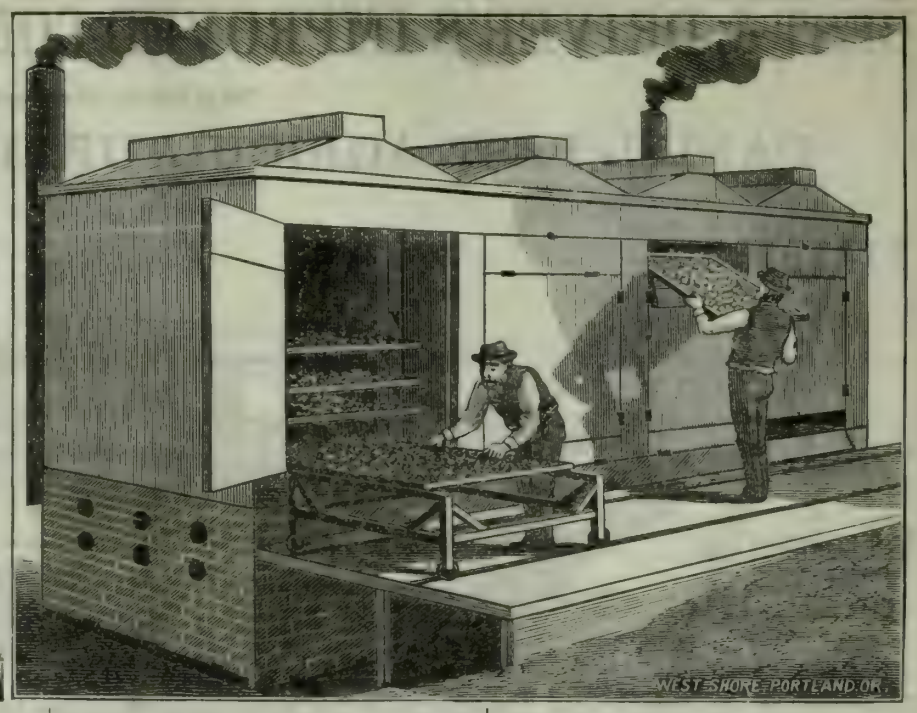
A dog that had once learned the trick of making mutton is usually regarded as incorrigible; but the Santa Rosa *Democrat* reports one radical cure and describes how the case was treated.

It appears that one of the oldest residents of that city, who is fond of shooting, and prides himself on his fine dogs and guns, bought a "purp" which had been represented to him as invaluable in the deer-chase; and so he proved —"a finer dog never bayed a buck." But he had one fault, a fault which has cost many of his kind their lives—he would kill sheep. Upon this fact being developed, he was on the point of shooting him on the spot, but he bethought himself that perhaps the trait was not incurable, as has been so often stated; so he lowered the gun from his shoulder, and paid the owner of the dead sheep.

A few days afterward he had occasion to visit a friend in the country, and took the dog with him for the purpose of trying his experiment. Informing his friend of his design, they proceeded to the field where a large band of sheep were feeding. The dog at once pricked up his ears and started for them. After he had succeeded in "rounding them up," the two men came to the rescue of the timid animals and singled out a large and well-horned ram. The dog was muzzled and fastened to the horns of the ram by a rope 12 feet in length. In a moment the fun commenced. The ram, true to its instinct, made a dash to free itself; the dog, true to its habit, "made a break" for the ram. Finding that flight was of no avail, the ram turned and made fierce fight. The dog being muzzled was at a disadvantage, and the way he was butted around that field was very lively. No sooner would he regain his feet than the frantic ram was upon him, and over he would go, sometimes being thrown the length of his rope. At last he weakened, and strove to break the bands which held him at the mercy of the avenging ram. When the sport was over the dog was nearly dead. From that time he has never offered to molest a sheep.

KERN COUNTY SHEEP HUSBANDRY.—Bakersfield *Californian*, Feb. 26: There are a great many sheep-men in this county, owning a vast number of sheep in the aggregate, who depend upon the open or outside ranges. When there is feed they do well, but in times of scarcity they meet with heavy losses. Up to within a few weeks, this season threatened to be the worst for them ever known. There had been little or no rain and nights cold and frosty. It looked as if there would be an absolute failure of feed and consequent destruction of their flocks. Owing to the recent copious rains and enormous snowfall on the mountains a late crop of good grass is assured, and they have narrowly escaped the threatened calamity. But the feed is still scanty, and before the period of assured abundance comes their losses will foot up heavily. They have met with similar experience several times before, and it is surprising that so few have taken steps to guard against the recurrence of these evils. If each of them were to acquire 20 or 40 acres of land in the valley upon which to gather and stack an accumulation of feed, from year to year, against periods of scarcity like the present, it would remove the present element of uncertainty from their business, and save them the anxieties and harassments they suffer on such occasions.

NOMADIC SKINNERS.—The Shasta *Courier* thus notices a little band of enterprising rovers, whose visits can hardly be welcome to the herdsmen of that region: A party of three Italians and a Chinaman came up to this county from the lower country about three weeks ago and struck a bonanza. They are professional "skinners," and follow in the wake of severe and prolonged storms as persistently as gulls follow ships at sea. Their outfit consists of a team, covered wagon, blankets, box of provisions, frying-pans, coffee-pot, an assortment of knives, small grindstone, etc., and their business is to take the hides off of the carcasses of such cattle and sheep as have succumbed to hunger and the weather. Where the owners of such stock are encountered they offer to pay a small price for the hides; but where no owner shows up, the hides are appropriated without ceremony. They are a tough lot, and it is surmised that they would not hesitate to insert a knife into the windpipe of weak animals—just to put them out of their misery, of course. The Chinaman's specialty appears to be the galls of the cattle, which, it is said, are used in China in coloring silk.



OONSHIU ORANGE.—Mr. Amoore, of the Japanese Tree-Importing Company (120 Sutter St., S. F.), brings us a specimen of the Japanese orange, the Oonshiu, to which allusion was recently made, which is quite two and a half inches in diameter and of the general features previously described. He brings also samples of dried Japanese persimmons, which those who have this fruit growing should study to imitate, as they may perhaps find a good market for them. Mr. Amoore reports much interest in Japanese fruits among our horticulturists.

NAPA winemakers are, generally, holding their wines for higher prices this season.

The Evants Pneumatic Evaporator.

This is a modification of the Alden Evaporator. To retain the spreading surface given by the Alden upon 64 trays, one above the other in a vertical column, the shaft, or evaporating chamber, is constructed in a *horizontal*, instead of vertical position. This horizontal shaft was divided into four sections, or compartments, each being provided with the Evants Patent Fruit-tray Elevator and 16 fruit trays. To this was applied the Evants Patent Double-return Furnace, which, it was discovered, will heat, with PERFECT UNIFORMITY, 14 sections with 224 fruit trays, instead of four sections with 64 trays. Thus increasing the Alden capacity by five to one, while the cost is reduced more than 50 per cent, and by the use of the Evants Automatic Tray Carrier, and other labor-saving devices, one man does the work for which four were required by the Alden.

The "Alden principle," and all of its advantages, are retained and fully utilized in the EVANTS PNEUMATIC EVAPORATOR; its products a fac-simile of Alden goods. No payment on evaporators required until this statement has been verified by an actual working test.

The capacity of prunes per day, of a $2000 evaporator is 16,000 pounds—fresh fruit. Pitted fruits dry in one-half the time required for prunes. This is an Oregon invention, where all fruits must be dried by artificial heat, and has been three years in successful operation.

Address,
THE PNEUMATIC EVAPORATOR CO.,
(P. O. Box 106.) Alameda, Cal.

AMERICAN SETTLER'S GUIDE.—Henry N. Copp, the land lawyer of Washington, D. C., has issued the 12th edition of his "Settler's Guide." It claims to give full information about the homestead, pre-emption, timber culture, desert land, and other laws, together with Commissioner Sparks' orders and late decisions and instructions; makes a pamphlet of 119 pages, and may be had for 25 cents.

The Old and the New.

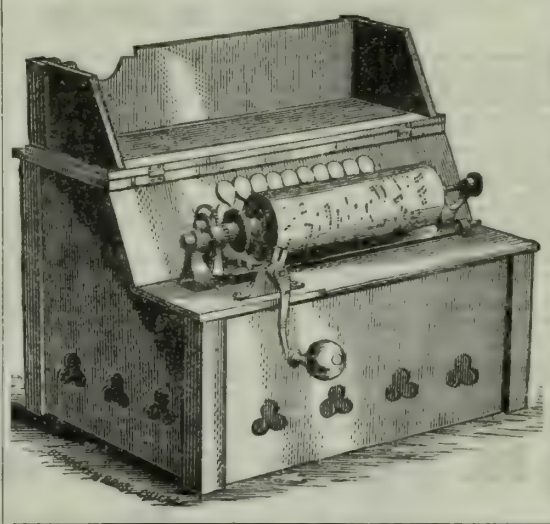
The old-style pills! Who does not know
What agony they caused—what woe?
You walked the floor, you groaned, you sighed,
And felt such awful pain inside,
And the next day you felt so weak
You didn't want to move or speak.
Now Pierce's "Pellets" are so mild
They are not dreaded by a child.
They do their work in painless way,
And leave no weakness for next day.
Thus proving what is oft confest
That gentle means are always best.

The Ruddy River

Of life is the blood. From it the system receives all its material of growth and repair. It bathes every tissue of the body. How necessary, then, that the blood should be kept pure and rich. Dr. Pierce's "Golden Medical Discovery" is the great blood food and blood purifier. It is a sovereign remedy for all diseases due to impoverished blood, consumption, bronchitis, weak lungs, scrofula, influenza, and kindred diseases.

* * * * Delicate diseases in either sex, however induced, speedily cured. Book, 10 cents in stamps. Address, in confidence, World's Dispensary Medical Association, 663 Main street, Buffalo, N. Y.

SEEDLINGS FOR SALE.



18,000 Pear Seedling, 6000 ditto Myrobolan, 3000 ditto St. Julien Plum, 5000 Apple, 5000 ditto Cherry Mazzard, $5 per M. All in prime condition, ready to be set in nursery now.

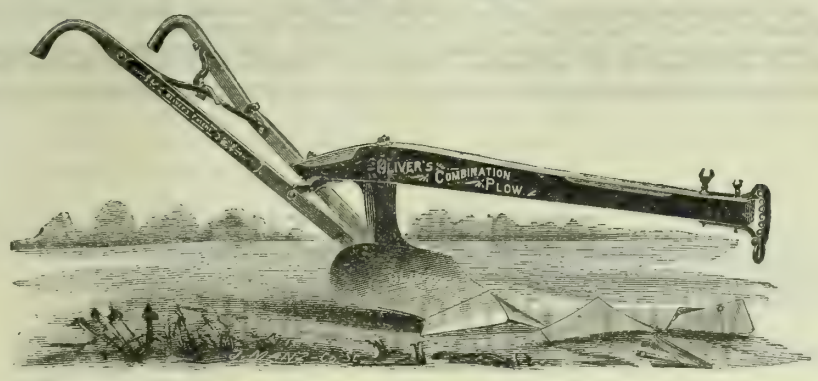
Especially Adapted for Cultivation of Vineyards and Orchards.

This Cultivator is all Iron, A NEW MODEL, and an improvement over all others. The wheels are behind the Cultivator, the Spring Seat being so arranged that a man or boy can see all the workings, and can raise or lower the Cultivator with ease by his weight and the use of the lever. There is also a Side Lever for use on side-hills, or to run the Cultivator up close to trees not in line. Price of Cultivator, $35. Manufactured by



C. M. HENSLEY, Cor. First and Williams St., San Jose, Cal.

Oliver's Vineyard and Orchard Plow

No. 8.

A Vineyard Plow.

We give herewith a picture of a vineyard plow, made by the Oliver Chilled Plow Works, which has a branch establishment at 37 Market Street, San Francisco. The description of the main points of value in the plow is as follows:

The Standard and Beam are thrown to the center so as not to interfere with the growing vines. The Land-side handle is adjustable, and can be thrown to or from the land at will of operator. The share of this plow is made in two pieces, the wing forming one and the point the other, each reversible independently of the other, yet as a whole, forming a very strong and most complete share. The wing, as shown in the illustration, is so made that the bearings or fitting parts are entirely concealed from view when in position, so that they are not exposed to wear in the least, thus insuring a complete fit under any and all circumstances. The special design of the wing is such that a concave surface is always presented to wear, and this holds good until worn out, no matter how often reversed.

The Slip Point is a marvel of strength and utility, which is clearly apparent when the principle upon which it is constructed and held in place is considered. The peculiar notched prongs forming the upper portion of the point or that part which fits into the standard, are held in position by a lever resting against the inside of the standard, and when the strain is applied as the point comes into use the pressure on these prongs is so graduated as to be almost, if not quite uniform and perfect, and thus nearly the entire strain is taken off the foot of standard and exposed portion of the slip point, thereby avoiding much of the liability to breakage, so common in the ordinary points and standards.

The bearings of the slip point, like those of the wing, are entirely concealed, hence are not affected by any use the point may be subjected to and a perfect fit always results.

The design of this implement, which is styled "Oliver Chilled Plow, No. 8," resulted from a special inquiry into and study of the needs of Pacific orchard and vineyard men. The implement was only introduced last year, but "took" at once to such an extent that the branch house in San Francisco could not supply the demand, and the prospect now is that the reputation it has already made for itself will grow proportionately the present season.

The above was written one year ago, and from the numerous testimonials received from Vineyard and Orchard Growers of this State, we feel perfectly safe in recommending this Plow as being the very best of its kind for sale on the Pacific Coast. Call on our nearest agent, or address

HENDERSON'S PATENT TRUSS.

Comfortable and Reliable.

This simple truss can be worn without inconvenience, and gives all the comfort to the wearer that can be obtained from a perfect-fitting, pliable apparatus. The pad is soft and yielding, and on account of its peculiar construction and the connections of its securing bands, cannot get out of place. It will remain in place no matter what position the wearer may assume. The engraving shows the construction of the appliance. It is simplicity itself, and is comfortable and reliable. Address,

GRAND AUCTION SALE!

WEST COAST LAND CO.,
San Luis Obispo, Cal.

Incorporated March 27, 1886. CAPITAL, 500,000.

DIRECTORS.	OFFICERS.
GEO. C. PERKINS.....San Francisco.	JOHN L. HOWARD.....President.
JNO. L. HOWARD.....San Francisco.	ISAAC GOLDTREE.....Vice-President.
ISAAC GOLDTREE.....San Luis Obispo.	R. E. JACK.....Treasurer.
R. E. JACK.....San Luis Obispo.	
C. H. PHILLIPS.....San Luis Obispo.	C. H. PHILLIPS, Secretary and Manager.

The WEST COAST LAND COMPANY now offering in subdivisions the

PASO ROBLES RANCH,

Of 20,400 acres, less 6000 acres sold to settlers in the past four months;

THE SANTA YSABEL RANCH,

Of 20,200 acres;

THE EUREKA RANCH,

Of 11,000 acres, and 12,000 acres of the

HUER HUERO RANCH,

All lying in a body, on the S. P. R. R., at its terminus in SAN LUIS OBISPO COUNTY.

Will sell

AT PUBLIC AUCTION

About March 22d (for date see later advertisement) **the balance of the Paso Robles Ranch,** consisting of town lots in Templeton, 800 acres in 5 to 12-acre lots adjoining Templeton, and 14,000 acres in ranch subdivisions;

ALSO,

2100 acres of the **Huer Huero Ranch** in 20 subdivisions.

These are all agricultural and fruit lands, in quality equal to any in the State, with an average annual rainfall exceeding that of Santa Clara county, and require

NO IRRIGATION.

Title, U. S. Patent and to be free and clear of all incumbrances.

TERMS OF SALE.

Lots in Templeton, cash, U. S. Gold Coin. All other tracts one-third cash; balance in 4 equal payments, at 2, 3, 4 and 5 years; interest 6 per cent per annum The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser.

An additional charge will be made of $5, for deed in sale of town lots, and $25 in other cases for expenses of sale, including making and recording all papers.

Schedule price of ranch subdivisions average $20 an acre; of 5 to 12-acre lots, $50 an acre.

SALE WITHOUT RESERVE,

Providing that no bid will be entertained at less than 60 per cent of schedule prices.

Ten per cent of cash payment (but in no case less than $100) required at fall of hammer; 30 days to complete sale. Parties failing for 30 days, forfeit sum paid.

Parties going from Los Angeles take P. C. S. S. Co.'s Steamers from San Pedro to San Luis Obispo. From San Francisco, take 8:30 A. M. daily train, S. P. R. R., to Templeton.

Parties wishing to inspect said lands with a view to purchasing at the Auction, or any of the Company's Land at private sale, will be shown the property free of charge by applying at the Company's office in Templeton.

Maps of all the ranch subdivisions, of Templeton, of the 5 to 12-acre suburban lots, and a general map showing the location of the Company's lands with a new descriptive catalogue are in press and will be sent free on application after the 25th inst. (February, 1887.)

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in DEWEY & Co.'s Patent Office Library, 252 Market St., S. F.

FOR WEEK ENDING FEBRUARY 15, 1887.

357,652.—WINDMILL—D. P. Barrett, Oakland, Cal.
357,822.—HARVESTER REEL—Jos. Gilbert, Los Angeles, Cal.
357,664.—CLIP FOR WIRE ROPE WAYS—A. S. Halidie, S. F.
357,773.—SHELL EXTRACTOR—C. H. Keenan, Ft. Halleck, Nev.
357,775.—EVAPORATOR—W. F. Lambert, S. F.
357,612.—CAR AXLE—I. W. Lewis, Portland, Ogn.
357,841.—HOEING AND RAKING MACHINE—D. Lubin, Sacto.
357,842.—CLOD-CRUSHER—D. Lubin, Sac'to.
357,843.—CLOD-CRUSHER—D. Lubin, Sac'to.
357,844.—CLOD-CRUSHER—D. Lubin, Sac'to.
357,798.—VAPOR-BURNER—Wm. Wainwright, S. F.
357,799.—SPRINKLER—Wm. Wainwright, S. F.
357,802.—FOG-HORN—Geo. White, S. F.
17,111.—DESIGN—W. V. Arthur, Oakland, Cal.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

CITRUS JAPONICA.—We saw at H. H. Berger & Co.'s (317 Washington St., S. F.) a collection of Japanese orange trees (*Citrus Japonica*) laden with fruit. They were very pretty little trees, and having the fruit attached as grown made the determination of the variety certain. The *Citrus Japonica* would not be generally acceptable as a fruit to be eaten out of hand, for it has something of the acid of the lime blended with the orange flavor. It is believed that it will be found very desirable for preserving and crystallizing, for the size is desirable for those uses and the skin is so thin that it can be eaten just as one eats preserved apricots or other fruits. The trees are pot-grown and are very small. The variety is claimed to grow 10 to 12 feet high in the open ground and the fruit to be about the size of a nectarine. We were informed that a member of the firm intends soon to start for Japan to make personal selection of plants and seeds for this fall's trade. Meantime many interesting things of Japanese origin can be seen at the Washington-street depot.

VALUED BY A COTEMPORARY.—The Chico *Enterprise* reproduces the likeness and life-sketch of Father Nelson which appeared in our issue of Feb. 12th, and in giving credit for it takes occasion to add: "The RURAL PRESS is one of the most valuable papers for farmers that is printed. We commend it to all."

L. W. PARSONS & Co., of San Jose, claim that their patent fruit evaporator combines the merits and avoids the defects of all previous patterns, joining the searing-over process with a dry finish, without danger of scorching. Their advertisement may be found elsewhere.

THE ROLLER ORGAN, advertised in another column, is somewhat of a musical novelty. There are no punctured papers about it; the expense is not great, it is easy to work, and under certain conditions can be made to serve the purpose of a band.

ROSES.—E. Bourguignon, of San Jose, in addition to general floriculture makes a specialty of fine roses, and his exhibit at the San Jose Fair bore testimony to the extent of his collection and his skill as a grower.

APPLEGATE'S

Cold Water Bleaching Soap

Was Awarded the First Premium at the State Fair at Sacramento, for the year 1886, UPON ACTUAL MERIT.

It can be used in Bath, Toilet or Laundry, and dispenses with Fuel, as no Warm Water or Boiling is Necessary. Beware of Cheap Imitations.

The Genuine is manufactured only by

J. J. APPLEGATE,

No. 12 Bush Street, San Francisco

You can certainly

Stop Coughing

With 10 parts molasses or honey to one part of

PERRY DAVIS'

Pain Killer.

Take ¼ teaspoonful often.

TRY IT.

PAINKILLER also Cures Sore Throat, Diphtheria, Rheumatism, Neuralgia

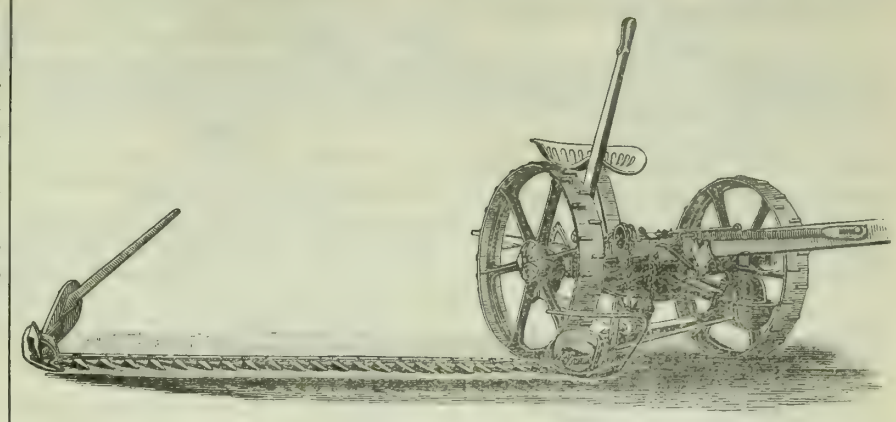
417 Sansome St. San Francisco

AGENTS WANTED TO SELL —THE— **MISSOURI STEAM WASHER**



To men and women of good character, seeking profitable employment, exclusive territory will be given with agency. Teams can be used to advantage by agents in country districts. The Washer is made of metal, size 13x22 inches at base, and works on a new principle, which saves labor marvelously. Sample shipped on a week's trial on liberal terms. Its great merit enables agents to earn $50 to $200 per month. Write for illustrated circular and terms of agency. J. WORTH, Sole Mfr. 1710 Franklin Ave., ST. LOUIS, Mo.

Or P. O. Box 1968, San Francisco, Cal.

PARSONS' FRUIT EVAPORATOR.

A complete success! Fire Proof! Best and cheapest. For circulars send to L. W. PARSONS & CO., San Jose, California.

THE STANDARD MOWERS.

The Only Successful and Practical WIDE-CUT MOWERS.

The entire weight of the Cutter Bar being suspended on the Spring Share, prevents the Bar from dragging on the ground, thus doing away with all side-draft and enabling us to use a 7-foot bar, thereby accomplishing a feat which cannot be done by other machines.

The 7-foot Mower is as Light Draft and as easy to handle as any 4-foot Cut Mower made.

Remember with two horses and one man the 7-foot Mower will cut 20 acres of grass per day.

SIZE OF MACHINES:

3 Feet. 4 Feet. 6 Feet. 7 Feet.

Send for Circulars.

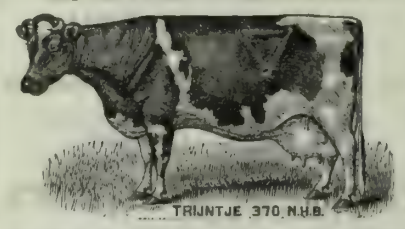
NEW IMPORTATION

—OF—



NORMAN STALLIONS.

Theodore Skillman has just arrived from France with the choicest importation of Norman Stallions that has ever reached the Pacific Coast. Mr. Skillman has selected these horses from the best in France, with a view to the improvement of draft horses on this Coast. They are young and sure to suit the tastes of intending purchasers as regards color, etc, a number being coal-black. He has also on hand some Imported French Coach Stallions. These horses are now very popular in the East and have long been the favorite carriage horses of France. Their merits speak for themselves. Come and inspect this rare collection of horses and be convinced that they are the best ever seen on this Coast.

☞Catalogue for 1887 sent free on application.

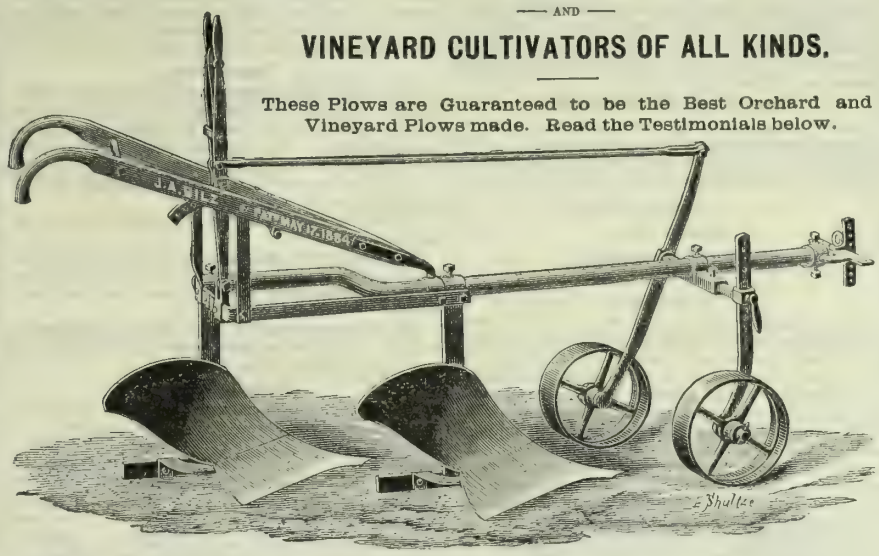
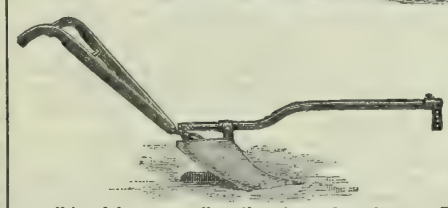
BANDMANN, NIELSEN & CO, General Agents, San Francisco.



ORCHARD AND VINEYARD



One-Horse Single and Two-Horse Gang Plows

— AND —

VINEYARD CULTIVATORS OF ALL KINDS.

These Plows are Guaranteed to be the Best Orchard and Vineyard Plows made. Read the Testimonials below.

The single plow can be set to any position, and can be run to or from the trees or vines and within an inch of them without any injury to the same. The handles are also movable, and can be changed from one side to the other to suit the circumstances. This plow has several advantages over all other Vineyard and Orchard plows. Among these are: By changing the beam, no matter to or from the land, the plow will always run in a straight line. By the revolving drop clevis, the plow can be set to or from the land, or in depth. With this plow a man can plow a straight furrow, when he could not with other plows where the beam runs across them. It works as well in adobe or gravelly soil as in sandy or loamy. The plow weighs about 50 pounds. This plow will fill a long-felt want among orchard and vineyard men, who fully appreciate its great value. Plow and Singletree patented May 17, 1884.

PRICE LIST.—Single Plows. with singletrees, $15; Gang Plows with Garden City Plow bottoms attachel, $35; Doubletrees with Patent Singletrees, $4.50. Extra Shares, $3.00. Extra Shares can be had of me.

TESTIMONIALS:

HOLLISTER, Sept. 11, 1886.

J. A. BILZ—Dear Sir: I take pleasure in testifying to the good merits of the plow and harrow made by you, which I have used at my vineyard to my entire satisfaction. WM. PALMTAG.

RUBY HILL VINEYARD,
PLEASANTON, CAL., July 24, 1886.

J. A. BILZ, ESQ., Pleasanton, Cal.—Dear Sir: Your two-horse Vineyard Gang Plow is a great success. It saves $2 a day over the old method of plowing, and is light in draft. We have two of them with which we turned under weeds this last spring over a foot high, and left the land in excellent condition. CRELLIN BROS.

CRESTA BLANCA VINEYARD,
LIVERMORE, CAL., Nov. 27, 1886.

MR. J. A. BILZ—Dear Sir: I have tried several vineyard plows on my place, but none have given such good satisfaction as yours. I take pleasure in recommending it to those who desire good work done economically.
CHAS. A. WETMORE.

FRESNO VINEYARD, April 9, 1886.

I have tried Mr. Bilz's double plow, and although very skeptical at the time, I must acknowledge it worked well, and I am much pleased with it. I have made up my mind to put them in the vineyard.
D. D. HUDSON, Supt.

PLEASANTON, Sept. 9, 1886.

J. A. BILZ, ESQ.—Dear Sir: I take pleasure in recommending your two-horse Vineyard Plow which I know to be a success, having purchased three of them in plowing in the past season, in my vineyard. Undoubtedly, they are the best implement of the kind I ever used. They are light in draft. It turns the ground over well, and is so regulated you can plow any depth you desire, and it leaves the ground even. It also turns the weeds under better than other plows I have used. I have saved $2.50 per day on each plow. I would not be without the plow for twice their cost. Yours truly, J. A. ROSE.

LIVERMORE, August 1, 1886.

J. A. BILZ, ESQ., Pleasanton, Cal.—Dear Sir: We have used one of your Vineyard Gang Plows during the past season and believe it to be a good plow, doing the work in a thorough and economical manner, and can heartily recommend it to those wishing an implement of this kind. Yours respectfully, S. OSTERHOUT.

LIVERMORE, Feb. 1, 1886.

MR. J. A. BILZ—Dear Sir: I have tried your vineyard plow and find that it works well and gives perfect satisfaction, and I take pleasure in recommending it to any one who wishes a good vineyard plow. Your patent singletree is also a success, and when used in an orchard will save many a tree from being injured. Yours truly,
F. KURTZ, Foreman of C. A. Wetmore's Vineyard.

Persons interested in Vineyards and Orchards are invited to call at my shop and examine and try the plow. It is warranted to do all claimed for it. For further particulars apply to

S. F. Market Report

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, March 2, 1887.

The past week has been a repetition of its predecessor so far as regards trading in cereals. Many look for more activity after next Monday, owing to that day being the time for assessing property. The cold rains continue retarding vegetation in the middle and northern counties, but the southern counties are contributing more freely. The English wheat market has ruled weak, but to-day private cables give the market stronger, although semi-public cables are weak. The following is to-day's semi-public cable:

LONDON, March 2.—Cargoes off coast, quiet but steady; cargoes on passage and for shipment, slow; New York advices cause a depression; Cal. wheat off coast, 36s to 36s 3d; Cal. wheat just shipped, 37s 3d; Cal. wheat nearly due, 36s 3d; English country market, firm; French country market, firm; Liverpool wheat, spot, inactive; Liverpool wheat, Cal., 7s 3¼d to 7s 6¼d.

Foreign Review.

LONDON, Feb. 28.—The *Mark Lane Express* in its review of the movements of the British grain trade during the past week says: Native wheat in both the London and provincial markets is steady at previous rates. The sales of English wheat during the week are 40,471 quarters at 32s 7d, against 68,823 quarters at 29s 3d, during the corresponding period of last year. Foreign wheat is quiet. Corn is weak. Seventeen cargoes of wheat have arrived; six cargoes were withdrawn and seven remained. At to-day's market flour was dull under large arrivals, and American brands were 6d lower. Corn was cheaper. Barley and oats were dull and declined 3d. Linseed was 1s cheaper.

Eastern Wool Markets.

NEW YORK, Feb. 27.—There was no great amount of business this week, but Texas descriptions continued to be taken in good quantities on concessions. The position of the market was unchanged in most other respects. Fine fleeces were offered freely at 35c, and would probably be shaded below that figure. Medium wools were firm at 36@38c, and the demand is relatively fair. The improved condition of the woolen goods market gives a somewhat better tone to business in wool, but the caution with which clothiers place their orders forbids any buoyant feeling among dealers. The sales of the week included 2500 pounds scoured Colorado at 55c; 7000 pounds scoured Oregon at 56½c; 3000 pounds of scoured California at 55c.

In Philadelphia, the activity has been confined to a few houses, and the market as a whole has continued quiet. Among the sales were 3000 pounds of Territory fine at 25c; 25,000 pounds Eastern Oregon fine medium at 21c; 13,000 pounds Montana medium at 27c; 50,000 pounds Oregon original at 29c.

At Boston, the tone is unsatisfactory, and as reported last week, a little pressure either way would have an immediate effect. Among the sales were 177,000 pounds of Territory at 19@26½c; 75,000 pounds Eastern Oregon at 17@22c; 3000 pounds spring California at 26c; 6000 pounds fall California at 16@20c.

BOSTON, March 1.—Wool is in moderate demand, with prices in buyers' favor. Ohio and Pennsylvania fleeces, 32½@33c per lb for X; do 34@35c for XX; Michigan X, 31½@32c; No. 1 Ohio, 37c; Ohio fine delaine, 36c; Marcn, 34@35c.

California Fruit in Chicago.

CHICAGO, Feb. 27.—The market is still loaded with Florida oranges, and the shipments from California have been curtailed somewhat on account of bad weather prevailing on the Pacific Slope. The demand is growing better for all varieties of oranges. The supply on hand is of a pretty fair quality, but there is not much fine fruit to be found anywhere in the market. Florida oranges bring somewhat lower prices here than those from California, because they are not up to the California fruit in quality. Bright Riversides are quoted at $2.75@3.25; Navel oranges, according to quality, $3@6. The volume of trade is generally reported as rather light. All descriptions of dried fruits are ruling quiet, with the exception of choice bright apples. The quietness of the market is due to orders from the country being rather restricted, on account of bad weather and roads. Some old peaches are coming forward and meeting with moderate sale. New peaches are scarce. The old fruit coming on the market shows very good condition. Sales of California dried fruits are moderate, and prices rule steady. The stock is moderate, with the exception of raisins, which are quite plenty. Prunes, French, per pound, 7@9c; plums, pitted, per pound, 10@11c; peaches, halves, 11@12½c; halves, pared, 20@21c; figs, 6@8c; nectarines, 9c; pears, 8@12c; raisins, London layers, 20-lb boxes, per box, $1.35@1.40; loose Muscatel, $1.25@1.50.

New York Wheat Market.

NEW YORK, Feb. 27.—Wheat, the past week, has ruled very irregular. The export trade was good and the milling demand fair. Options were fairly active, closing steady at the best figures. March, 88¾; May, 90½@$1.04; April, 89⅝@89¾; June, 91; July, 91⅜; August, 91⅜; and September, 92⅝.

California Products in New York.

NEW YORK, Feb. 27.—Honey—The market is strengthening under a steady reduction in the available supply. The sale of 18,000 pounds white California at 5c is reported, and this price is firmly demanded for additional quantities; amber, quoted at 4¾c.

Dried and Canned Fruit at the East.

NEW YORK, Feb. 27.—Canned—There is a moderate jobbing inquiry for various descriptions, though no large transactions have transpired. Tomatoes, firm, with $1.10 quoted as the inside price; corn, steady, with good grades scarce; Lima beans are obtainable at $1.40@1.50; white cherries are strong, $1.40 being now the holders' lowest limit; California peaches, $2.50; pears, $2.50; plums, $1.75@2; grapes, $1.75@2; apricots, $2.10.

Raisins—Buyers continue indifferent, but in most instances holders are not attempting to urge distribution by offering concessions. At an auction sale on Friday, Valencia raisins sold down to 4⅝@4¾c for off stalk and 7⅛@7¼c for layers; the market then steadied up and closed at 5@5½c for the former, as to brands, and 7⅜@7½c for the latter. Malaga and California remain very quiet at nominally unchanged prices. Loose Muscatel, three-crown, $1.50; London, $1.50@1.65.

Prunes—Turkish, quiet and easier; quoted at 5⅜@5½c. French are freely offered at 8@8¼c.

Citron—Firm at 18@18½c.

Currants are in moderate jobbing request at 4½@4⅝c.

Crops at the East.

CHICAGO, Feb. 27.—The *Farmers' Review* crop summary for this week is as follows: The winter wheat fields, except in Michigan and Wisconsin, have been bare for two weeks and subjected to varying mild and cold weather, but except in Kansas, the outlook for the crop continues to be reported as promising. The best reports come from Ohio, Indiana, Michigan, Wisconsin, and Missouri, while the outlook in Illinois is fair. There is a very light corn movement in Illinois and in all the States west and southwest of Illinois.

New York Hop Market.

NEW YORK, Feb. 27.—Business continues of moderate proportions, with no improvement in the demand. Coast crop of 1886, best, 21@23c; do, common to good, 16@19c; 1885, good to prime, 8@12c.

[COMMUNICATED.]

Market Information.

Cereals.

Advices from abroad do not report any material change either regarding the wheat crop or the market. Stocks in England, Germany, and France are being gradually reduced under a steady consumptive demand. While the low prices abroad have stimulated consumption, speculators are slow to take hold, owing to the facilities for securing supplies within a few days' notice—electricity and steam having revolutionized the old methods of doing business. At the East, the visible supply continues in excess of last year at this date, although a steady lessening in the visible supply is reported. The exports from the United States, from July 1 to February, compare as follows with flour reduced to wheat: 1886–87, 79,514,288 bushels; 1885–86, 38,261,465. This gives a total increase for the first seventh month of the present crop year, compared with the like time in 1885–86, of over 41,000,000 bushels. Crop advices, from the Western States are virtually unchanged; the outlook is favorable for the usual outturn, but as yet no correct estimate can be formed. On this coast, our advices are unchanged. The bag ring, as usual, are estimating on a very heavy outturn, with fully 150,000 tons more for export the coming season than the present. Our advices do not warrant any such high estimate, although whether the surplus will reach, for the season of 1887–88, 750,000 short tons, will depend on the weather. As yet it is not safe to place the surplus at over 500,000 short tons. The growing plant is looking exceedingly healthy and well stooled out, but the acreage seeded, taking the State as a whole, is fully 25 per cent less than last year. The local wheat market, the past week, was fairly steady, made so by stocks being well concentrated and an increasing supply of idle tonnage in port, and a larger tonnage on the way than at this time last year. Transactions in the sample market were few, with buyers and sellers apart; to sell, buyers' bids had to be accepted, and to buy any sized parcels, sellers' offer had to be paid. The stock on hand March 1 in this city and Port Costa aggregated 77,249 tons, against 83,307 tons on first of last month.

The stock of barley in the city warehouses was, on March 1, 18,474 tons, against 19,150 tons the first of last month. The past week witnessed a fairly steady market, with few fluctuations in values. Buyers hesitated to operate freely, owing to next Monday being tax-assessment day. It is claimed that the bulk of the stock in this city is held by Call Board manipulators. The consumption continues free.

Corn is without any particular change to note. The demand is of an offish character, owing to large stocks here and free shipments on the way. The stock in this city on March 1 was 1863 tons, against 1362 tons the first of last month. This is an increase of 500 tons, notwithstanding last month's total receipts were over 190 tons in excess of the January receipts.

The market for oats has ruled dull and quiet. Buyers continue to confine their purchases to near-by wants, thus keeping prices down under free receipts from the Western States.

Commission merchants report light trading in rye, with quotations unchanged.

The stock of buckwheat is said to be in excess of the demand, although dealers are trying to hold up prices.

According to the Cincinnati *Price Current*, the wheat requirements for consumption for the next five months will be "approximately 119,000,000 bushels, leaving 60,000,000 available for export; consumption last year for corresponding time, 116,000,000 bushels; exports, 52,000,000." If the above is correct, and the exports from the United States up to July 1 reach the same proportion they did for the like time in 1886, then the carry-over into the next season will be less than ever before known in the wheat history of this country.

Feedstuffs.

Bran is higher, but middlings are unchanged. Feedmeal, ground barley and oilcake meal are unchanged. The demand is only fair.

Hay is steady, with a freer consumptive demand reported. Receipts have only been moderately fair. The supply in the country is said to be not much, if any, above an average at this season of the year.

Fruits.

Apples are steady at full prices. Eastern apples are in fair supply, with more on the way.

Oranges are in free stock, necessitating concessions so as to close out consignments. Shipments to the north are free.

Limes are firm at an advance. Lemons are unchanged.

Raisins are reported to be moving slowly, even concessions not enticing buyers, owing to their lightness.

Dried fruits hold to steady prices, with the more choice in good inquiry. The consumption is reported to be larger than at this time last year.

Live-Stock.

Beef cattle are reported steady, as are mutton sheep. The consumption is said to be light. The price of sheep depends very materially on the length of the wool. Lambs and small calves are in good inquiry. Hogs are stiffer, with another advance obtainable. Milch cows are in better demand. Horses continue dull, the weather being against them at present.

The following are the wholesale rates of slaughterers to butchers:

BEEF—Extra, 7@7½c; first grade, grass fed, 6½@7c per lb.; second grade, 5½@6c; third grade, 5@—c.

MUTTON—Ewes, 6@6½c; wethers, 7@7½c.

LAMB—Spring, 12½@15c. Yearlings, 7@8c.

VEAL—Large, 7@8c; small, 9½ to 10c.

PORK—Live hogs, 4@4½c for heavy and medium; hard dressed, 7@7½c per lb; light, 3¾@4¼c; dressed, 6½@7c; soft hogs, live, 3@3½ c. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Vegetables.

Potatoes continue very strong under light stocks, light receipts, and a good demand. Choice to extra choice sold the past week at a slight advance on top quotations. The supply to come forward from Oregon and Washington Territory is light.

New potatoes continue to arrive sparingly, but the quality is greatly improved.

Onions are steady, with a firm tone reported for more choice.

The demand for cabbages was fully up to previous weeks, to fill distant orders. It is claimed that at times an advance was had for some of the more choice.

The Southern counties send small consignments of early spring vegetables, which are cleaned up every day at fancy prices.

Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1887.	1886.
On the way	203,899	166,509
In port, disengaged	121,463	61,840
In port, engaged	18,876	57,214
Totals	344,238	285,563

The above gives a carrying capacity as follows: 1887, 550,786 short tons; 1886, 456,900 short tons; increase over last year, 93,886.

Tonnage on the way and also in port continues to increase, causing exporters to bid down for ships.

Beans show another advance for choice, but not for other grades.

Honey is very strong, with Eastern buyers more anxious.

Hops are reported very dull, but then this always is obtained at this season of the year. The stock on this coast is claimed to be light.

Hides and tallow are weak, but no lower.

Quails are out of season; other game varies according to the daily supply.

Turkeys have ruled weak, but other poultry were fairly steady, notwithstanding a lessened demand.

Local Markets.

BAGS—The market is quiet, but strongly held at full figures, owing to the stock of standard Calcuttas being well concentrated. Calcuttas are quoted at 6⅜ to 6¾c for June–July delivery.

FLOUR—The market is weaker. The demand is slow for export, but fairly steady for the home trade.

BARLEY—The market has ruled weak and easy throughout the week under freer offerings so as to avoid paying taxes. On Call, the bears have sent prices down gradually, with a weak market to-day. Sales on Call to-day were as follows:

Morning Session: Buyer season—800 tons, 99⅝c; 800, 99½c; 200, 99⅜c; 500, 99¼c; 300, 99⅛c; 1200, 99c; 100, 98⅞c; 500, 98¾c; 900, 98½c; 300 98⅜c. Seller season—100 tons, 95c. May—200 tons, 96c; 100, 95½c. No. 1 Brewing, buyer season—200 tons, $1.14½; 200, $1.14¼ ₩ ctl. Afternoon Session: Buyer season—600 tons, 98c; 1600, 97¾c; 500, 97⅝c. May—100 tons, 95¼c; 100, 95½c. No. 1 Brewing, buyer season—100 tons, $1.14¼ ₩ ctl.

BUTTER—The market continues to rule easy under liberal supplies and an offish demand, owing to dealers confining purchases to actual trade wants.

CHEESE—The market is easy under more liberal supplies, and buyers only purchasing in a small way under the impression that receipts will increase.

EGGS—The consumption is large, but receipts are also large, which operate against an advance.

WHEAT—Trading is reported to have been light throughout the week. Exporters report considerable difficulty in having their wants met at less than $1.50 for even fair No. 1 shipping; yet if a parcel was pressed on the market they bid less. On Call, transactions have been fair at strong prices. The following are to-day's sales:

Morning Session: Buyer season — 100 tons, $1.56¾; 1700, $1.57. Buyer 1887—100 tons, $1.60⅜; 500, $1.61⅜ ₩ ctl. Afternoon Session: Buyer season—5400 tons, $1.57¾; 600, $1.57⅜. Buyer 1887—100 tons, $1.61¾; 800, $1.62. Seller 1887—100 tons, $1.46⅞ ₩ ctl.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, $3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

A SMALL CYCLONE.—The advertisement of the Pacific Manufacturing Company will be found on page opposite Market Report. The company is now turning out lots of mills and selling 10-foot wheels at $50. For small families these 10-foot mills come very handy.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

DEATH OF LOUIS GRANDJEAN.—We hear with deep regret of the death of Louis Grandjean, who has been employed by the Viticultural Commission for some time, as assistant to Prof. W. B. Rising, in the analytical work which has been undertaken for the commission. Mr. Grandjean was good in his work, quiet and gentlemanly in his manner, and his death will be widely deplored.

PACIFIC MANUFACTURING CO.,

934 & 936 Mission St., San Francisco, Cal.

For ORCHARDS and VINEYARDS.

THE FARMERS' FRIEND 3-PLOW GANG

Is a light, but strongly built gang, of 3, 9 or 10-inch bottoms; can be easily handled around hills or vines, and runs close to trees without barking them. Why use single plows in the orchard or vineyard, each requiring a man and one or two horses, when the FARMERS' FRIEND will do the work of 3 *single plows* and with *only one man and two horses?* Large numbers of these plows are in use here in California, and we refer to over 100 prominent fruit-growers who are using them.

PRICES GREATLY REDUCED. Address,

B. V. CUTTINGS.

Bordeaux Varieties.

I OFFER FOR SALE, AT $10 PER M. 200,000 CUTTINGS of the following renowned varieties, tule-packed, F. O. B at depot: Cabernet Sauvignon, Cabernet-Franc, Meriot, Verdot Malbec, Tinturier, Portal-Ploussard, Mondense, Petite Sirrah and Grosse Blue. Also from $2.50 to $5.00 per M. all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

J. B. J. PORTAL,
Box 627. San Jose, Santa Clara Co., Cal.

WHITE ADRIATIC,

SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Præparturiens, Macrocarpa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobolan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

TRY THE PERSIAN MULBERRY.

NO SCALE.—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.

STOCKTON, CAL., October 27, 1886.

This is to certify that we the undersigned have this day thoroughly inspected the Stockton Nursery; that we found no Scale or indication of Scale, and that to the best of our knowledge and belief the Stockton Nursery is free of this dreaded pest.

INSECTICIDE!

FOR ERADICATING AND DESTROYING ALL PESTS THAT INFEST FRUIT TREES AND PLANTS, SUCH AS

SCALE BUG, HARVEST FLIES, TREE HOPPERS, PLANT LICE, Etc.

It has been fully tested by the Agricultural Department of the State University, and pronounced a success, the endorsement of which we append. It is put up in convenient forms for use both in liquid and paste state.

For Sale in Barrels and 2 and 5-pound Cans in paste form, and in Barrels and 5-gallon Cans in liquid form.

Copy of Letter Received from the University of California, College of Agriculture, Berkeley, dated December 4, 1886.

J. N. KNOWLES, Esq., Manager Arctic Oil Works, San Francisco—DEAR SIR: We have lately tested the Insecticide preparation of Whale-Oil Soap sent by you to us, and have found it to be very effectual against the Scale infesting Orange and Bay Trees here; also against the Thrips. From our previous experience with a similar composition, I think it will be found fully effectual against any small Insect Pests not specially protected like some of the armored Scales, and against which any Wash short of strong lye cannot be used. Respectfully,

E. W. HILGARD, Professor of State University.

OFFICE, 28 California St., San Francisco, Cal.

SHINN'S NURSERIES

NILES, CAL.

We offer to the public our usual excellent and well-assorted stock of

FRUIT, NUT & SHADE TREES,

SHRUBS AND PLANTS.

THE PACIFIC INCUBATOR CO.,

PROPRIETORS OF

THE OAKLAND POULTRY YARDS, OAKLAND, CAL.

It is the best known Preventive of Disease among Fowls!

It will keep Fowls bright and active, Summer and Winter.

It will make Fowls lay when eggs are most wanted, and bring the highest price!

As a stimulant for moulting fowls and young chickens, the **Pacific Egg Food** is an invaluable aid to the Farmer and Poultryman; and it is now used by all the leading poultry dealers on the Pacific Coast and the Australian Colonies. It is compounded of the best known ingredients that have been found to be essential in forming the bone and muscle of the fowls and the shell of the egg. It acts as a stimulating tonic to the liver and digestive organs, gives tone to the system, and improves in every way the general condition of the flock.

It promotes early feathering in young chicks and moulting fowls, increases the appetite, accelerates their growth, and lays the foundation for large, healthy and profitable fowls. To prepare show birds for exhibition, secure a glossy and uniform plumage, and to restore them to their ordinarily healthy condition after the strain of a week's confinement in close coops, nothing can excel the **Pacific Egg Food.**

The recipe from which this Egg Food is prepared is the result of 20 years' successful experience in breeding and raising fine poultry.

TRY IT! and our word for it, you will find it an indispensable article. The **PACIFIC EGG FOOD** is put up in 1 lb. and 3½ lb. packages and 10 lb. cans. Full and complete instructions accompany each package.

For Sale by all Grocers, Seedsmen and General Merchants.

Vol. XXXIII.—No. 11. SAN FRANCISCO, SATURDAY, MARCH 12, 1887. $3 a Year, in Advance; Single Copies, 10 Cts.

The Cork Oak.

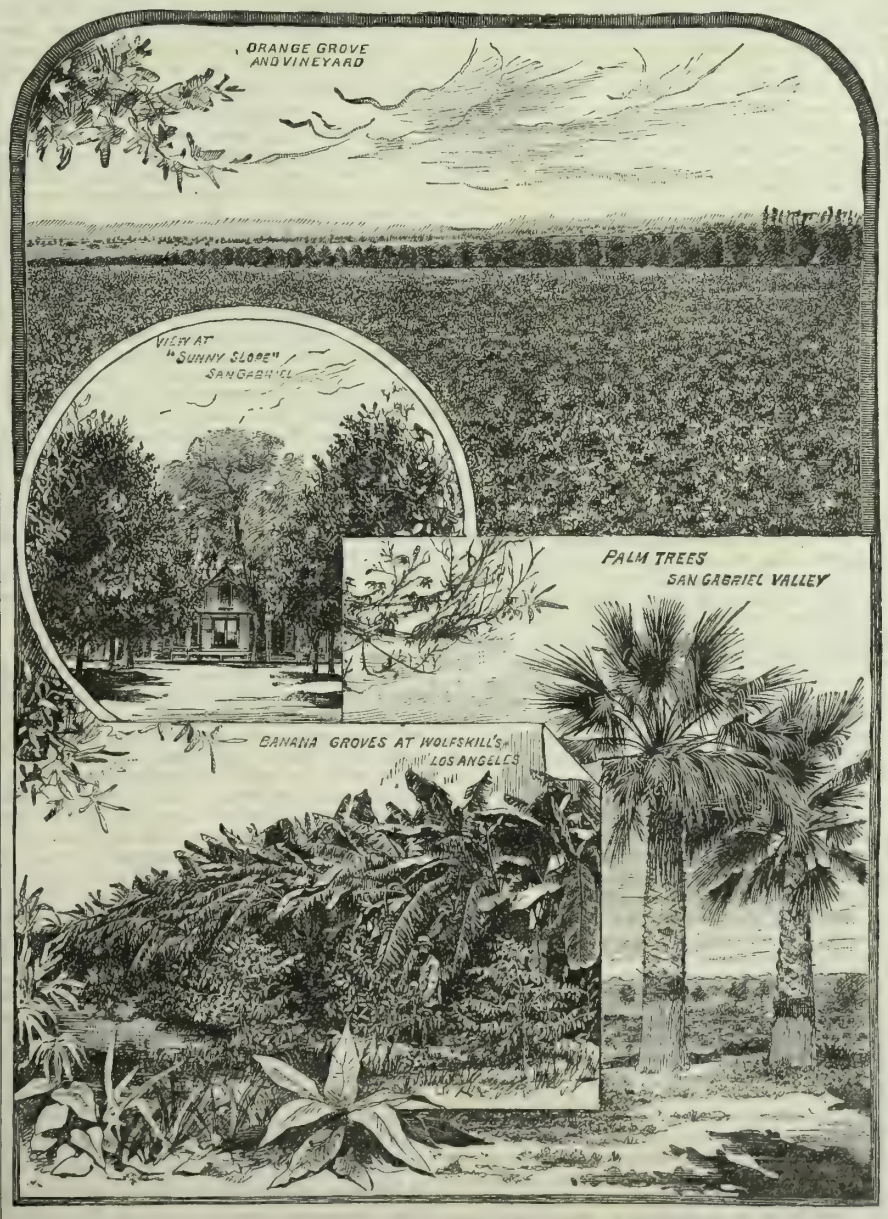
As we have started on the growth of the cork oak in this State, and the trees, now about 25 years old, have demonstrated the adaptation of our soil and situation to the tree, it is of interest to note corky information from the old producing countries. At the last meeting of the State Horticultural Society, Prof. Hilgard made some remarks, alluding to a recent French publication on the subject. It was shown that the supply of cork was diminishing, and that for certain purposes no good substitute for cork has yet been found. On the other hand, the uses of cork have multiplied. The cork plantations of France are becoming less in area and as yet little has been done to restore them. The subject is now being agitated in France, and the planting of cork oaks should be considered in all countries where it is likely to succeed. Of course such plantations must be considered in the light of permanent investments, and the benefits will accrue chiefly to our children and grandchildren, because of the length of time which must elapse before the trees are large enough for stripping.

There are two species of cork oak, the *Quercus suber* and *Q. occidentalis*. They adapt themselves to nearly all soils, but prefer lighter soils, the granitic and slate soils of the foothills for example, the distribution being probably something like that existing with our "blue oak." As for stripping the bark, there are two methods in vogue. The old style was to begin at the time the tree was 22 inches in circumference, at whatever age, but usually at 20 to 25 years. The first bark is coarse and full of seams and is only fit for coarse uses, such as grinding up for packing, etc. It is necessary to be careful in removing the bark and the section of bark removed should not be over 50 inches in length along the trunk. After the first removal the bark is removed about once in 10 years. Ordinarily there is a loss of 18 to 20 per cent in waste in the bark, and sometimes 50 pounds removed will only yield 20 pounds of good cork. The waste is largely occasioned by little holes and by big cracks. Many trees are lost after stripping by this method, and the bark when removed has to undergo a long process of drying, etc., so that the losses incident to the business are considerable.

In the new style of stripping, the first bark is replaced upon the tree after being separated, and the new bark growing under it is thus protected and the tree preserved from injury by the sun shining on the bare trunk. This method seems to be a great improvement over the old way. Taking into consideration the improvement in the quality of the cork, the advantage of the new method is estimated to be nearly one-quarter over the old. It is understood that in the removal of the cork, the stripper does not go down to the living layer, and therefore does not actually expose the wood.

Prof. Hilgard, in closing his remarks, alluded to a possible large demand for cork dust, in which to pack California fruits for shipment, and stated that samples had been shown him of a corky bark produced in large quantities in Yesso, Japan, which seemed to be well adapted for packing purposes. If it should be found so, it would probably prove of much value on this coast.

Young cork trees are now growing at the University from acorns produced upon trees in Calaveras and Los Angeles counties. A plantation has already been made on the bills back of the University, and it is expected that young cork trees will be ready for distribution next year.



Colton Citrus Fair.

According to all reports received up to our going to press on March 9th, the Citrus Fair to open at Colton on March 12th will be an exposition worth going a long way to see. A San Bernardino exchange says that the people are all at work to make it a grand success, and where any community at any enterprise works together, their labors will be crowned with all they anticipate. It was telegraphed from Colton on Tuesday that "large exhibits will be made by Riverside, Crafton, Lugonia and other sections of the county. The Riverside newspapers heartily indorse the fair, and Riverside people will make large exhibits. Excursion trains will run from Los Angeles, San Diego and other points."

As we have stated before, Colton is in the center of a very prosperous group of settlements and has also peculiar excellence of its own. We trust the fair will be a grand success.

In Los Angeles County.

Our engraving presents a few scenes in the San Gabriel valley and a pretty view in the Wolfskill orchard in Los Angeles City, showing especially a row of banana plants thriving in the open air. The upper scene in the engraving will give a general idea of a vineyard and orange grove, while far beyond are the slim plumes of the eucalyptus. The San Gabriel valley is one of the grandest stretches of ground in California, of vast extent and varied adaptations, bringing forth under the magic wand of the irrigator a great profusion of valuable productions.

SCENES IN LOS ANGELES COUNTY, CALIFORNIA.

The view at Sunny Slope shows the residence of Hon. L. J. Rose, an agriculturist of great repute and popularity, who has done much to demonstrate what can be accomplished in California by the use of wisdom and earnest effort. Mr. Rose is at present a State Senator, and won much praise for his course during the present session. The palm trees on the right are the native California Fan palms (*Washingtonia filifera*), which is one of our grandest native plants. These views will give distant readers a little idea of some of the features of the San Gabriel valley, and form an acceptable addition to other engravings which we have given during the last few years.

Southern California Orange Shipments.

According to reports, preparations are better than usual this year to handle the great orange crop of Southern California. It is said that there are 867 new fruit cars at various points in Southern California waiting for the loading and shipment of oranges. All of them have been built recently, mostly by the Pullman Car Company, at their extensive works near Chicago, for the Union and Central Pacific roads, and were designed for the special purpose of carrying California oranges and grapes to the Chicago and New York markets. The Union Pacific owns 469 of the cars and the Central 398. Each car has a carrying capacity of 350 boxes of oranges. As the fruit shipments are to run on passenger train time, the cars are all equipped with air brakes. They are thoroughly ventilated from the outside; that is, all the ventilators in each car are attached to an iron bar with a handle projecting from the side of the car, which by a simple turn opens or closes the ventilators. As the shipper is allowed to send a man in each train, it is very little work for the latter to regulate the temperature of the cars when passing through cold or warm localities. The aggregate cost of the cars was about $500,000.

It was announced last week that already six trains of oranges, each composed of 14 of these cars, were on the way or had reached Chicago, and this week several trains were sent. It is now expected that there will be orange trains out of Southern California almost every day until the shipments become exhausted.

Death of Col. A. H. Webb.

The death of Col. A. H. Webb, secretary of the State Board of Horticulture, which occurred on March 2d, at his residence in Oakland, will be heard with regret by many. Col. Webb was a pioneer, having come to the State in '49. Except five years spent in Idaho, he lived most of the time in the mining districts of Northern California, engaging in mining and trade. Upon the reorganization of the State Board of Horticulture at the beginning of Gen. Stoneman's term, Col. Webb was chosen secretary, and served the board in that capacity up to the time of his death. He was liked by all for his genial and gentlemanly manner, and respected for his strict attention to his duties. He had been out of health for some months, but clung to his work too long for his physical good and so weakened his system that it could not shake off disease. He died peacefully and quietly, though he had suffered much during the last weeks of his life.

Col. Webb was a native of Tennessee, and was born in 1828. He leaves a widow, a son and a daughter to mourn his loss. The funeral services were held in Oakland on Thursday, March 3d. Unfortunately, adequate announcement was not made of his death, and many were prevented from paying the last tribute to his memory, because they were not informed of his demise. Suitable action will be taken at the next meetings of the State Horticultural Society and the State Board of Horticulture to testify the respect paid his memory by our fruit-growers.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Ventura County.

EDITORS PRESS:—Southern California is attracting a great deal of attention just now, and no part of it presents a better field for those who wish to make for themselves beautiful homes, with a delightful climate and superior advantages in many ways, than Ventura county. The Southern Pacific branch railroad, from Los Angeles to San Buenaventura, runs through the county from east to west. It is completed to Santa Paula, and will probably be finished to San Buenaventura by the middle of March. Several large ranches are being divided into small tracts, notably the "Sespe" ranch, which was divided among the heirs eight years ago, and now the several parts are being subdivided.

The "Southern Pacific Improvement Company" are cutting up 200 acres of the land belonging to the youngest heir west of the Sespe river. They have a side-track and station which is called "Sespe." The land will probably be sold in May, when the heir becomes of age.

The Los Angeles Land and Water Co. have bought the eastern portion of the ranch, and have a side-track where they intend to locate a town, which, I believe, they propose to call Fillmore. They are also taking out a large ditch from the Sespe river, which will probably cover both these tracts. Mr. Surdam has bought part of the tract on the south side of the Santa Clara river and covers nearly all of it with a ditch. There will be a town there, to be called Bardsdale.

Here will grow all the semi-tropical fruits peculiar to Southern California, as well as the northern fruits, except, perhaps, cherries and currants. Although Los Angeles feels hurt that Central California aspires to have a citrus belt of its own, even *they* don't raise the very best and brightest oranges that ever were. Los Angeles people that come here praise our oranges as being much sweeter than theirs, and exclaim at the peculiar brightness of the skin. (Of course *those* L. A. people are not in the orange business.) I do not know much about it by actual experience in regard to quality, but I do know that the oranges raised in the eastern part of this county are exceedingly bright in appearance and very nice. There are but few orange trees, comparatively, in this neighborhood, but enough to prove what can be done. Raisin grapes do exceedingly well, making very sweet and handsome raisins, said by good judges to be equal to any raised in the State. They do not grow to perfection or make good raisins less than 20 miles from the coast.

As for climate and soil, we have a great variety of both, so that the most fastidious could be suited. In San Buenaventura the temperature varies the least, perhaps, while further from the coast it is warmer days and cooler nights. Nothing one can say is too extravagant in some people's estimation, and others like to complain because the sun doesn't shine every day, ignoring the necessity of rain to enable us to raise the great variety of fruit we do without irrigation (excepting the orange and lemon, of course). Barley, corn, beans, flax, potatoes, and nearly everything raised elsewhere, is raised here without irrigation, excepting the years of drouth. The large Santa Clara valley between Santa Paula and San Buenaventura is like one vast prairie, where the grandest fields of corn and beans are raised of any in the State. The Colonia sends its immense crops of barley to Hueneme for shipment, and the Conejo and Ojai valleys contribute wheat. The Santa Clara valley produces fine apricots, better than farther from the coast, but peaches and grapes are better east of Santa Paula than elsewhere in the county.

The Ojai valley is a notable resort for consumptives and asthmatic people. The elevation is high and it is peculiarly free from winds.

The Matilijah hot springs, about 16 miles from San Buenaventura, are quite a resort for invalids. I have no land to sell, but shall be glad to see these large tracts of land cut up into small farms and brought to the highest state of cultivation of which they are capable. Speed the day. SISTER SUE.

Santa Paula.

Contra Costa Notes.

EDITORS PRESS:—You ask for an *item* from Contra Costa county. Items there are in abundance, but our local press is so alert in catching them, and publishing to the world, that there is little chance to give you anything that you will not have received from other sources.

Farmers present smiling faces, since the rain of the past month has given promise of abundant harvests. From six to eight inches of rain have fallen in the different parts of the county within the month of February.

The splendid reputation our fruits have obtained in the Eastern market the past season has induced the planting of large areas of fruit trees and vines. All the local nurseries have been "cleaned out" of pear, apricot and plum trees, and many have been brought in from outside nurseries. The young trees of local growth have been given the preference, on account of their more vigorous growth and freedom from insect pests. This is especially the fact in regard to vines, as phylloxera has not made its appearance as yet in the county.

In the planting of wine grapes there has been inquiry for only the best types. The little wine that has been made here, from the now approved varieties, has been of such excellent quality that we feel assured of the highest success in the direction of choice table wines. To those who are experienced in the wine industry, and are familiar with the soil and climate of this county, it has always been a surprise that so little has been done to develop this industry. In fact, it is unaccountable that so little is known of Contra Costa county outside of its limits. With a soil not excelled by any portion of the State, yielding every product of the semi-tropic and temperate zones; a climate that is almost perfect; sheltered from the harsh winds and fogs of the "bay" by its coast line of hills and from the hot blast of the northers by its wide expanse of river and tide and marsh lands; scenery so diversified that the eye never tires to look upon it; situated almost at the very door of San Francisco; easy of access by both rail and water—it would seem that we have all the elements to make ours one of the best known and prosperous of sections. Had we been as enterprising and as politic in advertising our wares as were, and are, the people of the City of the Angels, we might have been receiving some of the tide of immigration that is now flooding that city. We are beginning to realize our lost opportunities, and, at a meeting of our citizens held at Martinez on Saturday evening last, it was resolved to adopt some of the tactics practiced by the "boomers" of other localities, viz., by the use of printers' ink to give such information to our Eastern visitors that shall attract a fair share to our county. At this meeting over 100 of the prominent men of the county were in attendance. Speeches were made by several gentlemen, setting forth our beauties and capabilities. A board of trade was organized, composed of some 60 representative men of the county, and it is proposed through them to collect information of our productions, soil, climate, rainfall, situation and price of lands, etc.—in fact, all information that an intending settler may want to know, and that all such information shall be truthful and reliable. This "board of trade" is to meet at Grangers' hall on the 3d inst. to more fully organize and start the ball rolling. Perhaps when we shall take our light from "under the bushel," we shall work up a boom on our own hook. QUIEN SABE.

Martinez.

POULTRY YARD.

Hints for Practice.

EDITORS PRESS:—As the hatching season is in progress, let us look over the wants and work in the farmers' poultry yard, at present and in the near future as well.

In the first place, as the warm weather is approaching we must be very careful to keep all coops and roosting-places for both old and young chicks very clean, otherwise they will be overrun with lice and red mites, both of which are an abomination; chickens and lice will not both prosper in the same coop, and the lice will be the victors in the short run. To prevent lice getting the upper hand of me, I use fine sand on the bottoms of *all* my coops; for grown fowls' coops I put it three or four inches deep, and then with a short-handled, square-pointed shovel it is an easy matter to remove the droppings twice a week, and then once in two weeks I go over the floors of coops for grown fowls with a mixture of one gallon of water into which I put a tablespoonful of crude carbolic acid. I use a fine spout sprinkling-pot; it could be put on with an old broom.

For little chickens' coops I only put in a thin layer of sand, clean out the droppings twice a week, and at the end of the week dump out all the sand and put in new. Don't forget to use whitewash freely during the summer months, and for the inside of coops for old and young; and into the whitewash put a tablespoonful of crude carbolic acid to each gallon, or two spoonfuls to a water bucket full. The lice do not live where carbolic acid is. Crude carbolic acid can be had at the druggist's for 50 cents a quart, and that amount will last most any farmer a year. For outside use, leave out the acid, and in place of it put in a good handful of salt to a pailful of wash to make it stick.

Just fix in your mind that perfect cleanliness both in the coops and in the drinking dishes, and in dishes for feed also, is one of the great secrets of successful poultry rearing, and also that cleanliness is a preventive of many, if not all, the diseases fowl flesh is heir to, and I think all who know will say it is better and cheaper to prevent than it is to cure disease, so be careful; you cannot be too clean; you are quite liable to get too filthy. The old saying is true: "No pains, no gains."

Time of Setting.

As to the matter of not setting hens after June 1st, I find that chickens hatched from June 15th to October 1st do not have the vitality, and seldom, if ever, make a success as a full-grown fowl. I much prefer to hatch from November 1st to May 1st. To be sure, it will require coops and runways, but in this way good, strong, early-matured chicks can be had, and they are the ones that pay best.

I much prefer sand or loam to put in boxes for hens to set on instead of straw. My firm belief is that straw or chaff is no good for hens' nests, anyway; use earth or sand every time, as you will be more free from lice, and will get a larger hatch than on straw. Be clean about the food you give little chicks, and give it to them on a clean place out of the dirt; change the feed often as possible; their natural feed is seeds of many kinds. The old hen does not boil eggs hard for them after hatching, but takes them to hunt seeds and worms, etc. However, I feed mine boiled eggs for the first day or two, then cracked wheat, cracked corn (corn in very small quantities), etc. Use care and common sense always, and be willing to learn all you can. E. C. CLAPP.

South Pasadena, Cal.

THE GARDEN.

"How Does Your Garden Grow?"

"Mistress Mary, quite contrairy,
How does your garden grow?
Peas more green were never seen,
Or onions all in a row."

EDITORS PRESS:—Happy is the man or woman whose garden seeds were safe covered in garden rows before the rains. Onions and peas, especially, may be put in very early, as they stand up bravely against Jack Frost, and, as Widow Bedott would say, they are a great favorite of rainy weather. Not long ago I inquired of a successful gardener what time onion seed should be sown, and was told that September was the best time, as then the little fragrant vegetable would be ready to transplant after the first rain, and would grow well during the winter. I was a little late with my question to do the most good this year, and could only try to have the seed hustled into the ground as soon as possible and remember the hint for another year. Perhaps the man who "never can grow onions" may have success if he starts early and uses plenty of ashes on the land.

Saltpeter for Corn.

Some years ago there was an article in the RURAL PRESS recommending the soaking of seed corn in water containing saltpeter just before planting, to prevent worms from appearing in the coming crop. Well, my Philander tried it one year, and sure enough the corn was fine, with scarcely a sign of the crawling foe; but he said it must be chance, for how could soaking the seed by any possibility affect the corn which grows so long afterward? But I have been thinking that some of the seed might contain the egg, which, under the favoring condition of the seed's decay, after sending up its stalk, would produce the worm ready to crawl up and fatten on the first juicy kernels that grow. Now, if anything like this really occurs, then the saltpeter bath might be actually useful, and our good corn crop did not come by chance. But if the worm is produced by a moth, then perhaps somebody can tell us about it. [Saltpeter may disgust some of the many pests which attack the kernel when placed in the ground, but the worm in the ear is the offspring of a moth, which lays its eggs on the silk, and soaking the kernel can have no influence upon it.—EDS. PRESS.]

Potatoes.

It has been the universal complaint that this year's potato crop has been uncommonly bad and wormy. Now will it make any difference with next year's crop whether you plant good potatoes or these bad ones? Might not the worm which tunnels little roads through our potatoes leave some trace? I have seen a moth fly from a sack of potatoes, but I think I will say no more; let some one else take the floor.

The above I wrote on the cars as I came up to San Francisco, and since that I have attended a lecture delivered at Cooper Medical College by Rev. Dr. Wythe, of Berkeley, and he said, among many other things, that "the egg of the worm produces the worm." Upon hearing that I craned my neck and gave a mental crow, and said to myself: "There, I'm ready to put up my umbrella and take all the rain of ridicule the many Philanders may begin to pour upon me, for daring to preach about potatoes and corn, but just let them prove that they never plant the egg of the worm along with their corn. HILDA DELESTHER.

[The "egg of the worm may produce the worm" in the sense that like produces like, but in the pests with which the farmer has to do, at least, there are intervening stages. The grub or worm or caterpillar is an imperfect insect, and has neither sex nor any of the special attributes of sex. The moth or the butterfly or the beetle, etc., are perfect insects and have the endowments of sex. The potato worm may go into the chrysalis state in the potato and emerge a moth, and then in planting potatoes one might plant the chrysalis with the potato and thus introduce the moth, the moth when it emerges lay eggs on the new foliage, and thus a new and increased crop of worms be prepared for the new crop of potatoes. We are speaking of possibilities. We do not say that the potato worm really takes that course. We do not know just what insect our correspondent means by the potato worm. There are several larvæ which might lay claim to that distinction.—EDS. PRESS.]

THE STOCK YARD.

Notes on Cattle Feeding.

EDITORS PRESS:—As you have often assured me that the letters I write to private parties might be of general value to the readers of the RURAL, I send you the following note and my answer:

Robert Ashburner—DEAR SIR: I would like to ask you a few questions in regard to feeding stock on cut feed. We put up a cutting rig and have been feeding cows and bulls on cut hay mixed with bran. We have had several taken sick and would be ailing for one or two days; the cows would fail in their milk, but all of them got over it all right. Do you think there is danger in feeding too much hay? I know we do not feed enough bran to founder them. Some stockmen tell us cut feed will kill stock, but I believe you fed cut feed and yours did not look like dying. If you can give me any hints on feeding, and it is not asking too much, would like to hear from you.—E. D. COMER, *Roseville, Cal.*

Mr. Comer does not describe the symptoms of the sickness in the cows; neither does he say whether the feed was given dry or wet. If given dry and to cows that had never been used to that kind of feed, the cause of sickness might be from ravenous and hurried eating, causing a species of indigestion or overloaded paunch, which might be relieved by the animal abstaining from food for a day or two. If medicine be needed in such cases, the quickest and safest remedy is one and a half to two pounds of Epsom salts, with one ounce of ground ginger and two ounces of saltpeter, in a gallon or more of water, with or without the addition of two or three pounds of treacle; and if this does not relieve in 12 hours, give half doses every six hours till the animal is relieved.

If the hay was good, sweet, and sound, there is no reason why the cut feed should cause sickness, but if it was musty or moldy, or in any other way unsound, it would be very sure to have an injurious effect upon the animals eating it. Any quantity of good, sound hay may be fed to cattle; it may be fed either whole or cut up, as circumstances require. There is no advantage in cutting good sweet hay such as cattle will eat up clean and without waste, but it is undoubtedly an advantage to have a little cut hay or straw to mix the meal or bran with when being fed to cattle. Hay and meal should be carefully and evenly mixed together in a box large enough to suit the quantity to be fed out, taking care that there are no doughy lumps of meal, half dry and sodden together, else one cow might get twice her share of meal, and others little else than hay.

The idea of cut feed killing stock is not worthy of a thought. Cut feed, with its accompaniments, may be fed dry when cows are having some kind of succulent food and plenty of it. Where the winter feeding of cows is undertaken, there should always be some kind of green fruit provided for use when the green grass fails. Green corn will come in best for the first part of the season, and after that mangel-wurzel may be used to advantage.

In our climate there is no need for storing any of our root crops for winter use. The time of sowing will vary with the climate and the kind of land used for the crop. On a light, warm soil, mangolds may be sown early and be ready for use by the first of September; but on heavy or cold land later sowing will generally make a better crop than when sown early, say in March or even in April in some seasons.

In our coast climate I prefer sowing after the heaviest of the rains are over, whatever time that may be. I seldom sow before the 10th of May, but oftener not before the 20th, and from that time on till the first week in July, and that on dry upland.

As I have always green corn till about the first of November, I do not need the mangolds till after that time. By late sowing, I do not have many weeds; the plants do not ripen during the summer, and stop growing, as an early sown crop would, before the rains, but keep on in a healthy growing state up to and during the rainy season.

The growth that comes to early-sown mangolds, that have once stopped growing, can hardly be considered a healthy growth. It may add weight to the root, but not in the right place. The additional weight will be detrimental to quality; there will be an accumulation of coarseness in the upper parts, chiefly by the lengthening and thickening of the neck, just below the leaves; and we most of us know that a cut off the neck end is not as good eating as one from the hinder parts of a beast. It is just so with all kinds of roots, mangolds, turnips and carrots especially.

A good crop of mangolds on a stock farm is a great help in getting stock through the winter, a great saving in the use of other food; they seem to be liked by all kinds of live-stock, cattle, horses, sheep, pigs and poultry; all will eagerly eat them and be the better for the eating of them—there's no doubt about it—for what an animal likes and eats with avidity is generally good for it, and a safe thing to feed liberally, but always in a judicious manner.

Hints on Feeding.

E. D. C. asks for a few hints on feeding. I would say:

Never make sudden changes, neither one way nor the other, from rich to poor nor from poor to rich food, neither from much to little nor

from little to much, at once. Let all changes be made gradually.

Whatever the food used, feed enough, but do not satiate, which is easily done when rich, concentrated food is being used. Find out about how much an animal will eat up clean, then you know how much it wants and have the most exact measure that can be got of an animal's appetite. When an animal leaves a part of the food put before it, then it is getting too much, or it may be too much of one kind, and a change would do good. A little variety in the food used every day, and a little change sometimes made in that variety, will generally be to the benefit and comfort of the animal as well as the profit of the owner.

Feeding Beets.

Since writing the above, I have received this week's RURAL, in which is a short article on feeding beets, by Ira W. Adams.

There is some danger in feeding very small beets whole, especially if they are short and round, and if not freely grown they are harder and not so easily broken up (possibly from having been overripe and too long in the ground, thus having become somewhat hard and woody) as those grown quickly and under the most favorable circumstances.

I have been feeding the long red mangold whole—big and little—to cows for 25 years in this country, for several years past as much as three tons a day for some three months in the year, always in the field, night and day, to both cows and calves (up to 12 months old), and never had but one animal in all that time that required any assistance. The careless way in which I have seen them cut up and fed to cows I consider very dangerous.

ROBERT ASHBURNER.

Baden Farm, San Mateo Co.

Taking Off a Hide.

Many farmers occasionally have a job of skinning a calf, a sheep or beef animal, and while so many have become quite expert in the work, many make a very bungling job of it. Butchers' hides always bring a higher price than country hides, partly because the former are taken off by expert workmen who perform the operation in the very best manner, while country hides are picked up, in part, among the farmers who carelessly cut holes in the valuable portions or gash into the main body by injudicious use of the knife. The *Leather Review* has the following instructions for taking off and preserving the hides:

In taking off a hide or calfskin, never cut the throat crosswise in the least. Slit the skin from the brisket to the tail, and from the brisket to the jaw; then cut around each leg to the hoof. Slit the hind leg from the hoof up directly over the gambrel and the forward legs in front, directly over the knee, to the top of the brisket bone. This leaves the hide or skin, then, in proper shape for finishing. Skin the head and legs carefully to avoid cutting them; then, commencing at the head, draw or fist off the skin without any further use of the knife, thereby avoiding the holes and cuts that almost spoil so many calfskins. Some farmers use a windlass to draw off the dairy skins, and others use a horse; but one or two men can do it a great deal more quickly and easily. When taken off, lay the hide or skin on the floor in a cool place where the sun cannot shine upon it, and cover it with salt, rather fine salt being better than too coarse salt. Do not roll it up, but let it remain in the salt until you take off another, then place that upon the first, salting freely as before, and so on until you get enough to make quite a pile; then commence another pile in the same manner. Do not be afraid to use salt freely; what the skins do not require will shake off and can be used again.

If you prefer to dry out your skins before selling them, be sure that they are thoroughly cured with salt before drying them, and then that they are thoroughly dried before being baled up for shipment. Never dry out a skin without having it salted as described, to preserve it from moths and other injuries on the hair side, which are liable to occur if the skins are not properly salted before being dried out. If your skins remain on hand very long after being dried out, before delivery to the tanner, even if salted, watch them carefully to detect any indications of moths or worms on the hair, and if any are discovered have the skins vigorously whipped with a stick so often that they shall be wholly eradicated from the entire lot of skins, as they often work serious injury in a very short time.

TO TEST KEROSENE OIL.—Manufacturers of kerosene oil say that all lamps are safe with good oil, and that the quality of oil can be ascertained by the following test: Take a pint tin cup, fill it nearly full of water warmed so that an ordinary thermometer immersed in it will show 120°, pour a small quantity of oil on the water, stir it a little, then pass a lighted match quickly but closely over the surface of the oil once; if it ignites, the oil is unsafe. If purchases are made of from 3 to 5 gallons at a time and this test is made, people can protect themselves.

ONION ROOTS.—A correspondent of the *Rural New-Yorker* found onion roots a foot long and still going down, though too fine to follow.

FIFTY THOUSAND TONS of soot were taken from London chimneys last year. Its value was set at $204,000—as a fertilizer.

AGRICULTURAL ENGINEER

Agricultural Lands in Nevada.

Gen. C. W. Irish, C. E., gives the Reno *Gazette* the following interesting statement: Many inquiries by letter and in person reach me from persons outside and inside of this State as to the probable amount of land in Nevada which can be brought under cultivation by irrigation and otherwise. Since my coming here I have diligently studied these questions, but from the fact that my duties keep me closely within office walls, and also as the season is not favorable to travel, it being winter time, I cannot say that I have made much progress, except to gather information from individuals, much of which, based upon experience, is valuable. I find that we have about 5000 miles of mountain ranges in the State, the greater portion of which can be made available in storing water for irrigating purposes, and to supply a large amount of water-power for mechanical uses.

Using all the information in reach, I am able to make up the following approximate estimate of available agricultural lands in the State, including the land now under improvement: Area of mountains, 55,400 square miles; area of water surface, 960 square miles; unavailable area, 56,360 square miles; total area of the State, 110,700 square miles; total unavailable area, 56,360 square miles; available lands, 54,340 square miles. Of this quantity, 54,340 square miles, there are about 30,900 square miles, a portion of which is denominated "desert" upon the maps, and all of it lies so far from mountain ranges as to, in my mind, preclude the idea of improvement by the means of irrigating ditches. I will describe this area further on.

I gather from the State Surveyor-General's report for the years 1885–6 that there was under cultivation in the State, for the latter year, 92,100 acres of land, or, in round numbers, 144 square miles. From all that I have said, it is seen that the surface of the State is divided about as follows: Mountains, 55,400 square miles; desert lands, 30,900 square miles; water surface, 960 square miles; tillable lands, 23,440 square miles. The last item contains the amount already under cultivation, which is 144 square miles, leaving 23,300 square miles or sections of valuable agricultural lands, which, with an adequate water supply, will certainly be equal in value and production to the best lands of that class anywhere in the world.

As to the distribution of the snows and rains, all that I can say is that it seems as if the slopes of the Sierra Nevada mountains in the State catch and hold the maximum quantities of the annual falls, and that the precipitation falls off in quantity from some point in Washoe county northward, eastward and southeastward. There may be other points or small areas in the State which will gather as much of the annual precipitation as does the eastern slopes of the Sierras, but that remains to be seen. However, I feel certain that the mountain ranges within the State, north of the Government base of surveys, catch more than enough water per year to put every acre of the 23,300 square miles of tillable lands, which lie spread out at the foot of their slopes, under perfect cultivation. The rainfall, properly saved in reservoirs, would do this and also furnish an immense power for mills and other mechanical purposes. The evidence of this lies in the large streams of water which are to be found taking their rise in the lower slopes of the mountains in White Pine and Elko counties, in the eastern part of the State—a region which certainly receives less rain and snow than do the more favored western portions.

I come now to speak of that part of the State which lies south of the base line of Government surveys. It is this region which contains the greater part of the tract denominated above desert lands. I am not able to say anything definite about its borders, many mountain slopes, which gather a sufficient quantity to supply water to reservoirs, and thus furnish a permanent supply. When the maps of this locality are looked over closely, it is seen that though the surface is dry and desert-like, yet there must be a bountiful stock of water somewhere, from which the supply of the numerous springs of this region is obtained. Taking the maps for it, there are far more springs to the square mile here than in any other part of the State. To my mind, this is certain evidence that beneath this dry surface lies an inexhaustible supply of water, which is drained from the more higher northern portions of the State. If this conjecture be true, it is evident that here is the region which is to be the most benefited by artesian borings and by deep wells, either bored or driven, and found to yield the needed supply of water by pumps actuated by windmills. These remarks apply with equal force to all the wide dry valleys in the State, but I fear that the chances to obtain water by deep borings in the northern portions will not be as many nor as favorable as in the southern regions. I wish to call the attention of all who are interested in the development and extension of the agricultural resources of the State, to the fact that, in my opinion, there is yet much land within its bounds which can be made to grow alfalfa without irrigation. In all those parts which have a certain supply of moisture, always in strata from a few feet below the surface to 30 feet below it, will, I am sure, other things being equal, furnish a sure crop of alfalfa. This I know from what I saw in New Mexico in many places a few years ago. The Mexicans, and in a very few cases, Americans, were getting very good returns from that forage crop without irrigation. It was all in knowing how to select the places to grow it. They told me that it took the plant two years to get its roots sufficiently deep into the soil, and that during the time it was rooting the plant above ground remained about one or two inches high and did not grow at all, but seemed dying all the time. The third year it shot up to its full growth, and from that time good crops were assured from it, however hot and dry the season happened to be. They sowed the seed just at the beginning of the season of rainfall or at the end of the winter, when thawing, moist soil was assured, and then let the plant take care of itself. That the Mexican theory of the deep-reaching roots of this plant getting down to a deep-laid moist layer was the secret of the success of the dry planting of this crop, I was fully made to believe, when afterward I was shown by the Catholic priests of Albuquerque their experiments, in which they had carefully dug to the depth of the smallest fiber which they could perceive and handle, and thus have excavated perpendicularly 35 feet before they reached the end of the roots in many cases. I saw this plant cultivated in dooryards where the material of the soil was the toughest adobe clay, where, by sprinkling it from time to time while it was rooting itself, the result was that it soon covered the dry, hard surface with its refreshing green, where before nothing else had grown. All this was done in a region of much less rainfall than this State enjoys—fully one-half less. I also believe that in many places small grain may be raised without irrigation simply by carefully watching for the time when the winter snow-falls are almost to cease and then sowing the seed, which will have the advantage of the moisture held by the soil until it can sprout, grow, and perfect the grain, before the hottest dry weather comes on.

ENTOMOLOGICAL.

Sal-Soda Wash for Scale.

EDITORS PRESS:—In your issue of Feb. 26th, we noticed the opinion of Prof. Hilgard on the merits of the sal-soda wash as an insecticide. He says:

"Sal-soda is a very weak insecticide, and can be effective only in very strong solution, and against young and tender scale; not against armored scale, nor even unarmored scale in the winter state.

"I cannot account for its use having come into vogue at all, unless it be because it was applied hot enough to damage the bugs. On that score I would not consider its effects as such worth the labor of spraying."

Now, as to the practical results of using the sal-soda wash as an insecticide:

In this part of Santa Clara county, the Willows, it has been in use some three or four years, and during the present season, at least, two-thirds of our orchardists have used it, all claiming that they have had better results in destroying the scale, and leaving the trees in better condition than from the use of any other wash. It is regarded as perfectly safe and harmless. We have known peach trees badly affected with red scale, and one application of the sal-soda wash has left them in healthful condition.

In some instances sal-soda has been used without oil with good results. We could give names of reliable orchardists who would be glad to vouch for the satisfactory results of using the wash. As to the cost, it is cheaper than most of the washes. It costs about two cents per gallon for the following formula: 25 pounds of sal-soda, and one gallon whale oil, to be put in 25 gallons water, made as follows: As soon as the water is hot, put in soda and it will dissolve quickly; add the oil and boil, stirring same, and it will readily mix, making a milky liquid. In using it, spray hot and stir often. We have used the above when the fruit buds were swelling and seen no bad effects from it. Some of our orchardists expressed a desire that some one make known the results of using the sal-soda wash, which we have endeavored to do, hoping that it may be of use to others. We have no axes to grind, and do not represent any commercial interest, being an orchardist, and feeling an interest in anything that relates to the preservation of our orchards. R.

San Jose, March 4, 1887.

Reply by Professor Hilgard.

EDITORS PRESS:—In regard to the above communication, I would say that without disputing the facts stated, I cannot agree in attributing to the sal-soda as such the effects noted: First, as to its being "more satisfactory than other washes," it should be understood what washes are meant. If the alkaline winter washes recommended in Bulletin 52 are referred to, or similar ones, the fact that the caustic soda is promptly—too promptly—converted into sal-soda by the action of the air, within a few hours, and that each pound of caustic soda used is thus transformed into 3½ pounds of sal-soda, which can be bodily seen on the branches afterward, would seem to dispose of the idea that the soda in a wash of one-third the strength is a more active agent. I have personally tried the effects of two pounds of sal-soda per gallon, used moderately warm, and have found the wash quite harmless, at least to pear scale and red spider.

But it is quite possible that the persons using the sal-soda wash have felt safer for themselves and for the trees in using it very abundantly and very *hot*, and have thus accomplished results that with a caustic wash, handled with some reluctance, caution and economy, and allowed to get lukewarm before it touched the scale, they have failed to bring about. When used hot enough to make the scale raise its edges at once, the sal-soda and whale-oil wash would be quite likely to make short work of the tender insects inside; and if the San Jose or Imperial nozzles were used (instead of those making fine spray in order to save in quantity, as is done in the more expensive washes), the liquid might well reach the scale in a scalding condition. If, as I believe, this is the true explanation of the reported efficacy of the sal-soda wash, the latter will have served an excellent purpose in introducing the practice of hotter spraying. The matter certainly deserves farther investigation by comparative experiments made with an exact observance of identical conditions of temperature, etc.

E. W. HILGARD.

University of Cal., Berkeley.

MISCELLANEOUS.

Does Charring Timber Promote Durability?

The general belief has long been that it does, and in accordance with this conviction the practice has been widely followed. But a contrary view of the subject is taken by *Wood and Iron*. That journal says in a recent issue: "As charcoal would endure for ages in places where timber would decay speedily, the practice of charring the surface of fence-posts and other timber has been repeatedly recommended in books and ephemeral publications, as eminently worthy of universal adoption.

"The theory upon which such a recommendation is based would seem to warrant a confident expectation of satisfactory results in practice; but repeated experiments with charred timber have furnished conclusive assurance that the process will not promote its durability. Indeed, numerous experiments have shown that charring promotes premature decay. Two posts split from the same log may be set side by side in the ground, the surface of one being charred and the other not; and it will be seen that the charred post will perish before the other.

"The same is true of railroad ties and all such timber as may be exposed to the altering influences of wet and heat. Could the entire timber be changed from its perishable condition to one solid piece of charcoal, the durability would be promoted to a surprising length of time; but the strength of the material would be destroyed. When fence-posts or other sticks of timber are exposed to the rapid action of wet and heat, the surface will decay first. One might suppose, therefore, that when timber is enveloped by a layer of charcoal, the durability of the entire piece would be greatly promoted. And such would be the case were it not for the fact that the charcoal is not impervious to water; and as water reaches the timber below the charred surface, decay will commence soon after the grain of the wood has been exposed to the influences of the weather. When the change has once begun beneath the charred surface, the durable covering of coal will be of no service whatever in preserving any portion of the wood. Taking this practical view of the subject, it will be perceived that if only half an inch of the outside of a post be charred the post will not endure so long as if the same thickness of wood had been left uncharred to waste away by slower decay."

DO BIRDS FLY DOWN?—This query has recently been made a subject of some considerable discussion among scientists and observers. Mr. C. F. Holder writes as follows in *St. Nicholas:* I see, in a back number of *St. Nicholas*, that one of your correspondents appeals partly to me in regard to birds flying down. But all who have written seem so well posted that I doubt if I can add anything to their knowledge. However, I have seen a California quail, a wood-dove, and a humming-bird flying downward; but in slow flyers, with large wings and heavy bodies, the wings are used more or less as parachutes in going down; in other words, the birds spread their wings, and rely upon gravity. This I have noticed in the sandhill cranes in their migrations along the Sierra Madres. A flock, of say a hundred, will mount upward in a beautiful spiral, flashing in the sunlight, all the while uttering loud, discordant notes, until they attain an altitude of nearly a mile above sea level. Then they form in regular lines, and soar away at an angle that in five miles, or so, will bring them within 1000 feet of the earth. Then they will stop and begin the spiral upward movement again until a high elevation is reached, when, away they go again, sliding downhill in the air, toward their winter home. It is very evident that a vast amount of muscular exertion is saved in this way. In some of these slides that I have watched through a glass, birds would pass from three to four miles, I should judge, without flapping the wings.

THE GOVERNMENT CHEMIST of New Zealand has proven that the dust of the recent volcanic eruptions is of great value as a fertilizer.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

The Anti-Debris Litigation.

Resolutions of Yuba City Grange.

We have received, for publication, from Geo. Ohleyer, Jr., Secretary of Yuba City Grange, the following report and resolutions adopted by that body:

To the Officers and Members of Yuba City Grange: We, your committee, appointed to draft resolutions in regard to the anti-debris litigation, beg leave to report as follows:

WHEREAS, There is a deep-laid conspiracy, organized and managed by the hydraulic miners and their agents, assisted by a few traitors in our midst, to divide our own people in regard to the manner in which the anti-debris litigation has been and is now conducted, and to continue to promote this division until our efforts for protection are rendered unavailing; and

Whereas, Our opponents from the nature of their business can easily organize, and from long experience have learned that to succeed, they must extol their leaders and promptly obey their dictation, by which means they frequently convince others that the wrong they represent is right; while we, if disunited, with a part of our people continually working against us and themselves, make but slow progress in the great work in hand; and

Whereas, We recognize the management of the Marysville *Democrat* and that of the Miners' Association to be in the same interest and dictated from the same source, while it seeks to draw its support largely from those whom t desires to destroy, and, under the guise of friendship and interest, attempts to criticise and belittle the true friends of our cause; and

Whereas, Some true friends of the valley, believing its accusations, because they have not and will not take the trouble to investigate the matter, severely criticise the manner in which the affairs of the anti-debris (litigation) have been conducted by those whom circumstances have forced into leadership in the fight; and

Whereas, Many of us have made close investigation of the records of the association, which have been accurately kept and can be readily examined by any one sufficiently interested; and

Whereas, We can see, from the course pursued by the miners in the State Legislature, that they are still endeavoring to render the law's delays more tedious and the litigation more expensive and inconclusive, that being the sole object of the Walrath and similar bills; now, therefore, we, the Yuba City Grange, containing a membership of over 100 farmers, and representing in this, we believe, the ideas and opinions of our most intelligent, energetic and influential citizens, *do resolve:*

First, That we repose unlimited confidence in the integrity and ability of the members of the anti-debris litigation, who have so thoroughly accomplished the purpose for which the association was founded, and are now assisting to enforce the decrees which they, at so great effort obtained.

Second, That, as a Grange, we stand united on this proposition, and feel called upon to counteract any spirit of discord that may be promoted among us by our enemies.

That circumstances which have transpired during the past year, so plainly point out the Marysville *Democrat* and its editor as instruments in the hands of our enemies, wielded for our destruction, that we are compelled to look with suspicion upon all persons using its columns or in any way contributing to its support.

Fourth, That we recognize the fact that many of our merchants have consistently refused to give aid to this wolf in sheep's clothing, and we assure them that the people of our county will not be unmindful of their friends.

Fifth, That we know that our representatives in the State Legislature, who are members of our Order, have been faithful servants, and represented our true interests, and that their present course meets with our heartiest approval; and we congratulate, not only the people of our district, but of our great valley, upon our having elected such men. And when the Grange shall have educated the farmers of the State so that they demand and obtain the majority of officers to which they are entitled, then we shall have a State Government of which we may well be proud.

W. J. HARDY.
C. E. WILLIAMS,
Committee.

The Walrath Debris Bill.

Since our last issue, the bill introduced by Walrath and supported by the mining interest has been defeated. The result evidently gives great satisfaction in the valley, as shown by the following dispatch:

MARYSVILLE, March 5.—The defeat of the Walrath bill in the Senate has caused a feeling of general satisfaction and a sense of great relief in this community, as the passage of such a measure was considered to be of great detriment to the interests of the valley, and would have been a great setback to all local improvements. With the prospects of a prosperous year, the community is elated, and the spirit of improvement started by the Sawyer decision will be kept up and continued as long as a feeling of security from the resumption of hydraulic mining prevails.

TEMESCAL HARVEST FEAST.—The fourth degree will be conferred at Temescal Grange at 10 A. M., March 19th. All Grange members of the California Legislature are invited to be present and speak of the experiences of the past session, and of future legislation concerning farming and other industrial interests. All Patrons are invited. Eden and other neighboring Granges are especially expected, and an interesting time is anticipated.

Equality of the Sexes.

[An address delivered before Eden Grange by MRS. R. PERHAM, and furnished by our request for publication in the RURAL PRESS:]

Worthy Master:—At our last meeting you put the question to the sisters, whether they wished to represent themselves personally or by proxy, by the use of the ballot. I suppose that each sister has the privilege of answering, and is expected to answer for herself; and I am compelled by all the forces of reason that I can bring to bear on the subject, to claim that woman, by a natural law, comes into existence as free to act in all that pertains to or concerns her as man; and I further claim that the discrimination which has been made between the sexes has been and will be instrumental in making inharmonious conditions in society. I do not think, Worthy Master, that simply casting a vote to elect certain candidates to fill certain offices, by either man or woman, will bring about satisfactory results; but when equal opportunities are given for education in all that pertains to the moral, mental and physical, it will be to the advantage of both man and woman. One sex cannot be debarred from any natural right, without disadvantages ensuing to both.

We women have been denied facilities for attaining the higher branches in education, colleges being closed against us. There has been created a false public sentiment by giving to the world a different code of morals for men and women, whereby moral delinquencies, which exclude women from society, are not only tolerated, but deemed of little account in men. This, I think, is one of the most potent of the many factors in bringing about conditions that are so much deplored by all thinking minds, who wish the good of all. It is not for women's sake alone that I claim equal rights and privileges, but for the sake of the whole human family, who will be better off when woman can give her influence, under all conditions, and in all places whence she is now debarred by the false conceptions which have arisen in regard to the conditions of life.

As I see it, what is legitimate and proper for man is equally so for woman, and whatever will demoralize one, will certainly demoralize the other, and the result is equally deplorable. There is no essential difference that can in any way affect humanity, the responsibility cannot be shirked by either sex. As I see it, all humanity comes into the mortal body having an immortal part or a soul that lives to all eternity, and each has inalienable rights, not only to the franchise but to develop his or her faculties—moral, mental and physical. One sex has no natural right to dictate to the other what sphere they shall move in.

God's laws are Nature's; and Nature speaks in language so plain that an unprejudiced man or woman must acknowledge that a defect in posterity is the result of conditions made by progenitors. Nature gives to each individual, whether male or female, the right and privilege of developing their God-given powers, so as to become pure, noble beings. Sex does not make conditions for saint or sinner. Each alone is responsible for his or her own life-record, and should be allowed freedom to think and act in all things so far as it does not infringe on others' rights.

Picnic Season.

Brother G. P. Loucks, Lecturer of Contra Costa county, interviewed us lately on the very pleasant subject of a Grange picnic, to be held jointly by the Granges of Contra Costa and Alameda counties. He will soon visit the brethren of Walnut creek and Danville, and we presume a first-class Grange picnic will in due time be materialized. Danville is considered one of the most accessible points of meeting. Our Grange picnics are becoming so popular that we have no doubt whatever of the success of such undertakings wherever held, in any part of the two counties.

While mentioning this subject we would urge Grangers in all parts of the State to commence in season and put the best foot forward in holding annual picnics. Invite in the most talented speakers available, to interest both Grangers and other farmers and their friends. Their influence is bound to be good and it is well for both old and young to devote a day at least to such recreations. It will do us all, old and young, lots of good, and seldom if ever at any loss.

Bro. Loucks reports Alhambra Grange as solidly increasing. Valley Grange, while holding its own lately, is expected to increase its numbers with the coming of the pleasanter season.

GALT GRANGE.—Installation, Feb. 19: H. Chase, M.; J. H. Lawyer, O.; A. A. Clough, L.; M. E. Stock, S.; Mary Simons, A. S.; Sister F. M. Fowler, C.; A. B. Bryant, Sec.; Peter Planalp, T.; S. E. Wriston, G. K.; Sister J. Mitchell, P.; Esther Carr, F.; Alice Carr, C.; Anita Donaldson, L. A. S.

WOMAN SUFFRAGE IN THE GRANGE.—Quite a lively discussion was held in Eden Grange, Feb. 26th, on this subject, the speaking being limited to the sisters, who agreed and disagreed in a very pleasant manner. Sisters Perham, Sheldon, Blackwood, Anway, McDermed, Gadding, Sharin and others, besides Sister Whidden, of Temescal, expressed their views plainly and frankly, after which a vote was taken by the sisters, seven of whom voted in favor of, and nine against, women taking part in elections. Whenever the question is fully discussed throughout the Grange we think the general expression will be the reverse of the above.

Grange Work and Progress.

[Prepared Weekly by M. WHITEHEAD, National Lecturer.]

The National Grange at its last session provided for the "extension of the Order" through the Lecture Department. The work was placed in charge of the Executive Committee and the Lecturer. After careful consideration the following plans have been agreed upon, and are already being carried out: The "field" was divided into four Lecture Districts, of nine States each. These Lecture Districts to be under special supervision and direction as follows:

The Eastern District, consisting of the States of Maine, New Hampshire, Vermont and Massachusetts, Connecticut, New York, New Jersey, Pennsylvania and Maryland, in charge of Mortimer Whitehead, with D. H. Thing, of Maine, as Deputy Lecturer.

The Center District, consisting of the States of Ohio, Indiana, Michigan, Illinois, Wisconsin, Kentucky, Virginia, Delaware and Tennessee, in charge of J. H. Brigham, who has consented to take the field as Deputy Lecturer.

The Western District, comprising the States of Iowa, Minnesota, Dakota, Nebraska, Kansas, Missouri, Colorado, Oregon and California, in charge of J. J. Woodman, with C. L. Whitney as Deputy Lecturer.

The Southern District, consisting of the States of Texas, Louisiana, Mississippi, Alabama, Arkansas, Georgia, Florida, South Carolina and North Carolina, in charge of J. N. Lipscomb, who as Deputy Lecturer will take the field.

Those in charge of these districts will arrange all the details of the lecturing in their districts.

All four of these Deputy Lecturers are now at work, and it is hoped that during the year they will be able to visit all parts of their various fields.

By a system of legislation granting special privileges we have seen in this country hundreds of millionaires created during the past 25 years, who have been permitted to absorb the profits of agriculture, which is not only robbing the farmer of the just rewards of labor, but the communities in which it was produced as well. And while farmers, under this system, have been compelled to contribute largely toward making the rich richer, they themselves have gained but little in proportion to the wealth they produced. It is true there are many who have made reasonable additions as profits, and it is also equally true that many more have gained but little—thousands have not gained one per cent per annum on labor and capital employed.

Judge Daniels, of the New York State Supreme Court, in a recent case of "cornering" lard, said that the business is no more than "respectable robbery"—"such a combination is an unlawful conspiracy punishable as a crime." There is a work in this direction for farmers, and the National Grange has already commenced to deal with the subject.

Masters of State Granges, Secretaries, Lecturers, Deputies, and other "workers" are greatly aiding the Lecturer of the National Grange by forwarding Grange news and items. It is this true spirit of co-operation that aids and cheers us in our work. One correction is necessary here and most cheerfully made. The worthy Secretary of the Indiana State Grange did *not* say "By Joe," as reported a week or so ago. No more able Secretary or more faithful worker can be found anywhere in our Order than Brother J. H. Walker, of Indiana.

"In this Grange structure I see the *one great principle of brotherhood* that underlies our common humanity. I see in it the united purpose that over 1800 years ago filled the hearts of the 12 disciples of the Son of God as they went forth on their chosen work of proclaiming the great truth of the new gospel dispensation. I see in it the united purpose of that company of exiles that, in 1620, landed on Plymouth Rock, the blessing of whose inheritance we to-day enjoy. I see in it the foundation of that success which was accomplished by the struggles, trials and sacrifices of our countrymen in those battles for our American independence, and in other events of the past and the present, the lasting blessings of co-operation we are permitted to enjoy to-day. As the result of co-operative effort, I see institutions of learning erected and supported. I see that it is by co-operation that every church in this broad land has been erected and is being supported to-day. Co-operation is the corner-stone in the foundation of our Grange structure on which alone can we build safely and permanently."—*James Draper, Master Massachusetts State Grange.*

Question for discussion by Granges: To what extent should the ownership of land be limited in the United States? Landlords and bonanza farmers are fast driving the small toilers of the soil to the wall, and unless a limit is soon put to land ownership our country will soon be a nation of few landlords and many tenants.

The Executive Committee of the National Grange have received an important communication from Nova Scotia, suggesting plans for more frequent, more intimate and more direct intercourse between the members of the Dominion Granges and those of the United States.

Suggestion for the Good of the Order.—"I do not consider myself able advice, but as a suggestion would say I think something should be done to have a uniformity of fees and dues. And that Masters should be made to understand that according to their obligation they have no right to put a motion to reduce before the Grange. I refused to do it and no change was made until after I left the chair. My firm belief is that when we break loose from our rules and regulations we are taking a long stride toward destruction."—*O. Towne, Piscataquis County, Me.*

The morning mail brought to the desk of the Secretary of the National Grange, a few days since, from the Secretary of the Illinois State Grange, resolutions on the following subjects, passed by the late session of the Illinois State Grange:

1. In favor of a Department of Agriculture, with its chief a Cabinet officer.
2. Against changing the Oleomargarine bill.
3. Urging the passage of Hatch Experiment Station bill.
4. In favor of the people electing United States Senators.
5. In favor of Woman's Suffrage.

The *same day* the Worthy Secretary placed them before the proper members in the House and Senate.

The *same day* Senator Cullom, of Illinois, introduced them in the Senate and had them referred to their appropriate committees, and next day's *Congressional Record* had a full account. What a change in the way farmers are listened to now from only a few years ago.

Progress.

Eight more new Granges:

Plainville, No. 54, Hartford county, Connecticut.

East Haddam, No. 56 (No 55 reported last week), Middlesex county, Connecticut.

Durham, No. 57, Middlesex county, Connecticut.

Northern Star, No. 286, Sagadahoc county, Maine.

Cook's Falls, No. 509, Delaware county, New York.

Twin Valley, No. 510, Broome county, New York.

Spring Valley, No. 814, Bedford county, Pennsylvania.

Mayville, No. 203, Clallam county, Oregon.

Talleyville Grange, Delaware, dedicated a new Grange hall, Feb. 22d.

Holmdel Grange, No. 99, New Jersey, is building a new Grange hall.

Orange Grange, Illinois, has just initiated seven new members.

"Though the prospect may be cheerless,
Onward press with courage fearless;
Down the centuries, calm sleeping,
Justice, velvet shod, comes creeping.
Past the monarch's throne and scepter,
Into man's heart—its acceptor!
In the fight thou'lt conquer surely,
With God's weapons armed securely;
In life's conflict prove the gallant,
In truth's service use each talent;
If thou canst not bring the flame,
Bring the incense to the altar;
Only such shall meet the shame
At the last, as faint and falter."

Meetings at Stockton.

EDITORS PRESS:—San Joaquin Pomona Grange had a rainy time for its business meeting, February 24th. Near the close of the private session W. S. M., Johnston came from the noon train, which, with the presence of W. S. L., Flint and wife, and intrepid Bro. Hooper, of Montezuma Grange, gave great pleasure to our members and visitors.

The open installation was dignified and becoming the leaders of an Order designed to broaden the usefulness of earth's greatest industry. W. S. M., Johnston's remarks aroused more pride and faith in the work the Grange had accomplished and raised respect for it in the breasts of lagging ones. Retiring Master Fiske has the confidence of all, and W. S. O., Overhiser's energy is well known, and with a solid staff of officers Pomona, No. 3, is equipped for doing good to farmers and the county generally.

Stockton Grange held literary exercises Saturday, March 5th, giving instrumental and vocal solos, recitations and a dialogue worthy of—well, worthy of our Grange—and that has to be pretty good! The program was well sustained, and sometimes dramatic talent blossomed out widely. A good-sized audience appreciated the efforts of culture.

Stockton, March 7th. MRS. W. D. A.

In Memoriam.

We have received from Bro. J. D. Huffman, secretary, the following resolutions passed at the last meeting of San Joaquin County Pomona Grange, No. 3, P. of H., held in Stockton, February 24th:

WHEREAS, It has pleased the Supreme Master of the Universe to remove from our midst our esteemed brother, A. A. Vansandt, Worthy Overseer of San Joaquin County Pomona Grange, No. 3, P. of H., who departed this life Jan. 19, 1887; therefore be it

Resolved, That in the death of our faithful brother, the Grange has lost a competent and efficient member, devoted to duty and ever mindful of the interests of his family, the farm and the Grange. Brother Vansandt has ever been a tower of strength to our beloved Order, endeavoring always to be prompt at Grange meetings. In sympathy and affection none were more compassionate, although in advocacy of justice and equality, the adamantine rocks were not more firm.

Resolved, That the sympathies of this Grange are hereby tendered to the widow and bereaved family.

Resolved, That the foregoing resolutions be spread upon the records of this Grange in memorial form, and a copy sent to the bereaved family and to the PACIFIC RURAL PRESS and *California Patron* for publication.

SAM'L C. WATERS,
CHAS. BAMERT,
J. D. HUFFMAN,
Committee.

DR. TRIMBLE CONVALESCING.—The faithful and devoted secretary of the National Grange, Dr. John Trimble, has been alarmingly ill of late at his home in West Washington; but we are thankful to learn, from the Washington *Post*, that he was considered out of danger on the 27th ultimo—so much better, indeed, that he is probably back in his office ere now, discharging its responsible duties with his wonted fidelity.

BY the death of Mrs. S. A. Daniels, which took place near Denverton, Jan. 21st, Montezuma Grange has lost one of its charter members and a most efficient worker for the principles of the Order.

CATTLE on Montana ranges appear to have suffered terribly from the recent wintry storms. It is reported that the losses between Miles City and Billings will be from 10 to 25 per cent, and east of Billings from 50 to 75 per cent. The losses around Fort Benton are very heavy.

RAISING R. R. RATES.—The railroad companies most affected by the interstate commerce law are trying to come to an agreement respecting through rates, in season to promulgate their schedule before April 5th.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

TREE-PLANTING IN LIVERMORE.—*Herald*, March 3: The ladies are meeting with excellent success in inducing our people to plant shade trees in front of their property. The planting began on Monday, and is going on all over town. The most popular tree is the locust. Next come the olive, black walnut, black acacia and pepper. A few will plant almond, pine and cypress. Thus there will be a pleasing variety of trees on our streets, and, if well cared for, they will, in a few years, make Livermore the prettiest town on this coast.

Butte.

MORE ABOUT OLIVES.—Chico *Enterprise*, Feb. 25: There are now on the Rancho Chico seven olive trees in bearing, all of the Mission variety. For several years past experiments have been made with their products, and this year 10 gallons of oil were made. The oil this year is not considered as much of a success as that made last year. It has not the right color or flavor, and is too thick. Nevertheless, the experiments have convinced General Bidwell that olives will grow well here, and that they will produce a good quality of oil, if the process is conducted by experienced men. Hence his determination to plant an olive grove and make the production of olive oil one of the future industries of the Rancho Chico. Our foothills are especially adapted to the production of olives, for the tree flourishes without irrigation and in stony land, its greatest need being good drainage, which elevated and stony sites supply.

Colusa.

ORCHARD AND VINEYARD.—*Sun:* Colusa is known far and near as a wheat-producing county, but ere many years she will be as well known for her orchards and vineyards. Two years ago there were planted in the immediate vicinity of Colusa over 19,000 fruit trees, including peaches, plums, pears, apricots, nectarines and figs, and about 120,000 grapevines, many of which have come into bearing, showing the adaptability of our soil for fruit and vine-growing. This year the number of trees and vines planted will more than treble that of two years ago. L. F. Moulton is putting out an orchard mammoth in its proportions. Dan Johnson is putting in a lot of pear and plum trees. Judge Bridgford purchased 100 orange trees this week for his ranch, and thus the work goes on.

Inyo.

RESTORING SHADE.—*Independent*, March 5: Everybody is busy planting trees in town. Trees of four or five years' growth are dug up at Camp Independence, brought in and planted along the streets, and in two or three years will replace those destroyed by the big fire. Most of these trees are locusts, which make rapid growth and afford good shade. Independence was rich in beautiful shade trees before the fire, and the citizens deplored their destruction almost as much as the loss of property.

Kern.

ANTELOPE VALLEY.—Bakersfield *Californian:* Rosamond, a station on the Southern Pacific a few miles this side the line of Los Angeles county, is the metropolis of Antelope valley, an extensive tract of good soil, embraced in a peculiarly healthy, invigorating climate. The valley has not yet been sufficiently beautified to attract the wealthy, æsthetic classes, and those who come now want soil to cultivate for a living, and profit if possible. Water for irrigation has been developed in sufficient quantity, as fast as required from artesian wells and streams in the mountains. A great deal of tree and vine planting is going on and there is a general disposition to create comfortable and beautiful homes, of which there will soon be several hundreds in that vicinity.

Lake.

ARTESIAN WELLS.—Clear Lake *Press*, Feb. 26: Few of our citizens have an idea of the number of artesian wells in this county. There are no less than four in Scott's valley, and at least two at Upper Lake. Two of the Scott's valley wells are on Scudamore's ranch and two on the Haycock ranch. All are between 80 and 85 feet deep. It is said that the parties who bored these wells, Messrs. Beach & Wambold, are willing to contract for a flowing well in Scott's valley, lined complete, for $100. At Upper Lake the trustees of the Middle Creek schoolhouse ordered a well to be bored 50 feet deep, and to their great surprise struck a magnificent flow of water at that depth. On the adjoining ranch Mr. Phelps had one bored, and also struck a fine flow at 50 feet.

Lassen.

SEVERITIES OF THE SEASON.—Susanville Cor. Reno *Gazette*, March 3: For a month now, with but few fair days intervening, we have been visited with snow and rain, and nights of exceeding cold, the mercury standing below zero. Since the commencement of the storm nearly seven feet of snow has fallen, and much rain. Much stock is reported to have perished in the hills, and some parties have lost many of their sheep. A scarcity of hay is feared here in the valley before cattle can find feed on the hills.

Los Angeles.

THINNING OUT THE HARES.—Santa Ana *Standard*, March 5: The rabbit-hunt a mile northwest of Anaheim last Saturday was rare sport. About a dozen men and as many boys, all pretty well armed, constituted the crowd. The hunt began about 10 o'clock and closed about 5 P. M., when 161 grape-eaters were hauled in as the result of the day's sport. Some of the hunters didn't bring theirs in to the final count, but it is safe to say that nearly 200 of the pests were destroyed. Another hunt is announced for Saturday, the 19th.

THE CUNNING COYOTE.—Orange *Tribune:* A Modena-ite had some chickens, and an old coyote visited their roosting-place every night and carried one off. The Modena man then provided himself with a dog, which stood off the coyote for several nights, but then the latter changed his tactics. He brought another coyote with him, and while one of them engaged the attention of the dog, and coaxed him to follow him off, the other raided the hen-roost and carried off the pullet.

Modoc.

WINTER IN THE COUNTY.— Eagleville Cor. Reno *Gazette*, March 1: The snowfall during the month amounted to 33 inches, the greatest in this valley since 1868. The lowest temperature during the winter was 4°. To-day it is 50° with south wind cutting the snow very fast, which our people are pleased to see. Ward Bros., Hudspeth, Clark & Patterson, Tom Cummings, Murdoc & Son, our cattle kings, are losing a great many cattle, and Chase and Ross are both losing sheep wholesale. The Freeman Bros. just came into the valley from Madaline Plains, and report the snow there from 2½ to 3 feet deep, and stock in a starving condition. Our farmers are jubilant over the heavy snows from two considerations: first, that we are assured of fine crops the coming season; and, second, that they will be rid of their surplus hay that has been accumulating on their hands for the last three or four years.

Nevada.

PENN VALLEY PROSPECTS.—Cor. *Tidings*, March 2: The crop outlook for the valley was never better; about all of the tillable acreage is already sown to cereals, which are quite well along, particularly the summer-fallow, and the hillsides are rich in verdure. Past seasons similar to the present have resulted more advantageously to the farmers than those in which the rain fell earlier. The ground is thoroughly soaked. The snow has all disappeared, except on the north hillsides, where patches are still to be seen. Stock suffered severely during February, and only farmers who fed their animals pulled through without loss. What feed there is has no strength, having been kept back by the cold weather.

Placer.

SWEET ORANGES.—*Placer Herald*, March 5: Mrs. E. A. Walkup has growing in her yard at Auburn several orange trees, the oldest of which bore this season for the first time. The fruit is of fair size, fine form and color, and the sweetest orange we remember to have eaten. Some think our foothill oranges rather more tart than those of Southern California. We thought so at one time, but further experience has dispelled the idea. An orange is not ripe for eating as soon as it is colored, but our thinking so at first led to the belief that our oranges were more tart. Mrs. Walkup's oranges have been ripe some time, and eaten to-day a better flavored orange does not exist.

San Bernardino.

LUGONIA LOCALS.—Cor. *Valley Echo*, March 3: The route of the Fruit Belt railroad is now pretty well settled. Its terminus will be about two and a half miles east of Lugonia, and one mile west of the famous old health resort, "Crafton Retreat," which will accommodate every one in this end of the valley south of the Santa Ana river. When run north over the river, it will tap every settlement from Highlands to San Bernardino, thus scooping in the entire trade. A large cannery at the terminus seems beyond doubt. Every one conversant with the quality of the apricots and peaches raised in this valley from Pomona and Riverside clear east, concedes the palm to Lugonia, Redlands, Crafton and Highlands. The cannery nabobs know this and assure us that one will be built this season large enough to work up the entire crop of these fruits. This will give us a cash market at our own doors.

DRAFT HORSES.—*Press and Horticulturist*, March 5: Mr. A. J. Myers had a very fine Clydesdale stallion on the streets, Monday, that is a beauty. It weighs 1743 pounds, and was recently imported from Scotland. Mr. Myers has another that weighs 2030 pounds. The importer of good blooded horses and cattle is a public benefactor.

Santa Barbara.

CITRON.—Santa Barbara *Press:* We have been shown samples of preserved citron of commerce grown and cured in Santa Barbara. The citron will thrive wherever the lemon will grow, and the fruit ripens all the year round.

San Joaquin.

A PLAGUE OF COOTS.—Stockton *Independent*, March 5: Mud hens are doing considerable damage on Roberts island, near Lindstrom's ferry, over 300 acres of grain having been destroyed by them. They begin at the land's edge and penetrate about a mile inland, eating every spear of grain as they go. The farmers have used shotguns and muskets with good effect; poison has been tried, and thousands of the pests have been destroyed, but they do not seem to diminish in numbers.

IMPORTING GALLOWAYS.—Stockton *Independent*, March 2: Last week Wright Cowell, one of the most enterprising farmers in San Joaquin county, received from Colorado 85 head of black, Scotch Galloway cattle. They were purchased of Leonard Bros., Denver, shipped in three cars, and arrived in good condition.

Santa Cruz.

THE MILLER PLACE IN THE HIGHLANDS.—*Courier-Item:* The house sits back a short distance from the road on a level plateau at an elevation of 2215 feet and commands a grand view to the east, south and west of the magnificently timbered region that stretches to the shores of Monterey bay. The vineyard tract of 18 acres is inclosed by a close board fence six feet in hight and set in the ground 18 inches, and, as it was intended, is proof against the inroads of wild animals. The whole is under a fine state of cultivation, covered with vines of luxurious growth, mature age, and, at the time of our visit, loaded with as fine fruit as can be produced anywhere. Twenty varieties of foreign grapes are growing here, and the lands from which these varieties came could make no finer showing. Here are the Black Hamburg, Verdel, Hamburg, Black Morocco, Muscat of Alexandria, Flame Tokay, Golden Chasselas, White Nice, Cornichon, Emperor, Laga Blume, Gordo Blanco, Rose Muscat, White Malaga Raisin, Seedless Sultana, Black Malaga, Chile Rose, Bowker, Catawba—all good table varieties, to which the vineyard has been exclusively devoted. Besides the vineyard there are 40 acres in orchard. In part are a number of fine, large apple trees of such choice varieties as the Jonathan, Hoover, Pippin, Bellefleur. The French prunes are making a fine growth. In fact every variety of fruit kindly takes to the situation. The soil is rich beyond comparison, climate perfect, water and wood abundant, and San Francisco but 2½ hours distant.

FINE FIGS.—*Sentinel*, March 5: We have sampled some white figs raised by Peter Peterson, Ben Lomond, and dried in the sun, self-sugared, that were of fair size, bright color, and as delicious as any we ever tasted. The man who has the land and climate to produce such fruit has a fortune, and we are informed that equally good figs can be produced and prepared all over Ben Lomond. The owners of fruit lands in the Santa Cruz mountains do not realize the fortunes of which they are possessed.

Shasta.

FALL RIVER ITEMS.—Cor. Redding *Democrat*, Feb. 24: The deep snow has caused the rabbits to be very destructive on young orchards. Stock is doing well, almost every one being prepared with plenty of feed, and we fear no loss, unless it be hogs, as grain is rather scarce and high to feed at the present low price of pork. Every week during the winter has witnessed the arrival by stage of more or less people from the East, and all seem to be well provided with money and are in search of homes.

Sonoma.

PROFIT IN PEACHES.—*Index-Tribune:* Mr. R. L. Watt, whose farm is located a few miles southeast of town, has a small peach orchard of two and a fourth acres. From this was netted the past season, after paying expenses of cultivation, packing and shipping, an even $610. For 10 years the trees in this little orchard have been steady, prolific and profitable bearers, and in only one instance have they failed to produce a good crop.

HOG CHOLERA.—Petaluma, March 5: Notwithstanding statements to the contrary, hog cholera does prevail in some parts of Marin and Sonoma counties; and it was introduced by a drove of hogs from S. F., landed about three weeks since, at Marshall's, on the N. P. C. R. A S. F. man was the ostensible owner. Most of the 240 head have since died, and the disease has been communicated to other hogs in every neighborhood where they were sold, and in at least one instance on a ranch that the diseased hogs merely passed through.

Tehama.

COUNTY GROVE AND ORCHARD.—*People's Cause*, March 5: The Board of Supervisors have decided to plant the hospital ground in fruit and shade trees, to be selected from the best nurseries. The fruit trees will consist of apple, pear, plum, prune, nectarine, apricot and orange. About 500 of these will be planted. The shade trees will consist of fig, mulberry, walnut, chestnut and almond, of which varieties about 250 will be planted. J. H. Brown started for Niles this morning, and will select the trees.

MAPLE SYRUP.—H. C. Wilson in Red Bluff *News:* Up in the foothills the other day, on my old Hickman ranch, I discovered that the white maple tree in the yard was tapped and running sugar-water. I spoke to Mr. Netzer about it, and he said: "I have been making maple syrup; look here." He had a can half full of as fine maple syrup as I ever tasted in any sugar camp. This tree is of the white maple variety that grows up in the canyons all over this State and Oregon. Who says we can't have sugar orchards in Tehama county?

Tulare.

HIS HEREFORDS APPRECIATED.—*Delta:* All the fine thoroughbred and graded Hereford cattle which C. B. Smith brought to Tulare have been sold. The importation and raising of fine stock is a most promising sign of the county's prosperity, and it is a pleasure to chronicle the success of those who thus contribute to our benefit.

SEEKING PASTURES.—Visalia *Times*, March 3: One hundred head of horses and mules from Stanislaus arrived in Tulare county this week for pasturage on our alfalfa fields. The parties bringing them say that feed is scarce in their section, and they can pasture stock in this county cheaper than at home. About 300 more horses are on the way here from San Joaquin and Stanislaus counties.

THE lambing season is about over with many of our sheepmen, and has proved very profitable with most of them. An increase of 104 per cent is claimed by Luke Howell, of Fountain Springs. Messrs. Hurlburt & Fay, of Deer Creek, had 100 per cent.

Sutter.

MENDING LEVEES.—*Farmer*, March 4: Henry Bolton, of Meridian, informs us that the break in the levee on Joseph Girdner's place was not more than 75 or 100 feet in width. Mr. Winship, who rents the place, lost about 80 acres of grain. The breach has been repaired, and a large force of men are at work on the break on the opposite side of the river. Work is being pushed both day and night, and will soon be completed. Prospects for a large crop in No. 70 this year are very flattering.

Yolo.

NOVEL HORSE-POWER.—*Democrat*, Feb. 24: There is on exhibition, at Glenn & White's planing mill, a new kind of horse-power pump. The horse-power is a gigantic hollow wheel, made of wood and joined with iron, and is over 16 feet in diameter. The horse is placed in this and started, the wheel soon attaining considerable speed. A brush wheel on the shaft works with another similar wheel, which in turn works the pump. The wheel is so light in all its bearings that the smallest child can make it go when not connected with the pump.

Yuba.

EXPERIMENTING WITH COTTON.—Wheatland *Graphic:* J. M. C. Jasper has procured a lot of cotton seed, and intends to plant it on his ranch as an experiment. H. Roddan has grown a few cotton plants in his garden outside of town, and they seemed to thrive well and produce abundantly, with very little care. Some of the specimens from his place have been pronounced fine by those familiar with the plant. If Mr. Jasper is satisfied with his experiment in cotton planting, he will set apart a good-sized area, and go into the planting business to see if it will pay to raise cotton.

NEVADA.

LIVE-STOCK INCREASING. — Reno *Gazette:* That stock-raising is fast becoming paramount to all other interests of the State, is evinced by the fact that the taxes assessed in Elko county to cattle-raisers, and live-stock interests in general, aggregate $1,793,000; and all other property aside from the Central Pacific's, a little over half a million.

Stockton Notes.

[Written for the RURAL PRESS by MRS. W. D. A.]

Any one, looking from an observatory over this growing city of four square miles, the entrepot set on Stockton channel, of the State's greatest arable valley, and of a county of 1450 square miles and over 32,000 people, with the best health record in the world, and grateful breezes blowing up through the funnel of the mountain-pass, and no longer slush and mud in the streets; then away over the green, unequaled grain-fields, with their spreading oaks, and homes with orchards and vineyards, and the rim of San Joaquin's fertile islands and a flash of its waters, and the broad expanse of its unreclaimed lands or tules in the distance, the serene level relieved by the Sierras and the low Coast Range, with Mt. Diablo 30 miles away, would wonder that this county had not boomed before. But now the go-ahead "County Board of Trade," helped by the papers and citizens, have an immigration agent in San Francisco, and have secured an agreement to sell at reasonable rates, conditional for vineyard and orchard or any diversified crops—a good move to save hired men from the demoralizing idleness of the long months between the short harvests of wheat-raising.

They sent 2000 copies of the Stockton *Independent's* agricultural map, and accurate descriptions of the county and its inducements for industrious home-seekers, to the Mississippi valley and eastward, and T. G. Goodman, G. P. and F. A. of the S. P. C., volunteered to distribute their pamphlets, and other matter showing up the excellence of this section of the State, on all of the company's lines, gratuitously.

Lodi believes every tub must stand on its own bottom, and in concert with Stockton has a "Northern Board of Trade," an up-and-doing boom of that part of the county's towns.

A $30,000 pavilion is to be built at once on Washington square, with elegant grounds around it and no gambling nor whisky-drinking near it.

The three accepted bids on the $250,000 courthouse are under consideration, and the lucky one will soon be known. [The Board of Supervisors of San Joaquin county, at a meeting held on the 7th instant, awarded the contract to J. A. Moross & Son, of Detroit, Mich., for the sum of $239,083.35.—EDS. PRESS.]

Growing weather prevails, and with a few showers the crops are assured though only 6.25 inches of rain have come yet. Grain is looking finely.

Stockton, March 7, 1887.

Stone the Woman.

Yes, stone the woman—Let the man go free,
Draw back your skirts, lest they perchance
May touch her garment as she passes;
But to him put forth a willing hand
To clasp with his that led her to destruction
And disgrace. Shut up from her the sacred
Ways of toil, that she may no more win an
Honest meal, but ope to him all honorable
Paths where he may win distinction;
Give him fair pressed down measures
Of life's sweetest joys. Pass her
If she puts out a poor polluted palm,
But lay thy hand in his on bridal day,
And swear to cling to him
With wifely love and tender reverence;
Trust him who led a sister woman
To a fearful fate.

Yes, stone the woman—Let the man go free,
Let one soul suffer for the guilt of two—
Is the doctrine of a hurried world,
Too out of breath for holding balances
Where nice distinctions and injustices
Are calmly weighed. But ah, how will it be
On that strange day of final fire and flame,
When man shall stand before the one
True Judge? Shall sex make then
A difference in sin? Shall He,
The Searcher of the hidden heart,
In His eternal and divine decree,
Condemn the woman and forgive the man?

—*Richmond Whig.*

The Arcadian Kitchen.

EDITORS PRESS:—A deep chasm of cruel circumstances has intervened since I had the pleasing privilege of displaying before your readers my blunders, trials and experiences in Arcadia. Since then the dread summons which awaits us all called from me my helpmate in trials, making dreary and desolate my hearthstone, and empty and void all my earthly aims and purposes. It also forced me into a closer acquaintanceship with kitchen drudgery and household duties. I remember vividly my letter on this all-important subject to the PRESS a year ago and the numerous letters in reply. This compulsory experience awoke in me a deeper and keener sympathy for the slave of the kitchen than ever, and made me feel for the soul dreaming that it was made for nobler things, compelled to grow through the daily routine of cooking, cleaning, scrubbing, and taking care of a growing family and its education.

Our learned theologians have been introducing into the revised editions of sacred writ, the words *sheol* and *hades*. I can assure them that the word *kitchen* would give a clearer and more impressive idea, and be quite as true to the original.

I entered into my duties with an almost virgin experience. My knowledge of the culinary art was confined to the memories of the glorious and never-to-be-forgotten days of flapjacks, coffee, and beans. Physically prostrated, my heart bowed down in sorrow and my spirit in rebellion against what seemed an uncalled-for visitation. I stood thus unprepared face to face with household duties, in which every corner invited attention, and dust defied disturbance on every shelf and article of furniture. The washing machine, too, stood yawning and waiting for the increasing pile ready for it, soiled, and conveying strong and imperative hints in the shape of rents and buttonless spaces. The children needed attention, and it would have provoked a smile from an old maid to have seen my confused efforts to determine the gender of clothing, and how the mystic articles should be adjusted to the corporeal demands of our future presidents. Just then, I am certain, a spark of pity must have been awakened for me in the breast of the presiding genius of hades—*kitchen*, I mean.

In my confusion and distress my neighbors were more than kind, and inconvenienced themselves to assist me, and I remember it all with the deepest gratitude. But what could they do; they themselves the slaves of the kitchen, with more to do at all times than they can satisfactorily accomplish? They simply had, in common with slaves, to suppress the sympathizing instinct to become the angels their higher nature aspires to.

So I had to face my own treadmill. Manlike, I made out after a fashion. Did manage to present a tolerable table, where there were no fault-finders, or at least dare not find fault; and, thanks to an early Californian education, did make fair specimens of biscuits; but bread and rising, and all that sort of thing, only reached a certain approximation of success, and even to this day remains in the realm of mystery. Flushed with apparent success, I sometimes venture into the higher grades of cooking and essayed puddings and other fancy productions, and, armed with Marion Harland and the "Dictionary of Every-day Wants," I sailed in. I made dumplings once and got recipes mixed, and what no doubt would have made excellent doughnuts had to do duty as dumplings; yet no one complained. Do not tell me that the heart is totally depraved.

Still I might have wrestled with all these difficulties, and perseverance might in time have measurably overcome them, while the men and children never grumbled, and have done my duty in outdoor work, after a fashion, had it not been for laundry troubles. I could wet the clothing and torture it in the washing machine and hang it out to dry, but I could not find time to iron the dirt in. If my family had been all boys, we could all have gone on in blissful ignorance of ironing, but it was otherwise, and there was no dispensation.

While the momentum of good housekeeping, which had been, had not yet spent all its force, appearances kept up tolerably well; but even that could not last long, and bit by bit, insensibly, I lost ground and every day found it harder to catch up, until outdoor and indoor work got into a fearful snarl, and I was mute with despair. Just then, at the opportune moment, Providence or my Oakland friends sent me a ministering angel to straighten things out for me, which she did. I thought things were tolerably decent; but she had microscopic eyes and saw dirt invisible to me, even with good glasses. Washing that I had put through in three hours took her three days to restore to their normal cleanly condition. I had dreamed that I was an excellent laundryman, but my fancy was only of such stuff as dreams are made of—a delusion and a snare.

Oh, the relief that followed! I was not aware of the amount of work I had been doing till the incubus was lifted from my mind and shoulders. Then I fled from the kitchen and left her mistress of the situation. And do you think I would let such an angel go until she blessed me? No, indeed; she has been retained permanently. And the readers of the PRESS I am sure will not blame me.

With the compulsory insight I have had into kitchen duties, and the lessons I have learned, I'm now in a better position to review the many excellent replies, direct and indirect, to my letter of a year ago by "M. B. D," S. P. Snow, "A Farmer's Wife," Carpinteria, "Maid of all Work," "An Old Maid," "An Old Bach," "A Girl of Twenty," etc. That is, if you do not think such a review out of date or stale. I do not think that the question was solved, nor do I know that under ordinary circumstances it can be solved. THE NOVICE.

[It is not too late to take up interesting experiences.—EDS. PRESS.]

A Tired Mother's Victory.

This tender story of a mother's experience is published in the *Christian Weekly*. She has laid her table with great care and pains for a company of distinguished guests, when her little girl accidentally overturned a tureen of gravy on the snowy cloth.

"What should I do? It seemed a drop too much for my tired nerves—many drops too much for my tablecloth. I was about to jerk my child down angrily from the table, when a blessed influence held me. I caught the expression on her face; such a sorry, frightened, appealing look I never saw, and suddenly a picture of the past came and stood out vividly before my mind's eye. My child's face revealed feelings which I had experienced 20 years before.

"I was myself a little nervous girl, about eight years old, in the happy home of my childhood. It was a stormy day in winter. It was soon after coal-oil lamps were introduced, and father had bought a very handsome one. The snow had drifted up against the kitchen window; so, although it was not dark, the lamp was lighted. Mother was sick in bed upstairs, and we children were gathered in the kitchen to keep the noise and confusion away from her. I was feeling myself very important, helping to get supper; at any rate, I imagined I was helping, and in my officiousness I seized the lamp and went down cellar for some butter; I tried to set it on the hanging-shelf, but alas! I didn't give it room enough, and down it fell on the cemented floor.

"I never shall forget the shock that it gave me. I seemed almost paralyzed. I didn't dare go upstairs, and I was afraid to stay down there. To make it worse, I heard my father's voice in the kitchen. He had cautioned us again and again to be careful of that lamp, and now there it lay, smashed to pieces.

"But his voice seemed to give me the impetus I needed to go up and meet the scolding or whipping, or both, which I felt sure awaited me, and which I really felt I deserved. So I crept up over the dark stairway, and as I entered the kitchen I met my father, with such a stern look upon his face that I was frightened. I saw there was no need to tell him what had happened. He had heard the crash, and if he hadn't I guess my face would have told the story.

"The children stood silently around waiting to see what father would do, and I saw by their faces that they were (horror-stricken, for that lamp had been the subject of too much talk and wonder to be smashed without a sensation. As for me, I felt so frightened, so confused and sorry, that I couldn't speak. But upon glancing again at father I saw the angry look die out of his eyes and one of tenderest pity take its place. I doubt not that he saw the same look in my face then that I saw in my child's face to-day. In a minute he lifted me in his arms and was hugging me close to his breast. Then he whispered, oh so kindly: 'Never mind, little daughter; we all know it was an accident, but I hope you will take the small lamp when you go down cellar again.'

"Oh, what a revulsion of feelings I experienced! It was such a surprise to me that I was suddenly overwhelmed with feelings of love and gratitude, and burying my face I sobbed as if my heart was breaking. No punishment could have affected me half so much, and nothing can efface the memory of it from my mind.

"How I loved my father to-day, as the sight of my little girl's face brought it all freshly before me! Will she love me as dearly, I wonder, 20 years or more from now, because, moved by the same impulse that stirred my father's heart in that long-ago time, I was able to press the little frightened thing to my heart, and tell her kindly that I know she didn't mean to spill the gravy, and that I knew she would be more careful another time? Will she be helped by it when she is a mother as I have been helped by it to-day?"

Home for Aged Women.

The *Record-Union* of February 26th gives the following report of progress in the work of the Marguerite Home for Aged Women which is located in Sacramento:

The annual meeting of the Board of Trustees of the Marguerite Home for Aged Women was held at the Home, corner of Seventh and O streets, on the evening of Founder's day, February 25th. From the reports of the officers it is ascertained that the affairs of the institution have prospered during the year, and although there have been a few cases of illness, none of the aged inmates have died. The income from all sources has amounted to $5580.22, while the total expenses aggregate $5494.50. It is now three years since this elegant property, with a liberal endowment, was given by Mrs. Margaret E. Crocker to the Board of Trustees for the benefit of such aged women as were deemed worthy of admission. One of the first acts of the board was to determine how many indigent old ladies could be supported upon the income of the endowment fund, and to arrange for the admission of those who could be received upon this basis. In a short time the list belonging to this class was entirely filled, and as there still remains in the spacious building room for more inmates, it was determined by the Board of Trustees to form an additional class for the benefit of those aged and homeless women who, having some means, desired to avail themselves of the benefits and advantages of the Home. In accordance with the British annuity tables, a rate depending upon the age of the applicant was fixed upon for admission and life support, and a number of very intelligent ladies are now being cared for upon these conditions.

Taking all together, the inmates form a body of good women, who easily adapt themselves to their situation, and who fully appreciate the munificence of their benefactress. In no part of the world can there be found an institution of this nature which excels the Marguerite Home, either in its management or the character of its accommodations and surroundings. Our people are justly proud of its success, and visiting strangers are loud in their praises of the noble woman who planned its foundation. The trustees are Messrs. Carroll, Miller, McCreary, Simmons and Gallatin, while the active management is vested in the lady directresses—Mesdames McCreary, Simmons and Gallatin. The Matron is Miss Fanny Safford, and the attending physician Dr. W. A. Briggs. Applications for admission can be made through the secretary, Charles F. Dillman, at the banking-house of D. O. Mills & Co.

Unrequested Advice.

The following was handed to us for publication by a gentleman who says he knows a case where this advice will fit to a dot, and if the party has sufficient good judgment to appreciate it, he will pop the question the next time he calls:

A few days ago Civil Service Commissioner Edgerton put a young lady candidate through an examination that she did not bargain for. The young lady came into his office with a face as red as a full-blown rose. But on a close examination the Civil Service Commissioner, who, although old in years, is young in sight and heart, discovered that this rosy hue was secured by paint and powder. Mr. Edgerton hates anything unnatural or artificial, and he looked at the young lady for awhile, and asked her if she ever expected to have a husband.

The young lady was rather startled at the question, but answered:

"Certainly."

"Then," replied Mr. Edgerton, "if I was a young man and calling to see you, I would prefer to see your face. Do you suppose a man is going to fight his way through the powder and paste on your cheeks when he wants to kiss your face? No, Miss; the young man wants the true article, not a mouthful of paint and powder. You have a good complexion, good color and good skin; why do you plaster yourself up with this stuff? Use soap and water, and you will find the young men will like you better. When I was young, the girls were natural and did not daub their faces all over with this stuff."—*Exch.*

Driftwood.

[Written for the RURAL PRESS by FANNIE AVERY.]

QUERY.

What will become of the driftwood
That floats on Life's vast sea,
Out with a current swift and rude
Into Eternity?

REPLY.

God will look after the driftwood,
For boundless is His grace.
His love is wondrous kind and good,
And infinite as space.

The Training of Children.

[The following hints from Madam Willard, mother of Frances E. Willard, are taken from the *Union Signal* for the benefit of Californian mothers.—EDS. PRESS.]

I have been asked to write some of the thoughts suggested by my experience in training my own children. We lived in Oberlin, Ohio, when my children were in their infancy. There were mothers' meetings at stated times. I felt my utter inefficiency to these young immortals and I was almost always present at the meetings. I hoped they would tell me just what to do, so that having the approved formula or program, I might make no mistake. But new conditions were constantly arising, and in my despair I said to the wise friend, "I don't learn anything from these meetings! I don't know what to do." He said, "They are making an impression upon you all the time." It gave me a little comfort to think that perhaps down deeper than my consciousness I was gaining a gleam of light.

And now, first of all, I would insist, to teach your children to *be truthful;* by all the incentives that occur to your prayerful thought, keep their love and confidence so that they will be open to you as to the day.

Then I would recommend the do-everything method, according to the varying needs of your priceless charge. If its nerves are startled, quiet it the best you can. Don't put it in a dark room and let it cry itself to sleep. It would be more motherly to hang it to the limb of a tree, like an Indian baby, where it could see the light and feel the gentle motion of the breeze. Don't regard it as a mere animal that needs only to be fed and clothed. It needs sympathy very early; it can smile back your love when only a few weeks old. Never punish a child when it can think you are in anger, or about to take its life. It will be so frightened as to lose all self-control. You may think it obstinacy when it is a frenzy inspired by the fear of one in whose power it is utterly helpless.

Mothers should try to keep their health so as to be bright, agreeable company for the older children, and to be patient with the little ones. I know this is easier said than done, especially if the mother is sick or overborne with care; but the attempt, if partially unsuccessful, will not fail of its reward. The habit of unselfishness and kindness cannot be too early impressed. The mother should be in spirit and manner, or should aim to be, such as she desires her child to be. I would not recommend over-indulgence, but genuine tenderness and love cannot go to an extreme in the helpless years.

If complications arise between the children, do not let them accumulate. Don't let them lie awake all night dreading punishment in the morning. Settle them at once upon their own merits without referring them to any umpire but yourself.

When they are old enough to commence study, do not be indifferent to the trials they meet with in the effort to solve difficult problems, but do them often yourself; don't be so fearful about weakening their self-reliance as to defeat your desire for their high achievement by allowing them to be discouraged in the outset. Should a child show a strong bias toward any laudable line of life that promises self-support and easy independence, I would encourage it. Try to cultivate a tender conscience, a delicate sensitiveness to right and wrong. I would place the acquisition of character infinitely before that of wealth, desirable as is a moderate share of the latter. Wealth ends with life; character is immortal, toward perfection of which all our efforts should tend.

I must not forget my pet idea, to be more careful to praise children for doing well than to chide them for doing ill. When the children are young and in the mother's care more directly, there may be a feeling of comparative safety, but when they blossom into young men and women and begin to assume personal responsibility, it is the hour of doom, that threatens to make or mar all her handiwork. Who is wise enough to counsel them? Silence seems safest, but silence would be treason; the mother must have the heart of her loved ones in keeping in this hour of destiny; no one can be consulted with such safety as the mother, and she will need the electric light of Deity to guide her in this supreme emergency. Who can arrest the flying hours? What issues hang upon the decision of a moment? She can find refuge only in Him who has said, "If ye ask anything in my name I will do it." Here she may anchor in a sublime faith, that young, inexperienced and adventurous feet may, through infinite riches of grace, be led into paths of safety, usefulness, and to a lasting peace.

Young Folks' Column.

The Adventures of Two Vain Cats.

[Written for the Rural Press by Adelaide Samson.]

"Good-morning!"

"My name is Spots; now, what you want with me?"

"Good-morning, Master Spots. I was about to ask for a little bite of something to eat. Will you kindly give me a drop of skimmed milk, or tell me where I can find a mouse?"

"Umph!" said Master Spots, jumping off the fence where he had been eyeing a suspicious hole, and taking a good look out of his green orbs at the stranger. "Well," he said at last, "you have rather a poor appearance; a good, square meal wouldn't be likely to harm you; but how does it happen you're out of a home? I don't like the looks of it, that's a fact." And fat, well-fed Spots jumped back on the fence, feeling as though he had been much too tender-hearted for a cat of his principles.

"Oh, good sir," replied the other, meekly, "the barns are overrun by cats, and kittens are so plentiful that a poor stranger like me has no chance at all. You see, sir, I am a little stiff about the right paw, the result of an accident while working down at the wharves. Just look how thin I am; you can count my bones, and—" here he paused to wipe away a tear—"and, sir, I'm an orphan."

This last appeal was too much for the good-hearted Spots; he was conquered. "Come, come, young man," he replied, "you have been unfortunate. Follow me, but mind you keep close to the wall, for my mistress is very particular about vagabond cats. She would set the dog on you in no time."

"Ah! sir," replied the other, humbly, "you call me a vagabond. It is a hard name, but alas! too true—that's what I am, a vagabond and an orphan. Would you rather have me walk on the other side of the wall? I wouldn't like to get you into trouble on my account."

"Oh, no," said Spots, completely mollified by this becoming behavior. "I guess I have influence enough to protect you. Here we are at the barn. Crawl right through this hole; that's good; now drink this milk—I am sorry there is not more—and here's a bone with a little meat left on it—chicken, I think. Yes, I always have chicken Mondays, on account of the Sunday dinner."

"They're better alone, though, now confess!" said the other, winking knowingly.

"Sir, remember your position," replied Spots, bristling his tail with indignation. "I am an honest cat, I wish you to understand. Have you finished?"

"Not quite, sir," replied the other, perceiving his mistake immediately, and changing his familiar tone with great dexterity. "Ah!" he continued, "what an advantage to be in your society! I have led a wild Bohemian life—there is little good in me. You have a beautiful home, kind sir, as beautiful as you deserve. How fragrant this hay! how soft those potato bags! Your bed, I presume? And your mistress is kind?"

"Yes," replied Spots, forgetting his ill-humor, "very kind—I want for nothing—a saucer of milk twice a day, plenty of bones and scraps. Of course I work hard," he added, somewhat severely. "If I say it myself, I don't think there is a farmhouse within ten miles that has fewer rats or mice than this. I never fight with the dogs, and the chickens feel as much at home with me as though I never picked their bones. By the way, Master —"

"Dots is my name. You perceive that my fur is dotted all over with white dots."

"Well, I was about to remark, Master Dots, that we have been, contrary to my custom, spending an hour in idle gossip. You have had a plentiful breakfast; now suppose you go to the loft and catch a few mice, while I return to the garden."

"A thousand regrets, Master Spots," replied Dots, rather quickly. "I really cannot remain this morning. I've made an engagement to meet a friend of mine on a back shed. He promised to find me a home, plenty of work, little to eat, but good enough for me. Your charming society has made the time pass too quickly. I must tear myself away; so good-by, dear Master Spots. If you will permit me, I shall return to-morrow at the same hour, to pay you my respects."

"A most agreeable young man," said Spots to himself, as Dots jumped over the fence and disappeared; "misguided, it is true, but perhaps my influence will be the means of his adopting more steady habits. I must save a few tidbits for his breakfast to-morrow. Poor boy!"

"Horrid old preacher!" muttered the other, sunning himself in a safe corner, and settling for a nap; "gives me a couple of bones, then expects me to work for them. Ha! ha! you don't know me, Master Spots. Now for a nap. I'm pretty sure of a breakfast to-morrow. Ha! ha!"

After this Spots and Dots became the best of friends. Every morning, after looking carefully around, Dots would slip into the barn, where Spots would have a dainty breakfast waiting for him. Dots had been a great traveler, and he had seen so many curious things, had such a store of amusing anecdotes to relate, that Spots had never found the time pass so pleasantly before.

"Now, Spots, bring over that bone; if it's pork, I don't want it," said Dots one morning. You see he was quite at home now, and ordered Spots about most unmercifully. "It *is* pork! What a stingy old thing your mistress is, to be sure! Here, give to me, can't you? It's better than nothing. I wouldn't stand it if I were you, Spots. Sleeping in a barn, too, on potato sacks—ugh! it is simply disgraceful. You've no pride at all. Now I've got an intimate friend, two, in fact—that is to say, we know each other by sight. I wish you could see the style they live in; wouldn't you open your green eyes!"

"This *is* rather shabby," said poor Spots, looking around and feeling discontented for the first time, "and potato sacks are not very—warm."

"*Warm!*" exclaimed the other, scornfully, "I should think not. Well, my friends sleep on satin. Just think of it! in beautiful baskets lined with satin, one pink and one blue. Why, your mistress hasn't anything so fine in her whole house!"

"Satin baskets!" answered Spots, actually blinking with surprise. "Oh, are they in the barn, Dots?"

"Dear me, Spots, how ignorant you are! One can see you have never traveled—of course not! The baskets are laid in the chamber of their mistress, or on the foot of her bed. She calls the cats Blonde and Brunette."

"What aristocratic names!" sighed Spots, enviously. "Blonde and Brunette! so different from Spots and Dots."

"And their mistress," continued Dots, glibly, "is the loveliest, sweetest little lady you ever saw. Every day she ties a different colored ribbon on Blonde and Brunette. And as for eating pork, why, Spots, they wouldn't even touch chicken! They have fish cooked expressly for them—fish and liver every day—think of that!"

"Fish and liver!" echoed Spots, almost crying. "I never have it, Dots, never; but how do you know so much about them, anyway?"

"Because I don't pass my life in a musty barn looking for rats," was the sharp answer. "I travel around and keep my eyes open. I say, Spots, you've got your faults, but you mean well. Come with me and I'll show you my friends."

So now see our two friends jumping the fence and disappearing toward the town.

Ah! Spots, foolish Spots! when and how will you return to your home?

"So, so," said the thrifty housewife, as she went to the barn. "What has come over Spots? He is not worth his board lately. The mice are running wild—keeping bad company, I'm afraid."

"Now, Spots," said Dots as they neared an imposing residence embowered in luxuriant trees, "I see my friends on the porch with their mistress. You had better keep in the shade, as they are very particular about vagabonds—might set the dog on you, you know," he added viciously.

"Will I walk on the other side of the street?" asked Spots, trying to make himself as little as possible.

"Oh, no," replied Dots, patronizingly; "but remember your position, that's all."

"Thank you, Dots; you are very kind to me," answered Spots, dropping behind a little.

"Look, Spots," said Dots at last, "look through the fence; now what do you say to that?"

Spots could say nothing; he could only open his green eyes as big as saucers and look and look. Never, even in his dreams, had he imagined anything so beautiful.

On the shady, vine-covered porch reclined a bewitching young creature in a low bamboo chair. In her arms she held two cats—one, like a big snowball, was climbing on her shoulders, rubbing its head against her soft cheeks, purring happily at the same time.

"Blondine, sweet Blondine!" exclaimed the young lady, "come, darling, let me tie this blue ribbon around your neck."

The other cat, a mass of black, silky fur, lay in her lap drowsily winking and blinking, too lazy even to be jealous. Then the dainty hand caressed it gently, and the low voice murmured: "Dear old Brunette! don't you want a pretty ribbon too, or will I put you to bed?"

Then Spots perceived the two satin-lined baskets with their frillings of lace and delicate trimmings.

"What do you think of that?" repeated Dots, triumphantly.

"Dots, it is grand—almost too grand to be true," answered Spots in an awe-struck voice; then, with a sigh as he thought of the plain wooden barn, he added: "Hadn't we better go home?"

"You've no spirit!" exclaimed Dots, contemptuously. "It's just as I thought. So you want to go back to pork-bones and potato sacks, do you? Pshaw! I almost feel like giving you up. I did have a plan by which we might have bettered ourselves, but what's the use?"

"Try me, Dots," pleaded Spots. "Dear Dots, don't give me up. Think of my poor advantages."

"Well," said Dots, with a great show of magnanimity, "I'll try you. Now this is my plan: Though you may not think so, there is a remarkable resemblance between you and the beautiful Blondine. Your fur is just as white. If there were any possible way to get rid of those ugly black spots, one could hardly tell you apart."

"And you, dear Dots," answered Spots, trembling with joy. "I noticed how much you were like in form and color to the handsome Brunette. True, you have a few paltry white hairs——"

"Just so," struck in Dots, decidedly. "I did not think you were so observing. Just so, Spots," said Dots, his voice becoming very solemn, "there is no question about the matter—*we must get rid of those terrible deformities.* Without them our fortune would be made. You would rival the fair Blondine; I, the superb Brunette. I know a place down at the wharves where we can hide for a few days. By the aid of our claws and teeth we can pull out the hated impediments to a glorious future. We will suffer a little pain, but what of that? Once the deed is accomplished, we will present ourselves before the young lady. She will immediately be struck with our wonderful beauty; she will unfasten the gates, lift us in her arms and place us with tender caresses in two satin-lined baskets. Farewell to the old barn, Spots; farewell to rats and mice. A glorious future awaits us. Come."

"Yes, come," answered Spots, completely overpowered by this glowing picture. "Come!"

"How do I look, Spots?" asked Dots, a few days afterward, as he called Spots from his hiding-place.

"O heavens!" thought Spots, his heart giving a big jump; "I wonder if I look like that?"

And truly Dots was miserable-looking. His fur, always coarse and scraggy, presented a succession of unsightly scars, wherever he had attempted to pull out the white patches; his eyes were large and wild-looking from suffering, and every bone in his body seemed to vie with each other in its endeavor to show itself. "But," thought the soft-hearted Spots, "I dare not tell him the truth. Poor Dots! how badly he'll feel when I am chosen and he is left out in the cold. But I won't forget him, indeed I won't!"

"Well, can't you answer?" snapped Dots, impatiently. "Don't look so jealous and envious!"

"Oh! you look beautiful, Dots—beautiful," answered Spots, feebly. "And I?"

"What a guy!" thought Dots, chuckling; "and I suppose he thinks he is just as fine as I am. Ha! ha! I'll just fool him for the fun of seeing him put down afterward. Won't he feel cheap when he sees me lying in the satin basket? You look simply *lovely*," he said out loud, "too lovely for anything. I can almost see you with a ribbon around your neck. Ha! ha!" he chuckled again to himself.

"Poor Dots!" murmured Spots, pityingly.

Now see the vain cats proudly walk with arched backs and bristling tails toward the vine-covered porch. Yes, the young lady is sitting as before in the bamboo chair, holding Blonde and Brunette in her lap, while scattered around are numerous guests laughing and talking. And Spots and Dots place themselves right in front of all the company—two cadaverous, pitiful-looking objects.

"They won't notice us," whispered Spots at last.

"Suppose we sing? That is sure to attract attention," returned Dots. "Now commence. Think of the satin baskets and the fish."

Oh, what a yell—what a howl—now broke the stillness of the peaceful scene!

The young lady turned around with a start, gave a loud, piercing scream as she caught sight of the two hideous cats with wide-open mouths and green, shining eyes; then she sank back pale and trembling.

"Send them away!" she gasped, covering her face with her hands. "Send those horrid things away! Oh! oh! I'm going to faint!"

"Shoo!" cried the gardener, running up to the gate with a big stick, followed by all the gentlemen with their canes. "Shoo! you ugly, villainous rascals! What do you mean by frightening my lady with your ugly selves? Out with ye!"

Then up tore a fierce dog, rattling his chains and showing two rows of terrible teeth.

Spots and Dots fled, never stopping until they reached the banks of a lonely river.

"O Dots! Dots! My heart is broken!" cried Spots.

"You ugly thing! It's your fault this has happened!" hissed Dots. "If you only could see how you look! You thought you were beautiful, did you? Well, I just fooled you there. No wonder you frightened them—it's your fault."

Then Spots understood it all. He did not reproach Dots; he did not retaliate—he felt too keenly his disgrace. He had pitied Dots, but Dots had only mocked him. Yes, his heart was broken.

"Dots," he said, in a low voice, "I do not care to live any longer. I will throw myself in the river."

"Ha!" thought the wily Dots, "a good idea. Once Spots is drowned, I will return to the farmhouse barn. I will have a good home until something better turns up. Spots," he said out loud, "forgive my unjust reproaches. I will share your fate. Do you throw yourself in the river first; I will follow."

Then Spots, thinking his last hour had come, recalled with pain his ingratitude and faithlessness to his mistress. He thought of the farmhouse that had been his home for so many years—of the old barn—of the warm corner by the fireside, and a great longing came over him to take one last look before he should throw himself in the cold waters. Perhaps, himself unseen, he might catch a glimpse of his kind mistress—a farewell look.

"Dots," he said at last, "I have a sad duty to perform before ending my life. I must bid adieu to the old farm and my beloved mistress. Wait for me here. I will return this evening."

Before Dots could expostulate, Spots had disappeared.

At last Spots came in sight of the farmhouse—the dear, comfortable, sunny farmhouse, so peaceful, so quiet. "And it is my fault that I have lost it all. Oh, why was I not satisfied?" murmured Spots, as he gave one last long, long look preparatory to leaving again for the bleak river.

At that moment his mistress came out into the garden, and, shading her eyes with her hands, she peered searchingly around as though looking for something. Then she said, out loud: "I will call Spots once more; perhaps he will hear me. The farm is not the same place without dear old Spots—here Spots! Spots!"

Poor Spots could not resist that call. With one bound he threw himself at the feet of his mistress, rubbing his head against her dress.

"Spots! dear Spots!" she cried, lifting him up tenderly in her arms, "where have you come from? I am so glad, dear, dear Spots."

Spots could only purr and tremble with joy, looking with loving, pleading eyes at the kind, homely face. How cozy the barn after his absence; how sweet the milk; how soft the potato bags; but how much better than all the thought that he was forgiven.

"I will never leave my home again," resolved Spots; and ever afterward he remained steady and faithful.

I do not know what became of the wicked Dots. Perhaps he threw himself in the river, or perhaps he is still roaming around trying to lead other cats into temptation; but never again did he come near Spots, though often, in the midst of his happiness, Spots would murmur, "Poor Dots!"

Domestic Economy.

Recipes.

Editors Press:—I will send you a few recipes:

Cookies.—Two-thirds of a teacupful of butter, one coffee-cupful of sugar, two beaten eggs, two tablespoonfuls of milk, two spoonfuls of baking powder, one-half cup cocoanut; mix with flour as soft as can be well rolled out.

Cream Cake.—Two eggs, one-third of a cup of thick cream, one cup sugar, one and one-half cups of flour, one teaspoonful of baking powder.

Chocolate Cream.—Soak half a box of gelatine in half a cup of warm water for one hour. Add one-half a cup grated chocolate, one-half pound of white sugar, and one pint of new milk; stir all together and boil five minutes; then add half a pint of rich cream, boil one minute. Flavor with vanilla. Nora Bucknall.

Gubserville.

Stewed Sweetbreads.—Parboil, and carefully remove the skin without breaking the sweetbreads. Put them into a small stewing-pan with two ounces of butter, a teaspoonful of chopped onion, a tablespoonful of chopped parsley, one clove, a bay leaf, a teaspoonful of Worcestershire sauce, a half teaspoonful of salt and a half pint of white stock. Stand the pan on a moderate fire and simmer for 30 minutes. Dish the sweetbreads. Wash a pint of French peas in cold water, add them to the sauce; let the whole come to a boil, skim all fat from the surface, and pour the sauce and peas around the sweetbreads.

Stewed Mushrooms.—If canned, drain free from all liquor, turn them into a granite pan with one ounce of butter. Let fry five minutes, stirring constantly, then dredge thickly with flour, mix, add a half-pint of cream, stir until it boils, add salt and pepper to taste and serve at once. Fresh mushrooms are stewed in the same manner; of course, peeled and washed first. Mushrooms may also be baked in the oven, basted and served with a little melted butter.

Mole.—Put one pint of cold cooked mutton or veal into a saucepan, with a half-pint of stock, a half-pint of stewed tomatoes, a teaspoonful of powdered coriander seed, a small onion sliced, a tablespoonful of rice, a tablespoonful of chopped parsley, a half-teaspoonful of salt, an ounce of butter, and pepper. Cover and stew slowly for 20 minutes. Serve very hot on squares of toast.

Sponge Jelly Roll.—Four eggs, one cup and a half sugar, one tablespoon baking powder, beat the whites separately, and the sugar and the yolks together till very light, then add part of the whites, then a cup of flour, then beat well, then a little more flour, then the rest of the whites and stir easy, put it in and bake. Spread and roll as quick as you can.

Plum Pudding.—One pound of currants, one pound of bread crumbs, one-half pound raisins, one pound of suet chopped fine, four eggs, one tablespoon brandy, sugar and nutmeg to taste, orange and lemon peel candied.

Sponge Cake.—Four eggs, one tumbler each of white sugar and flour, two tablespoonfuls of sweet milk, one teaspoonful of cream of tartar, one-half teaspoonful of soda, lemon and salt.

The Week.

According to prediction, the clouds have flown, the air has warmed, and our glorious climate is here in all its deep delight and charm. With the season's production assured, with activity increasing in all lines of manufacture and trade, it is hard to find a man whose face does not wear a genial, happy expression, and who is not ready for anything which looks progressive, promising and enjoyable. Nor are the ladies and the children less influenced by the gentle manners of the elements. The city streets and parks are gay with costumes and equipages; the suburban and rural landscapes are enlivened by the ladies at their garden recreations, and the children at outdoor sports and flower-hunting. The whole State is full of joy and cheer and spirit.

The disposition toward improvement has been great this winter, notwithstanding the fact the rains were delayed. Building operations are brisk and real estate transactions extensive. Planting of tree and vine has been large, and tree-growers have sold close, notwithstanding the increased propagation. There is also, we are glad to note, an increased interest in forest and ornamental planting. It is plain that our State is to grow in beauty as it advances in wealth and population.

Henry Ward Beecher.

Imagination cannot conceive of anything more strange or dreadful than that a man should die. We can understand all his smiles and tears, his labors, tastes and ambitions, but when the word comes that one who has filled a wide place in our thoughts and affections has passed away, the event transcends language and thought. To see all the gates of the senses suddenly closed, to hear no longer the voice of a friend or loved one, to think that he is oblivious to day and night, passing seasons and current events, and has become a pale, cold marble form in the coffin—this has ever been the amazing spectacle of the world.

Henry Ward Beecher was born June 4, 1813, in Litchfield, Conn. He came of a hardy, brainy stock. His father, Dr. Lyman Beecher, was a power in the land. For 40 years if not the ablest, he was certainly the most noted clergyman in America. During the early period of his life young Henry gave no promise of success. He was a great awkward boy, thick-tongued, dull in study, and deficient in memory; and had any one turned a teacup or cast a horoscope in those days, it is not likely the vision of America's most potent orator would have been seen. At Amherst college he did not take kindly to the drudgery of mathematics and dead languages, and, it is said, was only granted a diploma out of respect to his father, who had long been one of the pillars of that seat of learning. But he devoured the library and made his mark in the college debates. The wing of the eagle panted for the liberty of the sky and the fresh, pure air of the mountains. He studied theology at Lane seminary under the tuition of his father, and as the young novitiate preached in the schoolhouses on the outskirts of Cincinnati, it was soon whispered that Henry was a "chip from the old block." In 1837 he married and accepted a call to a Presbyterian church at Lawrenceburg, a little town on the Ohio river near Cincinnati, and in 1839 was called to the Second Presbyterian church of Indianapolis. Here he soon attracted attention, preached to crowded houses, and the bold and fiery attack he made on the drinking, gambling and licentious habits, then rife at the capital of the State, in a course of lectures to young men, was the startling and dazzling precursor of his fame.

Going down to New York City to attend the great annual jubilees of the church, the meeting of the American Board of Home Missions and American Tract Society, he found the fat, sleek doctrinaires of these bodies trying to tread on pro-slavery eggs and not break them, and the soul of the young hoosier preacher was stirred within him, and, with the sword of the Lord and of Gideon, he smote them into confusion. A few noble men in Brooklyn had resolved to wash their hands of this evil by starting an anti-slavery congregation, and when they heard Beecher's speech, said one to another, this is our man for a leader. The result was he became pastor of the Plymouth Society in 1847, a little cluster of men and women who believed a black man had a soul worth saving. The straitened hall in which they worshiped soon bloomed into a spacious church structure on Orange street. There, on a broad platform and behind a little desk made of olive wood brought from Jerusalem, more brave words were uttered in behalf of the poor, the down-trodden and the slave, than in all the pulpits of the time. When Bancroft remodeled some chapters of his history for fear of offending the slaveholder, Pierpont revised the catechism of his church and Edward Everett went over 30 States with his lecture on Washington, leaving out the brave words of the wise Virginian warning his countrymen of this evil, Beecher prayed for the slave, preached against the evil, and would not accept an invitation to lecture before an association that refused to sell a colored man a ticket. He threw himself into the van of the anti-slavery movement, and his celebrated Minie-rifle sermons during the Border War in Kansas have become a part of the history of the times. It used to be said of the Border Ruffians, "Nor hell nor the devil can make them afraid," but they feared the terrible whip of Henry Ward Beecher. His earnest addresses in England in 1863 on the causes of the Civil War then raging over the land had a powerful influence in arresting the current of public opinion and turning it toward the Union. When Lee surrendered and the Confederacy caved in, the Plymouth pulpit first hung out the white flag of forgiveness. This great man had the soul of the warrior combined with the tender heart of woman.

As a preacher, Beecher was undoubtedly the most thoroughly rounded and complete man of the age. James Parton once said, if he had a foreigner in charge and wished to reveal this country, he would take him to Plymouth church, hand him over to one of the ushers and say: "Stranger, you have arrived; this is the United States, the New Testament, Plymouth Rock, and the Fourth of July—this is what they have brought us to." The great charm of his preaching was the spontaneity of feeling. Many men lose this in getting educated. They have great tanks of rain-water, barrels of well-water, but on their premises is no spring; it never rains on their land. A mountain spring supplied Mr. Beecher with fresh living water. He loved children, flowers, birds, and was extremely susceptible to the influence of music. He possessed to a wonderful extent the power of divining the human heart, and entering into sympathy with the joys and sorrows of men. It was this that endeared him to thousands, and now fills the whole land with sincere mourning. A great-hearted, eloquent man, ripe in years, full of religious emotion and the tenderest humanity and love, has passed away. No wonder the Legislature at Albany appointed a committee to attend his funeral, the public buildings of Brooklyn were draped, the flags at half-mast, and his vast congregation weeping as children. The Plymouth pulpit is vacant and will never be filled again. This prophet's mantle falls upon no Elisha.

The Grape-Growers' Convention.

The Grape-Growers' Convention began its sessions at the Grand hotel, in this city, on Monday, March 7th, and is still in progress as we go to press. The attendance is excellent, there being over 100 present at some of the meetings, and the representation is wide, for we see delegates from as far as San Diego on the south and Shasta on the north. The convention is held under the auspices of the California Grape-Growers and Wine-Makers' Association, of which H. W. McIntyre, of Napa county, is president, and E. H. Rixford, of this city, treasurer. The transactions of this society since its organization a few months ago demonstrate the timeliness of its establishment. It is, in fact, a revival and extension of an old society, which lapsed on the organization of the Viticultural Commission.

In opening the session President McIntyre made a brief address, touching upon a number of practical points. He congratulated the grape-growers upon the passage of the "pure wine bill" by the Legislature. He also urged the necessity of more exact and intelligent action in grape-growing and wine-making. He said:

I think we all know now that slipshod methods will no longer succeed. Soil, climate and other things should be carefully considered. We cannot make fine wines from grapes of large and heavy product. For really fine wines there will be a market at all times. Vine pests and diseases merit our closest investigation. I believe we ought to be alarmed at the phylloxera. Commence to eradicate them at once. We must uproot at once the injured vines. A little expense year by year in planting resistants will well repay the vineyardist.

The subject was also discussed by other speakers, and the value of resistant vines generally affirmed. There was on another day quite a long discussion of the existence of the phylloxera on a few vines used for study of the pest at the University, and a motion was made to request the Regents to destroy them. It was shown, however, that the danger of spreading from such source was exceedingly small and the value of having the insect for study at the University was large. The discussion ended by the passage of a motion to lay the subject on the table.

Hon. M. M. Estee, of Napa, delivered an excellent address, reviewing the whole situation of the wine industry in this State, its problems, successes, etc. We are glad that the address has been published in pamphlet form, and no doubt Mr. Estee will give a copy to any of our readers who apply to him for it. The distribution of such literature will be of great value to the grape industry.

Addresses were also given by Messrs. H. W. Crabb and E. C. Priber, of St. Helena, Arpad Haraszthy and Chas. Bundschu, of San Francisco, Prof. George Husmann, of Napa, and O. H. Merrion. Others will follow.

On Tuesday morning the election of officers took place with the following result: H. W. McIntyre, president; McPherson Hill, of San Francisco, first vice-president; F. P. Elsen, of Fresno, second vice-president; John T. Doyle, third vice-president; J. B. Stillman, fourth vice-president; E. W. Martin, fifth vice-president; E. H. Rixford, secretary; Chas. Kohler, treasurer; J. F. Black, Charles E. Shillaber, J. F. Crank, M. M. Estee, E. C. Priber and J. B. J. Portal, directors.

Some of the matters coming before the convention will be given at greater length at another time.

Los Angeles Flower Festival.

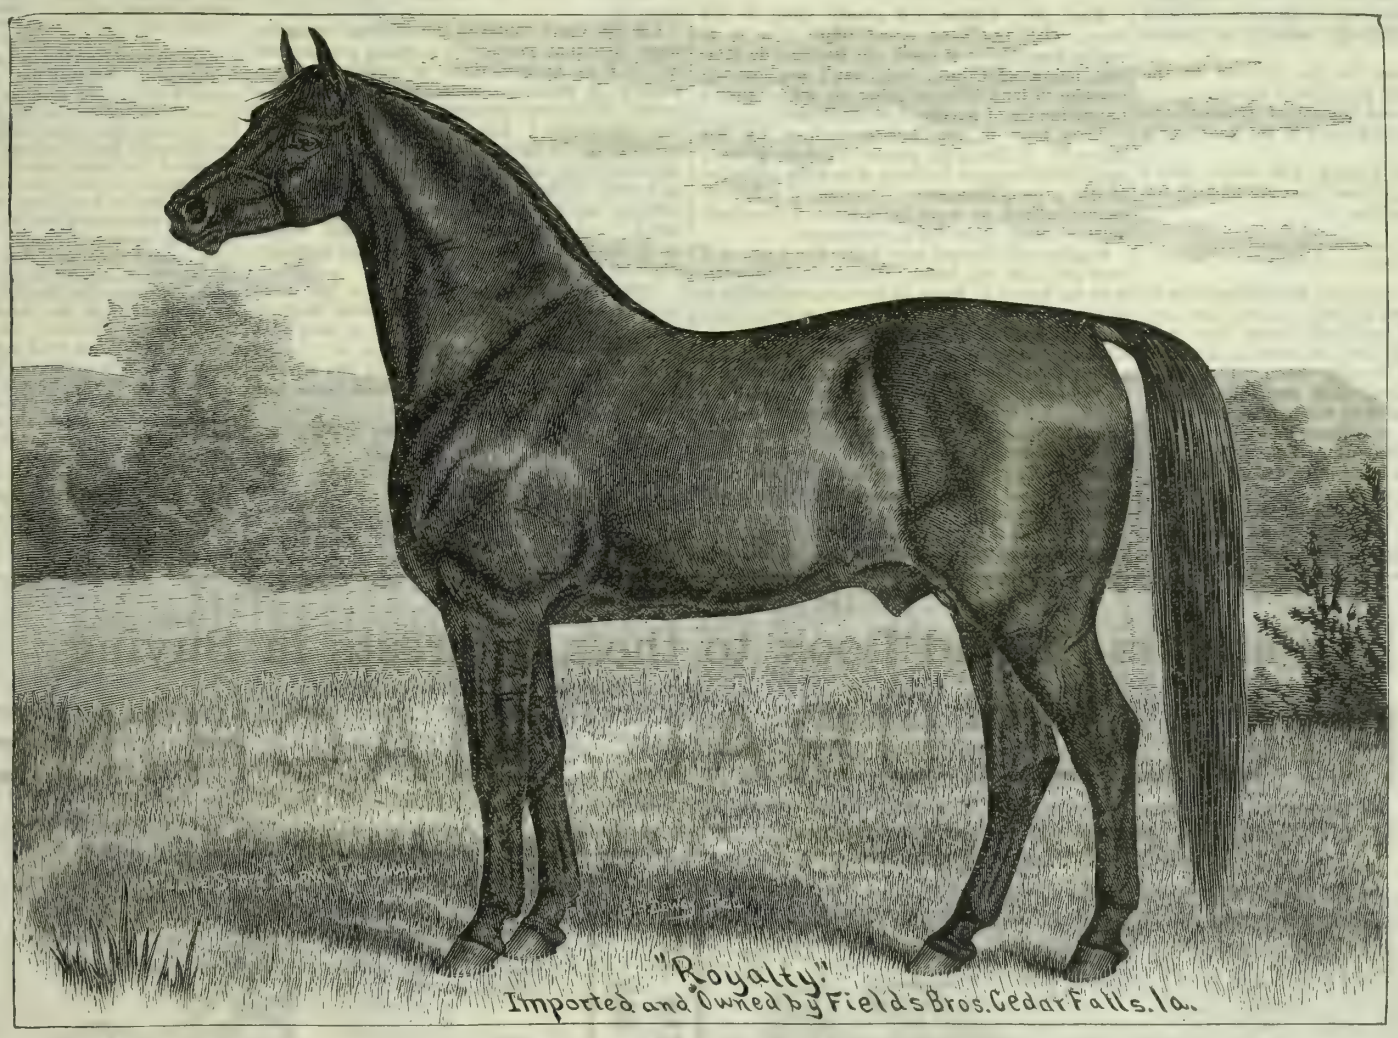
The Board of Managers of the Flower Festival Society have issued a circular that their Third Annual Festival will be held in Los Angeles, commencing the second week of April, and continuing two weeks.

The society gives these exhibitions for the purpose of raising funds to build a Boarding Home, where young women of limited means may have comfort and safety. The proceeds of two festivals and a loan exhibit, together with contributions from generous-hearted friends, have enabled them to commence the building, and they hope to complete it by receipts from the coming festival. To aid in accomplishing this, exhibits from the various sections in Los Angeles county are asked for, and each section is invited to provide one evening's entertainment. There will be no charge for floor space; all transportation fees will be paid, and two exhibitors connected with each booth will be entertained by the ladies of the society. While welcoming all exhibits from outside counties, it will be impossible for the society to assume any of the expense connected therewith, though hospitality will be tendered to two exhibitors from each booth.

Contributions of flowers, of all varieties, are solicited, and, if carefully labeled, their receipt will be acknowledged in the daily papers. Wells, Fargo & Co. have generously offered to bring contributions of flowers from any direction free of charge. They should be started upon the earliest regular express train of the day, and, if intended for any particular booth, should be very carefully labeled.

All communications in reference to the festival should be addressed to the secretary, Miss M. M. Fette, No. 18 Clay St., Los Angeles, Cal.

An Educational State.



California can well claim to be an educational State. With our State University second to none in the breadth of the means of culture available, with the doors of the grand establishment of Senator Stanford, the Leland Stanford, Jr., University, soon to be thrown open, with our public school system, acknowledged to be of the highest order, and with a large group of most excellent private schools and seminaries—certainly California can claim to be an educational State. Such assurance is of the highest value to people seeking a home in a new State. Take for example the State University. In his report to the Regents last week President Holden said:

It may not be known to all that during the last year 122 different courses of study were *offered* to students at Berkeley alone, and of these 94 were actually followed. Many other courses were offered and given in San Francisco. Yale University offered 92 courses during the last year. This comparison shows that there is no question but that the University of California is doing its whole duty to the State in this particular direction.

Similar breadth and efficiency extends through the educational system of the State. New-comers may be assured that the training of their children is at least as well provided for as in the older States.

Cleveland Bay Horses.

California is achieving a most honorable fame as a horse-breeding State. We often allude to the reputation of our State being spread by our vast cereal crops, by our flowers, and fruits and wine, and we do well, for all these products are winning us renown abroad. But our live-stock should also be clearly recognized as a factor in the good impression which we are producing in distant parts. The deeds of our trotters at the East have drawn the attention of all horsemen to our State as a land of early maturing, and most excellent horses. The visitors to the State return to expatiate upon the general high class of the horses seen on the streets of San Francisco, the majesty of our heavy drafts, the style of our carriage teams, etc. They also go to the many county districts, where horse-breeding has received most attention, and return to praise the unexceptionable pure blood which has been brought to the State and to the quality of their offspring, both thoroughbred and grades. It is quite certain that California's resource in horse flesh is not the least of her treasures.

IMPORTED PURE CLEVELAND BAY STALLION ROYALTY.

This being the case, we are always pleased to draw the attention of our readers to fine animals of the several breeds, and especially to make known the claims of breeds which are as yet but little known here, because we like to aid in all movements to bring hither whatever is desirable of all the pure breeds. We need this to secure horses adapted to all needs. The different breeds have been developed by generations of wise men to suit certain purposes, and thus various types have been secured. We should have the best results of all their labors. Some of our needs do not require the weight and power of the majestic draft horses, nor the speed and nerve of the trotters and thoroughbreds; therefore our resources in pure blood should be diversified. As a breed which is not yet widely recognized in this State, although some good work has been done in this direction, we mention at this time the Cleveland Bay horses. We use as an illustration the portrait of the stallion Royalty (No. 128, American Cleveland Bay Stud-Book), foaled in 1883 and imported to this country by W. M. Fields & Bro., of Cedar Falls, Iowa, who have the reputation of having the largest and best stud of Cleveland Bays in the world, the animals having been selected with great care by the owners themselves. Royalty was sired by "Prince of Wales;" dam, "Gaiety." He is a handsome bay, very stylish, high-stepping, blood-like-looking coach horse, with much of the appearance of the thoroughbred. He is a model in form and quality—in fact, so much so that at the late (1886) Iowa State Fair, at which he easily captured the first prize, he was the admiration of thousands of people. He stands 16 hands and weighs 1270 pounds. Messrs. Fields say in their catalogue that such is the high appreciation in which this horse is held that standard-bred trotters have been brought from Wisconsin to breed to him.

The Cleveland Bay, as the name denotes, is bay in color, and was originally bred in the Cleveland district in England. They are larger in size than the thoroughbred horses that are noted for speed—and this greater size with large development of bone, muscle and sinew, combined with superior action and endurance, render them great favorites in America as well as in Europe. In size they are from 16 to 17 hands high, and weighing from 1200 to 1500 pounds, with short back, strong loin and long quarters, excellent feet and pleasant disposition; they are well calculated to draw the plow or family carriage.

Mr. Youatt, an English author of accepted ability, says of the Cleveland Bay: "They will support a continuance of fatigue, and have been known to travel the extraordinary distance of 60 to 70 miles within 24 hours, with heavy loads, three and even four times a week, besides being employed during the intermediate days. There is, indeed, no better animal for farm labor, and the mares are the best species of stock for the double purpose of work and breeding."

Messrs. Fields & Bro. report great success in using the Cleveland Bay stallion upon native mares. They say: "Our experience in crossing the native mares with the Cleveland Bay horses has been the most satisfactory; several of our two-year-old Cleveland Bay grades weighing from 1100 to 1200 pounds, and are wonderful counterparts of their sires. When judiciously mated with our native mares, the product invariably is a fine, stylish-looking animal, well adapted for either the carriage or general purposes."

We have an idea that the Cleveland Bay grades will be found of much value in this State, both in our general farming, and especially in our orchard and vineyard, work where strength and fleetness are desirable, so far as the two can be secured in combination.

WOULD BE heirs in America to mythical estates abroad, who have been gulled by the misrepresentations of professing agents and attorneys, should thank their fellow-victim, Mr. Dakin, for bringing one of the swindlers to grief. The latter, one Anderson, got $5000 out of Mr. Dakin; but he has more recently got five years penal servitude from the court in which he was prosecuted.

IMMIGRANTS continue to pour into the State, hundreds who come to stay arriving every week, and scattering through the counties both northern and southern.

TWENTY-ONE CARLOADS of oranges are reported to have been sent eastward last Saturday over the Central Pacific railway.

Mechanics' Institute.

Last Saturday night the Mechanics' Institute of this city held its annual meeting, at which the usual reports were read. The present membership is 2852, an increase of 321 since March 1, 1886. There are 42,000 volumes now on the shelves, 4600 having been added to the library during the year; $20,000 more had been paid on the mortgage. The property of the Institute, including lots and buildings on Post and on Larkin streets, is valued at $596,000, over and above the remaining mortgage debt of $90,000.

On the recommendation of the Board of Trustees, Professors Joseph Le Conte, John Le Conte, E. W. Hilgard, W. B. Rising and A. W. Jackson were elected honorary members of the Institute.

In discussing arrangements for the next fair, President Cornwall stated that propositions to connect with it a stock show and horse-races had not met with favor on the part of the Trustees; also that they think of dispensing with medals and flower shows, which have proved too costly, and offering liberal cash premiums for machinery and other exhibits in which competition is desired.

Complaints having been made of the way in which visitors, especially young girls, had been allowed and encouraged to sample the liquor exhibits last year, the President said that as soon as the practice came to their knowledge the Directors had stopped it, and so effectually that he was confident there would never be grounds for such complaints at any future fairs under their auspices.

A resolution was adopted that the pavilion be no more rented for masquerade balls, slogging matches, nor any kind of exhibition at which liquor-selling is allowed.

Columbus Waterhouse, George Spaulding, C. F. Bassett, James Spiers, Irwin C. Stump, S. J. Hendy and John Mallon were installed as Trustees for the coming year, and the following officers were elected: P. B. Cornwall, President; David Kerr, Vice-President; J. A. Bauer, Treasurer; W. P. Stout, Recording Secretary; Irwin C. Stump, Corresponding Secretary.

The Institute appears to be very sound and thriving, with the prospect of continued and greatening usefulness.

SURE that overland freight rates will be advanced by April 1st, transcontinental shippers are moving large supplies westward.

Industrial School at San Quentin.

It is stated that when the Senate Committee visited the State Prison at San Quentin Senator Jones, of Butte, asked how much it would cost to convert the door and sash building into cells for the occupancy of criminal boys. His idea was that it would be wise and humane to start a State industrial school inside the penitentiary, where criminals of this class could be taught some useful vocation separate and apart from the hardened veterans of crime. The suggestion is a good one, and will command the approval of every kindly nature. By all means do something of the kind, and if the aforesaid building cannot be spared or adapted to this purpose, then erect another. It would be hard to find any one who has made penology a study that has not denounced the folly and cruelty that herds in the same workshop young offenders along with the old and experienced villains who delight in the artifices and tricks of vice and crime. It is a vicious atmosphere for a boy to breathe in. The unconscious magnetism of such surroundings is debasing and perilous to every hope of reformation. It should always be assumed that there is something good left in a boy. That however bad he may seem, there is still lingering in his soul some flickering sense of shame and quivering of the moral nerve of feeling that under judicious treatment may be quickened into an honest desire to lead a better life.

We are all more or less the creatures of environment, and many of these bad boys are the victims of the evil forces at work in the community. They have been wrecked upon social reefs. They have been swept away by the swift torrent of city habits, customs, and ways that older and maturer minds find it hard to stem. We were born with no purer blood than they, and might have gone astray as they have had we been rocked in the same cradle and educated in the same domestic school. What sense is there, then in placing these unfortunate youths in the society of those who neither fear God nor honor man, who sneer at virtue and honesty as phantoms of the conscience, and look forward to the termination of their sentence as the time to wage a more cunningly contrived and relentless war upon society? One of the chief objects of the State Prison is the reformation of the criminal, but our present system, at least so far as the boys are concerned, is a mere recruiting station for the army of crime. How can they learn the beauty of virtue in daily contact with vice? There can be no hope of amendment under such circumstances. It is too big a marvel to expect. The chaplain may pray, preach, and distribute good books, but one hour in the prison workshop is enough to ravel out and dissipate every good intention. By all means give these youthful criminals a better chance to redeem the future.

RAILROAD EXTENSION TO UKIAH.—The surveys, plans and specifications for the extension of the Donahue road from Cloverdale to Ukiah are now completed, and work upon the same will be commenced as soon as the right of way can be properly secured. The work will involve a length of 4800 feet of tunneling, but the grade thereby will be unusually favorable,

PUBLIC AFFAIRS.

Is Mr. Henry George the Farmer's Friend?

EDITORS PRESS:—The prominence accorded to Mr. George in New York politics renders imperative some familiarity with his views. Befuddlement of uneducated brains and bewilderment of untrained intellects are arts in which professional politicians are adepts. "Blind staggers" is a far too common complaint among bipeds. Especially is this the case among the darksome mazes of the so-called science of political economy. What should be crystallized common sense merely consists at present of conflicting crudities of differing doctors. Stripped of unnecessary verbiage, the proposals of Mr. George are as follows:

1st. To abolish all private ownership in land. This is to be done either by direct confiscation to the State, or by the imposition of a State land tax that shall be about equivalent to the rental, thus making real estate valueless to the nominal owner.

2d. Confiscation (actual or virtual) being consummated, the State to act in future as landlord (either directly or through landlord as unpaid agent).

3d. Land revenues to be devoted to the alleviation of present tax-payers' burdens.

All this with a great flourish of trumpets to herald the consequent advent of the poor man's millennium!

Now, Mr. Editor, I think you know that I too am one of the fellows that are looking for the laborers' millennium.

> "Not that I'm one of them that much expec'
> Millennium by express to-morrer."

Still, I keep an eye open for millenniums in general; so I thought I'd look up this new one of Mr. George's. I willingly admit that millenniums are breachy kind of cattle to hunt for; and all eyes are not equally keen. But, hitherto, I had not realized that the tax-collector was more competent than the landlord to usher in the reign of universal peace and goodwill. I had not realized that the tax-collector *plus* sheriff was one whit less rapacious and exacting than the landlord *plus* sheriff.

The renter will find Mother Earth equally chary of her dollars whether their destination be the State treasury or the landlord's pocket. So, as far as I can see, his position is unchanged.

But (and here I speak feelingly) the owner and occupier has his land "cut from under him." Take my own case. I bought my present farm nearly 20 years ago. It was said to be worn out. The Carmel river was sluicing it away. It was predicted that I should "freeze out" on such a 100-acre tract. Feeling sure that the place was *my own*, I went happily to work, dammed, fertilized, planted and husbanded my land until its present title, "Carmel Garden," is not a misnomer. This was done because I expected and intended that I should be permanent *owner* of this tract, and all benefits of my work should accrue to me *as owner*.

Dispossess *owners*, make all *Government tenants*, and who will improve lands in the future? Who will plant trees for another to eat the fruit thereof; who will build houses for others to inhabit; who will reclaim waste places for others to occupy, when the avails of all real estate are appropriated by Government? I admit that George and Gabriel both begin with a "G," but George's blast don't sound more like millennium than my bull calf's bellow.

Then he tells how this transfer of land to the State will elevate the whole community; how

> "None shall there be jealous,
> And none shall there contend,
> Fraud! clamor! guile! what say I?
> All ill! all ill shall end!"

Now, Mr. Editor, I'd gladly sling in my farm, with the very latest improvement, to realize that vision of good old Bernard de Morlaix, monk of Cluny; but I can't see how any transfer of land titles is going to make such a happy family of tenants and landlords.

Then how is the *laborer* helped by the scheme? Shifting tax-payers' burdens is very small alleviation to the man who pays no taxes, of which he is conscious. Further, if a laborer cannot afford to rent land from a landlord, neither can he from the Government!

Supply and demand now settle the amount of rent any land will bring. What else will settle it in the future? State or private ownership is no factor in the question. I never read that wine and tobacco were cheaper when State monopolies controlled their sale. It is competition among farmers that raises rents of agricultural lands; and the laborer can compete against the farmer, if he has the means, as freely *now* as under a State monopoly. More so! Some private landlords are possessors of sympathy and kindly feeling! The tax collector is not permitted to deal in either commodity! He is not allowed any soul!

Further, Mr. George's whole book is based on a false assumption, that the laborer has not shared in the benefits conferred by progress. In making this statement Mr. George has forgotten to consult the facts. It is safe to state broadly that a laborer's wages have increased 100 per cent in the last 80 years, and that the purchasing power of the coin is 100 per cent greater than in A. D. 1800. He enjoys facilities for travel and communication of which a prince then never dreamt. He may avail himself of educational privileges (for example, books and newspapers, the poor man's university) to which his predecessors had no door of access. And lastly, as abundant exemplars have proved, with the use of determination, effort, perseverance, and prudence, the laborer has fuller opportunities to raise himself to the highest pinnacles of wealth and eminence than his ancestors ever possessed.

If lightening tax-payers' burdens will indeed do all that Mr. George anticipates, there is a much less dangerous and less complicated way. The great burden of taxation is imposed either to provide against possibilities of future war (lashing ourselves to frenzy with our own tail, as in our present scare at the defenseless condition of our coast) or to pay the bill for past wars (debt incurred and pensions granted). By strictly adhering to the Monroe doctrine, and refusing to import ridiculous and antiquated European barbaric methods of patching up international differences by wholesale slaughter, we should avoid the incidence of such taxation.

Let us come round to the obvious commonsense view that war settles nothing permanently. Let us do something to prove ourselves worthy of those ancestors to whose genius a statue of liberty enlightening the world has been dedicated! Let us render illustrious the present age by taking steps toward the establishment of an international tribunal, to settle, on a basis of justice, these unseemly bickerings between nations, which constantly make "bad blood," and culminate in futile wars which leave nations oppressed by debt and impoverished by taxation.

This, Mr. Editor, seems to me a far more feasible and more worthy aim than that of Henry George. To deprive us all of land that governments may have ample funds to engage in wars, which it is the business of the aristocracy and military to foment, is not quite this farmer's ideal millennium.

If any lady will send us eleven cents, to pay the postage, we will send her a bar of our King Soap, which will do a washing without any rubbing. Capital Soap Company, Sacramento.

Coal Oil for Scales.

EDITORS PRESS:—Some time ago I read Mr. Thomas' communication in regard to applying coal oil to fruit trees to kill scale bug. Since then I have applied coal oil to several pear trees. It has killed the scale and there is apparently no injury to the trees.

In answer to Mr. Thomas' question I will state that, two years ago my neighbor, L. L. Walton, washed two Silver prune trees and one plum tree with coal oil. The trees were covered with San Jose scale. The application killed the scale bug and the following summer the trees were loaded with and matured as fine a crop of fruit as you would wish to see.

The fight against the scale here will be a hard one. Within half a mile of my house there are many poplar trees covered with San Jose scale. The RURAL PRESS is always a welcome weekly visitor at my house. C. O. BUTLER.

Hanford.

[We would like to have a specimen of the scales on the poplar for examination.—EDS. PRESS.]

If you have a sufficiency of this world's goods, but if you have not, write to Hallett & Co., Portland, Maine, and receive, free, full particulars about work that you can do, and live at home, wherever you are located, at a profit of from $5 to $25 per day, and upward. All succeed; both sexes; all ages. All is new. Capital not required; Hallett & Co. will start you. Don't delay; investigate at once, and grand success will attend you.

PERCHERON HORSES IN CHICAGO.—An exemplification of the fact that the quick and heavy draft teaming of Chicago is done nearly exclusively by grade Percheron horses was shown during the late Illinois State Fair. Auxiliary to the great Percheron exhibit at the fair, a grand street and fairground parade of Percheron business teams was organized. The procession, nearly two miles in extent, contained the two, four and six horse turnouts of over 150 of the most extensive wholesale merchant and manufacturing houses of Chicago. The quality of these high-grade Percheron teams, as regards individual appearance, compared favorably with many of the pure bloods on exhibition at the fair, which shows the adaptability of the Percheron cross on native stock. Grade Percheron horses are always in demand at high prices in all markets, and farmers can make no mistake in breeding them. Mr. M. W. Dunham, of Wayne, Illinois, the extensive importer and breeder of pure Percheron horses for breeding purposes, has on hand about 500 head registered with extended pedigrees in the Percheron stud-books of France and America.

Farmers Should Look to their Interests in Buying

AGRICULTURAL MACHINERY

TO GET THE BEST!

A BOY WITH ONE HORSE CAN RAKE 20 TO 25 ACRES PER DAY.

AND THE TAYLOR No. 4 SELF-DUMP RAKE

Are the only Rakes ever offered to the Farmers of America that have proved a Complete Success in all kinds of Raking.

WE ARE ALSO SOLE AGENTS FOR THE

Gold Medal Thrashers, Rice's Straw-Burner Engines,
Hodges' Headers, Schuttler Wagons,
"Perpetual" Hay Presses,
HOWE SCALES,
And a Large List of the most Improved Implements.

The Adriance "BUCKEYE" Mowers

ARE THE GENUINE, and are, as they always have been,

THE BEST IN THE WORLD!

One that will Outwear two of any other make of Machine.
One that is very Simply Constructed and the Lightest Draft.
One that will do better work than any other Mower made.

Farmers should remember that the experiment of buying inferior machines is expensive, when they can buy the ADRIANCE "BUCKEYE," and be sure of getting the best machine in the market. See that ADRIANCE, PLATT & Co. is cast in the machine.

Send for our New Catalogue for 1887, giving full Descriptions and Revised Prices of all kinds of Harvesting Implements.

HAWLEY BROTHERS HARDWARE COMPANY, San Francisco, Cal.

CALIFORNIA VICTOR MOWER

IMPROVED!

Guaranteed to do More and Better Work, with Less Draft upon the Horses, than any other Machine made. We Guarantee Construction, Material and Operation in the Field.

THE VINEYARD.

Santa Clara Vineyard Interests.

Our reports of the San Jose Citrus Fair made prominent mention of some of the important vineyard and wine industries of the Santa Clara valley. It is generally understood that the progress of viticulture in the valley and the adjacent mountain grape districts, which have been mentioned from time to time in our columns, has been very rapid, and the creation of wealth thereby has been very satisfactory to the old vineyard planters and very encouraging to those just embarking in such enterprises. As an instance of this course of affairs may be cited the following telegram which was sent from San Jose, Feb. 28th, to the Associated Press:

On Saturday evening the agent of an English syndicate met J. B. J. Portal at the office of Hon. Thomas H. Laine to negotiate for the purchase of Portal's famous Burgundy vineyard, about six miles west of San Jose. The price named was $134,000 for the real estate, improvements, name and good-will, but not including the stock of wine and brandy on hand. The preliminaries were all arranged, but final action was delayed to favor the organization of local capitalists to purchase the place. This is evidently the beginning of a great boom in Santa Clara county vineyards.

Mr. Portal has conducted his enterprise with much energy and skill, and his friends will be pleased with the figure which his property seems to command.

The Santa Clara vineyardists early saw that to give their industry the standing it merited in the public mind and in trade circles, they must organize and act together toward desired ends. Thus arose the Santa Clara Viticultural Society, one of the best organizations of its kind in the State. At a meeting held on Saturday of last week, with President D. C. Feeley in the chair, important action was had looking to the advancement of the industry, by securing better facilities, etc. According to the report in the *Herald:*

The matter of forming a company for the purpose of erecting a wine storehouse was discussed at length. The first storehouse to be built, said Mr. Combe, should have a capacity of 500,000 gallons. The company should have a capital stock of $100,000, divided into 10,000 shares of $10 each. About 25 per cent of the capital stock would cover the cost of purchasing land and erecting a first-class building with all appurtenances fit for a first-class cellar. About 40 per cent would be required for cooperage as required from time to time. It is proposed to put the business of this company under the direction of a board of seven directors, who shall conduct all the affairs of the company, procure land, cause buildings to be erected and purchase cooperage as fast as necessary. They will select a superintendent who shall be competent to receive wine, take proper care of it, ship it when so ordered, and grade it according to value, in order that the valuation as affixed may be of benefit in the transaction of business between the owners of the wine and those who should be disposed to make advances on the same.

President Feeley suggested that by the means proposed the winemakers could protect themselves from the "San Francisco ring."

Mr. Combe said when money could be borrowed on wine in storage the makers could keep their products out of the market, and the result would be higher prices.

Capt. Merithew spoke in the same spirit, and Capt. Frank Dunn moved to proceed and form an organization and elect a temporary Board of Directors. The motion was carried, and the following directors were elected: William Ginty, Frank Dunn, W. B. Rankin, J. Q. A. Ballou, William Warren, J. P. Bubb and Capt. Merithew.

J. B. J. Portal declined to serve, upon being requested, for the reason that he had important business on hand.

The directors withdrew and arranged for the immediate drawing up of a prospectus, after which they will secure subscriptions for stock and report progress at the next meeting of the society.

We are not familiar enough with the intricacies of the wine business to discuss the Santa Clara movement *ex cathedra*, but it is evident that the prosperity of the whole State depends upon the building up the various local industries and securing for them their proper place in esteem and in trade. We do not believe in centralization in such matters—that is, centralization which destroys individual excellence and individual rights. Let the producers of each region act together, not to pull down others, but to promote their own success.

Can't Afford Not to Take It.

A subscriber at Downey, Los Angeles county, inclosing his postoffice money-order for another year, remarks:

The PRESS continues to be full of valuable information for farmers and housekeepers. Don't see how so many farmers can afford to be without it. Such an article as "The Senator's Daughter" is a good departure occasionally.

EXPERIMENTS made indicate that the light of midday during fine weather penetrates the water of the sea 1300 feet.

Death of Jonas Winchester.

Jonas Winchester, better known as "General" Winchester, died at his home at Columbia, Tuolumne county, February 23d, aged 76 years. In early life he was a printer in New York, and a personal friend and partner of Horace Greeley. Coming to California in 1849, he soon became part owner and chief editor of the *Pacific News* in San Francisco.

He was appointed State Printer in April, 1850; held the office about a year and resigned in March, 1851. His publishing house having been ruined by fire meanwhile, he went to Grass Valley, engaged in quartz mining and wrote a series of valuable articles on that subject for the New York *Tribune*. It does not appear that he made a fortune at it, however, for he presently "returned East and for awhile was lost sight of by his friends and acquaintances in California." But he finally returned hither, like most of those who spend any considerable time in our beloved State, and took up the business of fruit-growing near Columbia, whence he now and then sent contributions to the RURAL, his last being a Tuolumne county note, dated February 14th, which went to press the morning after his departure.

He is spoken of as a man of intelligence, ability and courage; energetic, warm-hearted, enthusiastic, and a philanthropist both in theory and in practice.

Since writing the above, a letter respecting him has come to hand from our venerable friend, John Taylor, who says:

The short article from his pen in your issue of February 26th was his last effort for publication, and when it arrived the writer was still in death.

We conducted the services on Sunday in the Odd Fellows' graveyard to a large and sympathizing congregation. We have known Mr. Winchester for 25 years, and can testify to his worth as a man and friend. He lived and died a consistent, and in many respects an enthusiastic, spiritualist, and the services were conducted on that principle.

He leaves a widow, four daughters and a son; but they rejoice in the assurance that the dear patriarch still watches over the loved of home, and will see that no evil attends their footsteps.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, $3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Hay Presses.

Our readers cannot fail to see the conspicuous advertisement of the Price Hay Press Co., on the last page of this number. The records of their two leading presses, the Hurricane and Junior Monarch, for speed, are extraordinary. It is said that the manual labor of baling hay with Mr. Price's latest press, the Hurricane, is reduced to sliding the hay three or four feet on a platform, dropping it in a hole, and putting on the bands; the press not only pressing the hay but bringing it across the stack and hoisting the bales into a pile. It would seem as if further reduction in the labor performed by men was almost impossible, but who can say? Perhaps next year a sort of mower and press combined will be made which will cut the standing hay, dry it and drop the finished bales in the rear as it travels along, the manual labor being confined to one man who sits in a comfortable seat under a big sun umbrella and guides his team.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, *to those who pay fully one year in advance of date*, IF REQUESTED the following articles (while this notice continues), at the very greatly reduced figures named at the right:

1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price $1)..... $0.25
2.—World's Cyclopedia, 794 pages, 1250 illustrations; (exceedingly valuable)..... .50
3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt..... .50
4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated..... .25
6.—To NEW Subscribers, 12 select back Nos. of the RURAL PRESS, "good as new"..... Free
7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates.
9.—Pacific Coast and Eastern Dailies, Books and Periodicals, *except special publications*, we can usually give 10 to 15 per cent off advertised retail rates.
10.—March of Empire, by Mallie Stafford..... .25
11.—Life Among the Apaches, 322 pages, stiff cloth .25
12.—$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application .25
14.—Dewey's Pat. Newspaper Fileholder (18 to 36 in.) .25
15.—European Vines Described, 63 pages..... .05
19.—Webster's Dictionary, 634 pages, with 1500 illustrations; very handy and reliable..... .50
23.—Architecture Simplified, 60 pages..... .15
24.—Mother Bickerdyke's Life with the Army; patriotic and ably written; 166 pp., cloth, $1.00..... .50
25.—Ropp's Easy Calculator, cloth, 80 pp..... .25
26.—How to Tell the Age of a Horse..... .05
27.—Percheron Stud Book—French—bound in leather, 192 pages (full price, $3)..... 1.00
Beautiful Poetic Review, entertaining and instructive; 35 pages (a handsome and pleasing present).. .25

NOTE.—The cash must accompany all orders. Address this office, No. 252 Market St., S. F.

Inform your neighbors about our offers and paper. Sample copies of this paper mailed free to persons thought likely to subscribe.

Send for free circular describing most of these premiums, and any further information desired.

NOTE.—Copies of U. S. and Foreign Patents furnished by DEWEY & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

HOW TO GET A PERFECT SEED BED.—A sufficient bed for the seed is an absolute necessity for the success of any crop. The soil should be fine and mellow, free from lumps and of sufficient depth. The very best of plowing is a preliminary process for this effect, but the following harrowing is the most important part of the work. But one harrow is able to do this work in the most suitable manner, and that is the "Acme" Pulverizing Harrow, Clod-Crusher and Leveler. Its name indicates why it is thus successful in producing just what is required, but there is one point which should be noted, and that is that the depth of the pulverized soil can be regulated to an inch or less, as this harrow can be loaded by the weight of the driver to cut five or six inches in depth, or when unloaded can be made to work, by proper adjustment of the setting-bar, to a depth of from two inches to four. This deeper seed bed gives ample room for the spread of the roots. See advertisement on page 226.

The Cause of Consumption.

Scrofula, manifesting itself in blotches, pimples, eruptions, salt-rheum, and other blemishes of the skin, is but too apt by and by to infect the delicate tissues of the lungs also, and result in ulceration, thus ending in consumption. Dr. Pierce's "Golden Medical Discovery" will meet and vanquish the enemy in its stronghold of the blood and cast it out of the system. All druggists.

A Flat Contradiction.

Some one has told you that your catarrh is incurable. It is not so. Dr. Sage's Catarrh Remedy will cure it. It is pleasant to use and it always does its work thoroughly. We have yet to hear of a case in which it did not accomplish a cure when faithfully used. Catarrh is a disease which it is dangerous to neglect. A certain remedy is at your command. Avail yourself of it before the complaint assumes a more serious form. All druggists.

"Little, But Oh My."

Dr. Pierce's "Pleasant Purgative Pellets" are scarcely larger than mustard seeds, but they have no equal as a cathartic. In all disorders of the liver, stomach and bowels they act like a charm. Purely vegetable, sugar-coated, and inclosed in glass vials. Pleasant, safe and sure. By druggists.

Consumption Cured.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma, and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French, or English, with full directions for preparing and using. Sent by mail by addressing with samp, naming this paper, W. A. NOYES, 149 Powers' Block, Rochester, N. Y.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from $5000 to $500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. **

OONSHIU ORANGE

From a Photograph.

温州蜜柑木

NATURAL SIZE.

At the San Jose Fair much interest was manifested in the table containing some JAPANESE SEEDLESS ORANGES, which, although picked from the trees in Japan 60 to 70 days before, were still juicy and delicious. They are called the "Oonshiu," and have been referred to in our columns. The accompanying wood-cut shows about the size and general looks of a specimen of that fruit cut diagonally. It is medium size, oblate, 2½ to 3 inches in diameter; the rind thin, smooth and deep orange color, the pulp sweet, seedless and of delicious flavor and taste. The trees, of which some also were on exhibition, are claimed to be very hardy and to stand frost as well as drouth. In fact it is said that in Japan the ground is frozen hard for several months in winter. The trees are claimed to grow as high as 12 to 15 feet, and bear first at 2 years after grafting, and the great superiority of our soil leads us to believe that the trees, as well as the fruit, may exceed their present average size of growth in our country.

Mr. H. E. Amoore, the President of the Japanese Tree Importing Company (the exhibitors), who has been in China and Japan over 20 years, brought over 30,000 of the trees, and the Company is making large sales of from one to four thousand to some parties, and will ship the small unsold stock to their new nurseries, near Vacaville, Solano county, in a few days. The Company is an association formed to supply all kinds of Japanese Fruit and Flower Trees to this market, and comprises Japanese in Tokio, Osaka, etc., who have control of large nurseries in Japan, and their interests are protected by the four Japanese who came over with Mr. Amoore. The latter gentleman returns there in three or four weeks, spending his time constantly traveling in the country hunting up new trees, etc., and would be pleased to meet or correspond with any one interested in Japan or its products. At the office of the Company, 120 Sutter Street, San Francisco, the Secretary, Mr. S. L. Goldman, conducts the business, and is now taking large orders for future delivery, not alone for OONSHIU Orange Trees, but also for Persimmons, Camellias, Chrysanthemums, Tea Plants, Maples, etc. There are also to be found on exhibition two colored plates, engraved especially for the Imperial Japanese Secretary of Agriculture, representing 29 varieties of Japanese Citrus Fruit, of which 22 are oranges, and the same Company is prepared to take orders for all of them at prices of from $5 to $100 per 100, according to variety and size. But of all, the Oonshiu is the most valuable, and has hitherto sold the best.

We have also to make favorable mention of some trees called "Cumquot" in Japan and better known as "Citrus Japonica" in this country, which were exhibited by the company. The trees, although only 10 to 15 inches high, were laden with fruit of the size of a small plum, and are said to grow as high as 10 feet. The fruit is known to make a very fine preserve and is also useful for crystallizing. The "Ooji" Teaplants proved to be quite a curiosity, and sold at the fair so fast that Mr. Amoore was compelled to send for more to San Francisco.

Reasons why Sherwood's Steel Harness is the Best and should and will be Universally Used:

1.—It is a common sense Harness. 2.—It is made of material that will last a lifetime. 3.—In plowing, dragging, logging and scraping there are no whiffletrees. 4.—In all farm work you can change from plow to wagon quick. 5.—In plowing in the orchard, you can't bark fruit trees. 6.—In plowing and cultivating hops it has no equal. 7.—In plowing along the fences you can get two furrows closer. 8.—Horses cannot step over the traces, or calk themselves. 9.—A small boy will handle plow readily. 10.—There is no weight on plow beam. 11.—Team works one-third easier. 12.—There is no chafing, crowding or fretting of team. 13.—For man and team it has no equal. Do not hesitate, but order at once from your nearest agent. Address

DR. HORNE, INVENTOR, 702 MARKET ST., SAN FRANCISCO.

The University of the Pacific.

This school is located midway between San Jose and Santa Clara on the S. P. and S. P. C. railways. This institution of learning was ounded in 1851, 35 years ago, under the auspices of the M. E. Church. It is, therefore, the oldest Protestant college in California. After the usual struggle of young institutions in new States, it has entered upon a career of wide and extending prosperity.

It appeals for its support and enlargement to the Christian public, especially, and, also, to all who are interested in the promotion of a higher moral tone in society and a purer standard of public virtue. It aims to be a university in fact: Christian, but not sectarian, and therefore a seat of liberal scientific, literary and philosophic cultre, in the broadest sense of these terms.

The additional buildings and equipments provided during the past year supply the Faculty with better facilities for the proper performance of their work than ever before.

The new brick building for the Preparatory and Business departments, erected and furnished at an expense of over $45,000, provides every requisite for students belonging to these grades.

The Faculty offer a thorough business course, extending over three years, and including rigid training in grammar, English composition, geography, political and physical; United States history, natural philosophy, anatomy, astronomy, political economy and algebra, as well as arithmetic, penmanship, bookkeeping, business practice and commercial law. Students in this department can also be accommodated with telegraphy and phonography.

The Preparatory department, proper, includes all the branches usually taught in schools of this grade, and is designed to fit students for entrance into college classes of the strictest requirements. Indeed, the Faculty propose that in every respect this department shall rank with the most thorough preparatory schools of New England.

Students belonging to the Preparatory and Business departments are expected to room in the buildings appropriated to this use, the young ladies in South and the young gentlemen in East hall. The sexes meet in the dining-rooms and classes, and may associate at other times under suitable restraints and supervision.

The regulations are sufficiently liberal to permit the ease and happiness of the inmates, and sufficiently strict to provide for their safety. After an experience of many years, it is the unanimous judgment of the Faculty that this method of co-education is stimulating and healthful to both sexes.

The other improvements to be noted are recent additions to the museum; a new observatory, equipped with a fine telescope, transit instrument and chronometer, and better facilities for practical chemistry in the laboratory.

The Conservatory of Music, under Prof. King, has made its way to the very front in this department of instruction. It is no longer necessary for students who desire the most thorough education in music to seek it beyond the limits of their own State—the best facilities are at their own doors.

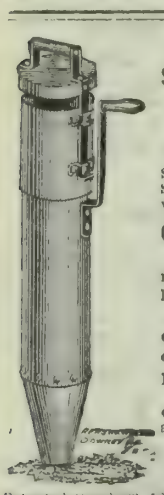
UNIVERSITY OF THE PACIFIC, SAN JOSE, CAL.

Provision is made for instruction in painting, drawing and other branches of art; for voice culture and elocution, and for French, German and Spanish.

A large normal class is conducted by Prof. Cox for training in pedagogics, and this is expected to be one of the permanent features of the University.

A class of young men preparing for the law receive weekly lectures in that branch, and their reading is directed by John E. Richard, L. L. B.

A large and promising class of young men preparing for the ministry are pursuing courses of reading and receiving special theological instruction, under Pres. Stratton, in addition to their regular college studies. This class was organized during the past year, and is regarded as the first step toward a Theological department. Other steps in the same direction must soon follow.



All of these facilities are but adjuncts to the solid and more exacting branches of the regular college classes. Undergraduate courses of study, leading to the degrees of A. B., B. L., B. Ph. and B. S., as well as Post Graduate courses leading to the corresponding master's degrees; and, finally, still higher courses leading to the degree of Ph. D., are open to all who seek to win these literary distinctions.

To these opportunities for the pursuit of knowledge is to be added the influence of a large and orderly and earnest body of students. About 400 have registered in the different classes during the past year. Hence results a literary atmosphere which powerfully tends to bring new recruits into harmony with their surroundings.

A gracious spiritual influence has prevailed during the past winter, and considerable numbers have entered upon a Christian life. These converts have been advised to unite with the churches of their parents or nearest friends, and the Episcopal, Presbyterian, Congregational and Baptist churches adjacent, as well as the Methodist churches of San Jose and Santa Clara, have shared the fruits of this work of the Spirit. No less than six religious meetings, and mostly conducted by themselves, are held by the students during each week. This religious atmosphere keeps alive the moral nature, quickens conscience, leads to sober views of life, and exerts a controlling influence in favor of good order. As a result, cases of discipline are rare; the spirit of the body of students guides and restrains the individual members.

With all of these facilities at command; with commodious buildings; a strong, united and enthusiastic Faculty; a large body of students full of purpose and promise; with a successful history of 35 years behind them, and the manifest blessing of God upon their work, the friends of the University feel that they can safely appeal to the confidence and support of the patrons of higher education in California. Up to this time the response has been generous and growing, and the outlook promises a still larger patronage for the future.

WHAT SCHOOLS

Have better music than those that use the sterling good

School Music Books

Of Ditson & Co.? Carefully compiled, attractive, musical and popular, they are the ones to choose, the next time a change is needed. Please examine.

FOR THE LITTLE ONES.

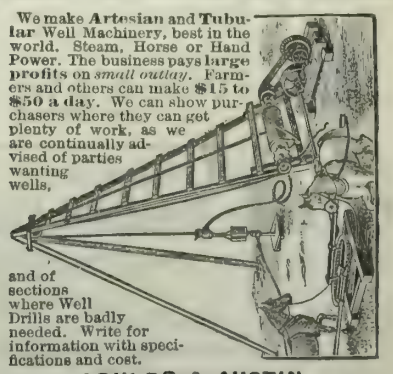
Kindergarten Chimes ($1) is a charming book with songs, plays, games and full instructions for teachers. **Gems for Little Singers** (30 cents, $3 per doz.) is a nice picture song book, as is **Fresh Flowers** (25 cents, $2.40 per doz.)—this last having Sacred music only. **Am. School Music Reader,** Book 1, (35 cents, $3.60 per doz.) First book for learning the notes.

FOR COMMON SCHOOLS.

We can recommend nothing better than the favorite **Song Bells** (50 cents, $4.80 per doz.) for a general collection, and for learning the notes, Book 1 (50 cents) and Book 2 (60 cents) of the **Song Reader,** by Irving Emerson and O. B. Brown. An eminently practical book by practical school music teachers.

FOR THE HIGHER SCHOOLS.

Song Greeting (60 cents, $6 per doz.) is the newest and best book, containing a large number of songs and glees in excellent taste, solfeggios and voice exercises.



☞Please send for full lists and descriptions.

☞Any book mailed for retail price.

OLIVER DITSON & CO., Boston.

C. H. DITSON & CO., - - 867 Broadway, NEW YORK.

We make **Artesian and Tubular** Well Machinery, best in the world. Steam, Horse or Hand Power. The business pays **large profits** on *small outlay*. GRAND AUCTION SALE!

WEST COAST LAND CO.,

San Luis Obispo, Cal.

Incorporated March 27, 1886. CAPITAL, 500,000.

DIRECTORS.	OFFICERS.
GEO. C. PERKINS.....San Francisco.	JOHN L. HOWARD.....President.
JNO. L. HOWARD.....San Francisco.	ISAAC GOLDTREE.....Vice-President.
ISAAC GOLDTREE.....San Luis Obispo.	R. E. JACK.....Treasurer.
R. E. JACK.....San Luis Obispo.	
C. H. PHILLIPS.....San Luis Obispo.	C. H. PHILLIPS, Secretary and Manager.

The WEST COAST LAND COMPANY now offering in subdivisions the

PASO ROBLES RANCH,

Of 20,400 acres, less 6000 acres sold to settlers in the past four months;

THE SANTA YSABEL RANCH,

Of 20,200 acres;

THE EUREKA RANCH,

Of 11,000 acres, and 12,000 acres of the

HUER HUERO RANCH,

All lying in a body, on the S. P. R. R., at its terminus in SAN LUIS OBISPO COUNTY.

Will sell

AT PUBLIC AUCTION

About March 22d (for date see later advertisement) **the balance of the Paso Robles Ranch**, consisting of town lots in Templeton, 800 acres in 5 to 12-acre lots adjoining Templeton, and 14,000 acres in ranch subdivisions;

ALSO,

2100 acres of the **Huer Huero Ranch** in 20 subdivisions.

These are all agricultural and fruit lands, in quality equal to any in the State, with an average annual rainfall exceeding that of Santa Clara county, and require

NO IRRIGATION.

Title, U. S. Patent and to be free and clear of all incumbrances.

TERMS OF SALE.

Lots in Templeton, cash, U. S. Gold Coin. All other tracts one-third cash; balance in 4 equal payments, at 2, 3, 4 and 5 years; interest 6 per cent per annum The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser.

An additional charge will be made of $5, for deed in sale of town lots, and $25 in other cases for expenses of sale, including making and recording all papers.

Schedule price of ranch subdivisions average $20 an acre; of 5 to 12-acre lots, $50 an acre.

SALE WITHOUT RESERVE,

Providing that no bid will be entertained at less than 60 per cent of schedule prices.

Ten per cent of cash payment (but in no case less than $100) required at fall of hammer; 30 days to complete sale. Parties failing for 30 days, forfeit sum paid.

Parties going from Los Angeles take P. C. S. S. Co.'s Steamers from San Pedro to San Luis Obispo. From San Francisco, take 8:30 A. M. daily train, S. P. R. R., to Templeton.

Parties wishing to inspect said lands with a view to purchasing at the Auction, or any of the Company's Land at private sale, will be shown the property free of charge by applying at the Company's office in Templeton.

Maps of all the ranch subdivisions, of Templeton, of the 5 to 12-acre suburban lots, and a general map showing the location of the Company's lands with a new descriptive catalogue are in press and will be sent free on application after the 25th inst. (February, 1887.)

San Jose Property on the Rise.

THE GARDEN SPOT OF CALIFORNIA.

I submit the following list; many of them are great bargains—JAMES A. CLAYTON.

236 ACRES of good land, seven miles from San Jose—in the hills—commanding a most beautiful view of the valley; over 200 acres are now cultivated; the hills are rented for $4.50 per acre, cash rent, for raising early potatoes and peas; house, barn, etc.; this is a good place and is a bargain. $10,000.

39 ACRES near Santa Clara; good land; 18 acres in fruit; one-half in bearing; house, ten rooms; barn, windmill, tank, etc. $3000.

5 ACRES in the Willows, in full bearing; one-third apricots, one-third peaches, one-third prunes; house, 4 rooms, hard-finished; small barn; on Hicks ave.; last year apricot crop sold for $515—only 2 tons fruit; 6 tons expected this year. $4500.

60 ACRES north of S. J. Water Co. reservoir, above Saratoga, about 14 miles from San Jose; good road to place; 10 acres in vineyard, in full bearing; 500 fruit-trees; tanks, barrels, etc., 5000 gallons; house, 4 rooms; barn, 2 wagons, horse and cart, spring wagon; all tools. $4300.

10 ACRES near Berryessa; three miles from center of San Jose; six acres in fruit, best variety, in bearing; house, four rooms. $5000.

10 ACRES, beautifully located, on Alum Rock avenue (a beautiful suburban avenue) three miles from San Jose; a beautiful view is had of the city and valley, being about 100 feet above the city; land adjoining is selling at $25 per acre advance. **Price, $225 per Acre.**

SUBURBAN HOUSE, adjoining the city limits, on 12th street (1½ miles from the post-office); 3½ acres; good soil; house, six hard-finished rooms; barn, etc.; flowing well. $3000.

CHOICE VINEYARD, 80 acres, all improved; location is eight miles from San Jose; a beautiful spot; 60 acres in vines in bearing; 10 acres in French prunes, five acres apricots and five acres assorted; house and other buildings. $20,000.

130 ACRES good land, near Mt. View (town); part in orchard, about 10 acres; small vineyard; good house and other buildings. $17,000.

30 ACRES, 2½ miles west of Mt. View; valley land; 300 acres olive trees, three years old; balance all in vines one and two years old; this is the making of a fine place; cheap. $6750.

60 ACRES; choice land west of Santa Clara; 40 acres in two-year-old vines; best varieties; trees—700 prune, 700 silver prunes, 750 apricot, also two years old. $12,500.

15 ACRES; orchard in the Willows, in bearing; good variety; location is No. 1; will compare with any five-year-old orchard; $1500 last year's crop sold for; will be much larger this year. $10,500.

25 ACRES; a fine apricot orchard, five years old; two miles from San Jose. $12,500.

12 50-VARA LOTS, bounded by three streets; part in orchard. $6000.

ON SANTA CLARA STREET, 137½x137½ feet; N. W. Cor. Eleventh street. $4800.

ON FIRST STREET, within two blocks from the court house; N. W. corner lot; 90x100 feet. $6250.

ON DELMAS AVENUE, lots 50x137½ feet. $350.

ON MARLIERE STREET, 50x137½ feet. $300.

We do business on the square. Sell on Commission only. Information reliable.

JAMES A. CLAYTON,

16 West Santa Clara Street, - - - SAN JOSE, CAL.

FRESNO COUNTY.

BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, to 20 acres, being 2½ times the usual amount supplied for colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is $3.75 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without teams are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for $150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads. Nearly one-half already sold.

Price, $22 to $40 per acre, on very easy terms to actual settlers.

The Legislature.

As we go to press Wednesday evening, it seems almost certain this body will adjourn Thursday or Friday at the farthest. The Senate has its grip-sack in hand, and waits the movement of the Assembly. As the swallows homeward fly, there have been indications for several days of the last gasp in the wild raid upon papers, pens, penholders, pencils, envelopes, inkstands and other property of the dear people. The grab characteristic of this body is strong in death. A resolution instructing the Secretary of State to deliver free of cost to each Assemblyman one copy of the Constitutional Convention of 1879, worth, it is said, about $40 a set, or $3200, passed with only one dissenting voice. The Senate adopted a similar resolution and $1600 more went. The raiding, thieving fever was now at its hight and a resolution was introduced, giving to each Assemblyman a copy of every book, chart or map issued by the State Engineer. With complacent unanimity these keepsakes were pocketed. We only wonder they did not call for an express-wagon and carry away the chairs, desks and gilded dome of the capitol. The raid was manfully opposed by a number of faithful representatives, and we are glad to see that the farmer members have done their duty well.

Senate Constitutional Amendment No. 2, relating to the reorganization of the Supreme Court, has been amended by the Assembly, making the office of Chief Justice four years from January after the regular election of Justices, and providing that the Supreme Court Commission shall continue for such time after the four years subsequent to the adoption of the amendment, as may be fixed by an Act passed by a vote of two-thirds of the elected members of the Legislature, if approved by the Governor.

It is well that the little bill before the Senate providing for the repeal of the Act compelling banks to make a semi-annual statement was denied a final passage. What will become of the notice of reconsideration is hard to tell. Brierly's bill for a commission on irrigation was amended so as to include the subject of hydraulic mining and the appropriation raised to $70,000, and will become a law. A compromise memorial on hydraulic mining was adopted in both houses. This memorial asks Congress to spend the $40,000 set apart for litigating the miners in sending out a corps of engineers to study the subject in all its bearings, including its past, present and prospective effect upon the navigable waters of the State.

The constitutional amendment for the reorganization of the Supreme Court has passed the House.

The Governor surprised every one, Tuesday, by vetoing the bill providing an appropriation for establishing a fund for the purchase of jute to be manufactured at San Quentin prison. The reason assigned for vetoing the bill is that an Act of 1885 appropriated for the purpose above set forth the sum of $40,000 as a revolving fund. The new bill adds largely to the fund, and authorizes the manufacture of jute goods without limitations. The bill appropriates $70,000, which would make the revolving fund $110,000, and the Governor says it is excessive and too indefinite. In addition to the revolving fund, about $260,000 will be appropriated for the use and support of the prison. It is virtually placing over $370,000 in the hands of the Directors to invest in purchasing jute and manufacturing jute goods, and in protecting such investment. The bill encourages investment beyond the requirements of the State Prison.

The Governor has approved the bill giving the Boards of Supervisors the right to open, improve and maintain public parks exceeding 10 acres. This is intended to apply to Golden Gate park. The most noticeable and interesting feature just now is the apparent determination to put through the Brooks Pilot bill that has been slumbering for some time in the Senate Committee of Commerce and Navigation. There will be a bitter fight before this can be done, as the pilot and tugboat men have many friends who are good debaters.

The bill intended to grant the Fish Commissioners the right to place a tax upon Chinese fishermen, who are sending millions of dollars worth of fish out of the State every year, without paying as much as a penny therefor, was called up on reconsideration and passed by a vote of 57 to 20.

Tuesday a message was received from the Governor announcing that he had approved Assembly bills 390 and 181. The first appropriates $5000 for the erection of a monument over the grave of J. W. Marshall, the discoverer of gold in California, at Coloma. The other is an Act to amend Section 4008 of the Code of Civil Procedure of the State of California, concerning the issuing of alias summons.

SAN DIEGO decided, at an election held February 26th, to issue $400,000 worth of bonds for constructing a system of city sewerage. The vote stood 1084 to 83. Col. Geo. Waring, sanitary engineer, is to superintend the work of construction.

SANTA CLARA MISSION.—In our last issue, in the article on San Jose, the date of the founding of the Santa Clara mission is given as 1677. The correct date was probably 100 years later.

Napa Grape-Growers and an Agricultural Society.

We learn from our local exchanges that a meeting of farmers was held in the Courthouse at Napa, Feb. 26th, at which it was decided to organize an agricultural society for Napa county and file articles of incorporation.

On motion, 11 persons were chosen a Committee on Incorporation to act as directors for a term of three months, as follows: M. M. Estee, Nathan Coombs, John Even, Leonard Coates and Jos. Cowan, of Napa; A. J. Raney, of Gordon Valley; W. F. Fisher, of Calistoga; John Thomann and B. O. Carr, of St. Helena; J. J. Swift, of Soscol; Harry L. Coleman, of Monticello. These gentlemen were selected from different parts of the county and as representing varied interests. They are to meet again to-day (March 12th) for the purpose of completing the organization, after which by-laws will be adopted, and subscriptions for life-membership solicited.

After the business of the Agricultural and Fair Association was disposed of, Hon. M. M. Estee, president of the Napa Grape-Growers' Association, called attention to the State Viticultural Convention, to be held in San Francisco, and about $25 was collected toward defraying the expenses of that body.

The subject of grafting was then brought up, Mr. Estee suggesting that in early grafting a liquid wax be used, in order to keep out moisture.

Mr. Coates gave as a recipe for such wax, two pounds of beeswax, one pound resin and one-half pound tallow, cooked well together.

Mr. McClure thinks it a great mistake to graft a vine too young. The larger it is, the better the chances for its growing.

Mr. Thompson approved Mr. Curtis' recipe, and said that in grafting small vines, prepared cloth should be employed, as the nurseryman uses it for root-grafting. It should be soaked in wax. This holds the vine together and excludes air and moisture.

Scale pests being spoken of, Mr. Estee expressed the opinion that every large orchard in and around Napa was more or less infected with the black scale, and intelligent efforts are needed to exterminate it. All present agreed that the cottony cushion scale is quite too numerous in Napa and that something must be done shortly to rid the town of this pest.

After further discussion on kindred subjects the meeting adjourned for one month.

Irrigation.

The bill relating to irrigation known as "Wright bill," has received the Governor's signature, and is a law. We have not received a copy since the amendments were made in it, but we shall secure and publish it as soon as possible. In a general way it may be said that the law provides for the organization and government of irrigation districts, and for the acquisition and distribution of water for irrigation purposes. It provides for the application of the law of eminent domain for the condemnation of the existing water rights (with compensation to injured parties), and is in harmony with the recent decision of the Supreme Court on the irrigation question. It also provides a system of elections and assessments and the collection of revenues necessary to carry out the provisions of the Act.

SAN JOSE HORTICULTURAL HALL ASSOCIATION.—A meeting of the Directors of the Horticultural Hall Association was held on Saturday last, at which, as we learn from the *Herald*, President Jones announced that Mr. Hale's mortgage for $1604 had been canceled. It was resolved to indorse the Committee—Mrs. S. T. Ingalls, Frank Dunn, Cyrus Jones—appointed by the Grange to solicit contributions to defray the expenses of a delegation of ladies to represent San Jose and keep up a flower booth at the Santa Cruz Flower Fair. President Jones stated that he had talked to most of the exhibitors, and all had expressed themselves perfectly satisfied with the Central California Citrus Fair.

Our New Street No., 220.

Upon first occupying our present location on Market street, we found our premises numbered 252, and the next door east of us (toward the water front) numbered 218. This discrepancy of numbers has confused people coming up to our office from the ferry-landing. One-fourth of a block above us on Market street, appear the numbers 400 and upward. Parties coming down the street and seeing the numbers 400 and upward, knowing our number to be 252, have naturally concluded that they had a block or two to walk before reaching our place, and have frequently passed by our office to suddenly find themselves abreast of numbers 200 and odd, and have to retrace their steps. Much confusion has occurred in this manner. For this reason we have adopted No. 220 Market street, hoping in a measure to avoid the difficulty, and trusting that some day the city authorities will take the matter in hand, and see that Market street, in our locality, is properly numbered.

Rural Seed Offering—1886.

Great Inducements for New Subscriptions.

To encourage gardening and further extend the circulation of the PACIFIC RURAL PRESS, we will offer, while this notice remains in our columns, to furnish to all old or new subscribers the following seeds on the favorable terms named below:

☞ *Refer to Nos. in latest issue when ordering.*

For $1.00 we will furnish new subscribers the PACIFIC RURAL PRESS for three months, and $1.00 worth of the above seeds. For $1.75 the RURAL six months and $1.00 worth of seeds. For $3.25 the RURAL 13½ months, and $1 worth of seeds. For $4.50 the RURAL for 19 months and $1 in seeds. The seeds will be carefully forwarded, post paid, from some one or more of our leading and reliable seedsmen, whose name will accompany the package. In ordering, write on a separate sheet the *number only* of each article wanted as numbered, together with your address.

Old subscribers can advance payment so that their subscriptions will be paid the same length of time in advance and receive the same terms as above. Those who have remitted since this offer was made can send the additional amount which would have entitled them to a premium, and receive the same by stating which numbers they prefer.

For other kinds of seeds, or for seeds in larger packages, patrons are referred to reliable seedsmen advertising in this paper. We wish to aid in increasing the planting and cultivation of gardens.

We are not going to embark in the regular seed business, and have not time to investigate or answer many questions of private interest only, nor respond to orders received without remittances.

Subscribers will please notify neighbors who do not take this paper of this offer, and the merits of the RURAL.

In writing correspondence, items of information, or on other business, please use a separate sheet.

LIBERAL RELIGIOUS LITERATURE. — Views, Opinions, and Sentiments of Eminent Writers on Religion and its Relation to Man and Society, *sent free.* Address,

MISS HARRIET KELSEY, Sec'y,
Unitarian Church, San Francisco.

Correspondence invited.

AGRICULTURAL BOOKS.

Sold by Dewey & Co., Publishers "Pacific Rural Press."

CALIFORNIA FRUIT GROWER.—A practical Handbook for the orchardist (in preparation).

CATALOGUE OF EUROPEAN VINES—With synonyms and brief descriptions, by I. Bleasdale, D. D. Invaluable to those growing the vinifera. Price, in pamphlet, 50 cents.

ORANGE GROWING IN CALIFORNIA—By T. A. Garey, of Los Angeles. The most comprehensive treatise on the growth of this fruit. It contains full instructions for growing the trees, planting and care of orchards, etc.; 227 pages. Price, 75 cents.

SILK GROWERS' MANUAL—By W. B. Ewer, A. M. A practical treatise full of useful hints for beginners in this State; 20 pages. Pamphlet, price 25 cents.

FRUIT GROWERS' CONVENTION REPORTS.—These annual conventions have resulted in bringing out the best and most useful information concerning the growth of different fruits in this State. The subjects discussed are of the most direct practical value and the facts laid down will prove helpful and suggestive to all in the fruit business. We have the reports of 1881, 1882, 1884, and 1885—the first for 10 cents, the others at 25 cents each.

THE AGRICULTURAL FEATURES OF CALIFORNIA—By Prof. Hilgard, 138 large pages, bound in stiff cloth, with colored maps, $1. This book is the best general review of California soils, climate and productions in existence.

NILES' STOCK AND POULTRY BOOK—Pamphlet, giving directions applicable to poultry growing in this State; 120 pages, post-paid for 50 cents.

KENDALL'S TREATISE ON THE HORSE AND DISEASES—Post-paid for 25 cents.

ARCHITECTURE SIMPLIFIED OR HOW TO BUILD A HOUSE.—Contains plans and amounts of materials for a number of buildings from a little cottage to a large dwelling. Price, ——

Books for the Household.

We desire to give our readers every advantage in obtaining useful books at the most favorable rates attainable. We offer below a number which we believe will be found acceptable to many readers of the RURAL, and the reduced prices at which we can furnish them to our cash-in-advance subscribers—POSTPAID—will place them within the reach of many.

WHAT EVERY ONE SHOULD KNOW.—A Cyclopedia of practical information. Gives full directions for making and doing over 5000 things necessary in business, the shop, the farm, the kitchen and the home. Recipes, prescriptions, trade secrets, law, art work, agriculture, etc. Compiled from the most reliable sources and alphabetically arranged by S. H. Burt. 510 pages, cloth. Postpaid 50 cents. Regular price, $1.

THE WAY TO DO MAGIC. — Illustrated. Plain directions to enable any one to become proficient in Jugglery and Legerdemain. 60 pages. Postpaid, 10 cents.

THE TAXIDERMIST'S MANUAL.— Illustrated. How to Collect, Prepare, Mount and Preserve all kinds of Beasts, Birds, Insects, etc. By Prof. Graham Allen. 64 pages. Postpaid, 10 cents.

KNITTING AND CROCHET.—A Guide to the Use of the Needle and the Hook. Edited by Mrs. Croly (Jenny June). 144 pages, 200 illustrations. Postpaid, 25 cents. Regular price, 50 cents.

NEEDLE-WORK.—A Manual of Stitches and Studies in Embroidery and Drawn Work. Edited by Mrs. Croly (Jenny June). 126 pages, 200 illustrations. Postpaid, 25 cents. Regular price, 50 cents.

LADIES' FANCY-WORK.—A Manual of Designs and Instructions in all kinds of Needle-Work, embracing Embroidery, Kensington, Lace-Work, Tatting, Net-Work, Wax Flowers, Painting on Silk, etc. Edited by Jenny June. 152 pages, 700 illustrations. 25 cents, postpaid. Regular price, 50 cents.

Easy Binder.

Dewey's patent elastic binder, for periodicals, musi and other printed sheets, is the handiest, best and cheapest of all economical and practical file binders. Newspapers are quickly placed in it and held neatly, as in a cloth-bound book. It is durable and so simple a child can use it. Price, size of Mining and Scientific Press, Rural Press, Watchman, Fraternal Record, Masonic Record, Harper's Weekly, and Scientific American, 75 cents; postage, 10 cents. Postpaid to subscribers of this paper, 50 cents. Send for illustrated circular. Agents wanted.

Eastern Agency for the Sale of California Lands.

Located in Santa Clara county and Upper California. Special arrangements are being made with persons in Minnesota, Iowa and the Northwestern States to advertise this agency, and to induce people to locate in this part of California. All persons in this part of the State having property, consisting of fruit lands, or lands suitable for subdivision into fruit or stock farms, will please correspond with this agency. Address H. R. BARDWELL, N. E. Cor. Market and Santa Clara streets, opp. P. O., room 4, San Jose.

WE WANT A GOOD, RELIABLE, ENERGETIC MAN in every county on the Pacific Coast to act as our agent for the sale of several new publications, of great merit and unusual interest. To the right parties extraordinary inducements will be made. Territory is rapidly being taken up. Apply at once for terms and territory to A. L. BANCROFT & CO., 607 Market St., San Francisco. Mention this paper.

A STALLION SHOW is to come off at the San Jose Fair Grounds the 19th instant, when it is expected that large numbers of trotting, draft and general utility horses will be shown.

California Inventors Should consult DEWEY & CO. AMERICAN AND FOREIGN PATENT SOLICITORS, for obtaining Patents and Caveats. Established in 1860. Their long experience as journalists and large practice as Patent attorneys enables them to offer Pacific Coast Inventors far better service than they can obtain elsewhere. Send for free circulars of information. Office of the MINING AND SCIENTIFIC PRESS and PACIFIC RURAL PRESS, No. 252 Market St., San Francisco, Elevator, 12 Front St.

NEW IMPORTATION

—OF—

NORMAN STALLIONS.

Theodore Skillman has just arrived from France with the choicest importation of Norman Stallions that has ever reached the Pacific Coast. Mr. Skillman has selected these horses from the best in France, with a view to the improvement of draft horses on this Coast. They are young and sure to suit the tastes of intending purchasers as regards color, etc., a number being coal-black. He has also on hand some Imported French Coach Stallions. These horses are now very popular in the East and have long been the favorite carriage horses of France. Their merits speak for themselves. Come and inspect this rare collection of horses and be convinced that they are the best ever seen on this Coast.

☞Catalogue for 1887 sent free on application.

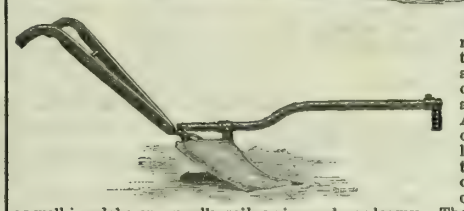
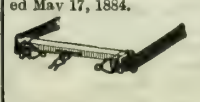
BANDMANN, NIELSEN & CO, General Agents, San Francisco.



ORCHARD AND VINEYARD
One-Horse Single and Two-Horse Gang Plows

— AND —



VINEYARD CULTIVATORS OF ALL KINDS.

These Plows are Guaranteed to be the Best Orchard and Vineyard Plows made. Read the Testimonials below.

The single plow can be set to any position, and can be run to or from the trees or vines and within an inch of them without any injury to the same. The handles are also movable, and can be changed from one side to the other to suit the circumstances. This plow has several advantages over all other Vineyard and Orchard plows. Among these are: By changing the beam, no matter to or from the land, the plow will always run in a straight line. By the revolving drop clevis, the plow can be set to or from the land, or in depth. With this plow a man can plow a straight furrow, when he could not with other plows where the beam runs across them. It works as well in adobe or gravelly soil as in sandy or loamy. The plow weighs about 50 pounds. This plow will fill a long-felt want among orchard and vineyard men, who fully appreciate its great value. Plow and Singletree patented May 17, 1884.

PRICE LIST.—Single Plows, with singletrees, $15; Gang Plows with Garden City Plow bottoms attached, $35; Doubletrees with Patent Singletrees, $4.50. Extra Shares, $3.00. Extra Shares can be had of me.

TESTIMONIALS:

HOLLISTER, Sept. 11, 1886.

J. A. BILZ—Dear Sir: I take pleasure in testifying to the good merits of the plow and harrow made by you, which I have used at my vineyard to my entire satisfaction. WM. PALMTAG.

RUBY HILL VINEYARD, PLEASANTON, CAL., July 24, 1886.

J. A. BILZ, ESQ., Pleasanton, Cal.—Dear Sir: Your two-horse Vineyard Gang Plow is a great success. It saves $2 a day over the old method of plowing, and is light in draft. We have two of them with which we turned under weeds this last spring over a foot high, and left the land in excellent condition. CRELLIN BROS.

CRESTA BLANCA VINEYARD, LIVERMORE, CAL., Nov. 27, 1886.

MR. J. A. BILZ—Dear Sir: I have tried several vineyard plows on my place, but none have given such good satisfaction as yours. I take pleasure in recommending it to those who desire good work done economically. CHAS. A. WETMORE.

FRESNO VINEYARD, April 9, 1886.

I have tried Mr. Bilz's double plow, and although very skeptical at the time, I must acknowledge it worked well, and I am much pleased with it. I have made up my mind to put them in the vineyard. D. D. HUDSON, Supt.

PLEASANTON, Sept. 9, 1886.

J. A. BILZ, ESQ.—Dear Sir: I take pleasure in recommending your two-horse Vineyard Plow which I know to be a success, having purchased three of them in plowing in the past season, in my vineyard. Undoubtedly, they are the best implement of the kind I ever used. They are light in draft. It turns the ground over well, and is so regulated you can plow any depth you desire, and it leaves the ground even. It also turns the weeds under better than other plows I have used. I have saved $2.50 per day on each plow. I would not be without the plow for twice their cost. Yours truly, J. A. ROSE.

LIVERMORE, August 1, 1886.

J. A. BILZ, ESQ., Pleasanton, Cal.—Dear Sir: We have used one of your Vineyard Gang Plows during the past season and believe it to be a good plow, doing the work in a thorough and economical manner, and can heartily recommend it to those wishing an implement of this kind. Yours respectfully, S. OSTERHOUT.

LIVERMORE, Feb. 1, 1886.

MR. J. A. BILZ—Dear Sir: I have tried your vineyard plow and find that it works well and gives perfect satisfaction, and I take pleasure in recommending it to any one who wishes a good vineyard plow. Your patent singletree is also a success, and when used in an orchard will save many a tree from being injured. Yours truly, F. KURTZ, Foreman of C. A. Wetmore's Vineyard.

Persons interested in Vineyards and Orchards are invited to call at my shop and examine and try the plow. It is warranted to do all claimed for it. For further particulars apply to

S. F. Market Report

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, March 9, 1887.

The past week has shown a greater degree of activity in produce than witnessed for several weeks past, due chiefly to warmer weather, with more sellers and buyers in the market. This is noted more at length in another column. The English wheat market has continued to make steady advances under stronger buying and only moderate offerings from this side. The following is to-day's cable:

LONDON, March 9.—Cargoes off coast, nothing offering; Californian prompt shipment not offered; Cargoes on passage and for shipment, firm but not active; Mark Lane, firm; Cal. wheat just shipped, 39s; Cal. wheat nearly due, 38s 3d; French country market, rising; Liverpool wheat, spot, quiet, but steady; Liverpool wheat, Cal. 7s 6½d@7s 9½d.

Eastern Wheat Markets.

NEW YORK, March 6.—Spot has been in moderate request at firm prices. Options ruled irregular, with a fair degree of activity, closing excited and strong, with gains of from 1⅝@2c; April, 92⅝; May, 93⅜; June, 93⅞; July, 94⅛; August, 94⅛; September, 94⅞; December, 98⅜.

CHICAGO, March 8.—There was wild excitement in the Board of Trade all day. The advance in May wheat from the lowest price of yesterday to the highest to-day was five cents. The market has cornered itself and has been captured by the Nevada Bank syndicate.

Continental and English markets very clearly show the effect of the Chicago boom. The American markets are all higher, but they don't keep up to Chicago in the rapidity of movement on short. This afternoon wheat got up to 86 cents on the curb and opened at 86⅛ cents for May at 2 o'clock. From this time there was free realizing. There was a wild market until bottom was struck at 83¾ cents, when it became steadier, closing at 84⅛ cents. Prominent brokers say there's no doubt of a big "squeeze." Liverpool, California and New York markets are being manipulated likewise. Crashes of small houses are anticipated before long.

Crops at the East.

CHICAGO, March 7.—The crop summary in the *Farmers' Review*, this week, is as follows: Thus far reports from the winter wheat belt indicate that the crop is emerging from the winter in better shape than last year. The crop is not assured from the resulting damage of storms and bad weather, and still has to pass through a critical period; but as a whole the outlook must be regarded as more favorable than at the beginning of March of last year. The extremely mild weather of the opening days of last week, followed by cold weather, caused some injury in Illinois and Indiana. In Michigan and Wisconsin the outlook is reported as very favorable. The season is well advanced in Missouri, and spring plowing has commenced. There is no change in the tenor of reports from Kansas. Fully one-half of the counties report very poor outlook for wheat.

The Chicago Fruit Market.

CHICAGO, March 5.—There is no material change in the fruit market. Inquiry as yet is only moderate, but offerings also are rather light. Some apples are selling all the time on the open market, and there is moderate trading between jobbers in other lines of fruit within about the previous range of quotations. For California dried fruits there is moderate inquiry, and at late quotations the market rules about steady. Prunes, French, per lb, 7@9c; plums, pitted, 10@11c; peaches, halves, 11@12½c; halves, pared, 20@21c; figs, 6@8c; nectarines, 9c; pears, 8@12c; raisins, London layers, 20-lb boxes, per box, $1.35@1.40; loose Muscatel, per box, $1.25@1.30. Oranges are steady and rather firm for choice, which are only in moderate supply, but there are a good many common on hand yet, and these being easy prevents any material improvement in the general market. California bright Riverside, $1.75@2.50; California Navel oranges, according to quality, $3@6.

Eastern Wool Markets.

NEW YORK, March 6.—There was little more doing, and slight concessions on fleece were made, but as a general thing, holders were firm in their views. The demand is moderate and manufacturers are independent. Some odd lots of Territory and Texas wools are said to have been closed out at low prices and not reported. Among the sales were 25,000 lbs Territory at 18½@22c, and 15,000 California and 10,000 Territory on private terms. California northern spring clip is quoted at 20@26c; do fall clip, 14@17c; California southern spring clip, 14@18c; do fall clip, 11@12c.

The Philadelphia market is quiet, most sales being of small lots for actual requirements. Holders are free sellers, and are occasionally shading prices. Among sales were 2000 pounds Territory fine at 21c, and 15,000 pounds Territory at 23c.

The Boston market is in buyers' favor. Among sales were 73,000 pounds Territory at 24@26c; 81,000 pounds California spring and Oregon at 18½c and on private terms.

BOSTON, March 8.—Wool is in fair demand and prices are firm. Ohio and Pennsylvania fleeces, 32@33c ₩ lb; do XX, 34@35c; Michigan extra, 31@32c; Ohio delaine, 36@37c; Michigan do, 34@35c; pulled wools, choice super, 38@42c; fair to good super, 30@35c; extra pulled, 27@32c.

NEW YORK, March 8.—Wool is quiet and barely steady. Domestic fleeces, 38c ₩ lb; pulled, 14@35; Texas, 9@25c.

New York Hop Market.

NEW YORK, March 6.—The market is steady, without new features. Coast crop of 1886, best, 21@23c; same, common to good, 16@19c; 1885, good to prime, 8@10c.

Dried and Canned Fruit at the East.

NEW YORK, March 6.—Canned Goods—The market is strong, but the demand is generally light. California canned peaches, $2.50; pears, $2.50@3.25; plums, $1.75@2; apricots, $2.10.

Raisins—There is little more doing, but as a rule buyers appear opposed to purchasing with a view to supplying future wants. Malaga and California raisins are nominally unchanged; California loose Muscatel, $1.50; London, $1.70@1.65.

Prunes—Turkish are in improved demand at 5¾@5½c; Bohemian, steady at 4¾@5c; French, 7¼@8c for 60's and 90's.

Currants—Firm, at 4½@4⅝c.

Local Markets.

BAGS—The market is easier, with more sellers than buyers at quotations. Calcutta standard sized are quoted at 6¼@6⅝ for June-July delivery.

BARLEY—The market, after falling to 97½c@$1 for No. 1 feed, reacted under strong buying to $1.02½ to $1.05. Buying has been chiefly for consumption, shipping and speculation. The consumption continues very heavy. The following are to-day's sales on Call:

Morning Session: Buyer season—100 tons; $1.04¾; 100, $1.04⅝; 600, $1.04½; 600, $1.04¼; 200, $1.04; 200, $1.03⅞; 100, $1.03¾; 200, $1.03⅝; 1200, $1.03½; 400, $1.03¼; 100, $1.03⅛; 1100, $1.03. May—100 tons, $1; 200, $1.00⅛. No. 1 Brewing, buyer season—100 tons, $1.14⅞ ₩ ctl. Afternoon Session: Buyer season—100 tons, $1.03⅛; 600, $1.03; 100, $1.02⅞; 300, $1.02¾; 200, $1.02 5-8; 200, $1.02½ ₩ ctl.

BUTTER—The market has a stronger tone, owing to dealers confining purchases to fresh roll. Receipts are large, but, as yet, do not accumulate.

CHEESE—The market continues to sink under free receipts and only a moderate demand.

EGGS—Receipts are in excess of the demand, causing lower prices to rule. Under the lower prices the consumption is largely increased.

FLOUR—The market in sympathy with a stronger wheat market is firmer, with an advance asked, but, as yet, not established. It is claimed that quotations will soon be higher.

WHEAT—Trading the past week has been large, with all parcels offering on the market quietly taken in up to quotations. Stocks now here are well concentrated. On Call, prices have been pushed up, from day to day, until an advance of over 13 cts per cental was paid on last week's prices. The following are to-day's sales on Call:

Morning Session: Buyer season — 1000 tons, $1.70; 100, $1.69⅞; 2000, $1.69¾; 500, $1.69⅝; 1800, $1.69½; 500, $1.69⅜; 2700, $1.69¼; 200, $1.69⅛; 1400, $1.69; 400, $1.68¾. Buyer 1887—300 tons, $1.73½; 200, $1.73; 400, $1.72½; 1300, $1.72¾. Seller 1887—3600 tons, $1.55; 500, $1.55¼; 100, $1.55½ ₩ ctl. Afternoon Session: Buyer season—100 tons, $1.68¾; 400, $1.68½; 200, $1.68 5-8; 100, $1.68¼; 100, $1.88½; 4400, $1.68. Buyer 1887, 100 tons, $1.72½; 200, $1.71¾. Seller 1887—300 tons, $1.54¾; 600, $1.54⅜; 100, $1.54 5-8; 100, $1.54½; 200, $1.54¾; 100, $1.54; 100, $1.53⅞ ₩ ctl.

[COMMUNICATED.]

Market Information.

Cereals.

European advices report that Great Britain will require to import from February 1 last, to August 31 next, at least 100,000,000 bushels of wheat, so as to keep the reserve stock from decreasing. To obtain this, free importations will have to be made, which necessarily will send values in the supply markets to still higher prices. The Indian wheat acreage is officially placed at last year's, with the outlook favorable to an average outturn. As the consumption in that country is increasing, and the reserve stock greatly reduced, there will be a lessened exportable surplus. Eastern advices continue to give the wheat situation as very strong, due to large reduction in the visible stock, and large exporting. It is claimed that the decline in values, last month, forced many holders of wheat to sell which was taken in by exporters and bull speculators at lower prices. With weak holders cleaned out, better prices was a natural consequence. Crop advices are without any material change to note. In this State there is nothing new to report about the crop. The weather continues favorable for the growing plant. In the local market a sharp advance in prices was made on Friday and Saturday last, followed by still better prices on Monday. The advance was due to an improved market at the East, and a large short interest on Call, filling. Holders of large parcels are firm in their advanced views, claiming that before next harvest they will be reached. This opinion is based on the large tonnage in port, and an almost certainty of higher prices for wheat abroad.

The barley market ruled strong throughout the week, under better buying on the long side. It is claimed that there is a large short interest on Call, which, if correct, may be forced to fill any day at better prices. It is now reasonably certain that the stock of barley in this State on January 1 last, given out by the Produce Exchange, was largely exaggerated, thus proving the correctness of this paper's assertion that the Produce Exchange's large stock return was wrong. The demand the past week showed a decided increase for consumption and also seed, as well as for shipment. Crop prospects continue very favorable.

The oat market continues to hold to strong prices for choice grades, but is slow and easy for off grades, owing to the over-supply of the latter in this city.

The market for corn is barely steady. The demand is reported to be improving, but the stock of Western here and to arrive is claimed to be largely in excess of the trade wants for the immediate future.

The rye market has a quiet but steady tone.

The demand for buckwheat is light, but the supply is also light.

Feedstuffs.

Ground barley is lower, but strong at the decline. Bran and middlings are quiet but steady, as is feedmeal.

Choice to extra choice hay continues light, causing dealers to bid well up so as to have their wants met. Poorer grades are offering freely at the lower prices.

Live-Stock.

Beef cattle are lower under free offerings. It is claimed that a still lower range will rule, owing to the improved pasturage allowing them to take on flesh more rapidly. Those now coming in are in fine condition and weigh more to the bullock—fetching more per head but less by the pound. Mutton sheep are steady, at the last quoted advance. After shearing it is claimed that lower prices will obtain. Hogs continue stiff, under light supplies and a good demand. Carriage horses are scarce and fetch good prices. Sales of matched teams, good steppers, and fine carriage, sell at from $700 to $1000 a span. Common work horses are slow and hard to sell.

The following are the wholesale rates of slaughterers to butchers:

BEEF—Extra, 7@7½c; first grade, grass fed, 6½@7c per lb.; second grade, 5½@6c; third grade, 5@—c.

MUTTON—Ewes, 6¾@7c; wethers, 7¼@8c.

LAMB—Spring, 12½@15c.

VEAL—Large, 5@7c; small, 6@9c.

PORK—Live hogs, 4¾@5½c for heavy and medium; hard dressed, 7@8c per lb; light, 4½@5c; dressed, 6¾@7¼c; soft hogs, live, 3½@4c. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Fruits.

Oranges are in heavy supply, necessitating some dealers to close out consignments accepting lower bids. At the lower prices, coupled with finer weather, the demand shows a decided advance. Shipments to Northern ports are increasing.

Apples are in freer supply, with Eastern pressing the market, but lower bids are only accepted to close out an assignment.

Limes and lemons continue to rule strong for the more choice.

Dried fruits are steady at full quotations. The stock here and supply to draw from are light.

Raisins, unless very choice, are placed with difficulty. Dealers quote lower. The stock here is light.

Vegetables.

Potatoes are higher, with a strong closing at the advance. The supply of choice is light, with a good demand ruling for the more desirable grades. New are coming in more freely, with the quality still improving, allowing their being shipped North on orders.

The onion market continues poorly supplied with choice grades, causing buyers to bid well up so as to have their wants met. Off grades are in good supply at the lower prices.

Spring vegetables are coming in more freely, creating lower prices. It is claimed that with warmer temperature receipts will show a still larger increase and lower prices before the month closes.

Cabbages are in fair supply. The demand continues to be confined chiefly to distant orders.

Root vegetables are steady at full quotations.

Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1887.	1886.
On the way	201,703	166,509
In port, disengaged	125,927	61,840
In port, engaged	16,370	57,214
Totals	344,000	285,563

The above gives a carrying capacity as follows: 1887, 550,786 short tons; 1886, 456,900 short tons; increase over last year, 93,886.

Beans are easy, at a slight decline, owing to freer offerings.

Ducks, geese, turkeys, and choice young hens and roosters are scarce, and higher.

In game, the market fluctuates daily.

Hops are steady, with holders not offering at present prices.

Wool is very dull; buyers appear to be bidding down so as to purchase the Spring clip at low prices.

Lard is higher and strong, at the advance.

Honey is quiet, but strong at the higher quotations.

Fruits and Vegetables.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

A NEW FRUIT EVAPORATOR.

A large number of fruit-growers who suffered heavy losses in past seasons, on account of their inability to bring their fruits to market from remote locations, or [to] otherwise handle the same to a profit, will be glad to hear that a most perfect machine for evaporating all kinds of fruits, potatoes, vegetables, etc., has recently been patented, and can be put to practical use this coming season. Its principal features of improvement on machines of this kind are: An ingeniously constructed furnace for heating the air rapidly with the smallest amount of fuel; a heat regulator which can be made to work automatically, and maintains the heat at any desired degree, and a suction fan which circulates the hot air through the apparatus, and returns it still highly heated to the furnace to be reheated. The material to be dried is placed on hollow shelves, through which the hot air passes, and being thereby subjected to any desired degree of heat from above and below, the water contained in it is quickly evaporated, leaving the fruit in a fresh and beautiful looking condition, without in the least impairing its flavor. The apparatus is constructed in such a manner that it can be taken apart or put up in a short time, and easily removed from one location to another. Either coal, wood, gas or any other fuel can be used. This is pronounced by practical fruit men the best evaporator made, and taking in consideration its cheapness of construction and perfect working, it is bound to take the lead of all machines of this kind.

HEREFORD CATTLE
AT SACRAMENTO.

T. P. A. WILLIAMS has just arrived with an importation of

Thirty Head of Herefords:

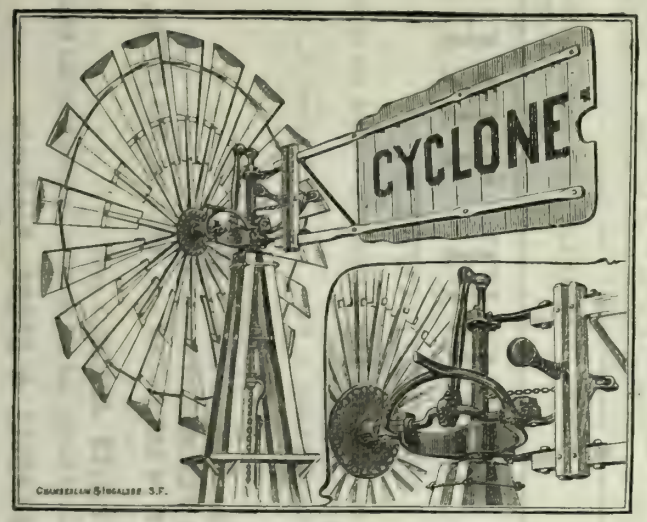
Bulls, cows, heifers and calves (all recorded in English and American Herd-books), the property of James Kay, Lancashire, England, whose herd embraces 100 breeding cows, all descendants of Lord Wilton, Grove Third and Grateful—the most valuable Hereford strains obtainable.

The cattle are at the Agricultural Park, Sacramento, for inspection and for sale. Correspondence solicited.

Address: T. P. A. WILLIAMS,
Western Hotel, Sacramento.

NOTICE.

THE ANNUAL MEETING OF THE STOCKHOLDERS OF THE GRANGERS' BUSINESS ASSOCIATION, a corporation, for the election of a Board of Directors for the ensuing year, and for the transaction of such other business as may properly come before it, will be held at the office of the corporation, 108 Davis Street, San Francisco, at 10 o'clock A. M., Wednesday, April 13, 1887.



CHAS. WOOD, Sec'y. DANIEL INMAN, Pres't.

WINDMILLS!

Are all very well and the "CYCLONE" is the BEST OF ALL Mills, and looks FINE when running, BUT unless a PUMP is attached, it will not raise WATER. Hence, we have in stock a large line of Pumps for SHALLOW and DEEP WELLS, and any of our Agents will supply them.

ANYBODY who wants a Mill can write to us, and we will send him name of nearest Agent, who will ALWAYS SELL AT OUR LIST PRICES, FREIGHT ADDED.

B. V. CUTTINGS.

Bordeaux Varieties.

I OFFER FOR SALE, AT $10 PER M., 200,000 CUTTINGS of the following renowned varieties, tule-packed, F. O. B. at depot: Cabernet Sauvignon, Cabernet-Franc, Merlot, Verdot, Malbec, Tinturier, Portal-Ploussard, Mondense, Petite Sirrah and Grosse Blue. Also from $2.50 to $5.00 per M. all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price. Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

J. B. J. PORTAL,
Box 627. San Jose, Santa Clara Co., Cal.

FOR ERADICATING AND DESTROYING ALL PESTS THAT INFEST FRUIT TREES AND PLANTS, SUCH AS

SCALE BUG, HARVEST FLIES, TREE HOPPERS, PLANT LICE, Etc.

It has been fully tested by the Agricultural Department of the State University, and pronounced a success, the endorsement of which we append. It is put up in convenient forms for use both in liquid and paste state.

For Sale in Barrels and 2 and 5-pound Cans in paste form, and in Barrels and 5-gallon Cans in liquid form.

Copy of Letter Received from the University of California, College of Agriculture, Berkeley, dated December 4, 1886.

J. N. KNOWLES, Esq., Manager Arctic Oil Works, San Francisco—Dear Sir: We have lately tested the Insecticide preparation of Whale-Oil Soap sent by you to us, and have found it to be very effectual against the Scale infesting Orange and Bay Trees here; also against the Thrips. From our previous experience with a similar composition, I think it will be found fully effectual against any small Insect Pests not specially protected like some of the armored Scales, and against which any Wash short of strong lye cannot be used. Respectfully,

E. W. HILGARD, Professor of State University.

OFFICE, 28 California St., San Francisco, Cal.

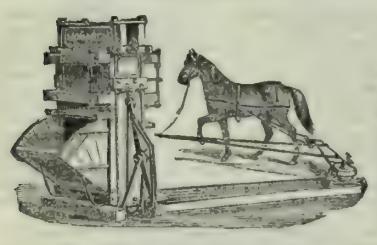
BRICK AND TILE MACHINERY

BEST IN THE WORLD.
Send for circular & prices.
J. W. PENFIELD & SON,
Willoughby, Ohio.

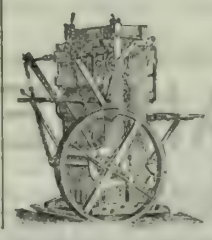
Stands Unrivaled. Lock Box 26.



Price's HURRICANE BALING MACHINE.

A Mounted, Top Feed, Double Ender, Capable of Baling 40 tons per day. Record—4 tons in one hour; 19¾ tons in a half day; 1800 bales (of Straw) in one week.

The above record is for last season, the year that the press was invented and first built, and was made by the second machine (size B) that we turned out. This year it is nearly one-quarter faster, because of the following **important improvements: The back and forth movement of the horse lever brings the hay across the stack with a horse fork and puts it on the feeding platform. It also hoists the bales up into a pile 4 or 5 high. The power has been nearly doubled, so that two charges in size B and three to four in size A make a bale. It can be moved one-third easier than before.** The bales are the smoothest and handsomest ever made, and are of even density throughout. Size A of this machine makes the compressed bale 17x22x40 inches, 5 bands; uses 4 men. Size B makes common bales 22x 24x46 inches, 6 bands. The above cut is behind the times and does not show this year's improvements. Send for a fine colored lithograph of this year's press; also large descriptive catalogue.



PRICE, ON BOARD CAR AT SAN LEANDRO, ONE THOUSAND DOLLARS.

THE CELEBRATED JUNIOR MONARCH.

Requires No Tramping.

RECORD.—33 tons in one day; 105 tons in 3½ days, and 2000 tons for season, being a daily average of over 20 tons! Bales 22x24x47 inches, with 6 bands. We sold 20 of these presses in Santa Clara Valley alone last season, where the hay had previously been baled by our Price or Petaluma Press, and such was their speed, ease of operation for men, and superiority of the bales, that the old tramping press could scarcely get a job, even at 25 cents per ton less than the Junior Monarch. Made only by us. Send for large catalogue. Price, on board car at San Leandro, **$500.**

The Well-known

PRICE OR PETALUMA PRESS.

This old stand-by was once the leading machine of the Coast, and is the fastest tramping hay press in the world. But the day of the tramping, muzzle-loading hay press is nearly over. It is still sold by us, however, quite largely for use in the hills and remote valleys of the interior, where jobs are small and far apart, and to parties who are not willing to pay the price asked for our rapid self-tramping machines. This press was invented by our Superintendent, Jacob Price, away back in 1868, and notwithstanding that fact, it has been improved almost every year since by him. Those made by us this season are as nearly perfect as machines ever get to be.

Price, on board cars at San Leandro, **$350.**

PRICE HAY PRESS COMPANY, SAN LEANDRO, CAL.

BEST & DRIVER'S IMPROVED COMBINED HARVESTER for 1887

Manufactured at the

DANIEL BEST AGRICULTURAL WORKS, San Leandro, Cal.

STANDARD SIZE

—IS—

14 Feet.

Will make any size that is ordered.

Belt

—AND—

Geared.

The BEST & DRIVER IMPROVED Combined Harvester, without doubt, will be the Leading Machine this season, is the verdict of all those who have inspected it.

IT H S ALUABLE IMPROVEMENTS THAT ARE NOT FOUND IN ANY OTHER COMBINED HARVESTER MANUFACTURED. SPACE WILL NOT ALLOW US TO ENUMERATE HERE; AN INSPECTION OF THE MACHINE WILL CONVINCE YOU.

The Gearing is composed mostly of Spur Wheels, and so compactly arranged that should the frame of the machine weave because of the unevenness of the ground, there would be no danger of the gearing getting out of line, causing it to cut or bind in the boxes, which occurs with other Harvesters in which the gearing is more scattered.

We have succeeded in getting that combination of Lightness, Adaptability and Strength which is the result of thought and skill, taking from some parts and adding to others, making our Harvester from four to six horses lighter draft, and yet retaining as great strength as the heavest machine manufactured. The Header is very rigid and so balanced and hinged that it is no trouble to save down and tangled grain. A boy ten years of age can manage it.

I wish to call your attention particularly to the separating qualities of my Harvester. The agitators are so arranged that the grain is completely shaken from the straw, and my new AUTOMATIC GOVERNOR on the fan completely governs the blast on the shoe, so that at any speed which the machine travels, the blast will be the same. Making a saving of a great amount of grain that would otherwise be blown over the riddles; but, instead, will go into the sack, which in a season will more than pay the harvestin expenses, over and above any **Combined Harvester** that has not the **Automatic Governor.**

Each **Harvester** has one of my celebrated **Grain Cleaners** ttached, which needs no recommendation fromme, as the grain growers of California can testify as to its merits and superiority over other Cleaners on the Coast.

Every machine is thoroughly tested before it is allowed to leave the factory, so there will be no trouble or vexatious delays in the field. The Lumber is thoroughly kiln dried that we use in the construction of our Harvesters, so that they will not fall to pieces under a hot sun.

Please call at my Works, near the Depot, San Leandro, and examine our Harvester. I have sample machine belted and attached to the power of the factory, and will take pleasure in showing how t works, so that you can become familiar with the working of the machine before taking it into the field.

IMPROVED GRAIN CLEANERS, and MILLS.

I desire to call your attention to my latest Improved Cleaners that I make for any and all Combined Harvesters. The great success I have had with my Cleaners, made to run with Thrashing Machines, as well as the satisfaction given by my Fanning Mill and Warehouse Mill, induced me to design and build a Cleaner, especially for the Combined Harvesters. I make the following sizes, viz:

45-inch for 18-foot cut and over.
40-inch for 14 to 18-foot cut.

This Cleaner is the most successful Combined Harvester Cleaner ever offered to the public, and I can guarantee it to be the most perfect Cleaner now in use. I have made a great many valuable improvements that have never yet been introduced, the merits of which will be quickly understood and highly appreciated by those who have use for the Cleaner. It is made strong and durable, and of such size and capacity that it will easily handle and thoroughly clean the grain as fast as any Combined Harvester will thrash it, and it has proven to be the only Cleaner mounted on Harvesters, that will thoroughly clean foul grain, and make it merchantable.

Write for Circulars. For further information, prices, etc., address

DANIEL BEST, San Leandro, Alameda Co., Cal.

PACIFIC RURAL PRESS

TWENTY-FOUR PAGE EDITION.

Vol. XXXIII.—No. 12. SAN FRANCISCO, SATURDAY, MARCH 19, 1887. $3 a Year, in Advance. Single Copies, 10 Cts.

Pomona.

The engraving on this page gives a mere glimpse of a town which is one of the handsomest, most prosperous, and most picturesquely situated and surrounded of Southern California towns. We say it gives a mere glimpse of the town, because it gives no idea of the streets and buildings of the village. In the foreground is one railroad station, and railway stations seldom are situated in the best parts of towns. The illustration is significant, however, for the idea it gives of the situation and environment of Pomona.

The village of Pomona is located in the eastern portion of Los Angeles Co., California, distant by rail 33 miles from the city of Los Angeles, and 50 miles from the Pacific ocean eastward and 30 miles northward. The Sierra Madre range of mountains—average elevation of 9000 feet above the sea, with snow-capped peaks—are distant six miles north, and Mt. San Bernardino (hight 11,000 feet) and Mt. San Jacinto—about the same hight—40 or 50 miles eastward. The lower range, called the San Jose hills, midway between the Sierra Madre Range and the ocean, terminate at the village, and the great valley widens at this point to 25 and 30 miles.

A GLIMPSE OF THE A. & P. R. R., LOOKING NORTH, AT POMONA, LOS ANGELES CO., CAL.

Thus these high mountain ranges protect the valley equally from harsh sea winds and the unpleasant dry winds and sand-storms of the deserts. The altitude of the village is 860 feet above the sea, the valley rising gradually to 2000 feet at the foot of the mountains.

Pomona valley is believed to be one of the mildest and healthiest in Southern California—free from ocean dampness or desert heats. The Atlantic & Pacific railroad, main line from Los Angeles to Albuquerque and all points south and east, runs through the village, and its depots are convenient to the business center of the town.

During the last few years there has been wonderful progress at Pomona, both in the extension and improvement of the town and in the development of the rich agricultural country surrounding it. We have given in former years engravings showing the source of the abundant water supply at Pomona and the method of its distribution. We have also had glimpses of the residences, gardens and orchards in the vicinity. No picture which we have yet seen, however, gives so good an idea of the mountainous environment of the town. The engraving is one of our new photographotypes made for B. A. Stephens, publisher of *Pomona Progress*, a local newspaper of much enterprise and spirit. By Mr Stephens' permission we give the first impression of the engraving in the columns of the Rural Press.

Some of the New Laws.

We propose as speedily as possible to give the full text of all the laws enacted at the recent session of the Legislature which have a bearing upon our agricultural industry and interests. The two bills on irrigation, one by Wright, the other by Vincent, are looked upon as preparing the way for all the legislation which we need on this most important method. We shall not attempt to summarize these measures, but await the full text.

The new law increases the powers of the Forestry Commission, empowering its officers to make arrests, and appropriating $29,500 for the use of the commissioners. The enlargement of the authority of the board is granted with a view to rendering its action the more effective in preventing forest fires and for other purposes.

Another enactment aims to prevent the adulteration or sophistication of California wines, or the using of coloring matter likely to injure the health of consumers, under a penalty of $250 fine for each offense. The bill also provides that the Secretary of State shall furnish, free of charge, "pure wine" labels or stamps to be placed by manufacturers over the bungs of barrels and the corks of bottles. Another law legalizes the mortgaging of wine and brandy in the cask, which will render it possible for manufacturers to retain their product in their possession until it acquires increased value through age, instead of being compelled to dispose of it immediately in order to meet current expenses. Another law appropriates $5000 to enable the Regents of the University to establish experimental stations; to distribute gratis vines and cuttings, with instructions regarding their propagation, and to give students instructions. One of the stations shall be established in the Coast Range and another on the mineral belt of the State.

One of the last acts of the Legislature was the passage of a new law concerning the repression of injurious insects. This bill among other things provides for the employing of two inspectors of fruit pests, one to have charge of the southern counties and the other the central and northern counties. Other details of the new enactment will be given as soon as we can get a copy of the law. The State Boards of Agriculture, of Viticulture and of Silk culture were also provided for by new appropriations.

In the matter of boundaries, there is an Act to correct a boundary survey near Lake Tahoe, by which Nevada gained a strip of California nearly a mile wide. Also a law changing the boundaries of San Benito county in such a manner as to give it 500 acres of Merced and a slice of Fresno, both the last-named counties agreeing.

There was a new agricultural district, No. 18, formed from Mono, Inyo and Alpine counties.

Another law prescribes that roadmasters shall be elected every two years, instead of appointed, as heretofore.

Land Commissioner Sparks pronounces the story of the sale of 60,000,000 acres of land to a New York syndicate a myth.

What the Fairs Tell About California.

Notably valuable service has been rendered by the different winter fairs or citrus fairs which have been held during the last few months in Central California and previously in Southern California. A study of the exhibits has often given a "pointer" to parties who have been seeking to find situations adapted to certain things. "By their fruits shall ye know them" is an excellent maxim, and it is not less true in determining the productive value and suitability of special locations in this State. We know of investments made and special enterprises started upon the information gained from the examination of fair exhibits and conversation with the practical men who have brought their productions for display at the fairs. Next to personal inspection of fairs is the chance to read about them, and for this reason we give so much space to what we endeavor to make truthful and moderate descriptions of the exhibits at the San Jose Fair.

California is a State of most varied resources and adaptations. There are fruits for which the fame of California is world-wide. There are also most important live-stock interests. Herds of all the popular breeds of improved stock can be seen. Excellent poultry establishments are in profitable operation. Horse-breeding is also a specialty, as, for instance, the splendid Palo Alto farm of Senator Stanford, in San Mateo county. This breeding farm, which is perhaps unsurpassed in the world, is supported by a host of more modest horse farms which are making their owners prosperous and contented. Grain-growing and all other branches of agriculture, the dairy, the swineyard, the garden, are also well represented. All these matters are discussed from week to week in the Rural Press.

Chief Viticultural Officer.—At the meeting of the Viticultural Commission in this city, the resignation of C. A. Wetmore, as chief officer, was accepted, and John H. Wheeler was chosen to fill the vacancy. Mr. Wheeler has served for several years as secretary of the Commission. Clarence J. Wetmore was selected to fill the secretaryship. The ex-chief officer was given a banquet and a beautiful service in the name of the California grape-growers, as a testimonial of his services in the grape interests of the State.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

The Season and the Santa Clara Valley.

EDITORS PRESS:—Once more I gladly take the opportunity of sending you a few items from this the garden valley of the world. The fall and winter months have been very warm and pleasant, in fact so spring-like and beautiful was the weather that the croakers came out one by one, looked cautiously at the bright, clear sky and verdant earth and began to whisper knowingly to each other: "A dry year, everything goes to prove it; just such a year as 1864. Barley will be worth five cents a pound. There is no hay, flour or wheat in the State, no fruit of any kind. Why, sir, the trees will not leaf out such a dry year as this is going to be. Starvation stares us all in the face. We shall have to live on beans, bacon and cornbread. Don't sow any grain; sell your land and stock while you can, for after a little you cannot give them away."

Such croakings as these were heard by the newcomers on every hand, told to them slyly and in the most confidential manner. What was the result? The timid were frightened and the strong discouraged. But, alas! for the croakers, what a change. On the 3d day of February the sunny sky was overcast, and gentle, welcome rain began to fall, steadily increasing till the thirsty earth was full and every little stream and rivulet went merrily on its way filled to overflowing. And this was not all; the elements combined with us to treat our Eastern friends to one of those rare, grand sights, a three days' California snowstorm.

Think of it! The thermometer at 34°; snow from 4 to 6 inches deep; roses, lilies, laurestinus and many other flowers in full bloom, while the potato and tomato vines were bending beneath their snowy burdens. The pines, peppers, olives and other evergreen trees were a strange sight to behold. But we must not forget the beautiful orange, lime and lemon trees, laden with their loads of rich golden fruit and snowy whiteness. It was a grand sight to behold and one that will not soon be forgotten.

But where, oh where, is the croaker? He has gone into unexpectedness and is now in the crowded ranks of those who say "I told you so." We are indeed blest. We have everything to be thankful for. If we do our part diligently and cheerfully, the good Lord will always do His part; for He has said "there shall be a seedtime and a harvest."

Our first Central Citrus Fair was a grand success. I think that it surprised the old settlers almost as much as it did our Eastern visitors. I was there all the time during the fair, and it gave me great pleasure and satisfaction to show the strangers over our beautiful hall with its wonderful and varied productions. There were a great many Eastern fruit dealers at the fair, and they told me that "for fine canned and evaporated fruits, English walnuts, almonds, olive oil and persimmons, Santa Clara county had no equal." They also said that, with proper care in the selection of varieties and cultivation, our oranges, limes and lemons would soon be among the best.

The "boom" has reached us and is sweeping over the county like an avalanche. The real estate market is very brisk and the country is full of buyers, and they are of the best and most desirable classes of people.

We have had over 15 inches of rain since Feb. 3d, and the prospects are very bright for bountiful crops of everything, especially fruit. We are all done pruning and are well along with plowing. A great many fruit trees of undesirable varieties have been grafted to the best drying and canning kinds, and the result will be that our orchard-men will soon be independent and happy. A. N. VAN FLEET.

Fair View Farm, Los Gatos.

ENTOMOLOGICAL.

Danger of Importing New Pests.

The following communication from W. G. Klee, State Inspector of Fruit Pests, is addressed to the *Patron* under date of the 2d inst.: During the last month it has been evident to my mind that we stand considerable danger of importing new scale insects to this State from China and Japan, no less than two kinds of such insects having been found on oranges brought from Japan. In case of a large shipment of orange trees sent from Japan I discovered trace of a red orange scale, probably *Aspidotus aurantii*, and had the whole lot of trees disinfected. Before I learnt of the existence of this shipment, however, trees had been sold, which thus may scatter infection. A quarantine guardian was appointed by me to look after the infected shipments; nevertheless, in many cases no information may reach us. The other day an orange from Japan, purchased in the California market, was found to be infected with the oyster shell scale, *Mytilaspis citricola*, a species *not known* to be in this State, but having proved very dangerous in Florida. Trees imported from abroad should be thoroughly scrutinized, and if anything the least suspicious is seen on them, the specimen should be forwarded, carefully wrapped, to this office. In case of importers, it is their duty to notify this office as soon as shipments arrive. As a matter of fact, it is an impossibility for one or two men to prevent the introduction of injurious insects without the closest co-operation with the persons representing the fruit interests. The establishment of local horticultural societies is an immense help in the matter, as they may not only help this office in pointing out infected stock, but members may individually agitate the matter and educate public opinion to the necessity of the greatest care being taken to suppress all kinds of insect pests. For every new pest we receive from abroad we think we have received the worst, and that there are not any more to come. No greater mistake; there are many very dangerous insects we might get yet. Let us all guard against these, and not permit anything suspicious to go past unnoticed.

THE FIELD.

The New Game Law.

The game law of the State, as just enacted, is formed by amending Sections 626, 631 and 636 of the Penal Code, and reads as follows:

SECTION 1. Section 626 of an Act entitled "An Act to establish a Penal Code," approved February 14, 1872, is hereby amended so as to read as follows: 626. Every person who, in the State of California, between the 1st day of March and the 10th day of September, in each year, hunts, pursues, takes, kills or destroys quail, partridges, or grouse, or rail, is guilty of a misdemeanor. Every person who, in any of the counties of this State, at any time takes, gathers, or destroys the eggs of any quail, partridge, or grouse, is guilty of a misdemeanor. Every person who, in this State, between the 1st day of January and the 1st day of June, in each year, hunts, pursues, takes, kills or destroys doves, is guilty of a misdemeanor. Every person who, between the 15th day of December, in each year, and the 1st day of July in the following year, hunts, pursues, takes, kills, or destroys any male antelope, deer or buck, is guilty of a misdemeanor. Every person in the State of California who has in his possession any hides or any skins of deer, elk, antelope, or mountain sheep, killed between the 15th day of December and the 1st day of July, is guilty of a misdemeanor. Every person who shall at any time, in the State of California, hunt, pursue, take, kill or destroy any female antelope, elk, mountain sheep, female deer, or doe, shall be guilty of a misdemeanor. Every person who shall at any time hunt, pursue, take, kill, or destroy any spotted fawn, is guilty of a misdemeanor. Every person who shall take, kill, or destroy any of the animals mentioned in this section, at any time, unless the carcass of such animal is used or presented by the person taking or slaying it, or is sold for food, is guilty of a misdemeanor. Every person who shall buy, sell, offer, or expose for sale, transport, or have in his possession any deer, deerskin or hide, from which evidence of sex has been removed, or any of the aforesaid game at a time when it is unlawful to kill the same provided by this and subsequent sections, is guilty of a misdemeanor.

SEC. 2. Section 631 of the same Act is hereby amended so as to read as follows: 631. Every person who shall at any time net or pound any quail, partridge or grouse, and any person who shall sell, buy, transport or give away, or offer or expose for sale, or have in his possession, any quail, partridge or grouse that have been snared, captured, or taken in by means of any net or pound, is guilty of a misdemeanor. Proof of possession of any quail, partridge or grouse, which shall not show evidence of having been taken by means of other than a net or pound, shall be *prima facie* evidence in any prosecution for a violation of the provisions of this section that the person in whose possession such quail, partridge or grouse is found took, killed or destroyed the same by means of a net or pound.

SEC. 3. Section 636 of the same Act is hereby amended so as to read as follows: 636. Every person who shall set, use or continue, or who shall assist in setting, using or continuing, any pound, weir, set net, trap, or any other fixed or permanent contrivance for catching fish, in the waters of this State, is guilty of a misdemeanor. Every person who shall cast, extend or set any seine or net of any kind for the catching of fish in any river, stream or slough of this State, which shall extend more than one-third across the width of said river, stream or slough at the time and place of such fishing, is guilty of a misdemeanor. Every person who shall cast, extend, set, use or continue, or who shall assist in casting, extending, using or continuing, "Chinese sturgeon lines," or "Chinese shrimp or bag nets," or lines or nets of similar character, for the catching of fish in the waters of this State, is guilty of a misdemeanor. Every person who, by seine or other means, shall catch the young fish of any species, and who shall not return the same to the water immediately and alive, or shall sell or offer for sale any such fish, fresh or dried, is guilty of a misdemeanor. Every person convicted of a violation of any of the provisions of this chapter shall be punished by fine of not less than $50 and not more than $300, or imprisonment in the county jail of the county where the offense was committed for not less than 30 days nor more than six months, or by both such fine and imprisonment. One-third of all moneys collected for fines for violation of the provisions of this chapter to be paid to informer, one-third to the District Attorney of the county in which the action is prosecuted, and one-third to the Fish Commissioners' Fund of the State of California. Nothing in this chapter shall be construed to prohibit the United States Fish Commissioners or the Fish Commissioners of the State of California from taking such fish as they shall deem necessary for the purpose of artificial hatching, nor at any time. It shall not be lawful for any person to buy or sell, or offer or expose for sale, within this State, any kind of trout (except brook trout) less than eight inches in length. Any person violating any of the provisions of this section is guilty of a misdemeanor. The Board of Supervisors of the several counties of this State are authorized, by ordinance duly passed and published, to change the beginning or ending of the close season named in Section 626 of this Code, so as to make the same conform to the needs of their respective counties, whenever in their judgment they deem the same advisable.

SEC. 4. This Act shall take effect and be in force from and after its passage.

State Board of Agriculture.

The State Board of Agriculture met at the pavilion last evening, the following members present: Directors Finigan, Singletery, Shippee, Boggs, Chase, Green, Shafter and Hancock.

The report for the year ending February 1st was read and adopted. The financial statement shows the net gain for the year to be $7770.40. The net liabilities February 1, 1886, were $30,346.88; and the net liabilities February 1, 1887, were $22,576.48. Net gain $7770.40.

L. U. Shippee was elected president for the ensuing year; H. M. La Rue, superintendent of pavilion; G. W. Hancock, superintendent of park.

The date for the State Fair of 1887 was fixed to commence September 12th, and continue two weeks; racing nine days.

The following directors were named on the speed program committee to report April 20th: Messrs. Rose, Finigan, Chase, Green, Singletery, and President Shippee.

On premium list, La Rue, Hancock, Green, Shafter and Boggs.

The usual two, three and four-year-old trotting stakes were ordered to be given, entries closing April 15th. A special stake for the three-year-olds that were winners as two-year-olds last year was also ordered to be given. These colts are Sable Wilkes, Soudan, Shamrock and Eda.

The board resolved to open to competition the pool-selling and book-making privileges. The custom of selling Paris mutuals on heats was unanimously abolished. Adjourned to April 20th.—*Record-Union.*

FLORICULTURE.

A Ventura Seed Farm.

We have often alluded to the possibility of paying business in this State in seed-growing. There has indeed been quite a little done in this direction by different parties in different parts of the State, and the chance for success in this line to those who have plenty of skill and patience is great. Those who believe there is a field for women in our horticulture will be pleased to learn that perhaps the most prominent seed-grower, measured by the number of varieties of high-class seeds produced, is a woman. The Ventura *Republican*, of last week, gives this very interesting sketch of her work:

One afternoon of this week a *Republican* reporter called at the residence of Mrs. Theodosia B. Shepherd, on East Main street, San Buena Ventura, and was shown through her magnificent flower and seed gardens and greenhouses. The gardens comprise a lot of ground 200 feet front by 400 deep and are surrounded by rows of palm and pepper trees and hedges of heliotropes and passion flowers. Three years ago this garden was a barley field; now it is a perfect paradise that yields its owner $2000 a year, and in three years that sum promises to be more than doubled.

The first place shown us was the fernhouse, where the most rare and tender varieties, including the stag's horn, harefoot, sandwich, sword, *davallia* tree, asparagus, *plumosus* and *jai l'elegant* are growing in the open air, the only shelter being a lath arbor, covered with *camp sidium* and *mandavilla* vines. In one corner of the fernery is a *begonia gilsonia* plant, measuring five feet across the top and the stalk seven inches in circumference. The lady has 30 varieties of begonias, and from one *begonia rubra* raised $4 worth of seed, and she was compelled to fertilize each flower. On one side of this house are 20 varieties of cactus, embracing five varieties of night-blooming cereus that will soon flower.

From here we proceeded to the greenhouse, and on the way were shown 18 varieties of violets, 100 of fuchsias and 50 of carnation pinks. In the house are 10 varieties of *primulas*, or Chinese primroses, from which she is now growing seeds. Mrs. Shepherd has succeeded, by chance, in obtaining a new variety of primrose. It is from a seed dropped by a Chinese variety, and at first the leaves were a dark green, but are now variegated, the top being cream-colored and the under side pink-tinted. We were also shown 25 varieties of Lady Washington geraniums, embracing six Regals.

Next came the bulbs, of which she has 30,000 callas; a freesia bed of 9000 bulbs; hyacinth and narcissus bulbs; another, also, of 28,000, of five varieties, worth at wholesale $1000. These are grown in a space of about one-twentieth of the garden. Also 1000 roots of the *Canna ehemani*, all sold to an Eastern florist.

On the west side of the garden we were shown three varieties of the *Tacsonia*, the aristocrat of the *passiflora* family—the handsomest flower, we think, in the grounds; also a good-sized camphor tree, which seems to be perfectly at home in this climate.

We were next shown a magnificent bed containing an infinite variety of the *verbena grandiflora*—a new and high-toned verbena—a recent introduction. The trusses of these flowers are nine inches in circumference and the individual flowers cover a 25-cent piece. The seeds of this flower are grown by Mrs. Shepherd for a New York firm, who are the first to offer seeds of this valuable novelty for sale.

One of the greatest attractions in the garden during the past year, Mrs. Shepherd informed us, has been her "stocks," or gillyflowers. These are in all the more delicate as well as the richer shades, and have been blooming for the past eight months. These had been cut back about two weeks ago, and are now coming on with a new bloom. A few of the plants are still in beauty, one with magnificent double flesh-colored flowers, measuring two inches across. Eastern seedsmen purchase their stock seeds of European growers, paying a high price for pot-grown seeds, and buy with great care, it being a heavy loss to them if the flowers are inferior. That California is the natural home of the stock, and that a superior quality of seed can be raised here from open-grown plants, is beyond question. Mrs. Shepherd experienced great difficulty in introducing these seeds to Eastern growers, who at first gave her but little attention, having no confidence in outdoor grown seed, recommended by an unknown grower in California. But knowing it was only a question of time and perseverance, and that in the end they would buy, this energetic and enterprising business woman continued writing and sending flowers, and as a last resort sent photographs. Now she has no trouble in disposing of all that can be raised. The lady believes that in a few years Eastern dealers will buy all their seeds of stocks, as well as many other varieties of seeds, in Southern California.

Her specialties are bulbs of *Canna Ehemani*, calla lilies, seeds of smilax, blue and white *Cobea scandens*, single dahlias, stocks apple geranium and double monthly carnations, though she grows an endless variety of other seeds and finds no difficulty in disposing of all to various large Eastern firms, as well as to small ones, and retail customers.

The choice collection of carnations, which in about six weeks will be in full flower, will be one of the grandest sights that can be pictured by florists. No other garden in California has such a large collection, there being 400 plants, embracing 50 varieties.

Peter Henderson, the veteran seedsman and florist, in a letter to Mrs. Shepherd five years ago (in which he encouraged her to grow seeds for sale), writes: "California will, I am certain, 50 years from now, grow seeds for the world. It has all the conditions of soil and climate for seed-growing." We go further and assert that in 25 years Southern California will grow seeds for the world.

For seeds and bulbs the coast climate is the most suitable, as inland everything becomes so dry and parched, the summers being much warmer and the winters more severe. There is no frost severe enough in Southern California to injure tender plants near the sea.

In the near future Mrs. Shepherd proposes to purchase about ten acres of ground and plant it to choice bulbs and seeds for the Eastern trade, increasing her varieties and stock. She intends making a specialty of choice *amaryllis* and *cyclamen* bulbs and raising them in large quantities. Her present site, a choice piece of ground on Main street, which will soon be too small for her rapidly growing business, is weekly advancing in value, and will soon be too valuable for a seed garden.

Mrs. Shepherd does quite a large business in the way of potted plants and cuttings, all of which are guaranteed true to name.

The lady is an enthusiast in her work, and enjoys nothing so much as work among her flowers. It has always been a passion with her. Three years ago she commenced work on her garden as a means of bettering her health, outdoor exercise being recommended, and now says that if she had but to work among her flowers she would never be ill. Her first conservatory was a very tiny affair, costing $2.50, from which has sprung what will one day be the best paying industry in Southern California.

The *American Florist* says that "$4,000,000 worth of flower seeds were imported into the United States from Europe last year." There must have been a like amount invested in bulbs. With but few exceptions these could be grown in the open air in Southern California.

Mrs. Shepherd is assisted in her work by Mr.

Samuel Cole, who is as enthusiastic as it is possible to be. Her children also take great pride in the garden. The younger, 10 years old, can show the entire gardens to strangers and converse intelligently concerning them.

Mrs. Theodosia B. Shepherd, the pioneer seed-grower of Southern California, is a most energetic woman and is commended for her work by all. Her gardens are the pride of San Buena Ventura. The gardens are open for the inspection of visitors and strangers especially.

AGRICULTURAL SCIENCE.

The New Experiment Station Law.

The following is the full text of the Experiment Station bill as enacted by Congress and approved by the President:

An Act to establish agricultural experiment stations in connection with the colleges established in the several States under the Provisions of an Act approved July 2, 1862, and of the Acts supplementary thereto.

SECTION 1. Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in order to aid in acquiring and diffusing among the people of the United States useful and practical information on subjects connected with agriculture, and to promote scientific investigation and experiment respecting the principles and applications of agricultural science, there shall be established, under direction of the college or colleges, or agricultural department of colleges, in each State or Territory established, or which may hereafter be established, in accordance with the provisions of an Act approved July 2, 1862, entitled "An Act donating public lands to the several States and Territories which may provide colleges for the benefit of agriculture and the mechanic arts," or any of the supplements to said Act, a department to be known and designated as an "agricultural experiment station:" Provided, that in any State or Territory in which two such colleges have been or may be so established, the appropriation hereinafter made to such State or Territory shall be equally divided between such colleges, unless the Legislature of such State or Territory shall otherwise direct.

SEC. 2. That it shall be the object and duty of said experiment stations to conduct original researches, or verify experiments on the physiology of plants and animals; the diseases to which they are severally subject, with the remedies for the same; the chemical composition of useful plants at their different stages of growth; the comparative advantages of rotative cropping as pursued under a varying series of crops; the capacity of new plants or trees for acclimation; the analysis of soils and water; the chemical composition of manures, natural or artificial, with experiments designed to test their comparative effects on crops of different kinds; the adaptation and value of grasses and forage plants; the composition and digestibility of the different kinds of food for domestic animals; the scientific and economic questions involved in the production of butter and cheese; and such other researches or experiments bearing directly on the agricultural industry of the United States as may in each case be deemed advisable, having due regard to the varying conditions and needs of the respective States or Territories.

SEC. 3. That in order to secure, as far as practicable, uniformity of methods and results in the work of said stations, it shall be the duty of the United States Commissioner of Agriculture to furnish forms, as far as practicable, for the tabulation of results of investigation or experiments; to indicate from time to time such lines of inquiry as to him shall seem most important; and, in general, to furnish such advice and assistance as will best promote the purposes of this Act. It shall be the duty of each of said stations, annually, on or before the first day of February, to make to the Governor of the State or Territory in which it is located, a full and detailed report of its operations, including a statement of receipts and expenditures, a copy of which report shall be sent to each of said stations, to the said Commissioner of Agriculture, and to the Secretary of the Treasury of the United States.

SEC. 4. That bulletins or reports of progress shall be published at said stations at least once in three months; one copy of which shall be sent to each newspaper in the States or Territories in which they are respectively located, and to such individuals actually engaged in farming as may request the same, and as far as the means of the station will permit. Such bulletins or reports, and the annual reports of said stations, shall be transmitted in the mails of the United States free of charge for postage, under such regulations as the Postmaster-General may from time to time prescribe.

SEC. 5. That for the purpose of paying the necessary expenses of conducting investigations and experiments and printing and distributing the results as hereinbefore prescribed, the sum of $15,000 is hereby appropriated to each State, to be specially provided for by Congress in the appropriations from year to year, and to each Territory entitled under the provisions of Section eight of this Act, out of any money in the treasury proceeding from the sales of public lands, to be paid in equal quarterly payments on the first day of January, April, July and October in each year, to the Treasurer or other officer duly appointed by the governing boards of said colleges to receive the same, the first payment to be made on the first day of October, 1887: Provided, however, that out of the first annual appropriation so received by any station an amount not exceeding one-fifth may be expended in the erection, enlargement, or repair of a building or buildings necessary for carrying on the work of such station; and thereafter an amount not exceeding five per centum of such annual appropriation may be so expended.

SEC. 6. That whenever it shall appear to the Secretary of the Treasury, from an annual statement of receipts and expenditures of any of said stations, that a portion of the preceding annual appropriation remains unexpended, such amount shall be deducted from the next succeeding annual appropriation to such station, in order that the amount of money appropriated to any station shall not exceed the amount actually and necessarily required for its maintenance and support.

SEC. 7. That nothing in this Act shall be construed to impair or modify the legal relation existing between any of the said colleges and the government of the States or Territories in which they are respectively located.

SEC. 8. That in States having colleges entitled under this section to the benefits of this Act, and having also agricultural experiment stations established by law separate from said colleges, such States shall be authorized to apply such benefits to experiments at stations so established, by such States; and in case any State shall have established, under the provisions of said Act of July 2, aforesaid, an agricultural department or experimental station in connection with any university, college, or institution not distinctively an agricultural college or school, and such State shall have established or shall hereafter establish a separate agricultural college or school, which shall have connected therewith an experimental farm or station, the Legislature of such State may apply in whole or in part the appropriation by this Act made, to such separate agricultural college or school; and no Legislature shall, by contract, express or implied, disable itself from so doing.

SEC. 9. That the grants of moneys authorized by this Act are made subject to the legislative assent of the several States and Territories to the purpose of said grants: Provided, that payments of such installments of the appropriation herein made as shall become due to any State before the adjournment of the regular session of its Legislature meeting next after the passage of this Act shall be made upon the assent of the Governor thereof duly certified to the Secretary of the Treasury.

SEC. 10. Nothing in this Act shall be held or construed as binding the United States to continue any payments from the treasury to any or all the States or institutions mentioned in this Act, but Congress may, at any time, amend, suspend, or repeal any or all of the provisions of this Act.

Has There Been Money Appropriated?

A dispatch from Washington seems to raise the question whether the money has really been appropriated:

WASHINGTON, March 9.—The agricultural bureau is considerably troubled about the terms of the bill passed, near the close of the last session, establishing agricultural experiment stations. The bill, after defining these stations, provides: "The sum of $15,000 is hereby appropriated to each State, to be specially provided for by Congress in the appropriations from year to year from the sale of public lands, the first payment to be made on the first day of October, 1887." This phrase was held by the framers of the bill to be an appropriating clause, but the question has arisen whether it does really carry any money with it. The agricultural department is already in receipt of letters from various State agricultural colleges, asking questions concerning the operation of the bill, and when the money would be available, and it is in doubt as to what reply to make. It was fully intended to make the first appropriation out of any money in the treasury not otherwise appropriated, but the ambiguous language of the clause quoted would seem to stop all action until Congress can make provision from the public lands funds as above provided.

It will probably require a little time to settle the point thus raised.

POULTRY YARD.

French Experiments in Feeding Poultry.

Professor Long prepares for the *Mark Lane Express* a translation of an account in a recent French publication, *Le Dictionnaire d'Agriculture*, concerning experiments with poultry-feeding. This work was begun by the late M. Barral, and is now being continued by other eminent French writers and investigators.

Comparatively few experiments have been made in poultry-feeding, and M. Barral, recognizing the fact, lays down as a rule that in every case the food given should be in proportion to the weight of the birds, taking into consideration their active nature and such accessory products as eggs and feathers. Generally speaking, an average hen will consume three ounces of grain per day, or over a bushel in the course of the year, but the weight of gallinaceous birds varies considerably, and hence no really definite idea can be formed of what they are capable of consuming to the best advantage. It is advisable to supply a mixture of foods, such as oats, buckwheat (where it can be cheaply obtained), and maize. Boiled potatoes are also beneficial, as well as various meals, herbs, salads, and cooked or uncooked vegetables. Perhaps the best system to adopt, especially where a number of fowls are kept, is to change the diet from time to time, diminishing or increasing the same as experience may suggest. Where, however, it is necessary to fatten poultry for table purposes, they should be given as much food as they can possibly consume without harm, but it should consist of highly nitrogenous and farinaceous substances.

As no direct and scientific determination of the quantity of food consumed by poultry had previously been made, M. Barral, with the assistance of M. Lemoine, a distinguished French poultry breeder, with whom I have had the pleasure of acting as judge, undertook a series of experiments with this end in view. Four lots of birds were selected, these consisting of a cock and three hens of the Crevecœur race; a cock and four hens of the La Fleche race; a cock and three hens of the Houdan race; and lastly, a cock and four hens of the Dorking variety. Particulars of the food given and consumed were taken daily, and each bird was weighed at the beginning and at the end of the experiments, which lasted six days. The eggs were also weighed and the food analyzed. The particulars published by M. Barral in several tables in his dictionary are of very considerable interest and value, and I consequently collect the leading figures together, giving, as they do, a good idea of the work he has done, and the results at which he has arrived. These figures are shown in the two following tables:

	Crevecœur, lb. oz.	La Fleche, lb. oz.	Houdan, lb. oz.	Dorking, lb. oz.
Weight at com'encement of experi'ts..	23 8	25 0	22 1	29 8
Weight at end of experiments.....	24 10	28 3	21 10	32 2
Av. weight at same periods respect'ly	5 11	5 8	5 7	5 14
	6 4	5 10	5 4	6 5

	Crevecœur.	La Fleche	Houdan.	Dorking.
Weight of food in normal state, per day, ozs.....	4½	6	4⅓	6⅓
Weight of food in a dry state, per day, ozs.....	3	3½	3	4
Nitrogen in food, grammes	1 93	1.94	1.65	2.43
Number of eggs.....	14	7	4	21
Weight of eggs, ozs. & drs.	2 2	2 3	2 3	2 0

In giving the above weights in grammes it is more convenient to follow the plan adopted by the French writer, merely observing that a gramme, in England, is about half a dram.

The food showed the following result upon analysis:

	Water, per cent.	Nitrogen, per cent.
Wheat.....	16.79	1.90
Oats.....	14 67	1.96
Buckwheat.....	18 94	1.77
Rice (cooked).....	32.59	0.71
Soft food (barley meal and potatoes).....	57.76	0.96

The three first-named foods were mixed in equal proportions. The nitrogenous matter contained in the ration of the Houdans was very little, and this may account for the small amount of increase of live weight during the experiments, whereas, in the case of the Dorking, it was very considerable, with a corresponding increase of flesh. The egg production, too, shows a similar result. It should be remarked, with reference to the third table, that the nitrogen indicates what is generally known as the nitrogenous food, which furnishes the elements for the formation of fiber and gelatinous substance, as distinct from the fat of birds and animals. The fowl being almost essentially a fleshy bird and possessing very little fat, it needs a larger proportion of the nitrogenous elements than the ordinary animals of the farm for the formation of its flesh and consequent increase in live weight.

In referring to turkeys, M. Barral remarks that, after having been given the run of a good pasture, it is necessary to have recourse to very nourishing and stimulating foods, and a mixture is recommended composed of bread-crumbs, boiled eggs, onions, nettles, a thousand-leaved grass (evidently yarrow), and drained curd. I have frequently advised the use of curd as a valuable food for chickens. If made from new milk it contains a large percentage of fat—really butter—the principal ingredient being a nitrogenous and albuminous substance, which is the chief element in cheese. If, however, it is made from skim milk, almost the whole of the fat contained in curd made from new milk is absent, so that skimmed-milk curd, which is one of the cheapest foods that can be given where milk is produced, is of especial value for chickens, and indeed for fowls, as it is highly nutritious, easily digested and stimulating.

Ducks, as everybody knows, are naturally fond of water, in which they find no small amount of their food; but in fattening it is essential to specially feed them by hand upon a diet consisting of mixed grains and animal food.

In France, where geese are very largely bred, the birds derive the principal portion of their food from the fields and pastures, to which they are driven in flocks, like sheep. They should also be supplied with a mixture of barley and buckwheat meal. When put up to fatten, oats and curds should be given, followed by barley meal, buckwheat meal, maize meal and pea meal, linseed, with herbs of a stimulating and aromatic nature. After this they may be hand-fed or crammed with boluses of meal. It may be observed that buckwheat meal is especially adapted for fattening poultry, containing, as it does, a large percentage of oil, which is obtained through its means at a much cheaper rate than fatty food of almost any other description. Buckwheat is not used with us to the extent it should be, and this in a great measure is probably owing to its cost; but it should be remembered that corn dealers who are only applied to for small quantities are obliged to charge a high price for it, as it would not pay them to keep a considerable supply on hand merely to meet an insignificant demand.

It is quite certain that the subject of feeding poultry to ascertain the actual cost of keeping the birds has not been fully understood, nor has any attempt been made to estimate it upon a practical basis. If we were made fully aware of the quantity of food which poultry consumed in the course of a year, we should, perhaps, be more willing to take greater trouble with them, although some persons who believe that they are making a large profit would undoubtedly be greatly deceived, for there can be no question that, especially upon a farm where food is at hand without purchasing, they consume very considerable quantities, often more than is returned by the sale of their eggs. These same minute details, however, also show how important is the manure which is produced, and that if an attempt is to be made to arrive at an accurate profit and loss account, it should not only be carefully collected and saved, but its intrinsic value actually determined.

FORESTRY.

Information Wanted on Tree-Growing.

EDITORS PRESS:—I have looked over my RURALS of the past six years—at least over the indices—and can find very little of the kind of information I refer to. An article, or series of articles, giving information on the following and other points would do a great deal toward solving the forestry question. Take such trees as the eucalypti, peppers, various palms, acacias, etc., trees that every one would like to grow if they knew how, and tell how in the first place to prepare the seed, whether to soak, scald or plant dry. You might begin with telling how to secure the seed, for that matter, of such trees as the palms, peppers and pines, and possibly the eucalypti, though the imported seed of the latter is cheaper and better, they say. Should the pepper seed be picked from the tree or picked up from the ground after falling? Should they be planted as soon as they are ripe or full, or should they be kept for a time to season? Can the seed of a dried date be planted after eating the date, or should it be kept for a time, etc.? Then tell us how to prepare the beds or boxes for the various seeds, how much sand and manure to use, etc.; the character of soil.

Then the place to put the boxes or beds. In the sun or in the shade or in a partial shade? Then tell how to plant, how deep to plant or cover, how far apart, etc.; how much and how often to water and how to do it. Should the date seed be planted with the germ end up or down? When the seeds sprout and come up, tell us how, when necessary, to transplant, at what age or size, etc.

You may possibly arrive at an idea as to what I am driving at from the foregoing jumble. Really there are thousands of people in the State who would like to raise a few hundreds or thousands of trees if some one would only tell them how to do it properly. Many try to raise a few boxes of "peppers" or "gums," and having poor success give it up, and maybe buy a box or two from some nurseryman, or maybe they go without, "not having the dollars to spare just now."

Peppers in the box only a few inches high are worth seven cents each here now, and those two years old, four to six feet high, are worth from 25 to 50 cents each, and larger trees up to 75 cents or $1 each. Pines are worth about 75 cents each for little fellows that are only a few feet high. Palms are over a dollar for those about a foot or so high. How many trees can a man afford to set out at that rate? Certainly only a few unless he is very well off.

It may be said that it is cheaper and better to buy of the nurserymen, who understand how to raise the plants, than it is to experiment with them ourselves; but I think there are plenty of people of sufficient intelligence and assiduity to raise great quantities of fine trees if they only knew how easily and economically it could be done. Tell them. Tree-planting will not attain to the proportions it should if we have to depend on the nurseries. We can't afford to plant what we should if we do.

Many of us think we know how to raise gums, peppers, etc., but for the lack of some one little point or two we often fail. It is the little points that we want. The eucalyptus seed, as I understand it, should be covered with only about a quarter of an inch of sand to insure a good growth; but if, in watering, the water is sprinkled on faster than the soil will take it in, the seed is apt to float to the surface, and the result is a very poor stand and considerable discouragement, which may result in the loss to the State of many fine trees. I suppose, in directions of growing trees, certain classes might be grouped generally. S. C.

Los Angeles.

[These points are good ones. Perhaps we have been giving too much time to the minutiæ of the fruit business and too little to forestry. Now, if all our readers who have succeeded with any kind of forest or timber trees will write out their experience minutely, whether they have grown one kind of tree or many, we shall soon have a compendium of information like that which our correspondent asks for. Perhaps, too, our State Board of Forestry will take all this information, and other which they may give themselves, and publish a hand-book especially relating to California practice which can be distributed free to all who wish it. Who can doubt that such a work would increase the number of trees in the State? Who will be first to contribute to this end by sending us a letter concerning the best way to propagate and establish any kind of a timber or forest tree?—EDS. PRESS.]

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Grange Work and Progress.

[Prepared Weekly by M. WHITEHEAD, National Lecturer.]

Many grave and important questions are coming to the front for settlement in America. With our great and rapidly growing population; our vast extent of territory; our many varied and often conflicting interests; our population from all nations, and of all creeds known of men; with new political parties being formed; new combinations of labor and other organizations; new theories being advanced, it is of the utmost importance that Patrons of Husbandry set a careful watch upon their every word and act. The Grange has always taken high ground, has stood aloof from the wild schemes of dreamers and extremists. It has made no "entangling alliances," and after 20 years of existence it has made a record that no Patron or patriot need feel ashamed of. Its record is more and more winning the respect of all good citizens. Its respectful requests were never more quickly heeded in legislative halls than now. Its lines of action have all been carefully considered by the National and State Granges, and thus unity of purpose and deserved success have come. But there is danger in success as well as in adversity. The influence, support and recognition of this great organization is now wished for, and often courted by others who would have this giant on their side. Let us "beware of the flatterer." No Grange should send "official" delegates to political or other conventions, in which the good name and fame of our Order might be injured, without at least having the sanction of their State Grange or of the National Grange. As *individuals*, as *farmers*, as *citizens*, each can exercise the right of a freeman; but in our *organized* capacity we should be careful to move only in an organized way and under direction of the organization.

A voice in the United States Senate, a few days before adjournment, said "That the demands of the farmers are just and proper must be apparent, and that they will be complied with is just as certain as that the Government shall endure and the farmers of the country continue to appreciate the justice of their claims and their undoubted power to enforce them." Let us appreciate our power and organize to enforce our claims.

The Interstate Commerce bill prohibits railroads from issuing free passes to any outside their own officials and employes. As far back as 1873 a director of the Pennsylvania railroad asserted that the free passes distributed by that corporation in one year represented $500,000. Charles Francis Adams, president of the Union Pacific railroad, within a year told a committee of the United States Senate that the losses incurred by the company which he represented, through the free pass abuse, amounted to $2000 a day, and that a reduction of 10 per cent in the passenger rates could be made if free passes were abolished. No one doubts but the distribution of free passes among legislators has been a fruitful source of "favorable" legislation for corporations.

More than *twenty millions of acres* of land in the United States are now owned by aliens or foreign landlords, most of whom do not even live among us. Many of them hate our free institutions. The PACIFIC RURAL PRESS says: [We refrain from repeating what was said in our issue of Oct. 23, 1886, under title "Alien Land-Owners."—EDS. PRESS.] The Grange has taken a decided stand against foreign landlords.

"To make this, the only farmer's organization, a success, the minds of the people must be prepared by a proper system of education to receive and comprehend fully the aims, objects and purposes of the Order."—*Daniel Morgan, Master Louisiana State Grange.*

At a late meeting of the Hillsboro', N. H., Pomona Grange, it was the universal opinion of the members who discussed the question of past and future rewards of agriculture, that with the increased opportunities for education among farmers, the improved machinery by which to lessen manual labor, and a powerful organization like the Grange to protect their interests in Congress and our State Legislatures, the profits from farming must be greater in the years to come.

Suggestions for the Good of the Order.—"That all members be made to understand that the Order is one that will do every member good, and that the better they appreciate it, and avail themselves of its privileges, the more good will each individual receive. There are live Patrons in this country, and such are striving to impress this idea upon all *slow* members."—*E. C., Md.*

Progress.

Six more new Granges:

Marlborough, No. 118, Chester county, New Hampshire.

West Hartford, No. 58, Hartford county, Connecticut.

Grover, No. 815, Bradford county, Pennsylvania.

Eureka, No. 816, Crawford county, Pennsylvania.

East Valley, No. 634, Furnas county, Nebraska.

Hope, No. 678, Huron county, Michigan.

The Grange Fire Insurance Company of Massachusetts is an assured success. It will start with over $500,000 of insurance on the property of Patrons *only*.

East Haddam Grange, Connecticut, received 56 members during the month of February.

Monmouth Grange, No. 92, New Jersey, has just received 18 new members.

Farmington Grange, Connecticut, conferred the fourth degree upon 17 members, February 14th.

Pembroke Grange, No. 111, New Hampshire, received 37 new members February 22d.

Columns could be filled with the reports of reorganization and new members, coming up from all parts of the United States. The rising tide is *surely* reaching all our States.

"Then turn up the soil and work it with care,
Sow broadcast the seed and root out the tare;
Look forth on the harvest of bright, waving grain,
Have faith in your labor. 'Twill not be in vain."

National Reading Circle.

Fannie E. Thoman contributes to the *Farmers' Friend* a long but very readable essay, on cultivating literature in the Grange and home circle, from which we extract as follows:

A decided step in the right direction has been taken in our Grange in the use of programs of specified work of an instructive and entertaining nature for each stated meeting.

A similar plan on a larger scale, and more united in its work, is the "Patrons' National Reading Circle," introduced by Col. R. H. Thomas, Secretary of the Pennsylvania State Grange, and approved by the Executive Committee of that body about one year ago, and in November last numbered 250 Circles, from 130 to 140 of these being in the State of Pennsylvania. It is similar to the famous Chautauqua system, with the addition of practical lessons and discourses upon agricultural and farm topics in general, thus giving to farmers and their families some of the educational facilities enjoyed by cities and towns. The rapid increase of these Reading Circles, and the interest that has been manifested in them, certainly proves what can be done by farmers in the direction of the cultivation of literature if you can but persuade them to try the experiment. We all know that an organization, in order to prosper and be successful, must have a firm and practical financial basis; the Grange is no exception to this acknowledged fact. Therefore, in advocating the greater cultivation of literature in the Grange, it is understood that it should not take the place of the regular and practical work of this organization, but that it should have an equal amount of time and attention.

Many can recall the time when farming by any other method than the old beaten track of our great-grandfathers was looked upon as money and labor almost worse than wasted. Thanks to education, those days are passed, and the farmer realizes at last that he must think and act intelligently for himself to keep pace with the age, and that agriculture to be successful requires as much study and deep thought as many other sciences. He has seen that scientific farming is practical and profitable. Not only is this the case in the field and stockyard, but also in the kitchen and dairy. The march of intellect may be seen in the improved surroundings, scientific methods and convenient implements used by the intelligent housekeeper.

This recalls an illustration of the advantage of education and its application in the household. A young lady, after graduating with high honors from one of our educational institutions, became engaged to a young farmer of moderate means. A friend, knowing the circumstances of the case, asked her what she intended to do with her fine education in farmer B's kitchen. "Do?" she replied. "Why, I intend to make use of it every day. I can make a fire better and in less time through my knowledge of philosophy, which also applies to many other things with equal advantage. Bake a better loaf of bread by knowing the chemical action of its ingredients and the effect of heat upon it, etc. In fact, I expect to use all that I have learned in making a comfortable and happy home, that shall be the best and most attractive place on earth to those who dwell therein." Was not her view of the matter the correct one?

What would a farmer say to a man who purchased a farm, and for the period of seven or eight years he planted and cultivated it upon approved principles, reaping good harvests? At the end of that period, suppose he should say that he had spent time and labor sufficient upon that land for it to take care of itself and bring forth the usual harvest without any further trouble upon his part. Would not any reasonable person say that he was insane to expect aught but a harvest of weeds, without the yearly planting and cultivation of good seed? Yet is not this just what some do with the intellect? There are very few in the rural districts who attend school after they reach the age of 15 years, and many see their last of the schoolroom before they reach that age, unless they intend to teach or enter some other profession. After the schooldays are over, if something is not done to continue the cultivation of the intellect, the mind soon becomes in the condition of the neglected farm. Cannot the Grange do a good work in this direction, and are not its capabilities almost unlimited in this respect?

Unequal Taxation.

Among the visitors present at the recent session of Summit County, Ohio, Pomona Grange, was Lecturer D. M. King, of Portage county—one who "hopefully believes that the 2,000,000 of Grange workers, with their increasing numbers, will be able to counteract the tendencies of both anarchists and monopolists to disrupt this government."

On the second day, as we gather from the *American Grange Bulletin's* account of the proceedings, M. L. Shook opened the discussion of the question: "How shall inequalities in taxation be remedied?" These inequalities are largely the results of unequal laws, and are to be remedied by legislation to be secured only through the ballot. When the assessors make their annual rounds the storerooms of the manufacturers are filled with implements of which the principal cost is in the labor which has been put upon them. The manufacturers are taxed only upon the average value of the raw material used monthly in their construction. The small fraction of their value is taxed; the large fraction escapes. The real estate and machinery employed in manufacturing is usually appraised at about one-fourth their value. The farms of the country are appraised at an average valuation of 62 per cent of their real value, and the products of the farm, upon which the farmer has expended an amount of labor nearly equal to their worth, are assessed at their full market prices. The same inequalities appear in our tariff legislation. Michigan wants her lumber protected; Pennsylvania and Ohio want their iron; Louisiana wants her sugar; the railroads want charters, land grants and Government loans; the banks want control of the money. They form a combination and enact such laws for their own benefit as may be agreed upon by the syndicate. In the year 1882 the people of this country paid nearly $48,000,000 import duties upon sugars, when the whole product of the Louisiana planters was worth only about $10,000,000. This duty has been somewhat reduced and the price of sugar has fallen, but the question remains, is it worth the people's while to pay all these millions to keep Louisiana voting with the syndicate?

D. M. King called attention to some statistics of unequal taxation in Pennsylvania, where farmers pay six times the taxes that are paid by money capital; also to the efforts that are being made by farmers in Mahoning county, without distinction of party, to reduce the taxes of that county. Charles Fields spoke of the double taxation of farms that were under mortgage. M. D. Call said that the law was generally correct in requiring all property to be taxed according to its real value. To tax a farm at its real value and the mortgage upon the same at its full value, was a violation of this rule, and the law that allowed it should be changed.

H. W. Howe said there was a clause in the law relating to the taxation of banks, which provided that bank capital should not be taxed higher than other capital. Bank stock, in demand at 25 per cent premium, has been assessed at two-thirds of its face value. The banks found other property assessed at a less proportion of its value, and thereupon asked the court to enjoin the treasurer from the collection of this illegal tax. The court granted the injunction, making a dead-letter, so far as the banks are concerned, of the law requiring all property to be assessed according to its real value. Owners of bank stock are privileged to deduct from it their indebtedness. It is alleged that affidavits filed with some of the county auditors in the State show an immense indebtedness on the part of such owners. The remedy lies in investigation followed by legislation.

HARVEST FEAST AT OAKLAND.—A good time is expected by Temescal Grange to-day, when the degrees of Husbandman and Matron will be conferred. It is hoped that a number of the Grange members of the Legislature will be present, with Patrons from Eden and other Granges, to discuss matters of great interest to farmers, concerning past legislation, with hints for the future; also that letters of importance will be received from those not able to attend. Bro. Geo. Steele, senator from San Luis Obispo county, in a recent visit to our office, spoke in high terms of the sterling influence and work done during the recent session by Bros. Chandler in the Senate and Ohleyer in the Assembly and other Grange and farming members of the Legislature. Bro. Steele returned home too early to be in attendance at Oakland to-day. Meeting at 10 o'clock. Let Patrons from all quarters, who can, attend.

GRANGE ITEMS.—The *Patron* informs us that Bro. Overhiser is setting forth upon his organizing tour. The work is waiting in Fresno, Tulare, Kern, Los Angeles, San Bernardino and San Diego counties....Yuba City Grange is to confer the second and third degrees to-day (March 19th) at 1:30 P. M....Sacramento Grange's last "Literary Day" was an exhilarating success....Watsonville Grange has voted thanks to Bro. Blackwood for his services as chairman of the State Grange Legislative Committee and indorsed the recent resolutions of San Jose Grange as to woman suffrage.

OAKLAND has just elected a very promising young man mayor by a heavy popular vote. We allude to W. R. Davis, a younger brother of W. E. Davis, Master of Santa Rosa Grange, and one of the prominent members of the California State Grange.

LONG AND SHORT HAULS.—The problems of "Interstate Commerce" are thus parabled in the San Bernardino *Times:* A gentleman riding in a California Southern car the other day had a postal card which he desired to send to a friend in Maine. Now if he could get that card to the postal car ahead of him, the Government would carry it 3000 miles for one cent. That's the long haul. But he had to pay the porter 25 cents to have the card carried a few yards to be mailed. That's the short haul. The porter, however, fell into a conversation with the brakeman, forgot his mission and lost the card. That was the shrinkage. And now you have the whole interstate business in a nutshell.

SAN DIEGO has just been taking its census, and finds its population 11,300.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

OUTLOOK AROUND MT. EDEN.—Haywards *Journal*, March 12: You can almost see the young grain come up, and the outlook is exceedingly bright. The acreage planted is equal to, if not greater, than that of any previous year. Seeding will be about finished this week. There was extensive chevalier planting the past two weeks, and the ground was never in better condition. We had a very warm spell last week, and the young grain sown was not long in sprouting. In one case where chevalier was planted last Tuesday, by Friday the roots were an inch long, and in less than one week it was above ground. Although we have had unusually heavy rains for two or three weeks past, the grain on the adobe has not been injured, and at present has a promising look.

Contra Costa.

VINES AND FRUIT TREES.—Crockett Cor. *Gazette:* On the Edwards farm there are planted some 9000 vines, all of table varieties, about one-half being Muscats. This vineyard is four years old, and the grapes produced on it last year were of the choicest quality and of excellent flavor. About 2000 trees have also been planted on the farm, one-half of which are Silver prunes. Apples sent from this orchard to the Mechanics' Fair last season, Mr. Swain remarked, assisted him very much in securing the premium for best county fruit exhibit.

Los Angeles.

FINE FRUIT FARM.—Pomona *Progress:* C. E. White has one of the model fruit farms of the Pomona valley. Forty acres constitute the home place, and 40 acres are in another piece just south of the railroad, and east of the town limits. The home place embraces 18 acres of oranges, 10 acres of Malaga grapes, and 10 acres of Royal apricots. The eastern place includes 10 acres of olives, 20 acres of Moorpark apricots, and 10 acres of French prunes. The prunes are three years old. Last year they averaged 20 pounds to the tree, and sold for two cents per pound. The apricots are planted 20 feet apart, and average 108 trees to the acre. Two years ago they averaged 120 pounds to the tree. Last year's crop was very light, being only 25 pounds to a tree. This year he expects to get 150 to 175 pounds per tree. The vines are planted 8x10. Last year gave the first crop, of 15 pounds to a vine. This year he expects 25 pounds. Mr. White expects to reap an increased profit from the cold storage system.

GREEN PEAS FOR THE HUB.—Pomona *Times-Courier:* E. T. Palmer has shipped 500 pounds of green peas to Boston. They are to be subjected to the cold storage process at Riverside, and forwarded East in refrigerator cars. This shipment is made as an experiment.

OLIVES FROM GATE-POSTS.—Santa Ana *Standard:* Six or seven years ago a man living near Orange set out two olive posts on each side of his gateway. They grew rapidly, as they were near his ditch, and two years ago the owner told us his crop of berries on the two trees amounted to ten bushels.

Marin.

CAMELLIAS.—San Rafael *Journal:* These exquisite flowers thrive in San Rafael. We once spoke of a group of trees heavily laden in Mr. Lichtenberg's grounds. In Hall McAllister's garden is a camellia tree from which 40 dozen flowers have been taken this season, and near it stands a very vigorous one imported from Japan, that is 300 years old and cost $300. It is about one foot in diameter at its base, though, like a true Jap, it is not tall—only about seven feet.

Mendocino.

ONE NICE DAIRY FARM.—*Dispatch and Democrat:* Joseph Sheppard runs a dairy and creamery on the Garcia river, just north of Point Arena. He has a most excellent ranch, on which he keeps about 200 Jersey cows, and from their milk manufactures the finest butter we have ever eaten. The cream is separated from the milk by a patent process, and the butter made at once, so that it cannot be otherwise than sweet. The butter is shipped to S. F., where it finds ready sale at the highest price paid.

Modoc.

GETTING RID OF RABBITS.—Adin *Argus:* Last Saturday a number of people left town in sleighs and on horseback, armed with long sticks, to rid Big valley of the rabbit pest, and succeeded in killing about 1000. The snow being 18 inches deep, the rabbits could not run, and the men would come up to and knock them over with clubs. It was a novel and economical way.

Placer.

PEPPERY PRECOCITY.—*Republican*, March 9: On P. W. Butler's place is a pepper tree which has made a remarkable growth. Two years ago it was a very small sprout just out of the ground, and now it is perhaps 18 feet high, with a trunk about a foot in diameter.

THE CO-OPERATIVE FRUIT COMPANY held a meeting in Newcastle Saturday, and decided to continue business this year as a corporation. It now has 35 members. John Mitchell was elected President, William Barter, V. P., and R. N. Nixon, Sec. These, with J. W. Blanchard and G. W. Callahan, will be the Board of Directors. William Hazen was elected Treas.

urer. Captain Hawk will retire as manager, being compelled to devote his attention to his ranch.

Sacramento.

HIGH HOPES.—Telegram to *Chronicle*, March 12: Sacramento valley farmers and fruit-raisers assert that there has never been a season when the outlook for crops was so good as now. Grain is reported in fine condition, and fruit in unlimited quantities will be produced in Sacramento county this year. From Galt, Folsom, Isleton, Courtland, Elk Grove and all the Sacramento county towns comes the cheering news of good times and business activity. Hundreds and hundreds of acres of new land have been planted to trees and vines this spring. The advent of new settlers and new energy has set commercial blood flowing in this community as never before, and the boom that is upon us is the general theme of conversation.

San Bernardino.

LARGE SOWING OF BARLEY.—*Valley Echo:* The newly-sown fields of barley are looking fresh and green. A larger acreage has been sown in this vicinity than ever before. Nearly all the unimproved lands of Arlington have been converted into barley fields.

THE CANNERY PROJECT.—*Index*, March 12: It is pretty authoritatively stated that an extensive cannery, under the management of Wm. T. Coleman & Co., of S. F., will be started at Lugonia the coming summer. Between Lugonia and the Santa Ana river there are thousands of peach and apricot trees in full bearing, and this immense crop is a big summer job. It is also rumored that the S. P. R. R. will extend its line from Mound City, only three miles away, to the Stillman tract just above Lugonia, which is the most accessible place in the valley to shippers. Leland Stanford's heavy landed interests at Lugonia give color to this rumor.

San Diego.

MAKING OLIVE OIL.—National City *Record:* Frank A. Kimball's new works are turning out olive oil by the barrel. This we consider a very important enterprise—one that will stimulate the raising of this profitable fruit. This mill will be able to handle all the olives raised hereabout and make the industry a very desirable one—perhaps the most remunerative in this section.

THE OTAY VALLEY.—This whole valley is rapidly becoming a charming section—a garden, vineyard and orchard, from the old county road back nearly to the mountains on the east. Lands in this valley which we could have purchased at $25 per acre one year ago have been recently sold for $60 per acre, and are now held at $100.

San Luis Obispo.

NIPOMO NOTES.—Cor. San Luis Obispo *Tribune:* Nipomo is enjoying a genuine real estate boom. From the cars can be seen eight dwelling-houses in course of construction in the valley, while in Nipomo five dwelling and business-houses are nearly completed. A carload of fruit and ornamental trees were sold last Thursday. The greater portion of the Nipomo has already been sown to wheat and barley and is looking fine. Beyond Santa Maria but little grain has been sown, and, as a rule, the ranchers have just commenced plowing.

Solano.

EDITORS PRESS:—The past four days have been warm and summer-like, and fruit-buds are fast turning into blossoms. Grass and grain are coming forward rapidly. To-day is cloudy and looks like rain. People here are very busy working their orchards and vineyards. Tomato plants that have been set out from hot-beds look well; they are worth $2 per hundred in Vacaville. The roads are very good, but rough.—G., *Vacaville, March 13th.*

Sonoma.

PROLIFIC PULLETS.—Cloverdale *Reveille:* An attache of this office gathered from eight hens during the month of February (28 days) 110 eggs. The hens are confined in a small yard, receive good care, and give ample returns in "hen fruit," as the above shows. The cockerel and two hens are thoroughbred white Leghorns (prize chickens), while the remaining six are half-breed brown Leghorns.

Sutter.

HORTICULTURAL COMMISSIONERS APPOINTED. *Farmer:* At the regular session of the Board of Supervisors for Sutter county, March 7th, upon petition of six orchard-men for the appointment of a County Board of Horticultural Commissioners, it was ordered that R. C. Kells, J. C. Gray and S. J. Stabler be and they are hereby appointed commissioners for Sutter county, to be known as a County Board of Horticultural Commissioners, provided, always, that in no event shall the services, acts, or things done or performed by said commissioners, or either of them, be or become a charge upon this county, in any sum whatever, until the further order of this board. This order is made under and by virtue of an Act of the Legislature of the State of California, entitled, "An Act to protect and promote the horticultural interests of the State," passed March 14, 1887. [We should say that the selection of members of the county board strikes us as excellent.—EDS. PRESS.]

NEVADA.

HOW HE SAVED HIS SHEEP.—Reno *Gazette*, March 9: Pat Molloy, who came in last evening from his sheep range, reports that he got his flock through the heavy snowstorm with a loss of only eight head. While the snow was deepest he moved his sheep about half a mile a day, thus keeping them on fresh sagebrush, and thereby kept them from starving until the snow settled.

LIVE-STOCK STATISTICS.—The number of horses in the State on January 1, 1887, was 44,654, valued at $2,462,499; mules, 1657, valued at $121,151; milch cows, 17,633, valued at $638,356; oxen and other cattle, 317,059, valued at $6,949,993; sheep, 674,486, valued at $1,153,371; hogs, 14,546, valued at $77,339. The increase in the number of horses in this State in 1886 over the number in 1885 was five per cent; mules, six per cent; milch cows, six per cent; oxen and other cattle, 10 per cent; sheep, two per cent; hogs, one per cent.

OREGON.

STOCK NOTES.—Ashland *Tidings*, March 4: Shook Bros., of Klamath county, are feeding from eight to ten tons of hay daily, and say that if the storms continue many farmers will lose their stock. The horses running loose are in very poor condition, and the bunch-grass which they are able to get from beneath the sagebrush, barely suffices to keep them alive. Hay is quoted at $15 a ton, and scarce at that figure.

CROP PROSPECTS.—*Willamette Farmer*, March 11: The snow was rather a benefit than an injury. So far as we can learn the wheat fields are in fine shape. The fruit crop promises well because of the late spring. If the weather keeps fine when good weather comes, there will be little danger to fruit. We are beginning to make fruit pay us a handsome profit, and a good season will encourage many to plant trees who have not yet done so.

The Fruit Union.

The Trustees of the California Fruit Union met on the 14th at 507 Montgomery street, S. F. All nine Trustees were present, and Pres. A. T. Hatch in the chair. There were also in attendance the following Eastern fruit dealers: Porter and Salisbury of Chicago, Palmer of Minneapolis, Davidson of Cincinnati, Butts of Council Bluffs, and Perry of Denver.

The special object of the meeting was to devise some plan by which the interests of Californian fruit-growers and shippers can be better protected, the coming season, and their business made more profitable. The discussion, which ran through both morning and afternoon, revealed a prevailing disapproval of last year's system of shipments and a general feeling in favor of but one agent in each principal Eastern city, who should receive all shipments to the territory under his control. Thus the quantity shipped to each place could be regulated and no more sent to one point than could be promptly used. With but one agent and a proper supply to meet demands, it was thought the difficulties of competition, with a surplus in some places and a scarcity in others, would be overcome.

A good deal was said as to the feasibility of sending East some member of the Union to act as a supervising agent. While the desirability of such a measure was unquestioned, the heavy expense it would entail was felt to demand unusual deliberation. It was resolved to call for the fourth installment of the 25 per cent on the capital stock, and to debar from the privileges of the Union all members who do not pay up by May 1st.

In the evening the directors met in executive session at the Palace hotel, and decided that an Executive Committee of three shall be appointed, consisting of the general manager and two directors, to serve during the term of the board, and that this committee shall hold a meeting on every Wednesday during the shipping season at the office of the general manager in Sacramento, to examine the books, confer with the officers and give the general manager such directions as may be considered necessary, subject to the approval of the full Board of Directors at their next regular meeting.

It was also determined that there shall be but one agent in any city in the Eastern States, except where fruit is sold at auction; in which latter case shippers may name their consignees, provided the fruit is sold by the same auctioneer at the same time and place; and that all agents hereafter appointed be required to give bonds sufficient to cover the largest volume of business which they may be expected to handle at any one time. The president will proceed to the Eastern States as soon as possible to appoint agents and make all other provision for properly handling the fruit of the coming season. He is also to look over the ground and estimate the approximate quantities to be shipped to the various points at any one time.

The National Bank of D. O. Mills & Co. of Sacramento was chosen as treasurer of the Union.

At the directors' meeting on the 15th, L. W. Buck, of Vacaville, Solano county, was re-elected general manager, and H. Weinstock and P. G. Platt, both of Sacramento, were appointed members of the Executive Committee.

Messrs. Weinstock, Kellogg and Buck were chosen to call on the Sunset Telephone Co., and present the following resolution:

Resolved, That the California Fruit Union respectfully suggest to the Sunset Telephone Co. that there is a large amount of fruit grown and shipped through Placer and Nevada counties, requiring very ready and complete communication between the different shipping points; we, therefore, request that the company investigate and consider the matter, and if consistent, extend their telephone connections through said territory.

Authority to audit bills was relegated to the Executive Board. Adjourned to meet in Sacramento, April 13th. The Union now has 817 members, representing 11,000 acres of orchard.

Constitutional Amendment Election.

Governor Bartlett has issued a proclamation for a special election to be held April 12th, for the purpose of voting on the Constitutional Amendments proposed at the past session of the Legislature. The amendments to be voted upon are three in number. Two relate to the judiciary and one to the framing of charters for cities. The latter is intended to confer upon cities having a population of over 10,000 and less than 100,000 inhabitants similar powers in relation to the framing of charters, by means of a board of 15 freeholders, to those now possessed by San Francisco. It will avoid the difficulty that has been met with under the general law in bringing about an agreement between two classified cities as to their respective needs. This difficulty has occurred particularly in the cases of Oakland and Los Angeles, which, by population, are classified together and have been unable to agree upon a charter acceptable to both cities.

The two relating to the judiciary are, first, relating to the internal arrangement and work of the Supreme Court; and, second, raising the salaries of the judges. The latter also provides that disabled justices, when their disability is certified to by five of their associates, are to be retired on a retiring salary of $250 per month for the remainder of the term.

A "WELCOME HOME" TO HON. C. C. WRIGHT.—On his return from Sacramento to Modesto last Saturday, Assemblyman Wright met with such a hearty greeting as well attests the esteem in which the people of Stanislaus county hold his faithful services in the Legislature. Notice of the intention to give him welcome, published by the local press, brought hundreds of people together from different parts of the county, some having come 25 miles to attend. Not less than 2000 persons were assembled at the depot when the train arrived, amid firing of cannon, playing of the brass band and hurrahing of the multitude. Mr. Wright, having been received by the committee and escorted to a carriage, a procession was formed, headed by the Turlock band, which marched to Rogers hall. The reception was strictly non-partisan, Mr. Wright being a Democrat. Dr. T. W. Drullard, chairman of the Republican County Central Committee, presided. Hon. G. W. Schell, a Republican, addressed the meeting, as did Dr. S. M. McLean, who was a candidate on the Prohibition ticket. Mr. Wright explained to the meeting the irrigation bill which bears his name, and predicted that inside of five years Modesto will have a population of 5000.

SANTA BARBARA ORANGES.—Chas. R. Hails brings us from his place at Cathedral Oaks, Santa Barbara, a fine cluster of Washington Navel oranges, large, clean and showing well the characteristics of the variety in juice, close texture and weight. Mr. Hails says his trees had some black scale until last summer, when the insects were killed by the excessive heat, as was the case in other southern situations as reported in the RURAL at the time. Mr. Hails brought also excellent specimens of the paper rind St. Michael. Cathedral Oaks is a beautiful locality about seven miles easterly from the city of Santa Barbara. Mr. Hails settled there 14 years ago and this is the first vacation he has taken since he began. We imagine from the fine fruit shown that Mr. Hails' place must be something handsome, but he modestly refrained from saying anything about that. Our talk with him as to the general condition and prospects of the county gave us the impression that activity and progress were ruling characteristics.

THE SANTA ROSA & BENICIA RAILROAD.—About the middle of the winter it was given out that a railroad would speedily be built connecting Santa Rosa with Benicia, and great was the rejoicing thereat in Sonoma county. But the project now seems in danger of miscarriage; the contractors have balked and the *Democrat* of last Saturday intimates that the directors have been grossly imposed upon by somebody, and that heroic treatment is called for to save the enterprise from utter dissolution. We hope that the needful combination of wisdom and nerve may be made manifest.

CONTRACTS TO BE CANCELED.—The S. P. Co. has issued a circular to agents and shippers, stating that "all special and contract rates quoted or entered into by this company will be canceled March 31, 1887." This action is made necessary by the Interstate Commerce Law.

The Colton Citrus Fair.

The Citrus Fair held at Colton, San Bernardino county, last week, is another instance of what can be done by co-operation and cordiality between adjacent communities. We should have more evidence of this sort and less of the outcroppings of sectional rivalry. Much of the latter comes from lack of knowledge of the real values outside of one's own little district, although local pecuniary interests are also a moving factor. The lack of knowledge can be best overcome by these pleasant assemblages which bring people in contact with each other; the local interest can thus also be taught that narrow views are neither the most creditable nor indeed the most profitable.

It is only a short time since the Colton people determined to invite their immediate neighbors and the farther regions to assemble for a show of horticultural produce. The result was a success beyond anticipation. We learn from accounts received that three rooms, each 30x60 feet, were occupied for the display, and they were arranged for their beautiful work in a most fit manner. The main hall was elaborately and most beautifully decorated with flowers and evergreens, and the pyramids of golden fruit, plates of bright, luscious strawberries and clusters of olives, presented a sight that was at once handsome and inviting. At the north end of the hall, wrought in evergreen, was the word "Welcome," and the word had special significance, for beside being cordially welcomed to the fair, all could enter the building without money or without price.

The leading exhibits were from the immediate vicinity of Colton, that beautiful stretch of mesa, known as "Colton Terrace," contributing splendidly. According to the *Semi-Tropic*, the exhibit from the "terrace" occupied a row of tables situated in the center of the hall, which ended in a pyramid in the north end of the hall, on which was displayed hundreds of oranges, lemons and limes grown exclusively on the Colton Terrace. The first exhibit we noticed was that made by Dr. W. R. Fox, which consisted of six varieties of oranges, viz.: Navels, Mediterranean sweets, Paper rind, St. Michaels, Konah and Seedlings; also a large variety of lemons, limes, olives, canned and preserved peaches, apricots, figs, loquat and orange jellies, strawberries in jars, pickled olives and quinces, and vases filled with beautiful flowers. The products of this one orchard alone would constitute a fair. Next came A. S. Fox's exhibit of some six varieties of oranges, and two of lemons and limes. Close by was to be seen the superb exhibit of the Alexander Brothers, of as many varieties of citrus fruits, followed up by fruits of Messrs. Sprecher & Fish, H. L. Martin, M. Archibald and James Barnhill. The pyramid of Colton terrace oranges attracted universal admiration and attention.

The district which stood next to the Colton neighborhood in extent of display was the eastern part of the grand San Bernardino valley, from San Bernardino City eastward, and including Old San Bernardino, Redlands, Lugonia and Crafton. The chief contributors were as follows:

Dr. Pierson, of Old San Bernardino, who had a fine display of fruit, both fresh and in glass, and a large variety of flowers; Mrs. C. R. Paine had an interesting exhibit of jellies and marmalades, made from citrus fruits; Aaron Haneson, who showed strawberries. A. Van Leuven, of Old San Bernardino, had a curiosity in the shape of oranges grown from the first tree planted in the valley in 1867, and they were on a par with the best. Among other exhibitors who creditably represented their various sections were Messrs. Croft, Paine and Care, and Mrs. Crafts, from Crafton; Messrs. Cook, Shaw, Haight and Tolles, from Lugonia; Dr. Pierson, W. Curtis and R. H. Kendall, from Old San Bernardino; E. P. Morrison and Mrs. B. Brown, from Redlands.

The Riverside people were represented by fine specimens of fresh and dried fruits, and there were also shown the fine set of gold medals won at the New Orleans World's Fair.

The social features of the fair were excellent, and throngs of people came in by excursion trains from surrounding points.

DISCUSSING PLEURO-PNEUMONIA.—The meeting of the U. S. Veterinary Medical Association at Philadelphia, on the 15th, was attended by representatives from nearly all the States. "Pleuro-pneumonia" was discussed at length, and it was

Resolved, That this association is convinced that inoculation for contagious pleuro-pneumonia is inapplicable and should not be allowed in the United States; that no animal should be placed in infected stables until thorough disinfection has taken place; and that all animals exposed to or having disease shall be destroyed.

OATS FOR GERMANY.—A leading commission house in Milwaukee has received overtures from a representative of the German Government for 200,000 bushels of oats for immediate shipment, and it was learned that inquiries have been made in other markets for large quantities of oats, corn and wheat for German consumption. Straws show which way the wind blows.

An Immigrant's Thoughts.

[Written for the RURAL PRESS by MIGNONETTE.]

We heard of a land, a sunny land,
A land doubly blest by God's own hand,
Where are lovely plains, and landscapes fair,
And fields, and fruits, and gardens rare;

Where the song of the birds doth never cease,
No winter or storms to disturb their peace;
Where green-clad hills and mountains high
Majestic rise 'gainst the western sky;

Where running rivers, and fruitful dales,
And a glorious sun that never fails
To cheer the way of the farmer who plods,
And hope inspires as he turns the sods;

Where lonely hamlet and quiet farm,
Far away from a city's worldly alarm,
Away from the sin, the worry, and strife,
Rest quiet and secure 'mid nature's still life;

Where forest wild and Sequoia grand;—
All these to be found in that far-away land;
Where ocean, the broadest yet calmest of five,
Wafts breezes making man feel doubly alive.

And now, dear friends, can you wonder why
Our home we left three years gone by,
And crossing the Atlantic, its mighty waves bore
Us on to the new and unknown shore?

The years have gone past with a ceaseless flow,
And oft as we sit watching the sunset's glow,
We talk of adventure, and trouble, and loss,
But know "A rolling stone gathers no moss."

We've traveled, and bought, and sold, and lost,
And at times wished we were again ocean-tossed,
If only homeward away! yes, homeward bound,
For in "the Golden State" no good is found.

And oft as we sit in our country home,
And think of the unknown years to come,
We ask if it's true that in this land,
Money is made on every hand.

But again we remember that the errors we've made
Are not the fault of the country; it shall not be said
Whose they are: We'll take heart again, and know
that in time
The grandest of lands will be in this Californian
clime.

And let old and new settlers on this foreign shore,
Who love, think, and aim for naught save earth's
store,
Just pause for a moment and let their eye rest,
On yon wondrous light as he sinks in the west,
On yon graceful cornfields, on yon mountains high,
On yon mighty forests with river hard by;
See the moon as she soars in an ocean of light,
See the sentinel stars keeping watch in the night,
Raise your hearts to the Maker and Giver of all,
And trust in His mercy whatever befall.

Wordsworth's Works.

[Written for the RURAL PRESS by C. P. N.]

I have never been able to understand why, because Wordsworth wrote one real poem, his works as a whole should be lauded to the skies, placed next to the works of Shakespeare and one or two other great poets and considered classics. That "Intimations of Immortality" is a masterpiece, fit to rank with any other poem ever written, and that *it* will remain a classic as long as the world lasts, no true lover of genuine poetry will for a moment deny; but—ah! that *but!*—no other one of all his poems can approach it in beauty of thought and expression, and hardly half a dozen of all his poems would be said, by one who had never heard of him before, to be the production of a true poet. He had a mind able to see many phases of the works of Nature, and, being an easy, fluent writer, was always raving and rhyming about "the silent heavens," "wildernesses dreary," "pathless rocks," or "gigantic mountains rough with crags." Having the heart of a poet, he was yet unable to translate into interesting paragraphs the "thoughts * * * too deep for tears," that he felt; and while he satisfied himself that he was the equal of Milton, he lost sight of the fact that old truths in commonplace settings merit little attention and possess less value. Poetry requires much more in its composition than bare simplicity, and had Wordsworth spent as much time on a few of his productions as he evidently spent on "Intimations," not undertaking so much—had he polished and shortened and introduced a little of the poetical feeling and touch in them, they would then probably have been well worth reading. As it is, his long poems in particular—"The Excursion" and "The White Doe of Rylstone"—are dreary wastes of barren deserts unrelieved by any poetical oases except in a few rare spots. "The Excursion" is really prose divided at irregular intervals into lines commencing with capitals, and is with unintentional sarcasm called "poetry." Copied in the form of prose, with only the omission of capitals, what uninitiated person would dream that the following sentences were originally written in the form of blank verse? They are from Book III of "The Excursion":

"His countenance gave notice that my zeal accorded little with his present mind; I ceased and he resumed. 'Ah! gentle sir, slight, if you will the *means;* but spare to slight the *end* of those, who did, by system, rank, as the prime object of a wise man's aim, security from shock of accident, release from fear; and cherished peaceful days for their own sakes, as mortal life's chief good, and only reasonable felicity.'"

(Such punctuation, although ruinous to a degree, was characteristic of that age, and therefore I have nothing special to say about that in this connection.)

Or take another example, this time from Book I of "The Excursion":

"We were tried friends: I from my childhood up had known him. In a little town obscure, a market village, seated in a tract of mountains, where my schoolday time was passed, one room he owned, the fifth part of a house, a place to which he drew, from time to time, and found a kind of home or harbor there."

This, to use an old, familiar pun, is indeed very blank verse.

Any one who wishes to be considered a poet, and especially one who flatters himself that he will "one day take rank by the side of Milton," as Wordsworth flattered himself, should never be so blind to the merits and demerits of his own writings as to allow anything commonplace to become known as his production, and, in fact, should not allow himself to even write trash. A poet must be one of the most versatile of men, able to view objects from different standpoints, talk about them intelligently and express what he wishes to say regarding them in a naturally poetical manner. His powers must be sufficient to raise his subjects out of the gutter if he would treat of ordinary things, and he should never allow his grasp of mind to fail him when dealing with great subjects. Perhaps the most laughable of all blunders and failures is when a poem is intended to convey some exalted lesson or present a truth in a lovable light, but fails in the attempt. Wordsworth has been guilty of this in "Peter Bell." Some parts of this poem are excellent, but when the reader comes to the last stanza, he receives such a severe surprise that he will, if he have any spark of humor in him, cry: "Eureka! a rich specimen of bathos!" Charles F. Johnson has said of this poem: "In fact, the moral savors so strongly of wishy-washy, goody-goody sentimentalism, is so out of keeping with the gnarled, tough and vigorous figure of the hero, that there is not a more startling instance of bathos in literature than this poem of 'Peter Bell.'"

Read the following lines—I dare not insult the shades of Shakespeare so much as to term the thing a poem—and you will wonder, as I have wondered, how a man who hoped to be considered a poet equal to Milton would yet dare to allow such lines to have an existence:

"The cock is crowing,
The stream is flowing,
The small birds twitter,
The lake doth glitter
The green field sleeps in the sun;
The oldest and youngest
Are at work with the strongest;
The cattle are grazing,
Their heads never raising;
There are forty feeding like one!
Like an army defeated
The snow hath retreated,
And now doth fare ill
On the top of the bare hill;
The plough-boy is whooping—anon—anon:
There's joy in the mountains;
There's life in the fountains;
Small clouds are sailing
Blue sky prevailing;
The rain is over and gone!"

Did time and space allow I could speak of other of Wordsworth's so-called poems, "The Idiot Boy" and "Beggars," for instance, that are quite as deficient in poetical expression as any verses I have quoted, but I think enough has been said to prove that, though he wrote a few excellent pieces, he wrote a great deal of stuff that is called poetry only out of respect to the author of "Intimations of Immortality." Wordsworth had something to say, but when he tried to say it he forgot to put away childish things, and the lamentable result is that although he is a man in thought he is a child in expression.

If the lovers of Wordsworth compare him with Shakespeare and Browning, his fate may be much the same as that recorded by Æsop of the frog who wished to make herself as large as the ox.

Haywards, Cal.

ELIZABETH D'ARCY KINNE, NATIONAL PRESIDENT W. R. C.

THE SALOON IN POLITICS is arousing the attention of the secular as well as the religious press. Many who differ widely from the Prohibitionists about policies and measures yet agree with them as to the malign and debasing power of the grog-shop upon State and national politics. It blunts public confidence, defeats wholesome legislation, debauches the voter, subordinates the politician and manipulates election returns. In city and country it makes itself felt with tremendous effect. It is high time for the church in all her branches to lift up her voice against the crying evil. She must combine her forces and wage an aggressive warfare against the giant wrong. United, determined action is demanded. Were she one in policy and movement, thoroughly aroused and active, the days of the saloon would be numbered.—*Presbyterian Observer.*

Winter Among the Sierras.

Written for the RURAL PRESS by MARY P. ARMS.]

The coming of the storm-king was long delayed this season; so long that the despondent began to predict another failure of crops, of which we have had many, and even the more sanguine began to say: was ever winter like this before?

Farm work was being rapidly pushed forward, plowing was going on on every side. The early spring flowers were peeping their little golden heads out into the sunshine on the sunny mountain slopes, when the 18th of January brought us a snowfall of half a dozen inches. Some brought out their sleighs, while others traveled on wheels until February 3d, when there came a night and a day of snow, one of those enjoyable storms, when the great fleecy flakes came straight down until mother earth lay buried three feet deep under her white mantle. And my little daughter begged me to repeat part of Whittier's "Snow-Bound," which she has grown to think part and parcel of every snow-storm. Was ever word-painting more true to nature?

"And when the second morning shone,
We looked upon a world unknown,
On nothing we could call our own.
Around the glistening wonder bent
The blue walls of the firmament;
No cloud above, no earth below—
A universe of sky and snow!
The old familar sights of ours
Took marvelous shapes; * * *
A fenceless drift what once was road;
The bridle post an old man sat,
With loose-flung coat and high cocked hat," etc.

Soon sleds and sleighs were taken out, and the work of breaking roads began in earnest, which was aided by the rapid settling of the snow. But February 12th and 13th the storm-king came again "announced by all the trumpets of the sky, and driving o'er the fields seemed nowhere to alight."

It was with difficulty the unstabled stock were fed, as the gusts of wind swept the hay here and there at its own wild will, while the poor dumb animals wandered around shivering with cold and half blinded with the snow, and the more favored of our equine and bovine friends who had been sheltered the previous night, were loosened but a short time at midday from stall and stanchion; while the snow drifted everywhere, finding its way into our closest houses—"into each crack and crevice, creeping, into the very keyhole peeping."

Again on February 24th we had a day of wind and snow, such as I have never seen, except among the high Sierras. Great drifts accumulated everywhere. The wind blew so relentlessly, those who are not wont to think of the source of their blessings instinctively thanked the Giver of all good for home and shelter.

These heavy storms always bring much work for many hands. Paths are to be shoveled, roofs which have grown unsafe from their heavy weight of snow are to be cleared, and many disarranged things are to be set straight. A few days after the storm of Feb. 24th the mercury sank to 20 degrees below zero, which is lower than we have had it for several years. My little girls delighted themselves with the beautiful tracery of nature's geometric signs upon the window panes, and we older ones recalled Hannah Gould's poem of our school days, of how Jack Frost

"Flew to the windows of those who slept,
And over each pane like a fairy crept."

Through all these weeks we have had what Emerson calls the "privacy of a storm." This morning I caught the first harbinger of spring in the full, glad notes of a meadow lark, who sang away apparently unconscious that the brown earth still lies deeply covered with snow.

Beckwith, Plumas Co.

A Leader in Charity.

We always enjoy the opportunity of calling the attention of our lady readers to those of their own sex who are leading in various departments of laudable effort, and on this page we give a portrait of a lady who is at the head of one of the leading charitable societies of this country. We borrow the portrait from the *Fraternal Record* of March, 1887, and the following descriptive paragraph is from the same journal:

Mrs. Elizabeth D'A. Kinne, of San Francisco, is National President of the Woman's Relief Corps. She has ever been one of the leading spirits of the Corps and continues one of the most ardent workers in the glorious cause espoused by the organization which carries on a noble work of charity as the auxiliary of the Grand Army of the Republic. The organization has been particularly fortunate in the selection of so earnest and faithful a worker as its chief executive. Her administration has been characterized by the exercise of the rarest good judgment, and the growth of the Relief Corps and the extension of its work during the few years of its existence has been little short of wonderful.

The national organization of the Relief Corps was perfected in Denver in 1883. Mrs. Kinne was appointed provisional President for this Department; the first Corps here having been organized in San Diego in June, 1883. At the

time of her appointment the organization numbered but five Corps. In February, 1885, a permanent organization of the Department was perfected, and Mrs. Kinne was elected Department President. In June of the same year, at the National Convention in Portland, Me., she was elected Senior National Vice-President, and in August, 1886, was elected National President.

In February, 1886, she closed her year's work as Department President with 21 Corps and 1200 members. Now the Department has 35 Corps, all in good working order, with 2300 or more members. Though the Department has not as many Corps as some of the Eastern Departments, still it ranks fifth in the matter of membership. Last year this Department disbursed $2700 in charity to the widows and orphans of soldiers, and to destitute soldiers not members of the G. A. R.

Mothers and Daughters.

Among one of the most essential lessons to be taught the young girl standing upon the threshold of womanhood and looking out with glowing hopes into the future is the sacredness of the marriage relation. The home life should be eloquent of its sanctity and its joy. The true value of the home, not merely as a place of shelter, but as a central spot where confidence, purity and mutual affection are the atmosphere which is breathed, our sons and daughters must learn to estimate in its true measure, and be taught to shrink from whatever would invade its sanctity or destroy its peace. If the mothers of America would train their children to look upon marriage in the light of its sacred obligations, and not as a relation that may be lightly entered into as a matter of convenience or ambition, regarding it as a compact that may be lightly broken if it prove in any way a disappointment, there would be less unhappy marriages and fewer divorces than exist to-day. The young girl who marries for a home, for social position, or from the fear of being "an old maid," or in order to spite a recreant lover, or for any of the numerous excuses for marriage save that of honest affection, does violence to her own nature, and to every hope of happiness in the marriage relation. The only safe and natural basis for married life is that of affection. It is the only one that will bring happiness and safety. Mothers, don't teach your daughters that to "make a good catch" is the thing to be regarded as the most important in determining their choice of a husband. Wealth alone will not bring happiness. There is a heart-hunger and isolation that is terrible, when marriage is cemented simply for mercenary ends. The young wife, bound to her husband by no ties of affection, and thrown into the society of brilliant yet unprincipled men, has no armor against temptation if once her heart is enlisted, and her affections, which are free, can be interested on the side of the tempter. She may not yield to dishonor, as the world recognizes it, but she may seek in divorce freedom from her unhappy marriage, and throw aside her wedded obligations as lightly as she assumed them. Every mother should seek to impress upon her sons and daughters the fact that marriage is something sacred, and a life-long obligation, divine in its origin, and, properly entered into, one of the most satisfying sources of earthly happiness.

I met a wise mother not long ago, whose daughter, a young girl of 20 years, had received some attentions from a widower much older than herself, but whom she had looked upon merely as a friend. "My dear," said the mother as her daughter confided the fact of his declaration to her, "do you feel that Mr. Blank is the man of all others that you could be happy with? Would you feel a sense of loss and sorrow at seeing him wed to some good woman other than yourself?"

"Oh, no, mamma," replied the young lady, "but I feel so sorry for his loneliness, and I do want to see that sweet little daughter of his brought up well, she is so lovely and winning; and he says if I do not marry him he will never seek another to fill his first wife's place. I like him, mamma, very much, but then I know I do not love him."

"Then, my daughter, do not think of marrying him. You are not called upon to marry him for his child's sake, and men are apt to forget their assertions that no other woman will do for them when they find their suit is unsuccessful."

That was three months ago, and the widower is now married to a good woman, more suited to his age, and the young girl is happy indeed that she was not led through her sympathies to become the wife of the man she did not love. Six months hence she hopes to be wedded to the man of her choice, a man to whom her whole ardent nature responds, and she says: "I should have missed the best life has to give had I married Mr. Blank. I shall be thankful all my life long for my mother's restraining counsel."

Mothers, be wise for your children; train your sons and daughters to be true to themselves in all the relations of life; to look upon marriage as desirable and honorable only when based upon affection, and divorce, save only for broken marriage vows, as a dishonor and a crime.—*Susan Sunshine in Los Angeles Times.*

TO MAKE papier-mache for fine, small work, boil clippings of brown or white paper in water, beat them into a paste, add glue or gum, and ize and press into oiled molds.

YOUNG FOLKS' COLUMN.

A Grandma That's Just Splendid.

Grandma's eyes are dim,
And grandma's hair is sprinkled
With threads of white; her caps set prim
Above a face that's wrinkled.

But grandma's eyes are kind,
And grandma's smile is cheery;
She likes our noise—she doesn't mind—
She calls us "pet" and "deary."

She tells us such a lot
Of stories, with a fairy
And giant in; she knows it's what
We like—something real scary.

She never scolds at all;
She keeps our playthings mended;
She dresses dolls. She's what we call
A grandma that's just splendid!

—*Golden Days.*

Louis Tells us a Story.

[Written for the RURAL PRESS by THORN.]

As was the custom, I generally managed to get the three boys off to bed with the promise of a story.

They had already listened eagerly to "Found in the Treasure Box," "Wooing of Master Fox," "Piff-Paff," and scores of others; tonight I was to tell them "The Three Lemons," and just as I had ended up with, "They lived happy all the rest of their lives," little Frank cried out, "Tell us another."

As my rocker was near the head of Louis' crib, he whispered, "I've got a story to tell 'em." So I introduced Master Louis as the story-teller. He began:

"Once there was a worm and a round stick which stuck straight up in the ground. The worm said, 'I am going to work and make a hole right around this stick.'

"So he started and in a little while he got all around; but this silly little worm didn't have many brains, and so when he got around the stick once, he kept going round and round until he dropped down dead."

With a sigh, Frank turned over on his pillow and said, "Poor thing!"

The next morning when Frank awoke he told the boys his dream, which ran as follows:

"I dreamed I had three lemons, and I cut the first one open and a fairy popped out; but I didn't give her any water, so she flew away. Then I cut the second open and let *her* fly away; but I didn't let the last one fly away, because I gave her some water, and then, what do you think? *She turned into a little tiny worm!*"

Louis and Charley gave one loud burst of laughter, and tripped downstairs to the breakfast-room to tell mamma that Frank's fairy was a little worm.

Island-Home Farm.

A Long Ride.

Ethel A., who passed her sixth birthday but a fortnight since, and whose parents live at the eastern extremity of the Highlands, was left at home with her mother a few days ago, the father being away on business and the older children all at school. Time with the little one hung heavily and she said: "Mother, may I get old sorrel and take a ride?" Mother gave her assent and old sorrel was brought out duly equipped. Ethel mounted and started down the road, as her mother supposed, for a short ride. At the forks of the road, about two miles down the valley, a pleasant thought flitted across the child's mind, as it was only about a mile farther up the slope to the schoolhouse where the children were—"It would be so nice to ride across and see them." Old sorrel had no objection, and so they visited the school-children. It then occurred to Ethel that it would be very nice to return by way of the ditch where the men were at work. So the return was made that way, completing a ride of about eight miles in a little over two hours, without accident and greatly to the relief of her anxious mother.—*San Bernardino Index.*

A TEAM TREATED WELL.—There is a big team drawn by four horses that we invariably meet as we drive with our children to school. The horses are so sleek and so handsome and always seem so happy, that our children, little ones, call out as they see this high wagon and fine horses, "Oh, there's Dizer's team." There are other wagons, besides the one drawn by the four horses, owned by Mr. M. C. Dizer, of Weymouth, and the animals are always bright and never seem overworked. The whole team is attractive, even to the kind-looking drivers who give the horses a breathing spell. During the late heavy roads, when the mud was very deep, we noticed a fifth horse as leader to the others, and although the drawing was hard, our four old friends went along as willingly as ever. Each of the children has his favorite of these well-cared-for horses, and we wish all who send teams to the city would emulate the care of Mr. Dizer or of whoever has charge of his animals. Economy in money alone would lead the prudent man to deal tenderly with his dumb servants, but love should prompt it, love to the helpless part of God's family.—*A. E. F., in Our Dumb Animals.*

GOOD HEALTH.

Water vs. Whisky.

EDITORS PRESS:—Water is the natural drink for man, and may always be taken in moderation when thirst is present. It performs important purposes in the animal economy, and is absolutely indispensable to life and health. Water is the only fluid which does not possess irritating, or at least stimulating, qualities, and in proportion as we rise from table beer to ardent spirits, in the same ratio we educate the stomach and bowels for that state of morbid sensibility which must eventually weaken the digestive organs in such a manner that they cannot perform their respective functions, and indigestion and dyspepsia is the consequence. If we would enjoy health, all stimulants should be avoided as common drinks. They may be useful as medicines, when nature falters and droops and cannot resuscitate herself; but as a beverage, stimulating drinks should be avoided. When stimulants are taken, the machinery of the system is hurried and driven too fast, and although by this means its activity and power may seem to be increased, yet a reaction must follow, and a corresponding debility must ensue, then another stimulating draught is called for to bring the system up again, when another reaction must follow. By this course the natural vigor of the constitution becomes gradually and oftentimes imperceptibly impaired. Hence, if we would preserve a healthy system instead of provoking nature to unnatural action, we must furnish her with sufficient healthy nourishment, and let her regulate her own mode and speed of action. Give her nourishment and she will furnish her own stimulants, which will be far preferable to any promptings which art can invent, sustain her in her natural action, and not force her to unnatural speed, which is weakening to her innate powers. To live naturally is to live healthily; to live artificially, is to tempt and foster disease. By stimulating, the nerves are excited, and, in due time, become so irritated as to set up an habitual state of morbid sensibility. From too frequent potations of spirituous liquors the appetite and powers of digestion are extinguished and the stomach irritated in proportion as the inebriate takes his libation the more frequent, till even the presence of food cannot be borne without pain, and a very small quantity of the burning fluid which he used to swallow so freely and with so much gusto, now quickly makes him inebriated. These are facts, and facts are stubborn truths which we see every day, and whoever has watched the dram-drinker's progress will bear me out and support the position I have taken. The too frequent use of ardent spirits stupefies the mind, blunts the mental faculties, weakens the nervous system, destroys our finer feelings, and makes us less sensitive. Injuring our appetite, it makes us irritable, lowers us in the estimation of our friends; we lose our self-respect; it reddens the eyes, it bloats the face, it saps the foundation of health, it weakens our physical strength, it cools the ardor of our attachments, it alienates our affections, and lastly it tumbles us into the ditch, and degrades us below the brute creation.

I find by the reports made to the authorities, in many cities, that there is a wonderful increase in an important branch of manufacturing. In these factories are made a great variety of articles for several classes of society, from the genteel dandy tippler to the beastly drunkard, from the brainless stripling, with his first cigar and julep, to the aged veteran, in filth and *rum*. Here the green puppy (pardon the expression) is prepared to squander his father's frugal earnings; here are made broken hearts of wives and daughters; here are ruined the hopes of fathers and the stay of mothers; here are prepared men for the prison and the gallows; here is doubled our taxation, and our homes are filled with poverty and shame; here votes are manufactured for demagogues to buy; here are made gamblers, thieves, rowdies, loafers, idlers, drunkards, vagabonds, grief, despair, suicide, and murder. In those factories are made rags, ignorance, and starvation for our children, shame and sorrow for our friends, and beasts of ourselves. LESTER CROSS.

Stockton, Feb., 1887.

Tested Prescriptions.

[Written for the RURAL PRESS by J. S. TIBBITS.]

Remedy for Dyspepsia.—Drink a cup of warm water, as hot as can be borne, in the morning, before eating. Eat moderately, slowly, and masticate food thoroughly. Drink no fluid while eating, and only one cup after the meal.

Cure for Corns, Bunions and Chilblains.—Three parts coal oil, two parts turpentine, and one part chloroform. Mix and apply to affected parts every morning, and heat in as hot as can be borne. Wear broad-soled, low-heeled shoes, and the cure will be complete.

AN EYE FOR AN EYE.—The replacement of a diseased eye by the healthy eye of an animal has now been done five times, with one success, says the *Medical Record*. In the four cases the cornea sloughed; in two, however, firm vascular adhesions took place.

DOMESTIC ECONOMY.

From Decoration to Dentistry.

[Written for the RURAL PRESS by MRS. J. HILTON.]

I must tell the sisters about a new kind of crazy work; and as it is very pretty, the brothers may do some of it, too, if they like.

Whenever you go visiting, get your friends to give you some of their scraps of wall paper and borders, and when you get ready to fix up your room, cut those different kinds of papers into various sized and different shaped pieces. Then paste the light kinds on the center of the ceiling, and the dark kinds around next to the wall. Then make a dado about three feet high from the floor, with the crazy work, put on a plain, light paper above that. Finish with the bordering and you will have a lovely room. If you have a design with circles in it, put that directly in the center of the ceiling. The room I saw done in that way was just elegant. The light paper relieves the medley, and makes a good background for pictures.

Unsealing Cans.—I have always made my own sealing-wax for cans with beeswax and resin, equal parts. But this year I did not have the beeswax, so I bought the wax that is made on purpose. But I did not like the way it flew all about when trying to open a can, until I tried pouring hot water on top of the can until the wax is soft. Then I put the point of my knife under the lid and lift it off, wax and all. In that way it does not get into the fruit, nor is it wasted as in the old way.

For Toothache.—Even when the tooth is decayed, two or three doses of some fever medicine will check and nearly always stop the aching. For ulcerated gums use a wash of one drop of carbolic acid to one cup of tepid water. Don't forget the proportions, because it must not be strong, as the acid is a poison. Although the mouth will bear stronger than that, yet that is safe, and will cure the ulcerations with one or two washings, unless they are very bad. If they are, keep on with the wash, and they will soon disappear.

Los Alamos, Cal.

Orange Recipes.

Sweet Orange Preserves.—Grate off the outside rind, cut in half and take out the seeds; after this put the fruit in a weak brine and let it stay for 12 hours, then rinse it in cold water. Put it into a kettle, cover it with cold water and let it come to a boil. Repeat this several times until the bitter taste is destroyed. Just as soon as the water begins to boil, change it for other water. Allow one pound of sugar to a pound of fruit, and one pint of water to a pound of sugar. Boil the fruit until it is clear, and after it is taken up, if the syrup is not thick enough, continue to boil.

Orange Marmalade.—Take 12 oranges, grate off the outer rind; reserve and spread on a dish what is grated from four of these. Peel them and reserve peeling of four, free the pulp from skin and seeds. Weigh the pulp, and add its weight in sugar. To this put one teacup of water, break up the pulp and put on to boil. Take the peeling of four oranges, shred it fine with a sharp knife, cover it with cold water and boil, changing the water until the rind is tender and free from bitter taste, then add to it the pulp. When the marmalade is nearly done, sprinkle in it the grated rind. How to tell when the marmalade is cooked enough: Take up some in a spoon, let it cool and pass the fingers through it. If it stays apart it is done; if not, it should be cooked longer. In the above recipes use the best granulated sugar.

Orange Cream.—The juice of six oranges, one-fourth of a pound of white sugar, one pint of boiling water and six eggs. Beat the yolks, add sugar, orange juice and water, and stir over boiling water until it thickens. When cool, put into glasses, and on each one put the beaten whites, sweetened and flavored with a little of the grated rind.—*Dayton (Fla.) Messenger.*

TO BAKE CAKE.—Most cake requires a moderately hot oven to make it rise up well. Fruit cake, however, should be put into a slow oven, as it needs longer baking and is apt to burn. For all cake the heat should be well kept up; if allowed to decrease, the loaves will be doughy inside, or at least heavy. Sponge cake, in particular, needs a steady heat. Jelly cake and all layer cakes need a hot oven and are easier for a novice to bake than any other kind. They bake quickly. Watch carefully to see that they do not burn around the edges. Except with layer cakes, do not open the oven door till the end of 10 minutes. It might chill the cake while rising, which is the most critical time. When opening the oven, take care that no cold draught of air from an open window or door strikes in. Do not slam the oven door when it is to be shut, or jar the pans by moving them unnecessarily.

TO COOK A HAM.—Boil the ham three or four hours, according to size; then skin the whole and fit it for the table; then set in the oven for half an hour, cover it thickly with pounded rusk or breadcrumbs and set back for half an hour longer. Boiled ham is always improved by setting it in an oven for nearly an hour, till much of the fat dries out, and it also makes it more tender.

The Week.

The leading feature of the week to one who looks over the whole State is the general awakening of interest and uprising of the people in nearly all parts which is described by the short and expressive word "boom," and the State may be said to be "booming." A stranger might think from noting the accounts in local and metropolitan journals, and from the organization of Boards of Trade for the purpose of united effort in spreading the truth about the several parts of the State, that our citizens had but just awakened to the worth and splendor of their heritage; that though gold was found 30 years ago the State of California had but just been discovered. Such is indeed the fact in some respects. Certain it is that never before did the State cut so large a figure in the eye of the world as now, and never did the world by common consent agree to overrun California as is now being done. The great events of the past, the Conclave and the Grand Army Encampment, did not do more to fill the State for their brief seasons than it is now filled, as one might say on its merits and without any special rallying occasion. We rather like it. We are glad to see the different counties arising in consciousness of their might and resources. Let it go on; California is better than it has ever been painted. We are not afraid of the verdict of any one who comes to see the State and to judge for himself. The beauty of it is, too, that California improves upon long acquaintance, and those who know her best are her most ardent admirers.

Our Mourning Symbols.

The abounding hopefulness and cheerfulness of Henry Ward Beecher's pulpit ministrations were always consistently illustrated when in the presence of death and bereavement. He did all he could by precept and example to strip the King of Terrors of his hideous features and heathenish gloom. However tenderly he loved those who were near and dear to him by the ties of nature or spiritual companionship, he never would wear mourning when they passed away, nor encourage its use by those who were under his influence. He always regarded it as a language of despair no Christian could fitly use, and at best a burden the rich lay upon the poor they were little able to bear. His bright and cheerful spirit could have found nothing to offend in the simple and chaste tribute of respect paid over his own remains. Only in the draped public buildings and tolling bells, a matter over which his family had no control, were there any indications of those symbols of grief that have so long been a reproach to Christendom. His coffin was placed in the center of a well-lighted room, surrounded with banks of flowers. The sweet perfume pervaded the air, and on all sides could be seen the floral emblems of loving friends. No streamer of crape hung on the door, and while his remains lay in state in Plymouth church a few hours to give his vast congregation an opportunity to take a last look upon their great pastor, music continuously played and no insignia of sorrow was in sight.

There are some indications of a coming revolution in this matter, and the sweet serenity and chaste simplicity of the Beecher funeral is a lesson that modern society needs and will not fail to note. Only a few, here and there, for awhile will have the courage to stem the tide of a foolish fashion; but the day is not far distant when an enlightened common sense will prevail. The custom of putting on mourning has for years been abolished in the higher classes of England, and there is no reason why it should not go out of fashion everywhere and among all classes. It entails upon many families an expense they are not able to stand, and then it is unbecoming and unhealthy. Not one woman in a thousand looks well in mourning. Can there be anything more incongruous than the spectacle, often seen, of a round, dimpling, laughing face framed in widow's weeds? And equally disagreeable to a sensitive nature is a haggard and unhappy countenance arrayed in the somber trappings of woe. A coffin bobbing along the street would be no more unpleasant to meet. Occasionally a charming widow in doleful weeds may be seen, but the recollection that her sweet attractiveness was born of the grave, and that she is making capital out of a corpse around whose neck her soft white arms a few months ago hung in loving embrace, turns admiration into another sort of feeling.

Then what a ludicrous and grim absurdity governs the custom of wearing mourning. Everything which can catch the light must be discarded; each little scallop or frill, or bit of lace, removed. If one is very strict, the long, suffocating vail must hang over the face for a prescribed period. There is a certain season during which it must remain pinned to the back of the bonnet, and then it may be gradually shortened and finally removed. White or gray may gradually be mixed with the sable costume. This indicates the coming of spring after the winter of sorrow. At last a touch of lavender, or even a bit of lilac, may be put on. And then comes colored clothing, and a person is said to go "out of mourning." And by and by, oh! sad fate of humanity, this must all be done over again when God takes another one out of the circle.

Many insist that it is a mark of respect for the dead, but we are inclined to think that we show a profounder respect when we carry our sorrows in the silence of our own hearts. Why should a broken heart flaunt its bereavement in the streets, butcher shops, stores and street cars? We like the sentiment of Jean Paul: "We hang the sweet images of those we love in the silent chambers of the soul. They are not parlor pictures for every one to look at. Only with the loved do we care to talk of loved ones. We let them into our holy of holies."

THE LATE HENRY WARD BEECHER.

Close of the Legislature.

At 2 o'clock last Saturday the Legislature of California, after a session of 69 days, closed its career. It may be said in the mixed metaphor of the Hoosier preacher, as he stood by the coffin at a funeral, "We have here, brethren, a standing monument and living example of the frailty of all mundane things." The closing hours of both houses were characterized by the usual noise and hurly-burly of a protracted session. In the Senate were introduced 445 bills; in the Assembly 569, a total of 1014. Out of all these, 219 passed both houses and were enrolled and sent to the Governor, and up to the date of adjournment the Governor had approved 134, vetoed two, and has till the 24th to consider the remainder. Of most of those he has on hand, about one-half are for claims and deficiencies, the remainder are emendations of the codes. Not including the printing bill, which is unusually large, the expenses of this Legislature are simply enormous. The itemized account stands as follows:

FOR THE SENATE.

Per diem and mileage	$ 21,300 00
Officers and clerks	6,487 00
Contingent expenses	37,449 14
Total	$ 64,936 14

FOR THE ASSEMBLY.

Per diem and mileage	$ 40,851 00
Officers and clerks	7,089 00
Contingent expenses	38,709 51
Total	$ 86,649 51
Grand total	$151,585 65

The tax levy was fixed by the Assembly as follows:

For the thirty-ninth fiscal year:	
General fund	$3,225,000
School fund	1,600,000
Interest and sinking fund	200,000
For the fortieth fiscal year:	
General fund	$2,814,000
School fund	1,800,000
Interest and sinking fund	200,000

The appropriation for the schools has been increased by $800,000—$300,000 for the thirty-ninth year and $500,000 for the fortieth year. Much of the legislation was wise, judicious and needful, while the really vicious measures are very few, and some of them the Governor has most likely spotted. The County Government Act is a commendable piece of legislation; the road laws have been greatly improved; the Anti-Dynamite, the Pure Wine, McCudden's Messenger Boy bills will all be gratefully received by a law-abiding people. Many good measures have died on the files, but we can bear the loss with the knowledge that the Telegraph hill steal and several other suspicious-looking bills died with them. Wright's irrigation problem has been given an opportunity of solving a vexed question, and the Vincent Water Rights bill, and the Davis Injunction bill, and many others we have already summarized in the RURAL, are laws for the next two years certain, and whatever may be thought of them, they will at least constitute a good experimental basis for future legislation.

THE portrait of Henry Ward Beecher upon this page is a photographotype from a photo by Taber, taken at the time of Mr. Beecher's last visit to this State, in 1883. It is probably the best likeness secured of him at that time. Those readers who remember the portrait we gave of him in 1879, during a former visit, will note the advance and improvement we have made in the art of photo-engraving. Mr. Beecher's portrait will probably be acceptable to many who admire his greatness in talent and remember his public service.

San Jose Citrus Fair.

We continue this week a description of some of the leading features of the San Jose Citrus Fair, together with the biography of two of San Jose's leading citizens. The articles referred to, which may be found on pages 245-49, were contributed by our correspondent H. M. H.

Ramie Culture.

We have already made allusion to the possibility of a profitable business growing up in this State from the cultivation of ramie. Experiments in growing the plant have been eminently successful. The only reason why our farmers have not gone more extensively into the business has been the absence of a market for the product.

There is now, however, good reason to believe that a market will be established in this city, at an early date, if, indeed, it may not be said to be already established, where the farmer can turn the product of his ramie-fields into coin at a profit for his labor and investment.

The Western Fiber Co. has recently been incorporated, and has opened an office in this city, where the fullest information can be obtained in regard to everything pertaining to the culture of ramie and the sale of the plants or their fiber. Samples of the stalks and the fiber in the various stages of its manipulation up to woven goods may be seen there, and will be freely shown to every interested inquirer. The capital stock of the company is $2,500,000, divided into 50,000 shares of $50 each. Following is the Board of Directors, all well-known and responsible citizens: A. W. Foster, President; E. W. Newhall, Vice-President; Geo. C. Hickox, Secretary; Reuben H. Lloyd, Walter S. Maxwell, George K. Porter and E. Scott.

This company is prepared to buy ramie stalks, dried, in the condition in which they come from the field; or where the plant is cultivated in sufficient quantities they are prepared to put the decorticating machine in the field and reduce the stalks to a merchantable article of fiber and purchase the same, either in the stalk or fiber, as may best suit the farmer, and at prices which, it is claimed, will return more than twice or even three times the profit that can be realized by cultivating the same ground in wheat. The market for the fiber is practically illimitable.

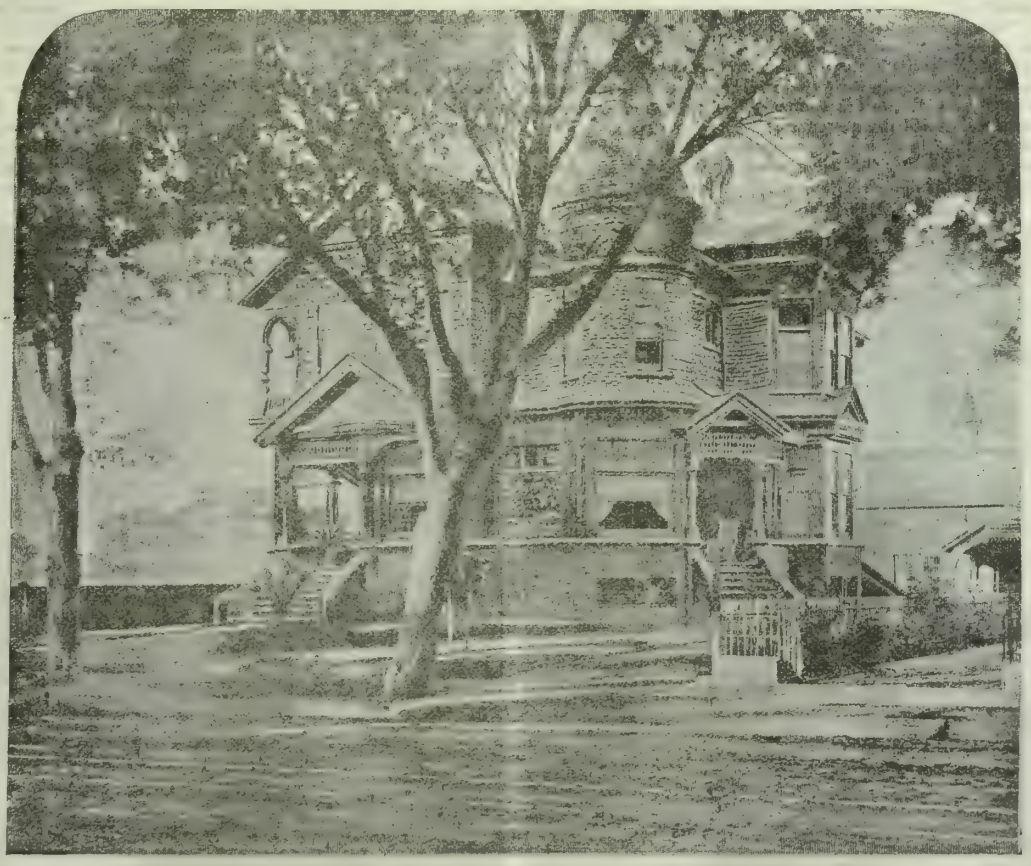
The industry which may be based upon this culture is almost unlimited in its possibilities, and the present state of the art of its manufacture has already made an advance from which it will no doubt soon take a pre-eminent position among the textile industries of the world. The world must be clothed, and the evidence is rapidly being developed that the article which will accomplish that purpose in the best and most economical manner is evidently ramie.

Up to a recent period the great drawback to the extensive manufacture of this textile has been the lack of a machine to properly decorticate the plant—to separate the fiber from its adherent woody matter and still more adhesive gum. Machines and processes have now been devised which seem to accomplish this work in a most complete and satisfactory manner. The company alluded to has already two machines in this city which do the work of decortication and place the fiber in the desired condition for bleaching and being reduced to a state of fineness, whiteness, and silkiness which cannot be equaled by the best sea island cotton.

Experiments have shown that there is probably no portion of the globe where the plant can be more favorably grown or more easily decorticated than in the dry central valleys of California. One of the great necessities for readily and perfectly depriving the fiber of its wood and gum is in most thoroughly drying the stalk and subjecting it to the action of the machine in the driest possible atmosphere. These conditions are more favorable in this State than perhaps anywhere else.

Of course no great progress can be made in the business in this State until the cultivation of the plant has been extended over quite a large area, so that it can be made profitable for the machines to go through the country, decorticating ramie as the harvesters and thrashers now go through our valleys to gather and winnow the wheat crop. We would advise all who may feel interested in this new industry to apply to the office of the Western Fiber Co., 215 Sansome street, for all needed information.

The Government Printing.



Perhaps few are aware that the United States Government is the greatest printer and publisher in the world. Every one who has made a hasty visit to Washington has come away with the vague impression that something immense in that line is going on. The real fact is greater than the impression. No one can form an adequate idea of the vast extent of the Government printing business until he takes time to examine it in detail. He must visit the Government printing establishment, a huge building looming up north of the Capitol. Here he will find that printing presses are counted by the dozens, type reckoned by the ton and paper by the carloads, and hundreds of men and women at work, day and night, type-setting, stereotyping, printing and binding, and the thousand processes incidental to such a business. The presses, type and material of all kinds are the best procurable. Uncle Sam keeps up with the times in utilizing the latest and best labor-saving mechanisms.

Then there are two large buildings to the south of the Treasury Department, almost under the shadow of the Washington monument, where our visitor will find the Bureau of Engraving and Printing. Here the fine work is done; the notes and stamps are printed and the Government engraving accomplished. It is an immense establishment, and a hurried walk through the rooms open to the public will show hundreds of men and women, boys and girls at work on splendid presses, costly material, and so much of the fine work as the public is allowed to see. Next let him visit the Government storehouse and take a glance at the tons of books piled up like cord-wood, and he will begin to have some conception of what the Government is doing. The aggregate number of Government publications now annually amounts to about 2,500,000, of which 500,000 are bound volumes.

If he cares to explore what comes of this vast mass of printed matter, he will find a deal of waste and extravagance. Most of the books and pamphlets published by the Government are intended for general distribution, and the theory is that they are sent as far as practical to the public and college libraries of the country. But it is safe to say that not one in ten are supplied with these publications, many of which are of great value to science and history. There is not a library in this State to-day that has a complete set of all the various public documents. One of our late Congressmen, having occasion to look up a matter in the *Congressional Record*, visited the libraries of San Francisco and the State Library at Sacramento and failed to find the number he wanted. This is owing to the defective and vicious system of distribution which depends largely upon the members of the two houses of Congress. Some of the members take pains to distribute public documents where they will do the most good, but the average Congressman regards them as official perquisites to be used where they make friends and influence votes. They are just as apt to go to a corner grocery or a city ginmill as to a public library. Many are too busy or too lazy to hunt up the people or libraries that would appreciate such publications, and find it easier to add to their cigar money by selling their shares to the brokers. Every one who has been to Washington and had occasion to look into the matter, knows that the brokers and second-hand book dealers carry on quite a lively local trade in these publications. Reports that cost the Government from 50 to 75 cents may be found at retail in the broker's shops at from five to ten cents a copy. There is no good reason why our public libraries should be so scantily supplied with public documents, for they may be had in abundance for the asking.

SPECULATION.—Recently, within the space of 10 days, oil declined 10 cents a barrel. As there are some 35,000,000 barrels in stock, this would represent $3,500,000 loss. Can this really be regarded as a loss, or is it a loss like that of the impecunious philosopher, who lost $100,000 in oil by not buying it when it was low and selling it when high? Could the holders of this 35,000,000 barrels have sold their oil when it was in the 80's if they had so desired? The market would have gone all to pieces had they made the attempt. Any one with money can put any market up, as Vanderbilt did the Harlem; the difficulty is in unloading. Speculation and making corners, especially in the more indispensable products, ought to be regarded as acts unworthy of an honest man, if not actually criminal.

BOILING ORANGES.—We have sometimes bought of an itinerant city vender oranges that looked extra fine and tasted infra vile; and we now suspect their deceptive charms may have been due to a practice described as follows in the Anaheim *Gazette*, which terms it "a new wrinkle in the chapter of fraud": Many street orange peddlers in S. F. resort to the practice of boiling their stock in trade, in order to increase its value as a salable commodity. An orange that has undergone the boiling process increases in size and improves in appearance generally, but it does so at the expense of its flavor, for it becomes worthless as an edible. They can generally be detected by the absence of any smut on the skin, the oranges looking as though they had each been the recipient of a careful hand-polish. Those who do not care to be victimized had better beware of an orange that is too clean.

RESIDENCE OF GEO. M. BOWMAN, SAN JOSE, CAL.

Send the "Rural" to Your Friends.

We request those who do not file the RURAL, that, after reading, it be mailed to other friends who are likely to be or to become interested in California. In this way the papers can be placed where they will do most good and the State in general be much more benefited than it could be by sending papers indiscriminately to addresses compiled without knowing the parties to whom the names attach. Each one receiving a copy of the RURAL can thus be doing very effective wooing for California, if he will mail it to a friend or acquaintance in some of the forlorn regions of the outside world.

Supposing that this is done, and this issue is sent broadcast, and thus brought to the attention of many new readers, we have a word or two in our behalf and in behalf of California. We advise all who can to come and see California. There is nothing like actual personal examination to give one trustworthy information, and this test of value California is always desirous of applying to herself. California captures at first sight, and holds her victims the faster by after sight—the longer the looking the less the desire to escape; in fact, the firmer the determination to remain. Those who cannot at the moment come for personal examination, cannot do better than read trustworthy accounts of the State, and such they will find in the RURAL PRESS. We have built our wide reputation upon the resolution not to exaggerate; our doctrine is that the truth about California is good enough for any one. We think a few weeks' reading of the RURAL will convince anybody of this fact; therefore we ask all new readers to send us their names as subscribers, even for a short period, on trial, if they desire. If they wish special information concerning facts to be presented in our columns, let them write direct to the parties mentioned in connection with the statements, and thus bring themselves into direct communication with the parties themselves, who are doing the things described.

Beside our effort to do nothing but trustworthy service for California, we can commend our paper as a clean newspaper, every line of which can be trusted to a child to read, and an honest paper, withal, in which we strive not to mislead, either in text or advertisement. Says one of our readers whose letter is just at hand:

> I am just in receipt of a letter from a friend in Colusa county to whom I sent a copy of the RURAL. He says: "We are subscribers to the RURAL, and our opinion is that it is the best and cleanest agricultural sheet on the coast;" but that is nothing new to you, it is the *general opinion*.

Thus we commend our effort to all new friends, trusting that any favor they may show us may bring them in return trustworthy information, pure entertainment and elevating themes for contemplation.

An Architectural Beauty.

The accompanying engraving is an illustration of the elegant residence of Mr. Geo. M. Bowman, Superintendent of the Golden Gate Fruit Packing Co. Located on First, near Empire street, in the city of San Jose, it has a most pleasant and desirable situation.

Mr. Bowman and his estimable wife, after making a study of residences in San Francisco and Oakland, combined the most attractive features observed, and, as a result, designed a model of convenience and architectural beauty. No two windows, doors or chimneys are alike, and no skill or expense was spared in either the exterior or interior finish. The house, which is modern in every particular, contains 13 rooms, every one of which is well lighted, a bath-room and a basement. The cost was $12,000.

Mr. Bowman, who is justly proud of a home so beautiful, believes it to be the handsomest mansion, for its size and cost, in the State.

PLACERVILLE has an incorporated Humane Society, and the *Republican* bespeaks for it hearty support.

SNOWSTORMS last week in Ireland, Scotland and the north of England were reported as very severe.

Leading San Jose Citizens.

Hon. B. D. Murphy.

Hon. B. D. Murphy was born in Canada, March 1, 1841, and, accompanying his grandfather, father, and the rest of the Murphy family, removed to Missouri, and afterward, in 1844, to California.

He was one of the founders of the San Jose Woolen Mills, of which he was a stockholder until 1881. He was also interested in the Angora Robe and Glove Factory, and is president of the Commercial and Savings Bank.

In 1869 Mr. Murphy married Annie McGeoghegan, and they have five children living and two deceased.

Mr. Murphy's father and grandfather, both of whom bore the name of Martin, were extensive land-owners. He himself is also a large land-owner and quite wealthy.

He was educated for the bar, but the large property interests of his family prevented him from entering upon the practice of his profession. He has always taken an active part in the politics of the county, and is regarded as one of the leading Democrats—not of this section only, but of the State. Twice a member of the Legislature, once in the Assembly, and again in the Senate, he proved intelligent, active and efficient. The State Normal school and other public institutions established in Santa Clara county owe their location here to the efforts of this zealous representative. Mr. Murphy was for three terms mayor of San Jose, and in this responsible position gave satisfaction to the entire community.

In every instance his election was against decided party majorities, both in city and county, and it is very well understood that for "Barney" to run for a position is to secure it. The Democracy of the State have long had Mr. Murphy in view as an invincible candidate for Governor, and whenever he shall express a willingness to accept the position of standard-bearer of the party, it is likely to be awarded him. He is an eloquent and effective speaker, one of the most enterprising and public-spirited of citizens, and generous and kind-hearted of men. These qualities have given him a measure of popularity second to no one else in this section of the State. Santa Clara county is justly proud of him, and will never miss the opportunity of showing her appreciation of his numberless good qualities.

Hon. C. T. Ryland.

This gentleman was born in the State of Missouri in the year 1827. His father, a leading lawyer of that State, was for many years upon the Supreme Bench, and there established a reputation second to none for integrity, ability and industry.

The subject of this article came to California in 1849, and after a brief sojourn in Monterey established himself permanently in San Jose, entered upon the practice of the law, and soon attained a position in the very front rank of his profession.

In politics Mr. Ryland is a Democrat, though he gave the Union cause his earnest support through the war. In 1868 he was elected to the Assembly, and that body chose him Speaker. By his ability, promptness and impartiality in this arduous position he commanded the respect of all, and at the close of the session received a flattering testimonial.

Judicious investments have placed him among the wealthiest of our citizens, and of late years he has wholly withdrawn from legal practice. He continues, however, to take an active interest in politics, less from motives of personal ambition than from a sense of the duty incumbent upon every citizen interested in good government.

He has been frequently spoken of as a candidate for U. S. Senator, for which he is eminently qualified. If ever he attains this honorable goal, it will certainly be upon his merit alone, and not by any methods to which the most scrupulous could take exception.

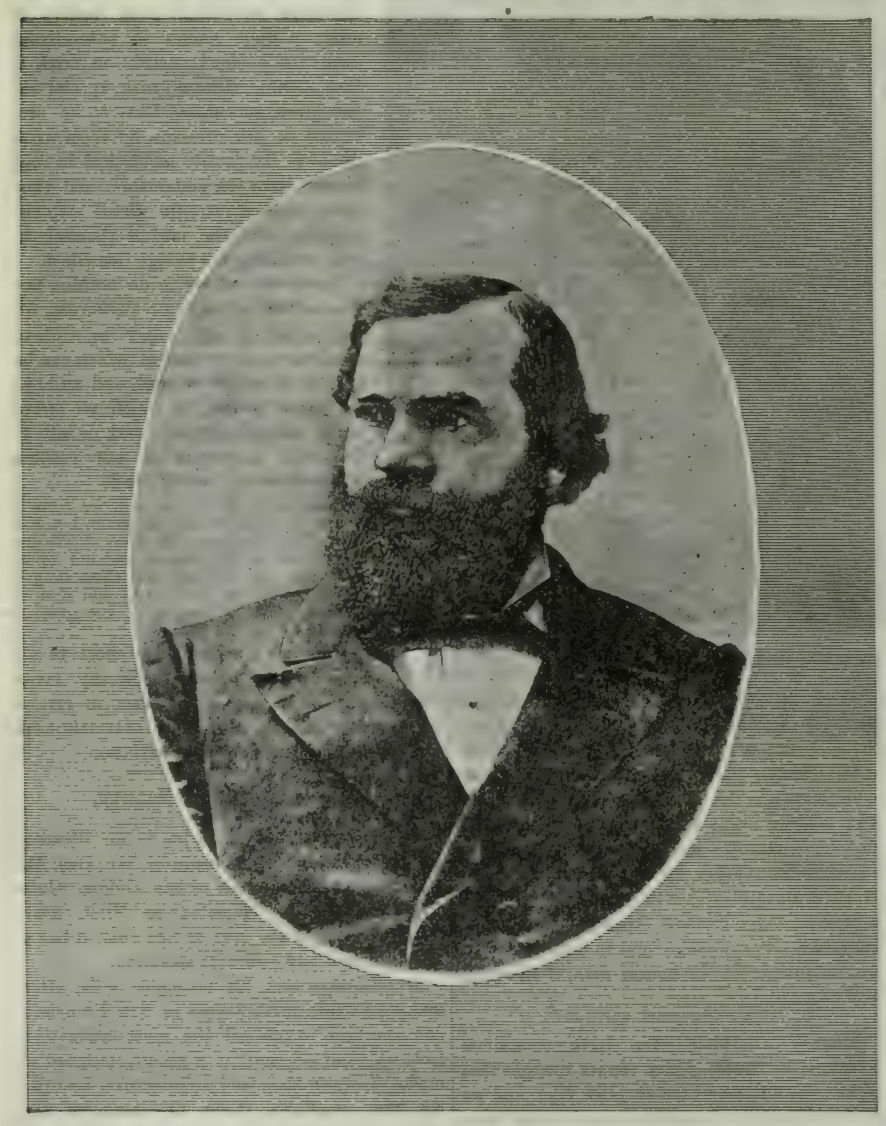
In 1853, Mr. Ryland married the daughter of Governor Burnett, and has reared a family of sons and daughters who are proving themselves, in every walk of life, worthy descendants of their illustrious and honored parentage.

Mr. Ryland is vice-president, and his sons members, of the Society of California Pioneers.

The Bank of San Jose.

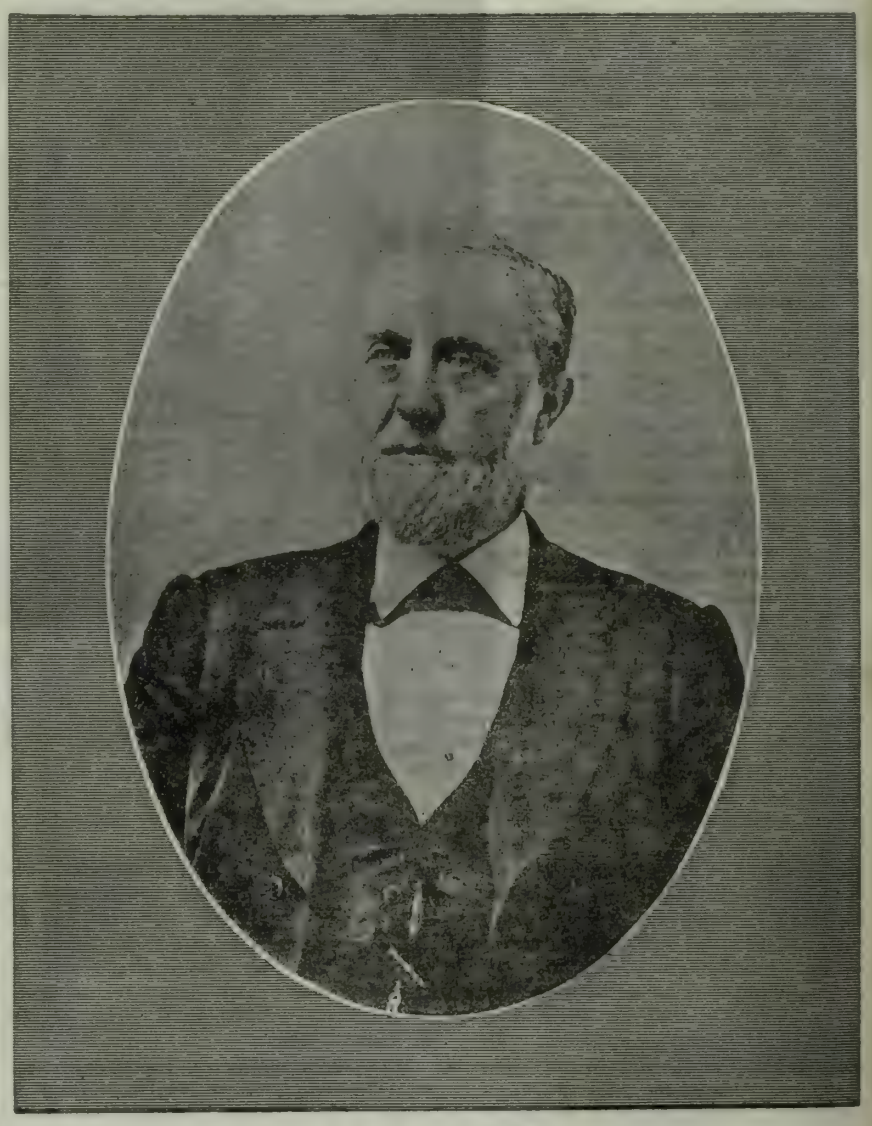
History and Standing of a Prosperous Institution.

The Bank of San Jose was established in March, 1866, under the firm name of Knox & Beans, and two years after, on January 31, 1868, was incorporated as a State bank, being the first incorporated bank in the State outside of San Francisco, and the pioneer bank of San Jose. From its foundation to the present time the management has been under the direction of T. Ellard Beans. Its bank building is one of the finest in the interior of the State. It is situated at the northeast corner of Santa Clara and First streets, and in dimensions is 90 by 100 feet, containing, in addition to its spacious banking-room and offices, five large stores on the first floor and a number of offices on the second and third floors. The rental value is over $1200 per month. Connected with the banking-room is a double burglar and fire-proof vault, the cash vault being also provided with a five-ton burglar-proof steel safe. The construction of the building was first commenced in 1871 and completed and occupied early in 1872, the total cost of the lot and building amounting to $120,000. The Bank of San Jose has had a prosperous career, having paid 220 dividends since the date of its incorporation, these dividends aggregating 278 per cent on paid-up capital. Its present standing and officers are as follows:



BANK OF SAN JOSE, SAN JOSE, CAL.

FINANCIAL STATEMENT.



Capital stock paid in full	$200,000
Surplus and profits Jan. 1, 1887	137,166

Officers—T. Ellard Beans, president and manager; C. T. Park, cashier; John T. Colahan, assistant cashier; C. W. Pomeroy, secretary.

Directors—T. Ellard Beans, John T. Colahan, W. K. Beans.

HON. B. D. MURPHY.

HON. C. T. RYLAND.

HORTICULTURE.

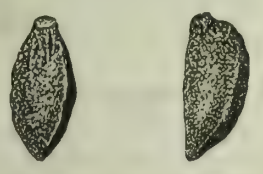
On the Preparation of the Prunes of Agen.

[An essay by M. Henri Issartier, Senator from Gironde, read the 19th of May, 1886, before the Society of Agriculture of Lot and Garonne; translated from the French by W. G. Klee and read at the meeting of the California State Horticultural Society Feb. 26, 1887.]

It must be considered temerity on my part to come from Gironde, the promised land of vines, to talk to you about the prune here, where its culture is one of the most abundant resources of the agricultural wealth of the region. It would be temerity if I could not as an excuse present the following reasons: The circumstances of my life have made me a Girondin, but my family belongs to your department, and I was born at Miramont, where in my youth I became well acquainted with the production of the *d'Ente* prune. I have also become an owner in the canton of Monsegur, near Duras, and have made important plantings of prunes, and have learned to cultivate, to prune, and to cure them in a very economical manner. I have myself established large nurseries, and have thereby distributed over 100,000 prune trees in my region. I have written a little book on the cultivation of the prune. Finally, by my advice and example, I have had the good fortune to see the commerce in prunes at Monsegur increase greatly. There, in good and bad years, there were sold only 100 kilos. of prunes. Now the sale reaches 1200 metric centals.

I ask pardon for all these details—a little personal, perhaps, but they seemed to me necessary, in order to convince you that I am not a theorist, rather a practical man, willing to study with you, in a scientific manner, how to solve this question so important to us—the curing of the prunes of Agen. We are continually talking of the burdens upon agriculture. Unfortunately these are too real, and are due to complicated causes. Conspicuous among these are the lack of agricultural education and agricultural appliances.

We must maintain our place in the prune market, and with this in view we must perfect



the culture of the prune, and the curing of the fruit. With reason, people concern themselves about foreign competition which is threatening our prunes. Here I quote some correct and interesting statements for which I am under obligation to the Director of Agriculture and to M. Bruneau, merchant at Marmande:

The prunes of Hungary are preserved as a marmalade.

The Prunes of Bosnia and Servia

Are the staple of an important trade. In 1884–5 the crops of Bosnia have been from 350,000 to 400,000 metric centals, and for Servia 250,000 to 300,000. It is especially to America, and there especially to New York, that the prunes from Servia and Bosnia are imported—in 1885, 550,000 metric centals being sent to New York alone. In 1883–4 the prices have varied from 9 francs to 22 francs per 100 kilos (about 80 cents to $2 per 100 pounds). In 1885 the crop has been of better quality and the prices have been higher, from 21 to 36 francs per 100 kilos (about $2 to $3 per 100 pounds). The principal markets in Bosnia are Bresca, Raesa, Schamatz, Siegawaltz; and in Servia, Schabatz, Abrenswatz, Belgrade and Semendria. The commercial center for prunes is Buda Pesth, which ships to Paris and all other points on the globe; but the trade tends to go over Ratisbonne, which ships by way of Trieste. The prunes of Bosnia of which I show samples are superior to those of Servia, being much larger and sweeter, and furnishing fruit varying from 140 to 110 to half a kilos.

Since the merchants of Buda Pesth have used our driers they have reached a high degree of perfection in the preparation of prunes, so that the only mode of distinguishing between the prunes of Agen and those of Bosnia is to compare the pits of the two, these being of different form.

D'ENTE. BOSNIAN.

The engravings show pits of prunes, growing 75 to the ½ kilo. The pits of the Bosnian prunes are much more bulky than those from Agen. The dorsal and ventral rim of the latter appear as the half of an oval. In the pit of the Bosnian prune the dorsal rim is straighter and the ventral much more rounded.

But few of the Bosnian prunes have been imported into Lot and Garonne, where the principal dealers have agreed not to buy them. However, the price of these prunes is less than that of those from Agen, about 15 to 20 to the kilo. (or 7 to 10 per pound); and a dealer in the department mixed the Bosnian with those of Agen, and was fined 1000 francs by the local court of your arrondissement.

The prune of Bosnia is less sweet than that of *d'Ente;* its flavor is less agreeable, and beside, it is not so fine in appearance. I have seen at Monsegur (Gironde) prunes of *d'Ente* of 30 to the half kilo (about 30 to the pound). The superiority of our prunes is affirmed officially by a jury of 16 members in Hungary, who unanimously reported our prunes to be finer, sweeter and of greater value than those of Hungary. With these advantages, it is easy to preserve the indisputable superiority of our prunes and to sell them at remunerative prices. With this in view, we must perfect the cultivation of the prune tree, as well as the curing of the fruit.

Propagation.

Many growers plant from cuttings. For two reasons I believe it to be preferable to cultivate grafted prunes. Among plantations of prunes there are trees which produce much finer and better fruit than others. And so, from these better trees, buds for propagation should be taken. With all trees, with prunes and vines, grafting assures advantages which must not be overlooked. I have learned recently that at Chalosse, before the appearance of the phylloxera, some owners there grafted French vines with French grafts, in order to obtain better products.

After we have grafted continually the French vines on American stock, it has been possible to prove that this grafting hastens and increases the production, that it advances the maturity and increases the strength of the vine. It is the same with the grafted prunes, of which the fruit is much finer, much earlier and sweeter. Likewise of great importance is the pruning of the trees, as everybody knows.

Now we come to the curing of the prunes, of which M. Adolph Magin, perpetual secretary of the Society of Science, Letters and Art of Agen, gives the most exact formula. By a curing well managed the superfluous water of the inner part is evaporated from the juices, and with moderate heat, sufficiently prolonged, the skin is dried. It is easy to understand that the oven is a defective apparatus with which to obtain this result. To cure fruit well it is necessary to let the heat penetrate all the parts, particularly the center, where the maturity is naturally less complete than at the surface. It is therefore indispensable that the surface remain easily penetrable by the heat, which should reach the center of the fruit and proceed, uniformly increasing, until it reaches nearly 100°. In the oven the temperature is apt to be too high at the beginning of the curing, and liable to cool off suddenly. Besides, the exterior of the prune receives altogether too actively the effect of the heat. It becomes shrunken and less penetrable; the center accordingly always receiving less heat, and therefore it is evident that the pulp and the seed are less cured than the skin, so that when the pulp is well cured the skin has had too much heat. The small fruit is reduced to a pit covered with a black parchment, and if the large and picked prunes cured by little heat preserve their good qualities, yet through the excessive drying of the skin they will lose a part of the weight which should have been retained. Nevertheless the ovens have given and are giving good service, but have lately become insufficient for large cultivation, and it has been found necessary to use means more expeditious.

To-day you will visit several driers exposed for competition. I am convinced that they are working perfectly, still I do not know them sufficiently well to describe them, but allow me to explain to you a very simple and economical apparatus which I have been using with complete satisfaction for 20 years. It was exhibited at the World's Fair of 1869, and the International Jury, of which M. Boussingault was president, thought it well, after the report of Baron Thenard, to recognize in the arrangement new and very important advantages, which he encouraged by awarding a large silver medal. By means of a few lines drawn I shall quickly represent it to you. I have no intention other than to bring my grain of sand to the edifice of progress, and I shall be happy if it should aid in suggesting a superior apparatus which will render successful any effort of agriculture.

The Heater.

The fireplace is a casting of a thickness of 0m. .01. It is composed of a fireplace proper, one meter long (about 3 feet 3 inches) with a width and hight 0m. .30 (nearly 12 inches). In section it is a kind of a half circle. The inner part or base is a grate formed of triangular tubes and contiguous on which the fruit is placed, and between which the ashes fall into the basin below. The air in the grate and all around in the furnace is heated gradually. None of the heat of combustion is lost, and the heated air surface is proportionately large. The heat in the ash-basin reheats the air in the tubes of the grate as well as the partitions of the ash-basin, which is a casting and in one piece with the grate.

On the outer face of the fireplace the doors are arranged independent of each other—one for the fireplace and one for the ash-basin. The door of the fireplace is entire and serves only to introduce the fuel. The ash-door has a hole in it to admit the air destined to feed the fire, and this air must come into the fireplace underneath the grate. The door-frames are surrounded by a large casement to protect from the heat the bricks or stones, which otherwise very soon suffer much. In the rear part of the fireplace is set the cast-iron chimney, which forks immediately into two arched passages running almost horizontally around the furnace, in order that the draught may not become too strong. This arrangement produces the effect of heating the air around the chimney as well as around the furnace. These chimneys unite again above, and in front of, the fireplace, so that there is but one chimney passing vertically upward, in front of the apparatus.

The interior of the drier is of bricks, laid on the flat side and cemented by a mixture of sandy earth and horse or cow manure. The bricks must be arched on the outer and inner edge, of a size of about 0m. .15 (about five and one-half inches). In this way a proper cylindrical construction is obtained within and without.

Hot-Air Reservoir.

All around the fireplace is made a wall about 0m. .25 distant (about 10 inches) to about the hight of the fireplace. Now is commenced an arch of bricks which covers it, but always at a distance of 0m. .15 (about five and one-half inches) at least. In this manner is obtained an air reservoir constantly heated by the fireplace; a reservoir which passes all around the double chimney, and thus the air is continually heated as it passes around until it enters into the drier, drawing after it the cold air that passes through the air holes, which are circular passages 0m. .10 (about four inches) in diameter, opening at the rear of the wall and at the side of the ash-basin. The hot-air galleries surrounding the chimneys are covered again with small arches, which, together with the arch above the fireplace, forms the base of the interior of the drier, in which the prunes are placed; this base is constantly heated and at the circumference the hot air comes through several openings, arranged at the beginning of the partitions, made of bricks laid flatly.

If the construction would end here, the hot air would enter at the base of the drier, and we should have all the inconvenience of the ordinary drier, in which the hot air enters below, rises quickly and goes out, without having been fully used. To avoid this waste, a second inner partition is constructed of brick, set on edge and laid in plaster, at a distance of 0m. .10 (about 4 inches) from the first partition, and in such a way as to have likewise two concentric cylinders—one formed by the partition of flatly laid brick, the other by the bricks set on edge. By this means, the hot air is forced to pass above the drier. It penetrates easily and evenly, because the inner partition reaches only to the ceiling, which rests on the exterior partition. Under the function of the drier I shall explain the advantage of this arrangement.

A Revolving Rack.

For a long time this arrangement has been in use in driers and is very convenient. It is composed of a vertical axis formed of several layers, on which are fixed horizontal triangles, braced with wire, forming in this manner 6 shelves, on which may be placed 60 trays covered with prunes. By means of a pivot resting in a socket in the center of the bottom of the drier, the rack turns easily. It is set in such a way that in its revolutions all the shelves present themselves successively at the door of the oven, which is large enough to admit the trays, but only just large enough, so that as little heat as possible shall be lost during the putting in and taking out of the trays. The door, which is best of double thickness, ought to be of wood, this being a poor conductor of heat.

Trays.

It seems to me that wooden trays should be abandoned. Our trays are composed of a light wooden frame covered with wire. On this wire grating rest the prunes, and so in a manner are suspended in the hot air. The wire is very fine. Besides suspending the fruit in the hot air, the iron wire is a very good conductor of heat.

Experience has proved to us that on these trays prunes are cured two hours earlier than on wooden ones.

Evaporation Passages.

The hot air which enters above, passes below saturated with moisture. In the partition made from the bricks placed edgewise on each side of the oven, there is reserved an opening at the base of the interior of the drier. These two openings are from passages between the two partitions, through which the vapors rise to escape outside. In these passages are placed two zinc valves worked from without, and by means of these the vapors are prevented from passing out when the chamber is used as an oven, but are allowed to escape when it is used as a drier.

The interior of the oven is closed by a wooden ceiling, or better, by large bricks resting on iron girders. To have everything complete it is necessary to have a large number of shelves around the oven and on top, these destined to hold a large number of trays.

It is hardly necessary to say that prunes must become perfectly ripe before being cured, and that if soiled, they must be washed and placed on the trays a long time if possible before being cured. All these precautions are well known and generally taken by careful cultivators.

Function of the Apparatus.

The prunes must be placed on the trays in single layers, and if possible, without being in contact one with another. In theory it seems advantageous to place large and small prunes on separate trays, each size by itself, but in practice this sorting is tedious and the work is not needed, because all the fruit ripens in two to three weeks, and so it is necessary to use the quickest process without jeopardizing the final results.

The trays covered with prunes are placed on the shelves of the revolving rack in the oven, and after having closed the evaporation ventilators, heated mildly at first—at the most 50° C. Thus the heat penetrates mildly to the pit without puckering the skin of the prune. The pulp is cured evenly and is transformed into a kind of marmalade without marring the shape of the fruit; the skin becomes brown and forms itself into small, even wrinkles. Afterward the heat is gradually increased without passing 70° C., and then we begin to open the ventilators and air mouths (closed until now) in order to let the vapors escape and to let in the dry air reheated around the furnace and chimneys and forming a continuous current, which enters from above, fills the upper layers, descends below between the prunes through the wires, filling the space evenly and permeating every part of the oven.

The prune is thus heated through and dried on all points of its surface, because it rests only on a wire, which, besides being a good conductor itself, heats the fruit, and every prune being diminished in size finds itself completely isolated.

From the second story the current passes to the third, descending until it reaches the last, where it finds the evaporation galleries, through which, saturated with moisture, it escapes to the outside. Little by little the heat is augmented by opening afterward the evaporation checks. Finally the oven becomes drier, the prunes become black and shining. At last, without allowing it to pass 90° C., a rapid current of hot air is established, giving to the fruit the last heating, by which the curing is accomplished, and there is given that black varnish sought for in commerce.

Now the trays from the upper story must be taken away, as they contain cured prunes that by a longer stay would become dried out, losing thereby some of their weight. The trays in the lower stories of the drier, however, contain fruit less cured, therefore these are placed on the upper shelves, and are again replaced by fresh prunes. The trays taken out are set upon shelves to wait until cool. This work done, the imperfectly cured fruit is placed on trays so as to have it put back into the drier. This handling, apparently very easy, requires, like all industrial pursuits, a certain knack. If the fruit is heated too much or too quickly, the prunes above become shrunken, the skin leathery and burned, the vapor inside inflates them and they lose in value.

With this drier a woman may cure about 70 kilos. (about 154 pounds) of prunes, but if a great sale or an abundant crop demand it, there can be cured by more labor, and by heating night and day, 100 to 120 kilos. (220 to 264 pounds) in 24 hours, with much economy of fuel. This result may be facilitated by utilizing the heat ordinarily lost through the ceiling and chimneys, by constructing above the oven another exactly like the one below, and in which a revolving rack is placed with six tiers of shelves, and supporting, likewise, 60 trays. The prunes placed in this inclosure are dried and cured without any additional expense of fuel. A very economical drier is obtained in this way, and the prunes may reach a complete curing if the heat be kept up day and night. Prunes cured in this way, so that the pulp is a marmalade of a saffron-yellow color and the seed well cooked, lose less of their weight than those cured in ovens. There is thus obtained of dried prunes 35 to 40 per cent of the weight of the green fruit.

This is the drier which we believe might be called the "economical drier," because all the castings and the iron rack do not cost more than 170 francs (about $32.50), and the material is of but little commercial value; the trays are well made and durable for a cost of 1½ francs (about 30 cents) apiece, the fuel costs but little, and, finally, the curing is rapid and perfect.

Finally, the prune *Robe de Sergent* or *d'Ente* prune is superior to all others for yielding the best and finest-looking fruit. It is thus easy, by careful culture and by good preparation of the fruit, to preserve for our region great commerce in prunes.

[California readers will be disposed to smile at the small capacity of this drier, which is given at the outside 264 pounds of finished prunes in 24 hours, by working day and night, and this would make the prunes cost about one cent per pound for labor alone. The principles involved in the arrangement of this drier may, however, be capable of application on a larger scale and thus be adaptable to an apparatus rather more Californian in its dimensions and capacity.—EDS. PRESS.]

Resurrected Fruit.

EDITORS PRESS:—I send you a sample of dried fruit that is represented to be Green Valley or Sebastopol fruit. We understand that it is dried fruit which is bought cheap in San Francisco, sent to this place to be overhauled and worked over by Chinamen, and then resold as Green Valley fruit.—J. W. K., *Sebastopol, Sonoma Co.*

The fruit is a very shabby and inferior lot of stuff, and we do not wonder that the residents in Green Valley do not like to have the name of their district attached to it. Concerning the operation to which our correspondent alludes, we find the following in the Santa Rosa *Republican* of last week:

A sample has been brought to the *Republican* office, from Sebastopol, of dried fruit put up in that place by a certain person, which he puts upon the San Francisco market as "choice Sonoma fruit." The sample is of plural and fraudulent kind. The boxes are so packed that layers of good dried fruit at top and bottom are made to conceal a mass of rotten, very unwholesome stuff in the center. It is a vile fraud, a criminal swindle. The rascal who is engaged in the swindle ought to be prosecuted and punished. By his shameless fraud he is working discredit to Sonoma county dried fruits and corresponding harm and loss to Sonoma county fruit-producers.

CANINE SCENT.—Careful experiments on the sense of smell in dogs have been made by Geo. J. Romanes, who has communicated the results to the Linnean Society, of London. He finds that not only the feet but the whole body of a man exhales a peculiar or individual odor which a dog can recognize as that of his master amid a crowd of other persons; that the individual quality of this odor can be recognized at great distances to windward, or in calm weather at great distances in any direction; and that even powerful perfumes may not overcome this odor. Yet a single sheet of brown paper, when stepped upon instead of the ground and afterward removed, was sufficient to prevent Mr. Romanes' dog from following his trail.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, $3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

BEER MORE DANGEROUS THAN WHISKY.—That is the verdict of the *Scientific American*, which sets forth that the use of beer is found to produce a species of degeneration of all the organs; profound and fatty deposits, diminished circulation, condition of congestion and perversion of functional activities, local inflammations of both the liver and kidneys are constantly present. A slight injury, a severe cold, or a shock of the body or mind, will commonly provoke acute disease, ending fatally in a beer-drinker.

Santa Clara Valley and Its Institutions.

[Written for the RURAL PRESS by H. W. H.]

EDITORS PRESS:—However picturesque any other valley may be, there is scarcely to be found, inhabited by a large number of people, a successful rival to the superb Santa Clara, embracing not only that which is generally so termed, but the scope of country included by the two spurs of the Coast Range and surrounding a large part of San Francisco bay.

From any of the mountain roads the view of the valley is enchanting, and from the one leading over the San Mateo mountains from Redwood City may be seen a panorama never to be forgotten. Taking a position near the summit, at an elevation of 1600 feet, one may descry 35 miles northward the city of San Francisco, and with a good glass may distinguish the Nob hill residences of Senator Stanford, Charles Crocker, Mrs. Mark Hopkins, J. C. Flood, and other prominently located buildings. The shipping in the harbor, Goat island, the moles of the C. P. & S. P. and S. P. C. railroads, the steam ferryboats crossing the bay, Oakland, Alameda, Haywards and sundry villages, make an impressive picture. At the right of this scene, rising to a hight of nearly 4000 feet, looms up the blue peak of Mt. Diablo, which, being visible as far as Red Bluff on the north and Visalia on the south, is the point whence a large part of the land in the State is surveyed.

At the base of the range from which we are observing is a continuous forest of live-oaks, above which peer the white buildings of Belmont, Redwood, Menlo Park, Mayfield, Mountain View and Murphys on the line of the S. P. railroad.

Rising like a huge white church out of a forest is the rural palace of J. C. Flood, near Menlo Park. Superb mansions, almost too numerous to mention, are scattered along the road—the homes of S. F. millionaires.

Eastward, enlivened by many a sail, lie the placid waters of San Francisco bay, on whose farther border is another line of villages, indicating the presence of another railroad—the S. P. C. Still farther eastward a mountain pass gives us the location of Niles, where the C. P. railroad emerges from the Livermore and San Joaquin valleys, one branch going to S. F. and the other southward.

These three lines of railroad converge to a point seven miles south of the head of the bay and 50 miles from San Francisco. At this point is San Jose, the heart of the beautiful Santa Clara valley. A more lovely picture can hardly be imagined. A city whose residences, public buildings, domes, and spires appear above groves of ornamental trees in the midst of a plain tessellated with small grain-fields, vineyards, orchards, and towns, is the center of a mosaic too exquisite for pen to delineate.

In the background of this beautiful picture lies a range of lofty mountains whose foothills are covered with thrifty farms and whose highest peak, Mt. Hamilton, towering nearly 4500 feet above the sea, is the site of the Lick Observatory. Already provided with a telescopic objective three feet in diameter, the largest in the world, this astronomical monument, to the memory of James Lick, one of Santa Clara county's pioneers, is destined to become the most famous of all observatories. With the world's largest telescope now approaching completion the observer will be enabled to pierce the ethereal realms of space to depths as yet unknown.

Looking westward, we behold a sight surprisingly unlike the beauteous valley. Almost inaccessible mountain ridges, densely covered with primeval redwoods, untouched by the vandal's ax, trend a dozen miles westward where rolls the majestic Pacific, relieved here and there by a coast steamer or a sailing ship.

The name of Ralph S. Smith, editor of the *San Mateo Times and Gazette*, should go down to posterity; for he has been the first to exclaim, "Woodman, spare those trees," and he proposes that the State shall buy this forest and convert it into a State park which in some respects would rival the Yosemite and the Yellowstone.

Other spurs which are more accessible have been partly denuded of their larger timber, and here and there may be seen the shingle mills' blue smoke floating among the dark-green redwoods and blending with the sky. In places the hills are bald and are utilized as dairy farms, with orchards of unusually fine apples for which this region is noted. Descending into the valley, we soon find ourselves on the 7000-acre farm deeded to the State by Senator Stanford.

Here affection has prompted the Senator and his wife to erect to the memory of their deceased son a monument after his own model, in the form of a great university. Senator Stanford has announced that within a year he will commence the construction of the buildings, which are to be of Moorish architecture and very beautiful. The possibilities of this university are almost beyond calculation.

Nearing the center of the valley, we find approaching completion at Agnews the Asylum for the Chronic Insane, and at Santa Clara the State Institution for the Care of Feeble-Minded Children.

The Santa Clara college, in Santa Clara, and the Convent of Notre Dame, in San Jose, are both conducted under the auspices of the Catholics. The former for boys, and the latter for girls, have become famous for their educational advantages. The University of the Pacific, which is under the control of the Methodist denomination, and the Garden City Commercial College, stand high in the confidence of the community.

People who are desirous of finding good schools in which to educate their children, should, before looking elsewhere, investigate those of Santa Clara county. Having the greatest Normal school, astronomical observatory and prospective university in the world, a system of thorough public schools and superior private and denominational seminaries, this county may become at no distant day the Athens of America.

The possible future of the region herein described is too dazzling to contemplate. When the capabilities of its soil are understood, and its varied industries are fully developed, the Santa Clara valley will contain and support 1,000,000 inhabitants. Considering its unequaled climate, its unexcelled productiveness and its surpassing beauty, it may be truthfully declared the most desirable place for residence on the globe—an earthly Paradise.

Here in San Jose we find the State Normal School, located in the center of what was formerly known as Washington square, occupying six blocks of the city. An imposing brick edifice accommodates over 500 students, instructed by the veteran educator, Principal Chas. H. Allen, and his corps of assistants. The teachers who are molding the characters of the future population of the State go forth hence, having received their inspiration from this school, which has become one of the greatest institutions of its kind in the world.

In every nook and corner of the county is found the *alma mater* of the people, the common school. For many years public instruction has been under the able superintendency of Mr. L. J. Chipman, who has raised the schools to a high degree of excellence.

Attending the public schools are 2000 children, under the tuition of experienced teachers employed by an efficient Board of Education, of which Deputy-Sheriff H. T. Welch is president, Supt. L. F. Curtis is ex-officio clerk, Geo. Lendrum, Wm. Erkson, J. W. Bowman, W. F. Foss, Geo. Ryder, A. R. Denike, and Dr. Geo. McCracken are members.

Five grammar schools and one high school occupy five handsome buildings, a fair sample of which is seen in our illustration of Empire-street grammar school.

At the last two annual sessions of the State Teachers' Association, the award for the best exhibit of school work was given to San Jose, the other competing cities being Oakland, Los Angeles, Sacramento and Stockton.

EAGLE AND BASKET—EXHIBITED AT THE SAN JOSE CITRUS FAIR.

J. H. Flickinger's Fruit.

J. H. Flickinger, of the "Pacific Orchard," near Berryessa, had a fine display of preserved and dried fruit at the San Jose citrus fair. The cannery being located in the orchard, none but choice fruit is preserved, and it is put up the same day that it is picked, thus retaining its freshness and flavor. His apricots, peaches, cherries and plums in glass, are unusually large, and attractively arranged in the form of a pyramid. His canned fruits, including apricots, lemons, cling and Crawford peaches, Washington and egg plums, white and black cherries, are of excellent quality. He exhibits a ton and a half of dried prunes in a huge box nine feet long, six feet wide and one foot deep. His apricots and prunes are for the most part sun-dried, and are claimed to be equal to any other dried fruit produced in the valley. The cannery will be enlarged the coming season to meet increasing demands. Excepting the remnant on exhibition, Mr. Flickinger's fruit crop of the past season has all been sold. Part of his canned and dried fruit finds a market in Philadelphia and Chicago, but most of it goes to England.

J. H. FLICKINGER'S EXHIBIT AT THE CENTRAL CALIFORNIA CITRUS FAIR.

Mr. Flickinger's orchard, three miles from the San Jose postoffice, contains 200 acres and consists of 20,500 trees, viz.: 7000 apricots, 7000 peaches, 4500 French prunes, 1000 cherries, and 1000 Washington and egg plums.

The oldest trees were set out near the close of 1880, and the youngest in the spring of 1886, the object being to supply the choicest canned and dried fruits for Eastern and foreign markets. His success has surpassed his most sanguine expectations—a crop having been gathered from all two-year-old trees.

From the "Pacific orchard" some large fruit has been taken; *e. g.*, peaches weighing from 8 to 15 ounces, and Moorpark apricots, from 2 to 4 to the pound. Santa Clara valley is certainly the home of the finest Moorparks which are raised here with greater success than elsewhere in the State. Being the best apricots grown, they find a ready market whether they are green, canned, or dried.

The orchard being in the warm belt, there is not frost enough to injure fruit.

Last season's crop amounted to 200 tons. Mr. Flickinger estimates his fruit crop the coming season from 17,000 trees at not less than 800 tons, which he will preserve in tin and glass, or evaporate. He is not a packer of other people's fruit, but all preserved by him is from

his own orchard. Realizing that his goods must be brought into competition with the products of European countries and the East, and that an attractive and convenient shape is of great commercial importance, he has established works in Berkeley, where he will manufacture his own flint-glass fruit-jars.

Eagle and Basket.

Back of the stage, at the Citrus Fair, was a dark screen, upon which is a spread-eagle made of a kind of yellowish-brown feather-grass, and bearing a bunch of calla lilies in its beak and a basket of oranges in its talons. Above the eagle is the word "Eureka," lettered in pampas-grass, while below is a model of a railway train. This work was executed by Mrs. S. P. Sanders, assisted by Mrs. A. Loomis, Mrs. D. C. Feeley and others.

In our picture it is represented for convenience so as to show the most effective leading characteristics of this rarely artistic work. It was located over the stage and attracted much attention and admiration. The design, not being in a favorable position for photographing, the engraving was made from a drawing, and could not, of course, be so accurate as our photographotypes.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in DEWEY & Co.'s Patent Office Library, 252 Market St., S. F.

FOR WEEK ENDING MARCH 1, 1887.

358,589.—WASHBOILER—G. Bergenheim, S. F.
358,597.—GRAPE AND APPLE CRUSHER—A. David, S. F.
358,608.—BALE TIE—A. S. Hallidie, S. F.
358,618.—HOSE PATCH—W. H. Loomis, Alameda, Cal.
358,686.—DREDGER—W. H. Milliken, S. F.
358,630.—HEADER—C. M. & W. L. Slayback, Folsom, Cal.
358,502.—ROOFING MATERIAL—G. W. Swan, S. F.
358,584.—SUBWAY FOR CABLE RAILROAD—Vogel & Whelan, S. F.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Are You Making Money?

There is no reason why you should not make large sums of money if you are able to work. All you need is the right kind of employment or business. Write to Hallett & Co., Portland, Maine, and they will send you, free, full information about work that you can do and live at home, wherever you are located, earning thereby from $5 to $25 per day, and upwards. Capital not required; you are started free. Either sex; all ages. Better not delay.

TO THOSE WHO CONTEMPLATE TAKING UP THE BOOK BUSINESS, we wish to say that we are prepared to do better by them than any other house can afford. We carry the finest line of popular subscription books on this Coast, and by a system of training, can make a success of the most inexperienced. Book Agents, we ask you to look into this. Address for terms, books, and territory, BANCROFT & CO., 607 Market St., San Francisco.

Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from $5000 to $500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. **

The only Manufactory that makes a Specialty of Building
COMBINED HARVESTERS.
PULL and PUSH, BELT and GEARED.
Houser, Minges, Shippee, and Powell
THE LEADING HARVESTERS OF THE PACIFIC COAST.

THE HOUSER BELT IS OUR STANDARD.
THE BEST KNOWN AND MOST POPULAR.
800 in Field Use and No Failures.
NONE EVER RETURNED TO THE WORKS.
HAS STEEL SHAFTING & GEARING & WIDER CYLINDER than 1886
They are built for 1887 with 30-inch Cylinder and 42-inch Separator. We are also building them with 46-inch Separator.
They Cut, Thrash, Clean, and Sack
For less than $1.00 an acre, and place the grain in the sack at less cost than the old method of putting it in the stack. They Save Three Bushels an Acre over and above Heading and Thrashing, or enough grain to pay the cost of harvesting.
THEY REQUIRE FROM THREE TO FOUR MEN AND TWELVE TO TWENTY-FOUR ANIMALS, according to width of cut and condition of grain. See Testimonials and large cut of the Houser, outside pages, RURAL PRESS, issues of January 15th and 29th. Call at Works. Send for Circulars. Address
STOCKTON COMBINED HARVESTER & AGRICULTURAL WORKS.

"MOULTON'S" ORCHARD AND VINEYARD CULTIVATOR.

A BOON TO ORCHARDISTS AND VINEYARDISTS. Has low wheels; frame extends beyond the wheels, enabling close work and preventing the rubbing of bark off trees and vines. Has patent adjustable shovels and shifting tongue; the latter is valuable for side-hill work, and can be used to advantage on level ground. Give us a trial order. Manufactured by
SAN JOSE AGRICULTURAL WORKS, SAN JOSE.

C. M. H. CULTIVATOR.
Especially Adapted for Cultivation of Vineyards and Orchards.
This Cultivator is all Iron, A NEW MODEL, and an improvement over all others. The wheels are behind the Cultivator, the Spring Seat being so arranged that a man or boy can see all the workings, and can raise or lower the Cultivator with ease by his weight and the use of the lever. There is also a Side Lever for use on side-hills, or to run the Cultivator up close to trees not in line. Price of Cultivator, $35. Manufactured by
C. M. HENSLEY, Cor. First and Williams St., San Jose, Cal.

A NEW FRUIT EVAPORATOR.

A large number of fruit-growers who suffered heavy losses in past seasons, on account of their inability to bring their fruits to market from remote locations, or to otherwise handle the same to a profit, will be glad to hear that a most perfect machine for evaporating all kinds of fruits, potatoes, vegetables, etc., has recently been patented, and can be put to practical use this coming season. Its principal features of improvement on machines of this kind are: An ingeniously constructed furnace for heating the air rapidly with the smallest amount of fuel; a heat regulator which can be made to work automatically, and maintains the heat at any desired degree; and a suction fan which circulates the hot air through the apparatus, and returns it still highly heated to the furnace to be reheated. The material to be dried is placed on hollow shelves, through which the hot air passes, and being thereby subjected to any desired degree of heat from above and below, the water contained in it is quickly evaporated, leaving the fruit in a fresh and beautiful looking condition, without in the least impairing its flavor. The apparatus is constructed in such a manner that it can be taken apart or put up in a short time, and easily removed from one location to another. Either coal, wood, gas or any other fuel can be used. This is pronounced by practical fruit men the best evaporator made, and taking in consideration its cheapness of construction and perfect working, it is bound to take the lead of all machines of this kind.

Holstein Record.

The following are the sworn statements relating to the Holstein-Friesian cow Lena Wit Menlo, to which allusion was recently made in these columns:

I am head milker at Frank H. Burke's ranch—La Siesta—Menlo Park, and have general charge of 93 head of Holstein cattle.

On the fifth day after the Holstein cow Lena Wit Menlo gave birth to her calf, I milked her dry at noon February 23d; I then milked her again at 7 o'clock P. M. and at 5 o'clock on the morning of February 24th and at 11 o'clock on the same morning. The milk of the third milking weighed (on the scales) 89 pounds, and was measured in the ordinary three-gallon milkcans and filled three of those cans and half filled another—equal to 10½ gallons. I have had full charge of this cow during the past year and know that since the 4th day of January she has not received any green feed, and at the time of the test was fed nothing but bran twice a day, with a pint of oilcake meal in each feed and dry uncut hay. (Signed) JOSEPH MILLER.

Acknowledged before Geo. T. Knox, Notary Public, March 9, 1887.

I am foreman of Frank H. Burke's ranch at Menlo Park and know that the cow Lena Wit Menlo gave birth to a bull calf on the 18th day of February, 1887; that on the 23d of February she was milked dry at noon and milked three times afterward within the following 24 hours, and gave on the third milking 89 pounds of milk which measured 10½ gallons. (Signed) JAMES MILLER.

Acknowledged before Geo. T. Knox, Notary Public, March 9, 1887.

THE LOTTERY SWINDLE AGAIN.—John G. Mervin makes this neat and terse statement in a recent issue of the Los Angeles *Times:* I have before me the prize-list of the Louisiana State Lottery for the drawing of last month, and as many people here purchase tickets every month, I thought it might interest them to know how fair a proceeding this lottery is. The list shows that they sold 100,000 tickets, at $10 each, making $1,000,000 in all; and by footing up all the prizes they pay the amount is $504,300, leaving the snug little sum of *four hundred and ninety-five thousand seven hundred dollars* ($495,700) as the profit to the lottery company for this one drawing. As this is repeated every month, it follows that the lottery company make a good thing out of the gullibility of the people who buy tickets. If a man should start a bank, agreeing to pay back just one-half of what was deposited with him, but also agreeing that he would put this half in one lump sum, and pay it to the depositor who drew a certain number out of a hat, none but fools would bank with him; but this lottery business is conducted exactly on this basis of paying back to certain lucky men just *one-half* of all moneys received for tickets.

DEATH TO MUD HENS.—W. McLachlan, of Staten Island, writes to the Stockton *Independent:* "Noticing in your paper of last Saturday an account of the damage done by mud hens to crops along the river, and having been myself a sufferer for many years from the pests, and having discovered a sure remedy, I feel it my duty to have it published for the benefit of my neighbors. Take large potatoes, cut them into slices about one-fourth of an inch in thickness, dust them over with pulverized strychnine, and lay the pieces about two feet apart on the land where the mud hens are accustomed to feed. Do this early in the morning for a few times and the whole band can be killed."

Some Folks

Have much difficulty in swallowing the huge, old-fashioned pill, but any one can take Dr. Pierce's "Pleasant Purgative Pellets," which are composed of highly concentrated vegetable extracts. For diseases of the liver and stomach sick and bilious headache, etc., they have no equal. Their operation is attended with no discomfort whatever. They are sugar-coated and put up in glass vials.

It is a Fact

Well established that consumption, if attended to in its first stages, can be cured. There is, however, no true and rational way to cure this disease, which is really scrofulous ulceration of the lungs, except through purifying the blood. Keep the liver in perfect order and pure blood will be the result. Dr. Pierce's "Golden Medical Discovery," a purely vegetable compound, does all this and more; while it purifies the blood it also builds up the system, strengthening it against future attacks of disease. Ask for Dr. Pierce's "Golden Medical Discovery." Take no other. Of druggists.

Decline of Man.

Mental or organic weakness, nervous debility and kindred delicate diseases, however induced, speedily and permanently cured. For large illustrated book of particulars, inclose 10 cents in stamps and address, World's Dispensary Medical Association, 663 Main street, Buffalo, N. Y.

PREPARING LAND FOR IRRIGATION.—For the purpose of irrigation the land must be brought to a smooth plane surface, free from ridges and knolls that would divert the water from any portion of the soil. To get this desired surface has been a serious difficulty hitherto, because of the want of necessary implements. Various machines have been used, but none have given perfect satisfaction until the "ACME" Pulverizing Harrow, Clod Crusher and Leveler was tried. This implement, following a plow, or working upon stubble land, draws the soil from every small elevation into the adjacent hollows and fills them with soil; and by working the land both ways a very even surface is procured, upon which the water channels may be laid out with a plow with great ease. The soil is left by the "ACME" furrowed by a number of small channels by which the distribution of the water over the land is perfect. See advertisement on page ——.

The Farmers' Union of San Jose.

The Farmers' Union of San Jose, a corporation doing a mercantile business, was organized in 1874 by members of San Jose Grange, No. 10. The working capital is $175,000, of which $150,000 is paid-up stock, $14,000 is a reserve, and $11,000 a contingent fund. The officers are C. T. Settle, president; W. M. Ginty, manager; W. C. Andrews, assistant manager. The directors are L. F. Chipman, Horace Little, Thos. E. Snell, C. T. Settle, J. Q. A. Ballou, W. L. Manley, J. A. Buck, J. M. Battee, C. W. Breyfogle.

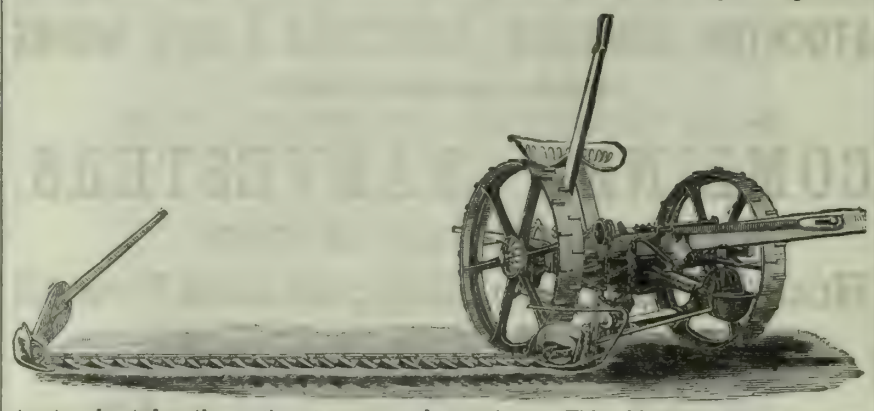
The store occupies the ground floor of the building, which is an elegant three-story structure located on the northwest corner, and extends 60 feet on Santa Clara by 150 feet on San Pedro street. Besides, there is a cellar underneath of the same size, and a one-story building 160x40 in the rear, on San Pedro street. The latter has a floor made of cement and is used as salesrooms for agricultural implements. The Farmers' Union have a good two-story stable 40x36, a warehouse 250x40 for storing wheat, a two-story structure 90x60 for storing goods, and a mill for crushing barley and handling feed. All of the buildings are substantially built of brick, and are owned by the corporation.

Facing the corner entrance of the main building is the office, which is tastefully fitted up, much in the style of a bank.

Beside doing a general mercantile business, the Farmers' Union receives deposits for the accommodation of their patrons.

It is the intention of the company to maintain a contingent fund of at least $15,000, from which may be paid unforeseen expenses as well as an eight-per-cent dividend, should adverse circumstances cause a deficiency in the earnings.

The employes work on the co-operative plan, receiving a certain per cent, thereby giving them an interest in the business. The plan has proved very satisfactory.



The Farmers' Union is the Pacific Coast agent for the Standard mower, which has been sold in different parts of the State to farmers who unqualifiedly praise it as being the best wide-cutting machine in the market. We call attention to the advertisement on page 205 of our issue of March 5, particularly because an error which occurs, there being but three sizes of the mower offered for sale, viz., 4 feet 3 inches, 6 and 7 feet. Alongside the pole there is an equalizing spring which partly suspends the weight of the cutting-bar. This contrivance lessens the draft and renders an unusually long-cutting bar entirely practicable. It is claimed to have much more cutting power, because nearly the whole weight of the cutter-bar and the inside and outside shoes is carried on the drive-wheels, thereby increasing the traction more than enough to make up the additional length of the knife.

The Farmers' Union, besides being profitable to the stockholders, has proved an inestimable benefit to its patrons.

Eureka Improved Windmill.

Patronize Home Industry.

San Jose is becoming famous for its windmills, and among them the Eureka Improved is taking a leading position. It is manufactured by Mr. Saunders, who has had years of practical experience. This, his latest mill, has more good points than any mill made on this coast. It is simple, strong, durable, self-protecting, easily controlled, requiring little oiling. The wheel is made on the most approved principles, peculiar to the mills made in Santa Clara county—open enough to get the full force of the wind and yet not confine it. Its action is *direct*, doing away with cams, vibrating bars and side motion, having no spider legs, little rods or flapping sections, sliding cranks or sub-vanes to get out of order. Mr. Saunders has plenty of testimonials in regard to the working of the mill, some of them very flattering indeed. One point of excellence in this mill is *it will face the wind* while in motion, not standing at an angle to the direction of wind.

Mr. Saunders expects to establish an agency wherever mills are sold on the coast, and all communications should be addressed to A. W. Hollis, 96 Montgomery street, San Jose.

The prices are reasonable, being, for 12-foot mills, $65 at the shop; 14-foot, $75; 16-foot A, $90; 16-foot B, $110; 18-foot, $120; 20-foot, $135.

All orders for mills should be directed to the inventor, E. B. Saunders, 96 Montgomery street, San Jose, Cal.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

ORCHARD AND VINEYARD

One-Horse Single and Two-Horse Gang Plows

— AND —

VINEYARD CULTIVATORS OF ALL KINDS.

These Plows are Guaranteed to be the Best Orchard and Vineyard Plows made. Read the Testimonials below.

The single plow can be set to any position, and can be run to or from the trees or vines and within an inch of them without any injury to the same. The handles are also movable, and can be changed from one side to the other to suit the circumstances. This plow has several advantages over all other Vineyard and Orchard plows. Among these are: By changing the beam, no matter to or from the land, the plow will always run in a straight line. By the revolving drop clevis, the plow can be set to or from the land, or in depth. With this plow a man can plow a straight furrow, when he could not with other plows where the beam runs across them. It works as well in adobe or gravelly soil as in sandy or loamy. The plow weighs about 50 pounds. This plow will fill a long-felt want among orchard and vineyard men, who fully appreciate its great value. Plow and Singletree patented May 17, 1884.

PRICE LIST.—Single Plows, with singletrees, $15; Gang Plows with Garden City Plow bottoms attached, $35; Doubletrees with Patent Singletrees, $4.50. Extra Shares, $3.00. Extra Shares can be had of me.

TESTIMONIALS:

HOLLISTER, Sept. 11, 1886.

J. A. BILZ—Dear Sir: I take pleasure in testifying to the good merits of the plow and harrow made by you, which I have used at my vineyard to my entire satisfaction. WM. PALMTAG.

RUBY HILL VINEYARD, PLEASANTON, CAL., July 24, 1886.

J. A. BILZ, ESQ., Pleasanton, Cal.—Dear Sir: Your two-horse Vineyard Gang Plow is a great success. It saves $2 a day over the old method of plowing, and is light in draft. We have two of them with which we turned under weeds this last spring over a foot high, and left the land in excellent condition. CRELLIN BROS.

CRESTA BLANCA VINEYARD, LIVERMORE, CAL., Nov. 27, 1886.

MR. J. A. BILZ—Dear Sir: I have tried several vineyard plows on my place, but none have given such good satisfaction as yours. I take pleasure in recommending it to those who desire good work done economically. CHAS. A. WETMORE.

FRESNO VINEYARD, April 9, 1886.

I have tried Mr. Bilz's double plow, and although very skeptical at the time, I must acknowledge it worked well, and I am much pleased with it. I have made up my mind to put them in the vineyard. D. D. HUDSON, Supt.

PLEASANTON, Sept. 9, 1886.

J. A. BILZ, ESQ.—Dear Sir: I take pleasure in recommending your two-horse Vineyard Plow which I know to be a success, having purchased three of them in plowing in the past season, in my vineyard. Undoubtedly, they are the best implement of the kind I ever used. They are light in draft. It turns the ground over well, and is so regulated you can plow any depth you desire, and it leaves the ground even. It also turns the weeds under better than other plows I have used. I have saved $2.50 per day on each plow. I would not be without the plow for twice their cost. Yours truly, J. A. ROSE.

LIVERMORE, August 1, 1886.

J. A. BILZ, ESQ., Pleasanton, Cal.—Dear Sir: We have used one of your Vineyard Gang Plows during the past season and believe it to be a good plow, doing the work in a thorough and economical manner, and can heartily recommend it to those wishing an implement of this kind. Yours respectfully, S. OSTERHOUT.

LIVERMORE, Feb. 1, 1886.

MR. J. A. BILZ—Dear Sir: I have tried your vineyard plow and find that it works well and gives perfect satisfaction, and I take pleasure in recommending it to any one who wishes a good vineyard plow. Your patent singletree is also a success, and when used in an orchard will save many a tree from being injured. Yours truly, F. KURTZ, Foreman of C. A. Wetmore's Vineyard.

Persons interested in Vineyards and Orchards are invited to call at my shop and examine and try the plow. It is warranted to do all claimed for it. For further particulars apply to

J. A. BILZ, Pleasanton, Cal.

Manufacturers' Agents,

104 Market St. and 3 California St., S. F.

COME LOOK AT THIS!

The Great and Only Fence Loom!

Fully covered by patents. No danger of buying a lawsuit. We are now offering the public the best and cheapest machine in the field, because it will make more than twice the amount of fence per day than any of the so-called machines can make. Goes up or down hill with perfect ease. The loom only weighs 30 pounds, consequently can be handled by a child as well as a man. Neither are you compelled to pull any cumbersome track over the rough ground. All that is needed is a common board laid upon the ground. Estimates made for material when desired. Correspondence solicited with hardware men generally.

THOMAS D. POOLE,
1867 Encinal Ave., Alameda, Cal.

CANTATAS FOR FLOWER TIME!

Teachers of Juvenile Singing Classes do not need to be told of the intense interest and enthusiasm which attends the bringing out of a new CANTATA. The following are new, bright, pretty and easily given. Commence in time to prepare them.

VOICES OF NATURE; operetta; N. B. Sargent.

FOREST JUBILEE BAND; N. B. Sargent.

NEW FLORA'S FESTIVAL; Bradbury. Arranged by J. C. Johnson.

MERRY COMPANY, or Cadets' Picnic; Collin Coe.

Price of each book, 40 cents, or $3.60 per dozen.

The first two books are by a nature and music lover, who fills them with very sweet songs of birds, flowers, insects, etc. Flora's Festival, doubled in size, and with minute directions, will surely be a success, as will, in another way, the "MERRY COMPANY."

Our new edition of **VOICES OF PRAISE** (40 cts., or $4 20 per doz.), by Rev. C. L. Hutchins, is cordially commended to all who wish a **Sunday School Song Book** of the highest character.

Schools, Academies and Seminaries are always safe in adopting the carefully compiled **School Song Books** of Ditson & Co. We recommend for the higher schools, **SONG GREETING** (60 cents); and **ROYAL SINGER** (60 cents); for grammar schools, **SONG BELLS** (50 cents); and for primary schools, **GEMS FOR LITTLE SINGERS** (30 cents).

☞Any book mailed for retail price.

The WEST COAST LAND COMPANY now offering in subdivisions the

PASO ROBLES RANCH,

Of 20,400 acres, less 6000 acres sold to settlers in the past four months;

THE SANTA YSABEL RANCH,

Of 20,200 acres;

THE EUREKA RANCH,

Of 11,000 acres, and 12,000 acres of the

HUER HUERO RANCH,

All lying in a body, on the S. P. R. R., at its terminus in SAN LUIS OBISPO COUNTY.

Will sell

AT PUBLIC AUCTION

About March 22d (for date see later advertisement) **the balance of the Paso Robles Ranch**, consisting of town lots in Templeton, 800 acres in 5 to 12-acre lots adjoining Templeton, and 14,000 acres in ranch subdivisions;

ALSO,

2100 acres of the **Huer Huero Ranch** in 20 subdivisions.

These are all agricultural and fruit lands, in quality equal to any in the State, with an average annual rainfall exceeding that of Santa Clara county, and require

NO IRRIGATION.

Title, U. S. Patent and to be free and clear of all incumbrances.

TERMS OF SALE.

Lots in Templeton, cash, U. S. Gold Coin. All other tracts one-third cash; balance in 4 equal payments, at 2, 3, 4 and 5 years; interest 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser.

An additional charge will be made of $5, for deed in sale of town lots, and $25 in other cases for expenses of sale, including making and recording all papers.

Schedule price of ranch subdivisions average $20 an acre; of 5 to 12-acre lots, $50 an acre.

SALE WITHOUT RESERVE,

Providing that no bid will be entertained at less than 60 per cent of schedule prices.

Ten per cent of cash payment (but in no case less than $100) required at fall of hammer; 30 days to complete sale. Parties failing for 30 days, forfeit sum paid.

Parties going from Los Angeles take P. C. S. S. Co.'s Steamers from San Pedro to San Luis Obispo. From San Francisco, take 8:30 A. M. daily train, S. P. R. R., to Templeton.

Parties wishing to inspect said lands with a view to purchasing at the Auction, or any of the Company's Land at private sale, will be shown the property free of charge by applying at the Company's office in Templeton.

Maps of all the ranch subdivisions, of Templeton, of the 5 to 12-acre suburban lots, and a general map showing the location of the Company's lands with a new descriptive catalogue are in press and will be sent free on application after the 25th inst. (February, 1887.)

Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most *reliable* advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

The Smallpox Scare Subsiding.

So many and various reports, concerning the prevalence of smallpox in the southern portion of the State, have been flying for the last two or three weeks, that we believe a summary of recent authoritative statements on the subject will be welcome to our readers.

Dr. Tyrrell, Secretary of the State Board of Health, in his bulletin of February, dated March 10th, said:

It found entrance through our unguarded southern frontier, appearing for the first time in Los Angeles during the latter part of the month, in the person of a young man from Mexico, who quickly communicated it to others, until by the end of the month 12 cases were reported, with three deaths. On February 26th three cases were reported in Lugos, a Spanish settlement nine miles from Los Angeles. Three cases and one death were reported from South Pasadena. These cases were at once quarantined by Dr. W. B. Sawyer, the Health Officer. The disease, however, continues to spread among the Spanish and Mexican population, who refuse vaccination, and will not tolerate isolation. Upon the first appearance of the disease in Los Angeles, Dr. J. S. Baker, the efficient Health Officer, and Dr. H. S. Orme, President of this Board, lost no time in taking every precaution to prevent the spread of the disease by vaccination and strict quarantine of the exposed persons. In spite of their efforts the disease continues to increase, and will, no doubt, reach other parts of the State. In San Diego, one case of the disease was imported from El Paso, Texas. We learn through private sources other cases occurred at Perris, San Diego county. Dr. Magee, Health Officer in San Diego, writes that no information has reached him of smallpox in Perris, and says he has made arrangements to have immediate reports, if any cases occur between Colton and San Diego. One case reached San Francisco, which was speedily quarantined. No other cases are there reported. This board has taken the precaution, by a circular, to warn the public that its safety resides in efficient vaccination, and that no quarantine, no matter how faithfully attempted, can be certain to exclude the disease from traversing the whole State, once the invasion has taken place. In vaccination we have a preventive that is at once certain and safe. Smallpox cannot exist without unvaccinated, and therefore unprotected persons, upon whom it can thrive. Protect these by vaccination, and smallpox must become extinct.

On the evening of the 12th inst. the following official bulletin was telegraphed to the Associated Press:

LOS ANGELES, Cal., March 11, 1887.

For the information of the country the following official statement is made. Since the first appearance of smallpox here, out of a population of 95,000, including both city and county, there have been but 41 cases, out of which there have been only 4 deaths. Health authorities, both State and local, apprehend no epidemic. All precautionary measures are being taken. H. S. Orme, president State Board of Health; M. Hagan, City Health Officer; W. H. Workman, Mayor of Los Angeles; L. N. Breed, president City Council; Thomas E. Rowan, chairman Board of Supervisors; E. L. Stern, president Board of Trade; H. G. Otis, editor L. A. *Times*.

It appears that very many cases, supposed by the panic-stricken to be smallpox, turned out to be nothing worse than measles.

On the 13th, at the instance of the railroad authorities, Drs. Tyrrell, Cole, Simpson, and Crowder, members of the State Board of Health, went down to Los Angeles, where they were met by Dr. Orme, President of the Board, and made a tour of the city and suburbs. On the evening of the 14th, they met the city authorities to discuss the situation, which was found to be not at all alarming. Dr. Hogan, City Health Officer, stated that 20,000 persons had been vaccinated, and it was his deliberate opinion that nine-tenths of the people of the city were now entirely protected. Dr. Beverly Cole believed the disease might be at once throttled and stamped out. Dr. Tyrrell said to a *Times* reporter: "This matter of checking the smallpox turns very much on vaccination. When it has no material to feed on, it is bound to die out."

The majority of the State Board, Drs. Orme, Tyrrell, Cole and Crowder, have gone from Los Angeles to San Diego. Dr. Simpson, who returned to S. F. on the 16th, says he does not think that the disease will be epidemic and extend throughout the State if the Los Angeles local authorities exercise due diligence.

A NOVEL STOVE.—Mr. John Brierly, Newark, Onio, has patented an open fireplace heater and stove. It is said to be the first combination of the kind. Any kind of fuel can be used in it. The principle is the bringing of cold air from outdoors by a conducting pipe under the floor, and which is circulated between the body of the stove and the outside jacket. After this the air is taken through the two sides of the stove in another pipe which passes through the fire-chamber of the stove and through the top into the room.

Death of a Well-Known Stockman.

The firm of Miller & Lux, so widely known for the immensity of its estates and business, is broken by the death of Charles Lux, which occurred on the morning of March 15th, in this city. The following facts are given by one of our daily papers:

Mr. Lux was born in Alsace. He immigrated to New York City in boyhood. There he worked for a retail butcher in Fulton market for some years as delivery boy. He came to San Francisco in 1857, and opened a retail butcher shop at 931 Washington street. In this business he was very prosperous, and in 1862 he formed the partnership which was destined to continue auspiciously through the many long years to the close of his life. This was with Henry Miller under the firm name of Miller & Lux, as cattle dealers and wholesale butchers.

Shortly after this firm was established, it commenced the far-sighted policy of investing in public lands, or buying out early locators. It maintained this policy down to very recent dates, until now its landed possessions cover an area of 700,000 acres. These lie in the counties of San Francisco, San Mateo, Santa Clara, Monterey, San Benito, Merced, Stanislaus, Fresno, Tulare, Kern, and San Luis Obispo, in California; in the counties of Washoe and Humboldt, in Nevada, and also in Oregon. The cattle-herds of the firm, scattered in many parts of this vast territory, number between 70,000 and 80,000 head. The firm has an aggregate annual tax of $50,000, and the total value of its land, improvements and cattle is estimated to be (not a close estimate) $10,000,000. Over 700 miles of private telegraph lines connect their ranches.

Mr. Lux was 64 years of age at the time of his death.

A Fraud—Probably.

From a certain village in the Mississippi valley there has come to us the following business letter:

. . . . . .

————, March 9, 1887.

Please write and tell me what my advertisement will cost in your paper; also send sample copy of your paper to me.

P. S. Can furnish best of reference, if desired.

[ADVERTISEMENT.]

10c. pays for your address in the Union Agents' Directory, which goes to thousands of publishers all over the United States; and, in return, you will receive *magazines, books, papers, pictures, circulars, pamphlets,* and lots of mail matter and good reading from those who want agents. You will be well pleased with your small investment. Directory, containing your name, can be got at this office.

(Mention this paper.)

We have purposely omitted the name and address of the applicant, partly because we don't intend to give him a free advertisement just at present, though we may do so later, but chiefly because we strongly suspect him to be a confidence-swindler, planning to fool credulous men, women and children out of their dimes, or to flood them with immoral circulars, or encourage and abet in defrauding publishers, by inducing them to send costly printed matter to "agents" who are not, and have little or no intention of becoming, agents. We fear he is one of those who would tempt thousands to baseness and falsehood, and deprave many, if he can thus get a few dishonest dollars for himself. In short, we guess he ought to be at hard labor in the Illinois penitentiary.

If any other publishers have had experience with or knowledge of this party, we would like to hear from them. We will give his name, if properly requested.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, *to those who pay fully one year in advance of date,* IF REQUESTED the following articles (while this notice continues), at the very greatly reduced figures named at the right:

1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price $1).....$0 25
2.—World's Cyclopedia, 794 pages, 1250 illustrations; (exceedingly valuable).....50
3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt.....50
4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated.....25
5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations.....05
6.—To NEW Subscribers, 12 select back Nos. of the RURAL PRESS, "good as new".....Free
7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates.
9.—Pacific Coast and Eastern Dailies, Books and Periodicals, *except special publications,* we can usually give 10 to 15 per cent off advertised retail rates.
10.—March of Empire, by Mallie Stafford.....25
11.—Life Among the Apaches, 322 pages, stiff cloth .25
12.—$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application .25
14.—Dewey's Pat. Newspaper Fileholder (18 to 36 in.) .25
15.—European Vines Described, 63 pages.....05
18.—Webster's Dictionary, 634 pages, with 1500 illustrations; very handy and reliable.....50
23.—Architecture Simplified, 60 pages.....15
24.—Mother Bickerdyke's Life with the Army; patriotic and ably written; 166 pp., cloth, $1.00.....50
25.—Ropp's Easy Calculator, cloth, 80 pp.....25
26.—How to Tell the Age of a Horse.....05
27.—Percheron Stud Book—French—bound in leather, 192 pages (full price, $3).....1.00
Beautiful Poetic Review, entertaining and instructive; 35 pages (a handsome and pleasing present)..25

NOTE.—The cash must accompany all orders. Addres this office, No. 252 Market St., S. F.

Inform your neighbors about our offers and paper.

Books for the Household.

We desire to give our readers every advantage in obtaining useful books at the most favorable rates attainable. We offer below a number which we believe will be found acceptable to many readers of the RURAL, and the reduced prices at which we can furnish them to our cash-in-advance subscribers—POSTPAID—will place them within the reach of many.

WHAT EVERY ONE SHOULD KNOW.—A Cyclopedia of practical information. Gives full directions for making and doing over 5000 things necessary in business, the shop, the farm, the kitchen and the home. Recipes, prescriptions, trade secrets, law, art work, agriculture, etc. Compiled from the most reliable sources and alphabetically arranged by S. H. Burt. 510 pages, cloth. Postpaid 50 cents. Regular price, $1.

THE WAY TO DO MAGIC.—Illustrated. Plain directions to enable any one to become proficient in Jugglery and Legerdemain. 60 pages. Postpaid, 10 cents.

THE TAXIDERMIST'S MANUAL.—Illustrated. How to Collect, Prepare, Mount and Preserve all kinds of Beasts, Birds, Insects, etc. By Prof. Graham Allen. 64 pages. Postpaid, 10 cents.

KNITTING AND CROCHET.—A Guide to the Use of the Needle and the Hook. Edited by Mrs. Croly (Jenny June). 144 pages, 200 illustrations. Postpaid, 25 cents. Regular price, 50 cents.

NEEDLE-WORK.—A Manual of Stitches and Studies in Embroidery and Drawn Work. Edited by Mrs. Croly (Jenny June). 126 pages, 200 illustrations. Postpaid, 25 cents. Regular price, 50 cents.

LADIES' FANCY-WORK.—A Manual of Designs and Instructions in all kinds of Needle-Work, embracing Embroidery, Kensington, Lace-Work, Tatting, Net-Work, Wax Flowers, Painting on Silk, etc. Edited by Jenny June. 152 pages, 700 illustrations. 25 cents, postpaid. Regular price, 50 cents.

[*In Preparation.*]

The California Fruit Grower.

A manual of methods and practices in Tree Propagation, Planting, Cultivation, and Pruning, which have yielded greatest success; with Lists of Varieties of Fruit best adapted to the different districts of the State. By our editorial associate, EDWARD J. WICKSON, Secretary California State Horticultural Society, etc.

The needs of a multitude of new-comers and the disposition among many old residents, who have followed other pursuits, to plant orchards and vineyards, has created a wide demand for a condensed and yet comprehensive treatise upon California fruit growing. While it is not the expectation of the publishers to produce at once a perfect work on this important interest, in so new a field it is believed that a book may be prepared that shall contain a large fund of useful information, relating to all branches of fruit growing, and thus serve as a trustworthy guide to the novice, and of suggestive value even to those of large experience. A better book may be the outgrowth of the present effort when time shall bring more permanent features and a fuller understanding of the industry. Just at present what is most needed is a straightforward, practical description of the methods which have so far been proved to yield the best results in every branch of fruit growing from the propagation of the tree onward to the marketing of the product. It is expected that this book will be so plain and practical in its character that anyone (of ordinary ability) may successfully plant and grow any of the common orchard trees, even if he or she has had no previous experience in horticulture.

The obvious necessity for such a work arises from the fact that California conditions are peculiar and practices must be especially adapted to conform to them. For this reason none of the many excellent Eastern books on fruit growing are of use to the California fruit-grower. He needs to know the results of the experience of the most successful California orchardists as a guide to his own operations, and this is what the book now in preparation will furnish him. Published by

DEWEY & CO.,
Proprietors PACIFIC RURAL PRESS,
No. 252 Market St., S. F.

Money Loaned

On Country Real Estate in large and small amounts, at lowest rates, by A. Schuller, 106 Leidesdorff St., room 3. **

A Profitable Investment.

One bar of the Le Roi des Savon will save two hours of hard work, twice its cost in wear and tear of the clothes, and a sleepless night from the overwork and drudgery of washing. It is warranted to wash without rubbing.

AGRICULTURAL BOOKS.

Sold by Dewey & Co., Publishers "Pacific Rural Press."

CALIFORNIA FRUIT GROWER.—A practical Handbook for the orchardist (in preparation).

CATALOGUE OF EUROPEAN VINES—With synonyms and brief descriptions, by I. Bleasdale, D. D. Invaluable to those growing the vinifera. Price, in pamphlet, 50 cents.

ORANGE GROWING IN CALIFORNIA—By T. A. Garey, of Los Angeles. The most comprehensive treatise on the growth of this fruit. It contains full instructions for growing the trees, planting and care of orchards, etc.; 227 pages. Price, 75 cents.

SILK GROWERS' MANUAL—By W. B. Ewer, A. M. A practical treatise full of useful hints for beginners in this State; 20 pages. Pamphlet, price 25 cents.

FRUIT GROWERS' CONVENTION REPORTS.—These annual conventions have resulted in bringing out the best and most useful information concerning the growth of different fruits in this State. The subjects discussed are of the most direct practical value and the facts laid down will prove helpful and suggestive to all in the fruit business. We have the reports of 1881, 1882, 1884, and 1885—the first for 10 cents, the others at 25 cents each.

THE AGRICULTURAL FEATURES OF CALIFORNIA—By Prof. Hilgard, 138 large pages, bound in stiff cloth, with colored maps, $1. This book is the best general review of California soils, climate and productions in existence.

NILES' STOCK AND POULTRY BOOK—Pamphlet, giving directions applicable to poultry growing in this State; 120 pages, post-paid for 50 cents.

KENDALL'S TREATISE ON THE HORSE AND DISEASES—Post-paid for 25 cents.

ARCHITECTURE SIMPLIFIED OR HOW TO BUILD A HOUSE.—Contains plans and amounts of materials for a number of buildings from a little cottage to a large dwelling. Price, ——

FARMS FOR SALE!

—BY—

GRIFFIN BROTHERS,

Cottonwood, Shasta County, California.

TITLES ALL GOOD OR NO SALE.

We have 40 inches of rain annually, hence need no irrigation and have no law-suits about water rights. Plenty of wood and water. Good schools, good society, cheap land, the best of soils, and local markets for all products. No snow, no blizzards, no black gnats, no damage from north winds, no chills and fever.

No. 49.

$3000.—A well improved 160 acres, 10 miles west of this town on Cottonwood Creek. On public road. New dwelling, only 10 rods to school house; no hills. Forty acres cleared; some good bottom land. U. S. title. Terms cash. Crop goes in.

A FINE RURAL HOME. No. 67.

$25,000.—1085 acres 2 miles from Cottonwood, and fronts on a never-failing stream. About 500 acres of the finest quality of dark, deep, alluvial land that will produce corn, alfalfa, wheat, vegetables or crops of any kind; has yielded 7000 bushels of wheat in one season, besides other crops. The balance of the farm is rolling woods-pasture. On the bottom land are two orchards and vineyard, 3 dwelling houses, large barns and granaries that would cost $5000. Several good wells of water. Splendid location for healthfulness and picturesque scenery. All the farming machinery and household furniture; 19 good horses, including a young stallion; 19 head of cattle, mostly cows; and 40 hogs; also sufficient hay and grain to seed the farm goes in with the farm. Part may remain against the farm if purchaser so desires.

No. 68. A SUBURBAN HOME.

$200.—240 acres on Cottonwood Creek, 2 miles from town; all well fenced and cross-fenced; all good land under cultivation; one half is first-class bottom land; good buildings; terms, half cash.

No. 71.

$3000.—800 acres rolling land, finest kind of pasture. Wells can be had for stock water.

No. 70.

$10 per acre—160 acres, perfectly level, gray, second-bottom land; 40 acres clear; balance has some brush and oak, but easily cleared. One of the very best locations in Cottonwood valley for Fruits of any kind without irrigation. Terms cash.

No. 73.

Four sections of the best stock pasture land. Rolling hills all covered with grass, on which cattle graze and do well the year round. Plenty of water for stock. This place will be sold very cheap if application is made soon. Title perfect.

No. 74.

$10 per acre.—120 acres good vine land, nearly all cleared, none too rough for work, good house and everlasting spring. U. S. patent. Terms cash.

No. 75.

$10 per acre.—700 east of and on the Sacramento river. All under a good, new wire fence. A never-failing creek crosses the land and furnishes abundance of stock water the year round. About 300 acres level, of which 80 are the finest kind of river bottom land. This bottom land has been under cultivation for several years and produces excellent vegetables.

DAIRY MACHINERY.

Woolsey's Improved Steam Generator

Has all the requirements of a first-class Efficient and Economical Boiler.

Woolsey's Improved Steam Cheese Vat.

Constructed with a View to Equalizing the Temperature in every part thereof.

Received first premium at the State Fair in 1873, and in 1881. Its chief merit consists in being separate from the heater, thereby avoiding all artificial heat in the cheese-room.

This Generator and the Improved Steam Cheese Vat, which it is designed to operate, has **superseded all others** in the vicinity of Gilroy, and has received the highest praise from cheesemakers wherever it has been tried.

For further particulars address

S. F. Market Report

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, March 16, 1887.

The past week has witnessed a fair degree of activity in all lines of produce, particularly in cereals. The fine weather has improved the general outlook of crops, although more rain is wanted in several of the counties. In wheat the week has been barely steady abroad, with to-day's market cabled as follows:

LONDON, March 16, 1887.—Cargoes off coast, buyers hold off. Cargoes on passage and for shipment, buyers hold off, hoping to obtain some concessions. California wheat, off coast, 37s 3d. California wheat, just shipped, 38s 3d. Liverpool wheat, spot, quiet. Liverpool wheat, California, 7s 5½d@7s 8½d.

Foreign Review.

LONDON, March 14.—The *Mark Lane Express*, in its review of the British grain trade during the past week, says: The supplies of native wheat are sparing. Trade in the provinces is firm and prices have advanced 6d@1s. The sales of English wheat during the past week were 43,442 quarters at 32s 7d, against 64,422 quarters at 29s 9d during the corresponding week of last year. Flour is steady, notwithstanding large foreign arrivals. Foreign wheat is steady and quiet; American Red Winters are 6d better. Foreign flour is steady. Corn is regular; mixed American is scarce and tending upward. Oats are dull. Linseed has declined 9d. Four cargoes of wheat arrived; one was sold and four (all Californian) remained. To-day's market for wheat was quiet and unchanged. Flour was in large supply and weaker. Oats were 6d cheaper.

Eastern Wheat Markets.

NEW YORK, March 13.—Wheat opened on Monday heavy and lower, but a good export demand set in, and the decline was recovered. On Tuesday the market became irregular and unsettled under the influence of radical and constant fluctuations at Chicago, where considerable excitement prevailed, owing to the bull movement. May options which collapsed on Thursday on heavy selling, on Friday and Saturday ruled comparatively easy, and the downward tendency was stayed. Spot closed ¾@1c lower, and futures, 1⅛@3¾c lower for the week. March, 90¾c; April, 91½c; May, 92¾c; June, 91⅝c; July and August, 90½c; September, 91⅛c.

CHICAGO, March 16—1 P. M.—Wheat, moderately firm; cash, 75⅞c; May, 81 1-16c.

New York Hop Market.

NEW YORK, March 13.—Business continues slow, and the demand fails to show the least improvement. Where any pressure to urge business is shown low prices are the rule, and foreign goods keep so much below prices at which domestic goods are held that very few sales of the latter are made. Pacifics, 1886, best, 20@22c; do common to good, 16@19c; do 1885, good to prime, 8@10c.

California Products at New York.

NEW YORK, March 13.—California honey continues in light supply, and the market is strong in consequence; quoted at 5c.

Seeds dull, nominally steady. California yellow mustard, 3¾@4½c.

Crops at the East.

CHICAGO, March 13.—The *Farmer's Review* will print the following crop summary in this week's issue: The weather for the past 10 days has been very favorable for growing winter wheat, and reports from the entire wheat belt continue encouraging. Rains and light snows in Kansas are reported to have caused improvement of growing grain in certain portions of that State, and improved the general outlook which was becoming discouraging. In sections of Michigan and Wisconsin the fields are still protected with snow and nearly all reports from those two States continue to be favorable. In Ohio, Indiana, Illinois, and Missouri the reports indicate that the crop is in a very promising condition, and unless subjected to freezing weather within the next three weeks, promises to emerge from the winter siege with unusually good prospects.

California Fruit in Chicago.

CHICAGO, March 12.—Oranges in fair supply, arrivals the past few days having somewhat increased. Choice, sound fresh fruit meets with fair sales and rules steady, but there is still more or less old and common stock sold, and this is rather easy. California bright, $1.75@3.25; Navel, $2.75@4.

California dried fruits are about steady and sales fair. Prunes, French, ₱ lb, 7@9c; Plums, pitted, 10@11c; Peaches, halves, do, 11@12½c; do, halves, pared, 20@21c; Figs, 6@8c; Nectarines, 9c; Pears, 8@12c; Raisins, London layers, 20-lb boxes, ₱ box, $1.35@1.40; loose Muscatel, ₱ box, $1.25@1.30.

Eastern Wool Markets.

NEW YORK, March 13.—The wool markets show little animation. Buyers still have the advantage in prices, but they generally adhere to the hand-to-mouth plan of purchasing. Sales of the week included 20,000 pounds Eastern Oregon at 22c; 10,000 pounds unwashed Western at 33c; 20,000 pounds Territory at 18½@22c; 9000 pounds scoured, do.; 20,000 pounds Montana and 25 000 pounds Mexican on private terms. California northern quoted at 20@36c; do. fall, 14@17c; California southern spring, 14@18c; do. fall, 11@12c.

The Boston market continues easy and in buyers' favor. California wool is unchanged. Last week there were sales of fall wool at prices ranging from 42 cents for scoured burry to 56@58 cents for free wool. Territory wool is quiet and very easy. Fine scoured Territory has been offered as low as 56 cents. Oregon wool has been sold with considerable freedom, but prices have fallen somewhat. Among the sales are 55,000 pounds of California at private terms; 100,000 pounds of fall scoured at 50 cents; 79,000 pounds of fall wool at private terms; 25,000 pounds of Oregon at 17 to 22 cents; 24,000 pounds of Valley Oregon at 27 cents; 35,000 pounds of Roseburg, Or., and 150,000 pounds of Oregon at private terms; 6000 pounds of coarse Territory at 20½ cents; 50,000 pounds of Montana at 24 cents; 8000 pounds of black Territory at 21 cents; 17,000 pounds of Territory at 17 to 25 cents; 24,000 pounds of fine Territory at 19 to 20 cents; 10,000 pounds of fine Wyoming; 60,000 pounds of Territory and 50,000 pounds of fine Territory at private terms.

The Philadelphia market shows little change. Buyers are operating cautiously and concessions are frequently made to influence business, but many holders have refused bids within one cent of the asking prices for good-sized lots. Agents' sales are: 1000 pounds of Montana medium at 28 cents: 2000 pounds of Oregon medium at 30½ cents; 30,000 pounds of Oregon fine at 28 cents; 10,000 pounds of Territory ⅜ at 27½ cents; 2000 pounds of Territory medium at 23 cents; 3000 pounds of Territory fall at 21 cents; 10,000 pounds of Territory fine at private terms.

PHILADELPHIA, March 15.—Eastern Oregon fine, 16@20c; New Mexican and Colorado, coarse, 14@16c.

BOSTON, March 15.—Wool is steady; Eastern Oregon, 16@22c; choice Valley Oregon, 25@27c.

Dried and Canned Fruit at the East.

NEW YORK, March 13.—Raisins are neglected and quotations entirely nominal. California loose Muscatels, three-crown, quoted at $1.40@1.50; do. London layers, $1.50@1.70.

Prunes—Turkish are in limited request at 4⅞@5c. French, weaker at 7½c.

Currants are strong, owing to limited offerings, being quoted at 4½@4⅝c for new.

Canned Goods—The demand is fair, and the market steady. Corn is inquired for, but as the stock is greatly reduced, strong views are entertained by holders. Tomatoes are dull but firm. California canned peaches, $2.25; pears, $2 25; plums, $1.75@2.00; tomatoes, $1.75@2.00; and apricots, $2.10.

Local Markets.

BAGS—The market is easy at a lower range, under stronger outside selling. Calcutta, standard size, is 6 cts spot and 6¼ to 6½ for June-July delivery.

BARLEY—The market made a sharp advance on Monday last, followed by a slight shading this morning, with a strong closing this evening. The demand is improving, with stocks only fair for the season. On Call, transactions the past week were fair, with a strong upward movement reported.

The following are the wholesale rates of slaughterers to butchers:

BEEF—Extra, 7@7½c; first grade, grass fed, 6½@7c per lb.; second grade, 5½@6c; third grade, 5@—c.

MUTTON—Ewes, 6¾@7c; wethers, 7¼@8c.

LAMB—Spring, 12½@15c.

VEAL—Large, 5@7c; small, 5@8c.

PORK—Live hogs, 4¾@5½c for heavy and medium; hard dressed, 6@7c per lb; light, 4½@5c; dressed, 6¾@7¼c; soft hogs, live, 3½@4c. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

BUTTER—The market is lower and weak at the decline, under stronger selling and freer receipts.

CHEESE—A further concession in prices is reported, owing to the demand being only fair and receipts large, as also the supply to draw from reported quite heavy.

EGGS—Heavy receipts from the West, and also of Californian, have demoralized the market, causing consignees not to refuse a bid when anywhere near the selling price. As higher freight rates go into effect on April 1, it is thought that the West will send very little to this market.

FLOUR—No advance is established, yet owing to the high cost of wheat, an early advance is looked for in this market.

WHEAT—The market holds to strong prices, with buyers trying to break prices to a lower level; but as stocks are well concentrated, they meet with poor success. On Call, trading was only fair. The bears made a raid, sending values off, only to be followed by better prices.

{COMMUNICATED.}

Market Information.

Cereals.

Mail advices from Europe report the stocks of wheat very light, with holders offering sparingly. It is claimed that both England and France will have to import very heavily so as to have their home consumption met. Even with free importations, present advices do not warrant us in expecting that either the English or French reserves will, on August 31st next, be up to the general average of reserves at that date for several years past. The general tenor of advices is to the effect, that owing to the high speculative market in the United States, English buyers take as little from this side as possible, confining their bulk of purchases to other supply countries, whose harvests come in December, January and February. Even if this be correct, yet eventually foreign buyers will have to fall back on this country, for the surplus in the other countries will soon be exhausted, and with signs of a rapid depletion under large shipping orders, speculators will take hold and send values up on a par with the United States markets. The papers are filled with reports and rumors of the wheat deal at the East, and express great surprise and ignorance regarding how and who are the controlling spirits. In October last this paper published a telegram from Chicago, outlining the deal which we herewith reproduce: "The most important piece of commercial news of the week is the report that the grain market has formed a money pool, and has gone into the business of dealing in spreads between England and America on a wholesale scale, or what amounts to the same thing, buying and shipping California and other wheats, and selling in this market against their purchases in California, at the Atlantic seaboard or in England, where carrying charges are 10 to 13c less than on this side of the Atlantic. The legitimate profit on these spreads is large enough to be tempting but concentrated speculative holdings of wheat in store, abroad or on passage, controlled by a combination of leading operators here, puts the breadstuffs market of the world practically in the hands of a few men and arms them with leverage sufficient to advance or depress prices at will. In theory it would seem that this combination could break the English markets any time by pressing their wheat for sale, or force prices to advance by causing the artificial scarcity. How the plan will work when put in practice on a grand scale, remains to be seen. A club which may also be used as a lever, reaching from California to Liverpool and worked from Chicago, is a spectacle worth contemplating. The combination is said to own considerable lines of wheat in English warehouses already, and a large amount en route from the Pacific slope to Europe, and to have its machinery in complete working order. The scheme is certainly not without its attractions."

No other paper on this coast had the enterprise to get the news, or if they did, they repressed it so the ring could manipulate the markets. This paper is not controlled by any ring or persons, and therefore aims to give news by which its patrons can make money. On the date the above was published buyer season wheat in our market was $1.41 per cental, and cash or sample wheat, $1.35 per cental; last week buyer season wheat sold at over $1.70, and spot or cash up to $1.68¾. In the local market the past week witnessed strong prices, notwithstanding decided bear raids on Call. The supply in the State, it is now claimed, is less than heretofore estimated it would be in this month, and as the stock is well concentrated, prices can be maintained at almost any figures holders wish.

The barley market has ruled strong and fairly throughout the week. Stocks are fairly well concentrated, and as the consumption, owing to increased railroad building, is quite large, no lower range in values is looked for previous to harvest. Buyers, as a rule, confine their purchases to actual wants.

The corn market shows continued strength, but no marked advance is reported. The demand the past week is said to have improved, causing holders to offer more sparingly.

The market for poorer grades of oats is stronger, and in sellers' favor, but for choice there is a good inquiry, with light obtainable supplies to draw from. Owing to the liberal offerings of off grades, buyers are slow to bid up on the more choice, yet they are compelled to pay full prices, so as to meet their wants.

The rye market is quiet, but steady.

In buckwheat, nothing new is reported.

Feedstuffs.

There is a continued scarcity of choice hay, necessitating dealers to pay full prices, but fair to good hay is in liberal supply, with buyers offish.

Bran and middlings are stiff at the advance. Feedmeal and ground barley are steady with a stronger tone.

Fruits.

Receipts of oranges the past week were large, but the market took all at steady prices, except the poorer qualities, and also the overripe, which were sold at concessions to peddlers.

Lemons are fetching an advance. Limes are steady, with the more choice in good request from shippers.

Eastern apples continue in fair supply.

Live-Stock.

Beef cattle and mutton sheep have a steadier tone under lighter offerings, but no advance in prices is looked for, owing to the lessened consumption. Calves are weak, but spring lambs are firm. Dressed hogs are weaker, but live hogs are scarce, and fetch good prices. Milch cows continue in good demand. In horses there is no material change since last week's report.

Vegetables.

Red potatoes are in good demand at full prices, chiefly to fill shipping orders. White potatoes are weak under liberal supplies from Oregon and Utah. Oregon potatoes are generally of poor quality.

Onions are strong, particularly choice hard-keepers, which are wanted to fill distant orders.

New potatoes are strong under light receipts. With continued pleasant weather, heavier receipts are looked for.

Seasonable spring vegetables are coming in more freely, with a lower range of values reported. It is claimed that nearby points will soon begin to send garden truck to this market, when a still lower range is expected to rule for that coming from more distant points.

Winter cabbages are in fair supply, with a continued good demand reported.

Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1887.	1886.
On the way	205,887	182,451
In port, disengaged	115,395	58,000
In port, engaged	15,958	26,969
Totals	337,230	257,420

The above gives a carrying capacity as follows: 1887, 550,786 short tons; 1886, 456,900 short tons; increase over last year, 93,886.

Dried peaches are stiffer, under lighter supplies.

Honey is very strong, with buyers taking parcels of choice, at a slight advance on quotations.

Beans are steadier, with buyers disposed to bid a slight advance for choice.

Choice poultry continues strong at full prices, owing to light receipts.

The advance in overland freights, that will go into effect soon, will have a decided influence on prices of produce shipped to the East, and also on produce brought to this coast, such as provisions, eggs, oats, corn, etc.

Game is going out of season, making quotations nominal.

Hops have a stronger tone, but buyers are trying to keep prices down.

A few stray clips of this season's wool have come to hand, but it is impossible to get quotations, as buyers are trying to keep the market low.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

THE W. C. T. Union has petitioned President Cleveland against drinking-houses, gambling-houses and other immoralities of the National Capital.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

MILLS COLLEGE.—Rev. C. C. Stratton, D. D., President of the University of the Pacific, has accepted the Presidency of Mills College. It will be remembered that, having been offered the position some months since, he was induced to decline it and remain at San Jose; later developments, however, have moved him to reverse his decision and take the chair vacated by Prof. Homer B. Sprague, much to the satisfaction of the trustees.

Address PACIFIC RURAL PRESS Office, San Francisco, Cal.

A LITTLE WATER!

Elevated, say 25 to 40 feet above the Kitchen Sink, is SO CONVENIENT. It is easier to OPEN A FAUCET than to work a PUMP HANDLE, not to mention PACKING WATER from the Spring. And since the "Cyclone" is so cheap, there is REALLY NO REASON why any farmer, or his WIFE or DAUGHTER, should not be SAVED THIS LABOR.

B. V. CUTTINGS.

Bordeaux Varieties.

I OFFER FOR SALE, AT $10 PER M., 200,000 CUTTINGS of the following renowned varieties, tule-packed, F. O. B. at depot: Cabernet Sauvignon, Cabernet-Franc, Merlot, Verdot, Malbec, Tinturier, Portal-Ploussard, Mondense, Petite Sirrah and Grosse Blue. Also from $2.50 to $5.00 per M. all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price. Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

419 and 421 Sansome Street, - - San Francisco, California.

33d YEAR. # STOCKTON NURSERY. 33d YEAR.

WHITE ADRIATIC,

SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Præparturiens, Macrocarpa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobolan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

TRY THE PERSIAN MULBERRY.

NO SCALE.—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.
STOCKTON, CAL., October 27, 1886.

This is to certify that we the undersigned have this day thoroughly inspected the Stockton Nursery; that we found no Scale or indication of Scale, and that to the best of our knowledge and belief the Stockton Nursery is free of this dreaded pest.

What Mr. Beyer says:

"Please accept my best thanks for the splendid seeds received from your firm. It would be a rather lengthy list if I should name all, but will say that amongst 38 first, and 3 second premiums awarded me at our fairs in Northern Indiana and Southern Michigan, 28 first premiums were for vegetables raised from your seeds. What firm can beat this?"

AUGUST BEYER, So. Bend, Ind.

Seed of this quality I am now ready to sell to every one who tills a farm or plants a garden, sending them **FREE** my Vegetable and Flower Seed Catalogue, for 1887. ARCTIC OIL WORKS,

Manufacturers of

INSECTICIDE!

FOR ERADICATING AND DESTROYING ALL PESTS THAT INFEST FRUIT TREES AND PLANTS, SUCH AS

SCALE BUG, HARVEST FLIES, TREE HOPPERS, PLANT LICE, Etc.

It has been fully tested by the Agricultural Department of the State University, and pronounced a success, the endorsement of which we append. It is put up in convenient forms for use both in liquid and paste state.

For Sale in Barrels and 2 and 5-pound Cans in paste form, and in Barrels and 5-gallon Cans in liquid form.

Copy of Letter Received from the University of California, College of Agriculture, Berkeley, dated December 4, 1886.

J. N. KNOWLES, Esq., Manager Arctic Oil Works, San Francisco—DEAR SIR: We have lately tested the Insecticide preparation of Whale-Oil Soap sent by you to us, and have found it to be very effectual against the Scale infesting Orange and Bay Trees here; also against the Thrips. From our previous experience with a similar composition, I think it will be found fully effectual against any small Insect Pests not specially protected like some of the armored Scales, and against which any Wash short of strong lye cannot be used. Respectfully,

E. W. HILGARD, Professor of State University.

OFFICE, 28 California St., San Francisco, Cal.
